

Über dieses Buch

Dies ist ein digitales Exemplar eines Buches, das seit Generationen in den Regalen der Bibliotheken aufbewahrt wurde, bevor es von Google im Rahmen eines Projekts, mit dem die Bücher dieser Welt online verfügbar gemacht werden sollen, sorgfältig gescannt wurde.

Das Buch hat das Urheberrecht überdauert und kann nun öffentlich zugänglich gemacht werden. Ein öffentlich zugängliches Buch ist ein Buch, das niemals Urheberrechten unterlag oder bei dem die Schutzfrist des Urheberrechts abgelaufen ist. Ob ein Buch öffentlich zugänglich ist, kann von Land zu Land unterschiedlich sein. Öffentlich zugängliche Bücher sind unser Tor zur Vergangenheit und stellen ein geschichtliches, kulturelles und wissenschaftliches Vermögen dar, das häufig nur schwierig zu entdecken ist.

Gebrauchsspuren, Anmerkungen und andere Randbemerkungen, die im Originalband enthalten sind, finden sich auch in dieser Datei – eine Erinnerung an die lange Reise, die das Buch vom Verleger zu einer Bibliothek und weiter zu Ihnen hinter sich gebracht hat.

Nutzungsrichtlinien

Google ist stolz, mit Bibliotheken in partnerschaftlicher Zusammenarbeit öffentlich zugängliches Material zu digitalisieren und einer breiten Masse zugänglich zu machen. Öffentlich zugängliche Bücher gehören der Öffentlichkeit, und wir sind nur ihre Hüter. Nichtsdestotrotz ist diese Arbeit kostspielig. The Year that is Past.

HE year that has just come to an end was one that will be long remembered as being the period of the most terrific fighting in the great war, and of the complete collapse of Germany's military and naval power. It will also be memorable as a year of great shortages; shortage of materials and labour being the things that mostly affected the commercial World, and printers will long remember that it was the year when a considerable portion of their stocks of type and metals were commandeered for the purpose of making bullets to kill the enemy. No less than an estimated amount of 25,000 tons of metal being given up for that purpose. Memorable, too, was the abnormal rise in prices of all commodities and the great increase that took place in the wages of printers and others connected with the printing trades all over the country, the present rates of pay being in many cases more than double what they were before the war. Prices of printers' materials also went up, showing an advance of 100 per cent. on type, and 200 per cent. on wood spacing material, with other things in proportion, so taking the twelve months all round, employing printers have had a pretty hard time. Among the movements for the betterment of the trade is the effort that is being made for the standardisation of paper and the adoption therewith of the metric system. The standardisation of sizes and weights of paper and of the number of sheets that go to a ream should be welcomed by all who handle paper, as it will simplify calculations in the office, and facilitate the work. We have heard much of the Whitley Committee and its report, and there has been a good deal spoken and written of betterment." Even as we write, the Printers' Industrial Council has become an established fact, and we trust that it will be a body whose deliberations will be for the betterment of the trade as a whole, and tend to render possible more amicable relations between employers and employed.

Printers' Managers and Overseers Association.

The work of this Association has been continued during the year, the London Centre, together with the provincial branches, have done good work, and the membership has been increased, while the financial position is better than in 1917. Mr. E. C. Moyce, who has been general secretary of the Association during a period of twenty-one years, and to whose energy much of the success of the Association is due, has retired from his office and Mr. G. Phillips has taken his place. The various centres have kept up the interest of their meetings with lectures and discussions on trade subjects, and have so contributed to an extension of the practical and technical knowledge of the members of this progressive association.

The Printing, Bookbinding and Kindred Trades Overseers' Association.

Under its new title, this body has been active, and in its new quarters at the St Bride Institute, the members find a pleasant meeting place. Lectures, concerts, and talks on trade and other matters have taken place during the year, and the Association has made itself extremely useful in dealing with matters affecting the welfare of its members. Messrs. Geo. A. Eden and A. G. Aves are to be congratulated on the success of their efforts in making the Association so useful.

New inventions.

The year has not been very productive of many new things in the way of printing machinery. Mr. T. Ruddinan Johnston, of Tokyo, Japan, has invented an improvement in two revolution presses, the object of which is to simplify the driving movement of these useful printing machines, and to provide for absolute register from end to end of the sheet without any adjustment of its parts being made by the macnine minder. It also provides for the strongest possible support being given to the form bed where the impression is being made. The Cade Manufacturing Co., an American firm, has purchased a plant at Greensboro, N.C., U.S.A., and is manufacturing typesetting machines. The Cade typesetting machine's features are said to be in many respects similar to those of other devices of the kind which have been perfected. The late Dr Cade, a well-known Baptist minister, once associate editor of the Progressive Farmer, and a newspaper man of varied experience, was the inventor. Omitting a few minor appliances we may say that nothing new or startling has been introduced.

The Master Printers.

The year has been a somewhat strenuous one for the employing printer and what with high prices of materials, high wages, scarcity of paper and shortage of labour, his task has been a difficult one. Still much good work has been done, and the London Master Printers' Association has by its efforts made good progress in increasing its membership, while the various district associations have prospered and flourished. The Costing Committee has been prompt and effective in meeting the demand for revised scales consequent on the rises of wages. The work of the Imprint Committee has given much satisfaction, and the Organisation Committee has prepared useful propaganda literature, and spent much time in the consideration and overhauling of the Association rules, with a view to their being brought into accord with the present constitution. The organisation of the various parts of London has proceeded successfully under the auspices of the district associations and the new Central Districts Branch promises well for the satisfactory completion of the organisation of the whole of London. We also note that the principal London vellum binders and rulers have become members of the Association and are working under a special committee of their own, with headquarters at 24, Holborn. The Federation of Master Printers has also been busy in organising the trade in the provinces, the membership has been largely increased by the formation and affiliation of new district associations and in many localities the master printers have entered into the work of the Federation with energy and success.

Increased Wages.

A feature of the twelvemonths just ended was the abnormal advances in printers' wages that took place all over the kingdom. The enhanced cost of living and the scarcity of labour combined to cause advances to be

granted that in normal times would have been undreamt of. Fortunately there were but few strikes in this connection, the employers meeting the men in a spirit of concilition that was productive of a general good feeling. An exception, however, occurred at Dublin, where a lock out of several weeks' duration took place, and a nearly total cessation of work was caused in that city, to the great inconvenience of other branches of the . trade, at one time nearly 2,000 persons being unemployed as a consequence of the dispute. many being women and girls in the bookbinding section, whose work came to a standstill by the stoppage of the printing works. A strike also took place at Belfast, but it was of shorter duration.

Technical Education.

Despite war conditions, progress has been made in the matter of technical education. and more than one scheme has been evolved which, if carried out, should be greatly to the benefit of all concerned, and provide a centre of technical education for the young printer in London. It is a fine ideal, and an institute that would embrace all sections of the printing trade in one building ought not to be beyond the powers of the trade. time, the various bodies that direct the training of youth are doing their best to utilise their present resources. The work of the City and Guilds of London Institute goes on, and although the war has greatly reduced the number of students attending classes, the best is being done under prevailing conditions. The St. Bride Institute has continued its good work during the year, and has distinguished itself by its successful costing classes, which have been much appreciated, and which were attended by ladies as well as male students. In the usual printing classes up to-date instruction has been given. The popular classes held at the Borough Polytechnic have been carried on successfully, the day practical classes being much appreciated. Other London centres of technical instruction for printers have also been active, but our limited space prevents details being given. In the provinces the Manchester Municipal College of Technology, the Leeds Central Technical School, and other centres have carried on the good work. While for the "grown-up's" the Manchester Prining Crafts Guild has done much to further the practical knowledge of its members by lectures and by visits to printing and other works.

Exhibitions.

Trade exhibitions have been but few during the continuance of the war, and 1918 was conspicuously meagre in that respect. The fourth British Industries Fair was held in March, and the section devoted to the paper, printing, and stationery trades was well occupied, and a good display was made by a considerable number of the leading firms in the trade. The British Scientific Products Exhibition held at King's College, had a few exhibits appertaining to the trades we represent, notably those of Messrs. Alex. Pirie and Sons, Ltd., Messrs. James Spicer and Sons, Ltd., Messrs. Wiggins,

Teape and Co., Ltd., and Messrs. Illingworth, Willesden Junction. A feature of the show was the display of photographic papers of Butish manufacture, a branch of trade that in pre-war days had been entirely in foreign hands. At the British Museum there was a small exhibition of printed books, ancient and modern, which, although limited in scope and character, was of interest to lovers of the printed book. Modern work was represented by the Kelmscott Chaucer, two or three volumes from the Ashendene and Doves Presses, and the Oxford University Press Homer of 1909, printed with Mr. Proctor's fount of old style Greek type. There were also some examples of modern American printing, from Mr. Conwell's Elston Press at New Rochelle, Mr. Updike's Merrymount Press at Boston, and the Riverside Press at Cambridge, Mass. Old American work was represented by one of Benjamin Franklin's productions.

The Charities.

The Printers' Pension, Almshouse and Asylum Corporation, the premier charity organisation of the trades has carried on its good work during the past twelve months, and its appeals for funds have been well responded to. At the annual dinner, in June, at which the guest of the evening was the Prime Minister, Mr. Joseph Mortimer, the indelatiguable secretary, had the pleasure of announcing that the subscriptions amounted to the record sum of £16,000. Arrangements were made by the Corporation to assist in the maintenance of all necessitous children of printers killed in the war, whether the father was or was not a member of the Institution. The various Auxiliaries have also played their part in collecting for the Corporation, and considerable additions to the funds have been raised by the Lithographers' Auxiliary, the Nonpareil Musical Society, the Brixton-Streatham-Clapham Fund, and other bodies, and during the year the St. Clement's Press inaugurated a pension fund in connection with the Corporation. The Bookbinders' Pension and Asylum Society and the Vellum Binders and Machine Rulers' Pension Society, have also been active and have received the support of their sections of the trade. Sports have not been much in evidence during the war, but the Printing and Allied Trades Charity Sports Association organised a football match at Leytonstone on behalf of the Printers' War Pension Fund, an interesting leature of which was the attendance of Mr. George L. Berry, of the American Pressmens' Union. The Printers' Medical Aid Association has put in a year of hard practical and useful vork, and alleviated the lot of many sufferers in the trade by providing medical and surgical help and by sending patients to Vatious convalescent and seaside homes. The Caxton Convalescent Home at Limpsfield and the Lloyd Memorial (Caxton) Seaside Home, at Deal, have helped many workers in the trade to regain health and strength. In this connection, and as illustrating the power of littles, we may note that the employees of Messis. Eyre and Spottiswoode raised £100 by penny-a-week subscriptions, to endow a bed in the new wing of the Caxton Convalescent Home at Limpsfield, in memory of their fellow workers who have made the supreme sacrifice in the great war.

Business Changes.

Among the business changes during 1918 we noted that an arrangement had been come to between Messrs. John Dickinson and Co., Ltd., and Messrs. Millington and Sons, Ltd., by which unity of interest and increased manufacturing and trading facilities will be obtained between those two companies. Messrs. T. G. and J. Jubb, of Leeds, manufacturers of stereo, lino, monotype and typograph metals, having occupied premises at 15-17, Clydeplace, Glasgow, for over two years, and finding them useful for their increasing trade in that city have now arranged to open daily for business. Mr. Asher is in charge of the Glasgow premises. Messrs. Lendrum, Ltd., wholesale stationers, importers and exporters, of London, Manchester, Liverpool and Glasgow, have taken extensive premises in Quay-street. Manchester, which, we understand, are to be the future home of the firm's paper and manufacturing stationery department. The firm of Messrs. Whittaker and Co., scientific and technical book publishers, 2, White Hartstreet, E.C.4, has been incorporated with that of Sir Isaac Pitman and Sons, Ltd. Messrs. Longman's, printers, advertising agents, etc., 42, Ludgate-hill, E.C., have removed to 35, New Oxford-street, W.C.y. Messrs. Chas. Pollard, who for several years had been the business manager of the London establishment of Messrs. Geo. Mann and Co., Ltd., has become a director of that firm. Mr. Robert Loring, formerly manager of the colonial business of Messrs. R. Hoe and Co., New York, has been appointed chairman and managing director of Messrs. R. Hoe and Co., Ltd., 100, Borough-road, S.E., superseding Mr. George F. Reed, who, however, still remains a member of the board. The Whitlock Printing Press Manufacturing Co., the United Machinery Co., and the Potter Press Co., United States firms, have merged their goodwill, plants and other properties into one organisation under the title of the Premier Printing Machinery Co.

Before the Courts.

Uusually a considerable number of libel actions against newspapers have to be recorded in the course of a year, but 1918 showed a considerable falling off in comparison with other years. At the Manchester Assizes actions for libel were brought by Messrs. E. R. Lightwood and H. Whittle, members of the Lytham Union District Council, against Mr. W. Fielden, editor and publisher of the Lytham Times. The jury found for the defendant, and in actions brought by the Clerk and Law Clerk of the Council, the defendant disclaimed any idea of reflecting upon their capacity or professional character, and tendered apologies, which were accepted. In the King's Bench Division, Dr. Mir Amwsruddin, a barrister, and an advocate of the High Court of Madras, brought an action for

BRITISH & COLONIAL PRINTER & STATIONER

alleged libel against Mr. Horatio Bottomley, the editor of John Bull, Messrs. Odhams, Ltd., . as printers of that paper, and John Bull, Ltd., the proprietors: a verdict was given for the defendants, with costs. Mr. Horatio Bottomley was awarded £500 in the King's Bench Division in an action for libel brought by him against Mr. John Greaney, a printer, of Hurststreet, Birmingham. The libel alleged was contained in a pamphlet entitled "Horatio Bottomley Exposed." An imprint case came up at Bow-street, when Mr James Ivison appeared in answer to six summonses for printing 5,000 copies of three pamphlets without the name and address of the printer. Two of the six summonses were dismissed, and in regard to each of the four remaining summonses the magistrate inflicted a fine of £5.55. and, in respect of one, five guineas costs-25 guineas in all. A curious case was heard in the Northampton County Court, when a grocer's presentation almanac was the subject of a claim for £1. Plaintiff said as a result of relying upon the lighting-up time given in the almanac, which proved to be wrong by half-an-hour, he was "pulled up" for riding a bicycle without a light. After a hearing, the judge said there was no warranty, and gave judgment for the defendant. A good many cases that came before the courts were brought under the Defence of the Realm Regulations, a measure which created an offence in many things that were perfectly lawful in pre-war days. A firm of printers were summoned at Lambeth by Lieutenant G. H. Hardy on bshalf of the Ministry of National Service, for failing to keep a list of their male employees of sixteen years of age and over, and for failing to deliver a copy of such list to the Recruiting Officer. On the second summons the defendants were fined $\xi 8$ and £2 costs. At West London a man was summoned for pablishing a monthly periodical without a licence, and another man was summoned for aiding and abetting. Defendants agreed not to publish the paper without a licence, and on that understanding they were bound over and ordered to pay two guineas costs. At Bow-street Leo Alfred Garner, of Kensington, George Sanders, of Soho, and the Twentieth Century Press, Ltd., Clerkenwell, were summoned for making statements in the Licensed Vehicles Trade Record likely to prejudice recruiting. Sanders, as editor, was fined £200 and 30 guineas costs, Garner (the writer of the articles) was fined £ 100 and 15 guineas costs, and the Twentieth Century Press £20 and 10 guineas costs. At Bradford, James Smith, printer, of Bingley, prosecuted at the instance of the Solicitor General for publishing an alleged seditious pamphlet without name address, and was fined £135, including 30 costs, on 21 summonses. At the Guildhall Police Court, Harrison Barrow, acting chairman Society of Friends' Service Committee; Arthur Watts, member of the committee; and Miss Edith Ellis, acting hon. secretary were charged with incit-ing Andrew Fisher, of Glasgow, to print copies of a leaflet, entitled "A Challenge to Militarism," without the name of the author or

printer, and without submitting it to the Censor. The magistrate passed sentence of six months' imprisonment on Barrow and Watts, and fined Miss Ellis £ 100. An order was made against all three to pay £50 costs. Notice of appeal was given. A fine and costs amounting to £460 were imposed at the Mansion House on C. W. Daniel, Ltd., Tudorstreet, and C. W. Daniel, managing director, for statements in a book entitled "Despised and Rejected." The statements, it was alleged, were calculated to prejudice recruiting and the training and discipline of the forces company was also fined for being in possession of 230 copies of the book. Messrs. Headley Bros., publishers, of Oxford-street, W., and the Rev. Joseph Davison Manners Rorke, of Bexhill, were summoned at Marlboroughstreet Police Court, the former as publishers and the latter as editor of a publication called the Venturer, in the March issue of which were statements likely, it was alleged, to prejudice recruiting and the discipline of the forces. The magistrate fined Messrs. Headley £100 and £5 costs, and Mr. Rorke was fined £50. The Paper Restrction Order, too, was prolific of prosecutions, and in a case at Birmingham, James Bentley, printer, Aston, was fined £5 for printing football betting coupons. The defence was that the paper used was printer's waste. At Tottenham, Charles George Woodhams, Charles E. Phipps, and William Hicks, were summoned under the Paper Restriction Order for printing advertising circulars on behalf of a bookmaker. Woodhams was fined £20, Phipps £5, and Hicks £25. At the Leeds City Police Court, the proprietors of the Newtown Picture House were ordered to pay costs, and the manager, Walter Foster, was fined £3, for a breach of the Paper Restriction Order. Bills of an aggregate area of 5,220 square inches - 2,820 square inches in excess of the legal limit—had been posted on the gable end of a mill opposite the picture At Blackpool, the magistrates had before them 36 summonses for breaches of the Paper Restriction Order' the defendants being advertising managers for places of entertainment, general advertising agents, and others. The cases had been adjourned to obtain a ruling from the Board of Trade. The ruling was against defendants, and fines varying between 40s. and 20s. were imposed. The billposters' workmen who actually fixed the posters were fined 10s. each. At Marlborough-street, Henry Pilet, of Ladbrokegrove, Notting-hill, was summoned, under the Paper Restriction Order, for having unlawfully posted to Edwin Kellett, of Leicester, an advertising circular relating to a contest of skill, or alternatively, a guessing competition. Pilet was fined £50, or two months' in the second division. Colonel Repington, military critic, and Mr. Howell Arthur Gwynne, editor, Morning Post, were charged with a contravention of the Defence of the Realm Act by the publication of matter calculated to be of assistance to the enemy. After hearing counsel for the defence, the magistrate fined Mr. Gywnne £100, and 50 guineas costs, and Colonel Repington was fined £100, and 40 guineas costs. Mr. Charles Grey, editor of -

Digitized by Google

the Aeroplane, and the Aeroplane and Genera Publishing Co., Ltd., were summoned at Bowstreet Police Court for having published without lawful authority information in respect of the place of manufacture of aeroplanes. Each of the defendants was fined £50, and the company was ordered to pay 15 guineas costs. A local reporter was fined £10 and £5 5s. costs at Ramsgate, for chalking on a newsagent's board, "German Landing in Kent! Volunteers to Rescue," contrary to the Defence of the Realm Regulations. At Bow-street, a charge of publishing information of such a nature "as might directly or indirectly be useful to the enemy" was brought against Mr. West F. de Wend Fenton, controlling editor of the World. A fine of £100 and 10 guineas costs was imposed.

Fires.

Fortunately we had to record but few fires, and among them was a slight one at the printing works of Messrs. Waterlow and Son, Finsbury-market, E.C. The staff got appliances to work, and restricted the outbreak to the part of the building in which it broke out. Fire also occurred on the premises of Messrs. C. Knight and Co., Ltd., publishers, Tooleystreet, EC; a six floored building being badly damaged. A serious fire caused by enemy action took place at the printing action took place at the printing works of Messrs. Odhams and Co., Long acre, and a number of lives were, unfortunately, lost, great damage being done to the building and plant. The branch office of the Newcastle Chronicle in Station-approach, South Shields, was destroyed by fire, and by a fire that occurred at the newspaper and general printing works of the Derbyshire Courier (1912), Ltd., Broad Oaks, Chesterfield, the premises were destroyed. Considerable damage was done by fire at the works of the Universal Transfer Co., Ltd., Tunstall, and an outbreak occurred on the premises of Messrs. W. Holmes and Co. and W. W. Lindsay, printers, Market street, Aberdeen. The building was badly damaged, and a large stock of Paper and fancy goods destroyed, the damage being estimated at over £1,000.

Trade Literature.

Among the technical books issued during the year we noticed the following:—"Printing," by Frank S. Henry: Chapman and Hall, Ltd., an American text book for printers' apprentices, continuation classes, and general use for technical instruction, from the pen of the/instructor in printing at the Philadelphia Trades' School. A "Gazetteer of Hebrew Printing," by Elkan Nathan Adler: Grafton and Co., Coptic-street, W.C. "The Principles and Practice of Newspaper Make-Up," by Mr. T. E. Naylor, the secretary of the London Society of Compositors, published Raithby, Lawrence and Co., Ltd. "Ma cript Writing and Lettering," by an Educa-tional Expert: John Hogg, Paternoster-row, "Oil Colours and Printers' Inks," by L. E. Andes, second edition, Scott, Greenwood and Son, Broadway, E.C. We also had a very useful revised edition of the "Ar-Gee Printers' Pric'e List," issued by Messrs. R. Grieve and

Sons, Dumfries. "Photograms of the Year," which is as interesting to the printer as to the photographer, was in its 1918 issue a splendid production.

The Death Roll.

The death roll of 1918 has been a heavy one, and besides the many who have passed away in their homes a large number have given up their lives on the field of battle, or have died in hospital of wounds received while fighting in defence of their country. Much as we should like to chronicle the names of all who have passed over to the other side the exigencies of space prevents giving such a full list and we must content ourselves with naming but a few of those that have gone from among us. In the London district our columns recorded the passing away of Mr. Arthur E. Berrill, one of the managing directors of the export house of Gordon and Gotch: Mr. Graham Procktor Spicer, a member of the firm of Messrs. Spicer Brothers; and Mr. Frederick Pulman, the late managing director of Messrs. George Pulman and Sons, Ltd. printers and publishers, Marylebone and Wealdstone. An interesting personality in the London printing world was removed by the death of Mr. Knott, of Brook-street, Holborn; Mr. Knott was born in 1828, and had lived through part of the reign of George, IV., and those of William IV., Queen Victoria, King Edward VII., and our present king, George V. We also recorded the death of Mr. Andrew Wybrant Penrose, governing director of Messrs. A. W. Penrose and Co., Ltd., Farringdon-road, E.C., the well-known photo-process supply firm which he founded in partnership with Mr. Wm. Gamble, in 1893; Mr. Samuel Insull, sen., also passed away, he was well known in the printing trade and had attained to a high reputation for the special lines in numbering machines which for many years he supplied. We also announced the deaths of Mr. Alexander Strahan, at one time one of London's best-known publishers, who published Good Words when that magazine was edited by Dr. Norman Macleod; Mr. Horace Cox, who for 50 years managed the Field, the Queen, the Law Times and "Crockford's Clerical Directory"; Mr. Alan Lupton, chairman of Messrs. H. R. Baines and Co., Ltd , proprietors of the Graphic, Daily Graphic, and Bystander; Mr. John Gennings, managing director and editor of the Central News; Mr. James Wann, a member of the board of T. B. Browne, Ltd., advertisement agents, and Mr. A. Evans, the general secretary of the Printing and Paper Workers' Union, at the comparatively early In the Provinces there age of 56 years. passed away many men well known in the trade, among them being Mr. Mark Smith, who was for over thirty years the works manager and for the last twenty years a director of Messrs. Taylor, Garnett, Evans and Co., Ltd., Guardian General Printing Works, Reddish, an inventor of many useful appliances for the printer. Mr. E. J. Arnold, founder of the well-known Leeds firm of Messrs. E. J. Arnold and Son, Ltd., stationers, printers and publishers. Mr. James Broadley, head of the firm of printers and publishers,

Accrington, which bore his name. Mr. Alfred Williamson, proprietor of the North Wall Printing Works, Ashton, and Mr. John Watson, the oldest master printer in Bolton, and head of the firm of Messrs. Hasley, Watson and Co., Ltd., printers and lithographers. The deaths also occurred of Mr. William Wallace Hargrove, of the Yorkshire Herald, at the age of 92, and of Mr. George Harvey Willmer, of Willmer Bros. and Co., Ltd., publishers of the Birkenhead News. Among the deaths occurring in Scotland were those of Mr. George Bell Watson, head of the firm of Messrs. Hugh Imlay and Co., envelope manufacturers and wholesale stationers, Aberdeen, and Mr. John Alexander Blackie, of Messrs. Blackie and Sons, publishers, Glasgow, who was the senior director of that well-known publishing house.

The year that is past has been one of difficulties and trials for us all, but it has passed away leaving us the blessing of peace, and a brighter outlook for the twelvemonths we have just entered on. We have still many troubles to face before normal conditions are reached, but let us hope that with care and judgment on the part of those in charge of affairs we may enter on a period of great national prosperity. In such a hope we heartily wish all our readers and friends

A Dappy and Prosperous New Year.

Messrs. Jubb's Calendars.

Messrs. T. G. and J. Jubb, metal manufacturers, Hunslet, Leeds, have in past years made a feature of utility and attractiveness in the calendars they send out to customers, and this year these features are still retained. One of the firm's calendars for 1919 is a daily tear-off with very bold date figures, four inches in height, and printed in red, the name of the month appearing in white letters on a black ground under each date. The date slips are mounted on a heavy card on which the firm's business announcement appears at the top. This calendar may also be used as a diary, and engagements, etc., may be noted on the slips, when they will automatically come into sight as the required date comes round.

Another calendar is entitled "Moving Incidents." It is 13½ by 8½ inches in size, and consists of a series of six sheets on which are portrayed in delightfully humorous coloured pictures the father of a family getting the new house into order after a moving; laying the carpet on the stairs, paperhanging, carpentering, saving the plumber's bill, inspecting the water supply, and painting the porch, being all depicted in a manner to cause a hearty laugh. The dates, two months to a leaf, appear under the pictures, and are in white figures on a brown ground. These calendars should delight the recipients, and be of practical use during the coming year.

DIVIDENDS AND REPORTS.

PRINTING MACHINERY Co.—In their report for year ended June 30th, directors state that the guaranteed dividends of 7½ per cent. on ordinary shares and 5 per cent. on preference shares have been duly paid, the same as for previous year.

EYRE AND SPOTTISWOODE.—Accounts for the year ended March 31st last show, after writing off £1.000 from costsof issue of montgage debenture stock, £11,074 for depreciation of plant, type, fittings, etc., £367 for depreciation of investments, £1,173 for war allawances, £1,200 for debenture stock redemption fund, and £862 for leaseholds sinking fund, a profit of £11,566, which reduces the debit balance to be carried forward to £20,826.

Dobson, Molle and Co., Edinburgh the accounts were unanimously adopted, and dividends at the rate of 5 per cent. per annum on the preference shares and 10 per cent. per annum on the ordinary shares were declared. The chairman said the company had had a thoroughly satisfactory year, although business had been done with very great difficulty owing to the scarcity and high prices of paper, and the absence of a large number of employees with the Forces.

MERGENTHALER LINOTYPE, New YORK.—The report for the year ended September 30th shows:—Total net profits \$1.343.545, against \$1.883,159; dividends (about) \$1,660,000, against \$1,600,000; dividend rate 12½ per cent., against 12½ per cent.; deficit \$256,455, against surplus \$283.159; total surplus, \$7,093,869, against \$7,350,323.

Sun Paper Mill Co., Ltd.—Dividend of 7s. 6d. and bonus of 5s. per share, which, with the interim dividend of 7s. 6d. per share paid, makes 20s. per share for the year.

Bury Papermaking Co., Ltd.—In their annual report the directors of this company state that after charging interest, depfeciation, etc., and placing £10,000 to the reserve fund, amounting in all to £21,816, there is a credit balance of £20,253 (against £3,666). With the amount brought forward, the disposable balance is £30,820. The directors recommend dividends of 10 per cent. con the

preference shares, less tax, and 15 per cent. (as last year) on the ordinary shares, free of tax, absorbing £3,910 and leaving £26,910 to be carried forward, against £14,476 last year.

NEW COMPANIES.

CARLTON PUBLICITY Co., LTD—Registered with a capital of £25,000, in £1 shares (5,000 7 per cent. cumulative preference shares). Objects: To take over the business carried on at Carlton House, Great Queen-street, W.C., as the Carlton Auxiliary, and to carry on the business of publicity consultants (commercial and development experts, advertising agents, newspaper space brokers), etc. Agreement with W.T. Wallace, A.A. Martin, and T.A. Stephens. The subscribers (each with one share) are H. N. Letts, and Miss M. J. Noall. Private company. The first directors are W. T. Wallace, A. A. Martin, T. A. Stephens, and M. Gibson. Registered office, Carlton House, Bedford-street, W.C.2,

PIRIE, APPLETON AND Co., LTD—Registered with a capital of £250,000, in £1 shares, to take over the business of envelope manufacturers and paper coaters carried on in Aberdeen and London by Alex. Pirie and Sons, Ltd., and also the business of wholesale manufacturing and general stationers carried on in London by Fenner Appleton and Co., Ltd. The subscribers are F. D. Pirie, and F. Appleton. Private company. Five of the first directors are to be nominated by Alex. Pirie and Sons, Ltd., and three by Fenner Appleton and Co., Ltd.

COLOUR PUBLISHING AND PRINTING CO., LTD.—Registered with a capital of £1,000, in £1 shares. As title. The subscribers are A. W. Barron, and Captain H. B. B. Smith-Bingham. Private company. First director—A. W. Barron.

TEARNE AND SONS, LTD.—Registered with a capital of £5,000, in £1 shares, as transfer, colour and general printers, photographers, paper merchants, gold leaf and gold size manufacturers, aluminium manufacturers, etc. The subscribers are A. George, F. E. Tearne, and A. J. L. Menzies. Private company. First directors—A. George, F. E. Tearne, and A. J. L. Menzies. Registered office, 22, All Saints-road, Birmingham.

Current Topics.

Mr. Naylor on Reconstruction.

MR. T. E. NAYLOR, general secretary of the L.S.C., contributes his views on the basis of Reconstruction to the December issue of the Review of Reviews. He argues that the future prosperity of British industry depends upon employers and employed working harmoniously together, with a fair share of the fruits of industry for the workman. "The workman must be encouraged to do his best,' says Mr. Naylor. "It is unreasonable to expect high production if the only result of maximum output is to be maximum profit. Instead of the shilling or two above the minimum that superior workinen are paid, the difference ought to be much more, rising even to 50 or 75 per cent. above the minimum. That would be an incentive to the workman to give of his best." Mr. Naylor believes that "the success of the Industrial Councils will show itself quite early if both sides enter

into the spirit of the scheme. This implies the giving of the best to each other. It also implies confidence in each other's willingness to give. To the workman must come shorter hours and higher wages, with improved and healthier conditions of working, and a voice in the general affairs of the business. To the employer must come a good output and efficient methods of production. It is also desirable that employers should keep in mind the 'human' side of business. A little less 'Capital' and 'Labour' and more of the 'man to man' would be beneficial. The personal interest must be restored. Workmen must no longer be regarded as 'hands'-it is resented. There may be nothing in a name, but its use in this connection is often a true indication of how an employer regards his staff." There is certainly room for greater sympathy of working between all concerned in the printing, as in any other business, and both parties in the contract have been equally at fault in the Now that the scheme for a Whitley Council has so far advanced in our particular industry, it is to be hoped that the broader visions to which Mr. Naylor alludes will spread from the members of the Council to the rank and file, and exercise a wholesome influence upon the whole trade.

Edinburgh Printers and Demobilisation.

THERE is probably trouble brewing in the printing trade of Edinburgh in connection with demobilisation questions and other matters affecting the future position of the men. At a meeting, the other evening, of the Edinburgh Press and Machinemen's Society (Scottish Typographical Association) a circular that has been sent to the members was discussed. The meeting was private. The circular in question contained inter alia the following proposals:—The combined Edinburgh S.T.A. Committees, had agreed strongly to resist any attempt to lower the present wages. All members disabled in the war who were desirous and felt that they could work at the trade to be allowed to do so, and arrangements made as to their earning capacity. They called for a reduction in the working week to 40 hours per week, without any reduction in weekly wages. They should also reconsider at the National Federation Conference the proposal to abolish all overtime. They proposed that eighteen months be the limit any apprentice might receive, in addition to time of apprenticeship served, when restarting in civil life; that apprentices, if under 21 years of age, and having 21 years of apprenticeship served, counting above addition, should be paid 25s per week; and if

over 21 years of age, and same term of apprenticeship, a wage of 30s. per week, and rising each year by sums of 5s. additional to their wages; that all apprentices desirous of working at the trade when discharged from Army must be given an opportunity to do so. and Masters' Associations and Local Unions should arrange their allocation if necessary; that the present scale of wages was totally insufficient for upkeep of apprentices, and they urged that a new rate be agreed upon, starting from a minimum of 10s. per week on commencement of apprenticeship, rising each year as follows: -12s. 6d., 16s., 20s., 26s., 32s., 38s. They also proposed that no new apprentices be started until the journeymen and apprentices at present in the Army return to the trade, and then the whole matter be reconsidered. Probably at a future meeting some modification of these demands may be made.

A British Trade Mark.

THE question of a British trade mark for British goods is again to the fore, and among those who have declared in its favour is Mr. Hughes, Prime Minister for Australia, who sums up the matter thus: -" In my opinion, this mark is absolutely necessary, for the enemy, atter the war, will use many means to conceal the origin of his goods, and will pass them off as of British or Allied manufacture. It was quite a usual practice before the war for firms to import German goods, and then mark these goods with a British firm's name or trade mark, thus suggesting German goods were British. If the British origin mark is adopted even the most ignorant purchasers will be able to know goods produced within the British Empire. Unless such a scheme is adopted it is quite useless for patriotic individuals to declare they will not purchase enemy goods after the war, as without a British origin mark they will be only too easily defrauded." The British Empire League is using its influence to have a British trade mark adopted which will provide a simple, practical and definite means of identification of British manufactures and produce, and show clearly the particular part of the British Empire from which these goods emanate.

The Printers' industrial Council.

THE question of Betterment that has been so much before the printing trade lately has now entered on a practical stage, and the scheme which has been before the masters and mens' federations for some time past has been approved of and recommended for acceptance by the members of the unions con-

cerned. The text of the official scheme, which we give on another page of this issue, is designed to further the interests of both parties, to give the employers freedom from strikes, and an increased output, while the workmen benefit by better wages than formerly, better working conditions, and other advantages. It is to be sincerely hoped that the Joint Industrial Council of the Printing and Allied Trades will bring better days to the trade and that employers and employed will work together as they have never done before.

Stationers' Social Society.

After a period of inactivity during the war, the Stationers' Social Society is now inaugurating plans for the future, in order to bring its members together in friendly inter-The annual general meeting was other day, when there was course. held the other day, when there was a good attendance, with Mr. W. J. Whyte, the esteemed president, in the chair. The officers were all re-elected. Mr. Whyte expressed a wish to relinquish the presidency, but it was the unanimous desire that he should hold office for the ensuing year, and he consented to do so. Mr. D'Oyley Mears, one of the trustees of the society, also intimated a desire to retire from office, but consented to go on for another year. In a discussion that took place, the members expressed a wish to commemorate victory by contributing in way — an operating table for suggested -- to the treatment of our wounded soldiers. It was considered that the sum of £100 could be easily realised, and, in fact, exceeded. A subcommittee (Messrs. F. L. Cayzer, W. E. Green and W. J. Whyte) was appointed, with the co-operation of Messrs. G. H. Wilkinson and Woolacott, to consider the question and report to a subsequent meeting. The society has in operation a rule excluding Germans and Austrians from membership.

BRITISH & COLONIAL PRINTER & STATIONER

Trade Notes.

THE death has occurred of Mr. James Rowley, who had been associated with Liverpool journalism for thirty years.

Police and soldiers raided the Ballina Herald works, the other day, and dismantled the printing machinery, as the result of a leastlet issued for use in the East Mayo election.

THE death has taken place of Mr. Charles Ferdinand Smithers Danks, of Cromehurst, Lancing, proprietor and editor of the Grocers' Journal. He died suddenly in a London express at Worthing Station on Tuesday.

The death is announced from North Carolina, U.S.A., of Dr. Walter Hines Page, formerly American Ambassador in England. Dr. Page, before joining the diplomatic corps of his country was editor of the Forum (New York) from 1890 to 1895; the Atlantic Monthly (Boston) 1896 to 1899; and the World's Work, from 1900 to 1913, when he was sent to represent the United States as Ambassador at the Court of St. James.

INDUSTRIAL RECONSTRUCTION COUNCIL. The first lecture of the second series arranged by the Industrial Reconstruction Council will be held in the Saddlers' Hall, Cheapside, E.C.2., on Wednesday, January 8th. The chair will be taken at 4.30 by the Marquess of Crewe, K.G., and a lecture entitled Industrial Unity will be delivered by the Right Hon. G. H. Roberts, M.P., Minister of Labour. Applications for tickets should be made to the secretary, 2 and 4; Tudor-street, E.C.4.

THE Jaenecke-Ault Co., of Newark, New Jersey, U.S.A., whose advertisement appears on another page of this issue, is now a purely American concern, having been purchased by Mr. Charles H. Ault (who was for thirteen years engaged in the printing ink business in London. The present officers of the company are Charles H. Ault, president and treasurer; Donald P. Ault, vice-president; and Frederick. Weldon, secretary, the same gentlemen being directors of the firm, and all are American citizens. The German name of the firm is still continued because of the reputation the house had for high-class inks, which high quality will be kept up by the new proprietors. We may add that we are in possession of a letter from the U.S. War Trade Board confirming the above statement as to the nonalien character of the Jaenecke-Ault Co.

AT the gala entertainment given by the "Beyond Seas" Association at the Albert Hall on Christmas Day, the Queen, assisted by the Duke of Connaught, Princess Christian, Princess Beatrice, Princess Marie Louise, Prince Albert and Prince George, personally presented a copy of the Royal "Peace" Christmas Card, specially prepared for her Majesty by Messrs. Raphael Tuck and Sons, to every one of the 3,000 Dominion and other officers who had accepted invitations. The

unique Royal distribution, which occupied over half-an-hour, the entertainment being stopped while the Royal party made their round, evoked the greatest enthusiasm among the crowded audience. The Royal "Peace" Card represents the Angel of Peace holding aloft the olive branch, the leaflet inside bearing her Majesiy's happy message for Christmas and the New Year, with the beautiful lines from Longfellow:—

Out of the shadow of night The world moves inte light. It is daybreak everywhere.

We regret to announce the death of Mr. George Worrell, manager of the stationery departments of the Solicitors' Law Stationery Society, Ltd. Mr. Worrell was sixty one years of age.

GLASGOW.—The directors of the Glasgow Newsboys' League and Home, in their report for the year express the view that the work in which they are engaged should be undertaken on national lines if the problem is to be solved and an end put to the wastage of boy life. The report mentions that a piece of land which had been lying idle for 20 years was cultivated largely by the boys, with the result that the year's potato and vegetable supplies were secured at a small cost. The revenue account shows that the receipts amounted to £1,162, leaving a balance on the year's operations of £241.

Freedom for the Press.—Sir George Riddell, who presided at a dinner given by the Newspaper Conference at the Savoy Hotel to the American journalists accompanying President Wilson, referred to statements that had been made that a censorship had been determined upon at the Peace Conference. "I think I am justified in saying," said Sir George Riddell, "that those statements are incorrect, and that we shall start the Peace Conference without any censorship." A luncheon was also given to the American journalists by Lord Northcliffe, who said he had not any tear at all about the Peace Conference, so far as England and the United States were con-

TENDERS WANTED.—The Corporation of Southend-on-Sea invite tenders for the printing of the daily programme of music to be used in connection with the performance of army bands at Southend on Sea during 1919; particulars from Mr. H. J. Worwood, town clerk, Southend on Sea. For printing, stationery, etc., for the use of the Durham County Constabulary; forms of specification from the Headquarters of the Durham County Constabulary, Durham. For printing 800 annual reports and 9,000 recommend forms for 1919, for the Rochdale Infirmary; particulars from the secretary at the Infirmary. By the Hendon Urban District Council for printing and stationery; particulars from Mr. S. Slater Grimley, surveyor to the Council.

BOX-MAKERS' WAGES. In accordance with Regulations made under Section 18 of the Trade Boards Act. 1909, by the Minister of Labour, and dated October 31st, 1918, the

Trade Board established under this Act for the box trade have given notice that they have varied the general minimum time rates of wages, so previously varied by them on January 7th, 1918, for female workers, other than homeworkers, to $5\frac{3}{4}$ d. an hour, for female homeworkers to $5\frac{3}{4}$ d. an hour, and for male workers to 9d. an hour, and have also varied the general minimum time rates for learners correspondingly. The Minister of Labour has made an Order, dated December 11th, 1919, confirming the rates, and they are now in force.

MR. ROBERT H. RUDDOCK, printers' auctioneer and, valuer, 71, Fleet-street, E.C., has sent out a handsome desk diary for 1919. It is a quarto book, well bound, and besides having space for each day's entries, is subdivided into spaces for each hour of each day. A cut index to the months facilitates reference. The diary will be of great service to the busy man, and an ornament to the desk,

ENTENSIVE thefts of books from the premises of a publishing firm in Glasgow by whom they were employed were admitted by four youths at Glasgow Eastern Police Court. Three of the lads were each fined £2 2s., with the alternative of 14 days' imprisonment. The other was ordered to pay £1 Is., or suffer 14 days' detention. It was stated that about 1,000 books had been recovered, as well as a number of writing tablets, stationery, etc. The thefts had been going on for several months, and the books were all newly published volumes, the selling price being from 5s. to 7s. 6d.

NEW

Appointment for Mr. F. S. Roberts.

Mr. F. S. Roberts, Labour Secretary to the Federation of Master Printers, and Secretary of the Linotype Users' Association, has accepted an appointment with Messrs. E. Hulton and Co., Ltd., to manage the linotype and composing department at Manchester. Before he came to the Federation 14 months ago, Mr. Roberts was deputy with Messrs. Hulton's, so that he practically resumes his old place, only with complete charge. He spent 19 years with the progressive Manchester firm, having joined them after serving his apprenticeship. In his new position, Mr. Roberts will have to see to the composition of Messrs. Hulton's many widely-circulated publications. Some 60 linotypes deal with the mass of matter to be set.

During the 14 months he has served the Federation of Master Printers, Mr. Roberts has won golden opinions. The period has been quite unique in the history of printing in view of the wage memorials which have been flowing in so constantly that the movement became known as "the vicious circle." In dealing with these, Mr. Roberts attended nearly 200 conferences during the 14 months

and all were settled so amicably that not a solitary man was displaced during the whole time. Indeed, so agreeable was the settlement reached in one particular case that the employers and the unions sent letters thanking Mr. Roberts for his services couched in equally warm language.

The attendances at the conferences all over the country involved a great amount of travelling and it is on record that in one week Mr. Roberts travelled "from London to Manchester, from Manchester to Bristol, from Bristol to Cardiff, from Cardiff to London, back from London to Cardiff, from Cardiff to Leeds, from Leeds to Manchester, from Manchester to Penrith, and from Penrith to Barrow-in-Furness." In each town impor-In each town impertant conferences were held on the question of wages and conditions, and to cover the ground much of the travelling had to be done at night, four hours being spent on one night journey in sleeping on the floor of a corridor train, as no better accommodation was available owing to the crowded state of the train.

Mr. Roberts takes up his new duties early in the New Year, and he leaves 24, Holborn much to the regret of all his colleagues and those whom he served, including the officials of the unions with whom he came in such frequent contact. At the same time they congratulate him on his new and important appointment.

Captain Norman Bolton.

Captain Norman Bolton, son of Mr. H. C. Bolton, chairman of the Institute of Printing and Kindred Trades, was home for Christmas after remarkable war service covering the whole period of the war. He was a member of the H.A.C. when hostilities commenced, and was at once mobilised. In the following October he obtained a commission in the R.F.A., but his eagerness to get out to the Front led to his transference to the Flying Corps. In June, 1915, following a remarkably short period of training, he obtained his pilot's certificate, and went to France. From that time until June, 1917, when he was wounded, he was flying continually on the Western Front. Recovering from his injuries, he proceeded to Egypt, and went right through the Palestine campaign, finishing up that great victory with General Allenby. He was then requisitioned for the Balkans, but on arrival at Salonika the war was over, and he returned home. Captain Bolton was 20 years of age when he went into the war. For his splendid services he received many awards, including the Order of Leopold, the Croix de Guerre, and the D.F.C. After four and a half years of unexampled experience, he was ready to enjoy his first peace Christmas, and Mr. and Mrs. Bolton did their best for him in this respect. He is the first flying officer to be demobilised, and he has already resumed his place in the conduct of the business of Messrs. Morris and Bolton.

BRITISH & COLONIAL PRINTER & STATIONER

Printers' Industrial Council.

Text of the Official Scheme.

The following is the text of the scheme for the establishment of a Joint Industrial Council of the Printing and Allied Trades of the United Kingdom which has been approved by representatives of both Federations:—

I. The Industrial Council is an Association of (1) employers who are members of the Federation of Master Printers and Allied Trades of the United Kingdom, and who employ members of a federated trade union, and (2) trade unions affiliated to the Printing and Kindred Trades Federation of the United Kingdom. No members of any organisation not in harmony with the objects of both Federations shall be eligible for membership of the trade council.

Objects.

2. To endeavour, in order to carry out the work of the Industrial Council, to secure complete organisation of employers and em-

ployees throughout the trade.

3. To promote good relationship between employers and employed; to secure co-operation and the recognition of mutual interests; to encourage direct contact between employers and workers; to devise ways and means of settling any differences that may arise; to resist the action of those who would injure the fair standard of prices and wages by disposing of their goods or labour at less than the standard mutually agreed upon; and to do all things possible for the betterment of the trade and the improvement of its conditions.

4. To establish uniform working hours and

conditions.

5. To assist in the maintenance of such selling prices as will afford reasonable remuneration to both employers and em-

ployees.

6. To establish means of ensuring to the workpeople the greatest possible security of earnings and employment, without restriction upon change of employer; and to endeavour to minimise unemployment and casual labour.

7. To secure recognition by all persons in the trade of agreements relating to wages and

working conditions

8. To provide means for securing to the workpeople a greater share in and responsibility for the determination and observance of the conditions of health and comfort under

which their work is carried on.

g. To take in hand the question of apprenticeship conditions; the adoption of suitable methods of selection for apprenticeship; the technical training for apprentices, learners, and journeymen throughout the industry; the removal of blind-alley occupations; the improvement of processes, designs and standards of workmanship; to seek adequate representation on the control and

management of all technical institutes; to consider and report upon all improvements of processes, machinery, and organisation, and appropriate questions relating to management and the examination of industrial experiments, with special reference to cooperation in carrying new ideas into effect, and full consideration of the workpeople's point of view in relation thereto. The better ntilisation of the practical knowledge and experience of the workpeople, with provision of facilities for the full consideration and utilisation of acceptable inventions and improvements designed by employers or workpeople, and for the adequate safeguarding of the rights of the designers of such improvements.

10. To consider, report, advise, and make representation upon any proposed legislation affecting the trade; to combine to secure full and proper observance of the House of Commons fair wage resolution by public bodies.

mons fair wage resolution by public bodies.

11. To insist upon clean healthy workshops; to encourage full and proper ventilation, clean surroundings, and decent habits; to promote the systematic observation of the health of workpeople generally, and especially of young persons of both sexes until they reach the age of eighteen, in continuation of the methods in use in public elementary schools, and to combat the scourge of tuberculosis. To this end the National Executive shall inquire and report upon the advisability of the creation of sanatoria, etc., controlled by the Industrial Council or otherwise; in this connection to secure the services of medical inspectors to the end that men and women suffering from tuberculosis shall be ordered to cease work immediately and to receive treatment at the institutions referred to, and to provide that some maintenance grant be provided to them during their stay in the

12. To encourage friendly intercourse between all engaged in the industry outside of working hours by means of sports and social clubs and by other means.

13. To encourage the establishment of welfare departments and the provision of meal-

rooms for workpeople.

14. To promote the recognition of merit and

ability among workpeople.

14A. To consider and, if necessary, deal with any other matters of general interest to the trade.

Executive Body.

15. The National Executive shall consist of equal numbers of representatives of employers and employees, each Federation electing its own representatives. None but members of the Industrial Council shall be elected on the National Executive or on Joint Committee set up for carrying on or forwarding the interests of the Industrial Council.

16. The officers shall be elected for a term of one year. A chairman and vice-chairman shall be elected from the members of the National Executive. When the chairman is a member of a trades union, the vice-chairman shall be an employer, and vice-versa, the chair and vice-chair passing annually from a representative of the employers to a representative

of the trade unions alternately. The chairman (or in his absence the vice chairman) shall preside at all meetings, and shall have a vote, but not a casting vote.

There shall be for Scotland a branch of the Industrial Council which shall deal with all matters affecting the industry in Scotland, subject always to the National Council.

17. The National Executive shall have full power to consider all matters connected with the industry. It shall have power to appoint sub-committees for any purpose—such sub-committees to consist of equal numbers of employers and representatives of trade unions. Each committee shall appoint its own chairman and vice chairman, except in the case of the Finance Committee, over which the chairman of the National Executive shall preside. The sub-committees have power to consult experts. The minutes of all sub-committees shall be submitted to the National Executive for confirmation. The National Executive shall also have power to select and maintain its own secretaries, clerical staff, and office, and may from time to time fix the remuneration of its officers and this, and any other expenditure, shall be borne equally by the two Federations.

District Committees.

18. District Committees shall be established in every town or group of towns, and shall consist of an equal number of employers and employees and be linked up with the National Executive.

Works Advisory Committees.

19. Works Advisory Committees may be created in every office where possible, representative of management and workpeople. Where a recommendation is made by either side of a Works Advisory Committee and is not accepted by the other side, the matter shall be referred to the District Committee.

National Assembly.

20. There shall be an annual convention, consisting of the National Executive with delegates from every district committee, in equal numbers of employers and employees, each side electing its own representatives. The meetings of the National Assembly shall be open to all concerned in the trade as visitors. The function of the Assembly shall be limited to the discussion of matters of general principle affecting the printing and allied trades-industrial, economic, legislative, and hygienic.

21. Each district committee shall be responsible for expenses of its delegates to the

National Assembly.

22. Note.—It is recommended that the meetings of the two federations should be held in the same town and immediately prior to the National Assembly.

District Conferences.

23. Each district committee shall convene an annual conference at least three months preceding the National Assembly, at which representatives of employers and employees from all works shall be invited to attend.

The conference shall discuss motions for submission to the National Assembly. These meetings shall be open to members of the trade as visitors.

Voting.

24. Voting on all questions in the National Assembly, National Executive and its subcommittees, and in the district committees and conferences, shall be by show of hands, and a majority on both sides irrespective of the numbers present shall be required to carry any resolution or motion.

Disputes.

25. No strike, lock-out, or other aggressive or coercive action shall take place in any locality until the matter in question has been placed before and considered by the district committee and, failing a settlement being arrived at, has been remitted to the National Executive, which shall meet to consider the question within six days.

Withdrawal from Membership.

26. Any member being either an employer or a trade union may withdraw from the Industrial Council by giving six months' notice in writing to the National Executive, but such notice shall not be given so as to determine the membership within one year of joining.

Dissolution.

27. The Industrial Council may be dissolved by either the Federation of Master Printers or the Printing and Kindred Trades Federation giving six months' notice in writing of their intention to withdraw; but such notice shall not become operative until twelve months have elapsed from the first meeting of the National Assembly.

AGREED PRINCIPLES. Production.

28. That the employers shall have full advantage of the individual efforts and goodwill of all their employees, to assist in economical production and generally in forwarding the interests of the respective houses.

29. That it is desirable to encourage scientific adaptation of management, workers, and machines to the work, and that the functions of the district committees and works advisory committees should include the application of this principle to individual

Cost Finding.

30. That all employers should adopt and use for costing and estimating a uniform costing system approved by the National Executive or be guided by any schedule of hourly cost rates issued for their district and approved by the National Executive.

THE proprietors of Aircraft announce that, commencing with the new year, the journal is to be published weekly instead of fortnightly as heretofore.

A very poor sort of a printer may be wealthy if he has the money.

BRITISH & COLONIAL PRINTER & STATIONER

Betterment.

SIR,—The scheme for an Industrial Council for the printing trade, approved by a majority of the employers' representatives on the Betterment Committee, has now been published and submitted to the trade by the Federation Council, and it will be noticed that only members of the Masters' Federation who employ federated trade unionists are to be represented on the employers' side of the National Executive and District Committees, and that no non-union men or workers who have joined the Printing Trades Alliance are to be represented on the workers' side. This Alliance was formed by non-union workers and registered as a trade union partly for the purpose of such representation, and though its members are not in agreement with some of the practices of the older unions it is manifestly unfair that they should be excluded.

My committee appeals, therefore, to all non-union employers and workers to rally to the support of the Alliance, which is fighting the battle of freedom and striving for proper recognition of their rights. It seems absolutely necessary that non-union men and women should organise if they are to have any voice in trade matters, and surely employers will see that for this purpose it is in their own interests, and also of their employees, that they should join a reasonable trade union such as the Printing Trades Alliance, which is managed by a committee of employers and employed.

Whether or not a place is ultimately found for Alliance members at the conference table of the Joint Industrial Council, the Alliance if made fully representative will, at any rate, obtain proper recognition in the trade, maintain the position of the free element amongst workers, and settle the difficulties of its members through its conciliation committee.

I shall be pleased to send a copy of the rules and forms of application for membership to any of your readers who are interested.

Yours, etc.,
WALTER COURT, Secretary.
Printing Trades Alliance.

39, Shoe-lane, E.C.4

Standardisation.

SIR,—Now that serious reforms and rumours of standardising in the paper trade are filling the air, there is one matter which I consider of considerable moment. I should like to see an agreement amongst the envelope makers brought about speedily to entirely abolish the loose-folded wind-filled envelope for ever from our midst. Think for one moment the space taking and packing costs which this incurs, the extra care to prevent crushing and damage to the goods, and I think you will

agree that it is quite time the change was made.

If two-thirds of the fancy and needless knives were abolished and the sizes and shapes properly standardised, it would further simplify and benefit the trade.

Yours, etc.,

C. OLDERSHAW.

December 25th, 1918.

Personal.

CONGRATULATIONS to Sir G. Roland Blades, who is now Member of Parliament for the Epsom Division of Surrey. As the Coalition Unionist candidate he received 13,536 votes, or a majority of 8,760 over his Labour opponent.

Mr. C. W. Bowerman (Labour) retained his representation of Deptford with a majority of over 4,000 in a three-cornered contest.

ALL interested in the welfare of the printing trade were glad to see Mr. G. H. Roberts again returned for Norwich with a majority of 19,786 over the Independent Labour candidate. He is expected to continue his important work as Minister of Labour.

His namesake, Mr. F. O. Roberts, also representing the Typographical Association, scored a notable victory for Labour at West Bromwich, against Lieut.-Col. Viscount Lewisham, the Coalition Unionist candidate.

The two master printers who challenged the Coalition at Leyton failed, though Mr. E. E. Alexander (Independent Unionist) in East Leyton came within 200 of the Coalition Liberal. Mr. A. E. Newbould stood as a Labour candidate at West Leyton, but the majority against him was 5,668.

MR. T. E. NAYLOR (Labour), general secretary of the L.S.C., was beaten in a straight fight in South-East Southwark, and Mr. Geo. A. Isaacs (Labour), general secretary of the N. S. O. P. and A., failed in a foursome in North Southwark. Both these gentlemen, however, polled over 2,000 votes each, Mr. Naylor getting 2,718.

MR. G. NELSON, another representative of the printing trade, who stood in the Labour interest in the West Derby Division of Liverpool, had Sir F. E. Smith and a majority of 6,004 against him.

MR. H. THOMSON CLARK, who since 1907 has been the London manager of the Glasgow Herald. Evening Times, Weekly Herald and the Bulletin, has been appointed general manager of those papers at Glasgow in succession to Mr. H. D. Robertson, who has been elected a director. Mr. Clark will be succeeded at

Digitized by Google

London by Mr. George Scott, at present advertisement manager in Glasgow. The changes will take place at the beginning of the year.

MR. HARRY JONES, a member of the editorial staff of the Daily Chronicle since 1904, has resigned his position as deputy-editor and Parliamentary correspondent of that journal.

SECOND LIEUTENANT IVOR WHITTINGHAM, Bedfordshire Regiment, who prior to joining the army in September, 1914, was on the commercial staff of the Railway Gazette, has been awarded the Military Cross for bravery and leadership displayed in the final battle on the Western Front

MR. E BARNETT, the secretary of the Bath Branch of the Typographical Association, has been appointed a Justice of the Peace for the City of Bath.

MR. HORATIO BOTTOMLEY, editor of John Bull, has been returned as member for South Hackney by a majority of 8,315.

MR. J. J. KELIHER, President of the L.M.P.A., has consented to give a flute solo at the concert which Mr W. H. Burchell is arranging for the meeting of the Central Districts Branch at Anderton's Hotel on January 22nd.

PRIVATE GEORGE MOORE, R.A.M.C., formerly employed in the case-room of the Dundee Advertiser has been awarded the Military Medal for gallantry at the front.

SERGEANT W. A. FRENCH, of the Scout Section of the 4th Gordons who was before the war on the reporting staff of the Aberdeen Daily Journal, has been awarded the Medaille Militaire.

Printers' Wages.

The Labour Gazette notifies the following advances in wages in the printing and allied.

trades during November:

London.—Warehousemen and women, etc., employed by wholesale newsagents: Full time indoor hands, drivers (single and double), full time war-ticket hands, and women in warehouses; increase of tos per week. tors (book, jobbing and newspaper), readers, printers' assistants, lithographic printers; increase of tos. per week. Minimum rate after change for jobbing compositors, lithographic printers, 66s. 6d.

Certain towns in Yorkshire —Compositors, machinemen, and linotype and monotype operators (book, jobbing and newspaper); increase of 7s. 6d. per week. Minimum rate after change for jobbing compositors; Scarborougn, 60s.; Todmorden and Hebden Bridge, 60s. 6d.; Mexborough, 63s. 6d.; other

towns, 625. 6d.

Bradford, Cleckheaton, Otley, Pudsey, and Stanningley District.—Compositors, machinemen, and linotype and monotype operators (book, jobbing and newspaper); increase of 6s. per week. Minimum rates after change at Bradford: jobbing and evening news compositors, bis. plus a war bonus of 5s.; morning news compositors, 69s. plus a war bonus of 5s.

Sheffield and Rotherham. - Compositors, machinemen, and linotype and monotype operators (book, jobbing and newspaper); increase of 6s per week. Minimum rate after

change for jobbing compositors, 66s.

Cambridge, Colchester, Ipswich, Lynn, Norwich and other towns in East Anglia. - Compositors, machinemen, linotype and monotype operations (book, jobbing and newspaper); increase of ios. per week in the minimum time rates, and an equivalent increase to piece-workers. Minimum rate after change for jobbing composi-tors: Cambridge, 58s. 9d.; other towns. 58s. Cutters, head warehousemen, packers, etc.; increase of 2s. 6d. per week in the minimum rate (40s. 6d. to 43s.). Assistants to the above and machine-room labourers; increase of is. 6d. per week in the minimum rate (33s. 6d. to 35s.). Women and girls, including letterpress and lithographic machine layers on, binding 'stab hands, etc; increase of 5 per cent. to piece-workers.

Grimsby.—Conpositors, machinemen, linotype and monotype operators (book, jobbing and weekly newspapers); increase of 7s. 6d> per week. Minimum rate after change for

compositors, 62s. 6d.

Certain towns in South-Eastern and Home Counties. - Compositors, machinemen and linotype and monotype operators (book, jobbing and newspaper); increase of 7s. 6d. to 10s. per week in minimum rates to a flat minimum of 58s. per week for compositors and machinemen, and to a minimum of 58s. per week plus 12½ per cent. for linotype and monotype operators; and an equivalent increase granted to piece-workers

Newton Abbot and Totnes. Compositors, machinemen and linotype and monotype operators; increase of 5s. per week. Minimum rate after change for jobbing composi-

tors, 43s.

Certain towns in North Wales with Aberystwith.—Compositors, machinemen and linotype and monotype operators (book, jobbing and weekly newspaper); increase of 2s. 6d. per week. Minimum rate after change for jobbing compositors, 45s.

BRITISH & COLONIAL PRINTER & STATIONER

MESSRS. ANDRE, SLEIGH AND ALGLO, LTD., process engravers, of Milford-lane, Strand, are changing the name of the firm to The Sun Engraving Co., Ltd. No change whatever has been made in the proprietorship or management of the business. In order to cope with their increasing turnover, and to add to the general efficiency of their business, they have recently purchased the modern factory at Watford belonging to the Menpes Printing and Engraving Co., Ltd., and they are to a large extent concentrating their work there. Urgent orders will be dealt with at Milford House as usual. At Watford the works have now been equipped with every modern appliance necessary for producing process blocks in colour, half-tone, and line. The business of the Menpes Printing and Engraving Co., Ltd., has been acquired by Mr. F. T. Staley, for many years managing director of that firm, who has made an alliance with the Westminster Press (Gerrards, Ltd.). His trading style will be the Menpes Printing and Engraving Co., and his offices are as formerly at Craven House, Kingsway, London, WC..2.

Women's Wages in Printing Trade.

An Agreement between the London Master Printers' Association and the N.S.O.P. and A. as to Standard Rates for Machine Work.

After negotiations, discussions and conferences between the London Master Printers Association and the National Society of Operative Printers and Assistants, which at one time reached a deadlock, an agreement has been arrived at as to standard rates for female members of the society engaged on flat-bed printing machines, and also as to the rates for such females when doing all or part of men's work in connection with letterpress machines over double-demy size. The following is the text of the agreement:—

ing is the text of the agreement:—
Agreement between the London Master
Printers' Association and the National
Society of Operative Printers and Assistants as to women's wages.

I. Female feeders on all types of flat-bed printing machines, whether platen, litho or letterpress or other class of machine not included in the schedule hereto, shall receive, according to age, the rates set out in the following scale (—

Commencing work at the trade at the

age of							
16 and under 17.	17 and under 18.	18 and under 19.	nuder 20.	20 years and over.			
1st 6 months, 18/0 2nd 20/0 8rd 22/0 4th 28/n 6th 28/n 8th 80/0 8th 80/0 8th 82/6 9th 83/0	20/0 22/6 25/0 27/6 30/9 34/8 85/0 37/6	23/0 28/0 28/0 31/9 34/0 37/0	2670 29/0 32/0 36/0	1st 3 months, 28/0 2nd			
At 2! years 40/0	40/0	40/0	40/0	40/0			

2. The above increases to be given on the first pay day in either January or July after at least six months' service.

3. Members presenting themselves for employment must, if 16 and under 17, be able to furnish evidence that they have been employed as feeders for a period of at least six months; for ages above 17 they are entitled to the rate specified. If no other evidence is available, the period of membership in the society shall be proof of service in the trade.

4. Overtime shall be paid at time and a

quarter.

5. Any feeders at present receiving above the rates specified herein shall not have their wages reduced.

6. Any member having to work during the dinner hour, supper hour, or breakfast time, shall charge 4d. for each occasion, even if the meal-time be allowed before or after the usual time; but, if no time is allowed, the same shall be considered overtime, and charged for at the rate of overtime in addition to the 4d.

7. Sunday and Christmas Day to be paid at double the ordinary time, with a minimum of six hours. Good Friday and Bank Holidays to be paid at time and a half of ordinary time, with same minimum. Good Friday may be exempt by mutual arrangement in houses regularly working on that day.

8. No female member shall be engaged

casually.

9. Female feeders of any age upon the machines specified in the schedule hereto, being machines covered by the agreement of 1915, and on which male feeders were exclusively employed, shall receive the rates set opposite the machines in the said schedule, and in the case of overtime the rate now or at any time current in the cases of male feeders.

For specially high-class work the rates are to be mutually agreed upon in each house.

no. The rates in the schedule shall be paid in all cases where a female feeder is performing the usual work of an assistant, i.e., feeding, washing up, lifting paper on to feedboard, and taking printed paper down. In cases where other labour is engaged for part of this work the following deductions from the rates shall be made:—

(a) Where feeders are doing no work other than the actual feeding, a reduction of 8s. per week.

(b) Where, in addition to feeding, the feeder is lifting paper on to the board or lifting paper down, a reduction of 4s. per week.

(c) Where, in addition to feeding, the feeder washes up, a reduction of 4s. per week.

11. The agreement to come into force on the pay day in the week ending January 11th,

12. The duration and termination of this agreement shall be governed by the conditions as to duration and termination of the agreement of 1915 and the later general agreements with the London Branch of the Printing and Kindred Trades Federation.

THE SCHEDULE REFERRED TO IN THE ABOVE AGREEMENT.

	8.	d.
Feeders on Wharfedale and similar machines over double demy Feeders on perfecting machines over double demy and up to quad	57	6

The agreement is signed on behalf of the London Master Printers' Association by Mr. J. J. Keliher, president, and Mr. Reginald J. Lake, secretary; and on behalf of the National Society of Operative Printers and Assistants by Mr. George Isaacs, general secretary, and Mr. John B. Sullivan, London branch secretary.

Managers and Overseers

Start the Year with a Concert. .

The members of the Printers' Managers and Overseers Association, Parent Centre, began their monthly meetings of the New Year with a concert at the "Old Bell," on Tuesday night. A large gathering assembled under the presi-

dency of Mr. E. H. Berryman and the evening was well spent.

There was a little business to transact before the musical programme was reached. The minutes, which were presented by the General Secretary (Mr. G. Phillips) were adopted.

The membership of the Parent Association continues to grow steadily and the President had the gratification of submitting the following names on the recommendation of the Council:—Mr. B. Burgess (Southampton Times Co, Ltd. — general overseer), proposed and seconded by Messis. J. E. Barnes and G. Phillips; Mr. J. W. T. Burrows (Messis. Waterlow and Sons, Ltd., Dunstable-letterpress machine), proposed and seconded by Messrs. J. C. Pugh and E. H. Hines; Mr. W. G. Thompson (Messrs. Waterlow and Sons, Ltd., Dunstable-composing), proposed and seconded by Messrs. J. C. Pugh and E. H. Hines; Mr. G. H. Lake (Messrs. Andre, Sleigh and Anglo, Bushey-composing), proposed by Messrs. D. Greenhill and J. Hutton; Mr. L. B. T. Day (Messrs. Metchim and Sons—general manager), proposed and seconded by Messrs. H. R. Grigson and H. P. Wells; Mr. T. W. Phillips Chromo Works, Ltd.-overseer, litho), proposed and seconded by Messrs. G. Lloyd and G. Quncan.

On the motion of Mr. Blackwell, seconded by Mr. Cooper, these gentlemen were duly elected, Mr. T. W. Phillips, who was present, being welcomed by the President. Mr. Pugh took the apportunity of suggest-

Mr. Pugh took the apportunity of suggesting that the Bohemian concerts should be resumed and that the Council should try to arrange one prior to Easter if possible.

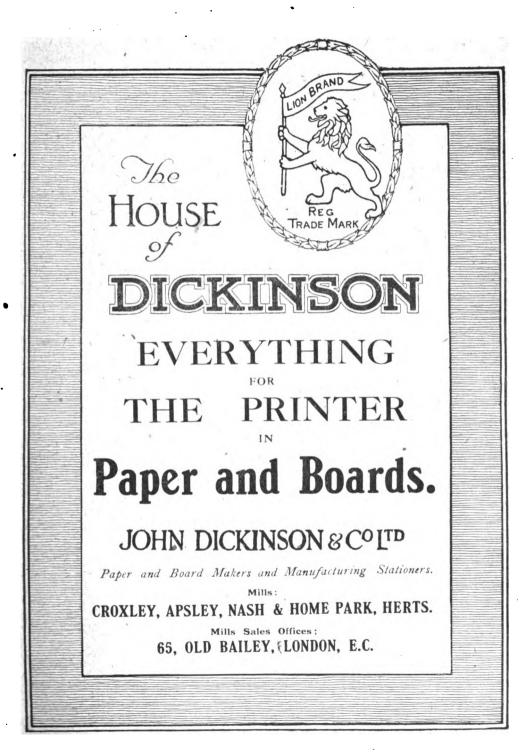

Mr. J. A. B. Reed agreed with the proposal, which met with the assent of the meeting.

The programme for the concert was of a high order, and the members enjoyed the variedentertainment to the full: Miss Florence Martyne, who proved herself an able accompanist, opened the proceedings with an acceptable solo, after which came a variety of excellent turns. Miss Dorothy Lyndhurst and Miss Lily Davies were very attractive in their different styles. Mr. Sydney Wilson rendered several dainty bailads in pleasing fashion. Humour of an infectious sort was contributed by Mr. Arthur French, who sang four songs altogether. The members were glad to welcome once more Mr. Harry Hawksbee, who not only sang by himselt, but joined Miss Lily Davies in a costume recital of the quarrel scene from "The School for Scandal." This fine piece of Sheridan was admirably acted, and it is a tribute to the artistes that they were able to rise to so high a plane of mimicry with such success.

At the conclusion of the concert the President extended the season's greetings to those present, and the Vice-President (Mr. A. E. Jarvis) moved a vote of thanks to the artistes and the Lecture and Entertainment Committee for the really enjoyable programme they had provided, a resolution which was carried unanimously.

EVERYTHING comes to those printers who refuse to wait.

The "Individual Printer."

Some Pertinent Views on Reconstruction and Production, and the Work of Printers and others during the War Period.

By WM. SOWDEN.

XXVIII.

The Text.

I take what I may call my text from the statement of his policy issued by Mr. Lloyd George some ten days or so prior to the polling day at the General Election. The account is that of the Daily Telegraph:—
"... And when the whole nation sees that wealth lies in production, that production can be enormously increased, with higher wages and shorter hours, and when the classes feel confidence in each other, and trust each other, there will be abundance to requite the toil and to gladden the hearts of all. We can change the whole face of existence.

"I will work hard for any scheme of profitsharing which provides the workman with a real inducement to increase production. There lies our national salvation. We want better and ever better machinery, not only to ease the burden of the workman, but to shorten his hours and to increase his wages. That is the way to such prosperity as we have never known. This is the new spirit I want to see breathed into industry—that increased production has not for its end the enrichment of employers, but the enrichment of all classes of the British people."

Buttering Him Up.

The burden of much that has been written and spoken the last few months—and more particularly the last few weeks—is the need for greater production. The workman is appealed to to do his share. Generally, as in Mr. Lloyd George's case, he is flattered and cajoled, is congratulated upon the way he has "come up to the scratch" during the war and urged to continue his efforts.

Time to Drop the Farce.

Well, the war is over and we are facing the reconstruction period in dead earnest. I ask in all seriousness, therefore, is there any longer any purpose—assuming that there ever was any—in keeping up the farce of pretending that the workers of this country have worked well during the war. For the plain, unvarnished fact is that never in their history have British working men produced less in a given time than they have in the last few

While our contributor's articles will be of an interesting character we do not necessarily identify ourselves with any of his expressed opinions.

Contributions, correspondence, suggestions and eriticism are invited upon all matters connected with the industry, with special reference to the problems of an office managed by or worked by the owner.

years. Not only is this unquestionable, but it is also true that each year they have done less than they did the year before. They have, to put it bluntly, almost to a man presumed upon the fact that they could not be "sacked" because their employers could not find men to take their places.

A Bit of a Shock.

It is the fashion in these days to beslaver the workers with all sorts of fulsome flattery, and it may well come as a shock to them to be told that this is not deserved. We are told to look to the workers as the hope of the future; in many quarters the Labour Party is held up as the one body possessing any real ideals or offering any substantial promise of better things in the days that are ahead of us; the workers themselves are daily becoming more convinced that they are the very salt of the earth—and a salt, too, which is in no danger of losing its savour. They have come to look upon themselves as sacrosanct persons who must not be criticised.

Value for Money.

Now, I believe in my previous writings for the British and Colonial Printer and Stationer I have shown that my sympathies are very strongly on the side of the bottom dog. I am no believer in nigger driving. But at the same time I am no believer in boss baiting. Each side has its rights, and the employer has as much claim to have value for his money as the worker has to have money for his value. I cannot be dismissed, therefore, as a professional carper when I bring a definite charge that during the war the working classes of this country have done less rather than more than their duty.

Munition Shirkers.

The criticism applies to every trade. I have heard engineers, tailors, shoemakers, builders and many other employers of workmen tell the very same tale. Nor, if Mr. Lloyd George will come down to detail, will he find that munition workers are exempt from blame. I have not been quite without knowledge of the inside of munition works—not, I may admit, of shell factories, by the way—and I have seen time cards which have been a disgrace to the workers whose names were on them. I have seen, too, articles made for private use out of Government material, in Government time, which represented hours, and in some cases days of labour. I have known for certain that overtime has been deliberately manufactured. I have known cases where,

following a holiday, a very large proportion of the staff stayed away for the following two or three days, deliberately calculating that by doing so they would necessitate overtime on Saturday afternoon and Sunday, for which double pay was received. And I ask what we are to expect in times of peace if, with their brothers facing death and waiting for the materials these men were paid high wages to produce, they could act in so selfish a fashion.

In the Printing Trade.

The charge can be proved in every trade, and in every trade the employer knows it to be true. In no industry, I should say, can the truth of the charge be more clearly demon-strated than in the printing trade. There is a strated than in the printing trade. great deal of repetition work in printingjobs that come in at more or less lengthy intervals, which are substantially-in many cases actually - the same. Well, here is a test for printers. Get out your cost sheets on these repetition jobs for the years from 1913 to 1918, and compare them. I venture to say that in hardly a single case will you fail to find that of which I complain. You will often find that the job has been handed to the same compositor, the same machine hand, in the later cases as in the earlier, and where this is so you will have an even surer test.

The Future in the Light of the Past.

Well, we are facing the future with this as the record of our immediate past. There has been no fear of the sack, and less work has been done as a deliberate consequence. The state of things once men are thoroughly distributed over industries after release from the army is, we are told, to be such that never again need men fear unemployment. It is a condition that must commend itself to all - in the abstract. But, in the concrete, where are we? Production may have increased, but there have been more workers, or there has been improved machinery where such a result has been shown. Individual work has never been poorer in our national history. Life in thearmy does not tend to encourage steady application. There is danger, there is discomfort, there is everything undesirable, an you will. watch the men dodge out of sight when they spy in the offing one of those who hand out jobs to do. So there is not much reason to suppose that the men who come back will be any better than the men we have. And in the light of these considerations, where do we stand, and what is the real outlook for the days that are before us?

MESSRS. MACAIRE, MOULD AND CO., LTD., printers and account book makers, 17, Crouch Hill, N.4., have, with the New Year, sent a useful table diary for 1919 to their friends. Each tear-off page, in addition to the diary for the current month conveniently printed in one corner, is divided into six days, with ample space for notes which cannot be overlooked.

Reconstruction.

Field for the Development of Printing Machinery, etc.

The Ministry of Reconstruction has issued a pamphlet giving a deal of information as to what has been done to utilise factories and workshops set up originally for war purposes, and how to utilise the labour employed in them for the purposes of peace.

A committee, with Mr. H. D. McLaren, M.P., as chairman, has not yet fully reported, but has agreed that some of the information acquired in the course of its investigations should be made public. Fifteen sub-committees have dealt with machinery, etc.

In regard to printing and printers' general machinery, information so far obtained tends to show that there is a considerable field for the development of British industry in this The branch committee found that trade. their section of the engineering trades was much handicapped by the lack of any organisation representing employers. So they drew the attention of firms engaged in the industry to this need, with the result that steps have been taken to form a representative association. A useful suggestion made by the branch committée is that manufacturers should meet periodically the users of their machines, with a view to improving the designs. This suggestion is apparently being acted upon, and it can hardly be doubted that nearly all trades would benefit sensibly by the adoption of this practice.

Edinburgh Typographia.

An Address on Betterment.

Discussing the betterment of the printing trade in an address to the Edinburgh Typo-graphia, Mr. James S. Waterston said the whole trend of public opinion in industry had so tremendously altered that they could not go too far in the direction of bringing the employers and employed together, and of getting them on the right side of each other. It was only by such methods as were suggested in the Whitley Report that they could get nearer each other and see the point of view of Mr. Waterston referred to the each other. scheme prepared for the printing trades, which provided that every workman must be a member of his Union and every employer a member of his Association. There was to be absolute equality of treatment as far as administration was concerned, and the scheme also provided means for encouraging production and preventing disputes from becoming acute.

Many a man leads a dog's life because he growls so much.

BRITISH & COLONIAL

Personal.

MR. T. J. MOUNTAIN presided on Tuesday night at the annual meeting of the South-West London Master Printers Association, held at the Albert Tavern, Victoria-street, S.W.

MR. J. J. KELIHER, president of the L.M.P.A., and a large company assembled to dinner, which preceded the business meeting. We will give a full report next week of the interesting and instructive proceedings.

ONE of the largest gatherings under the auspices of the I.P.K.T. was seen at St. Bride's, on December 18th, when Mr. A. Langley, one of the most active spirits in the printing trade, provided a very excellent concert.

MR. J. HYSLOP BELL, who was president of the Newspaper Owners Association in 1884, has resigned the Coronorship for the Stockton Ward of the County of Durham on account of ill-health.

COMPANY SERGEANT MAJOR G. W. SCURRAH, who previous to enlistment was in partner-ship with his father as a printer in Bradford, has been awarded the Medaille Militaire of France. He had previously been awarded the British D C.M. and the Military Medal with Bar.

THE REV. WILLIAM TEMPLE, the protagonist of the Life and Liberty movement, has resigned the editorship of the Challenge. He has now been a head master, a rector, and an editor—all before he has reached his 37th birthday.

SIR HALL CAINE, the father of the Deputy Controller of Paper, is suggested as Governor of the Isle of Man.

MAJOR H. J. GILLESPIE, D.S.O., will open a conference on "Reconstruction and Restoration" next Tuesday evening in the Hall of the Institute of Journalists. Sir Henry Urwick will preside.

SIR JOHNSTON FORBES-ROBERTSON has consented to appear at the great Victory Matinée which Mr. Oswald Stoll is giving at the London Coliseum on Sunday. February 2nd, in aid of the dependents of British sailor and soldier journalists.

MR. ROBERT E. MURCHIE was presented by his colleagues in the literary departments of the Glasgow Herald and associated newspapers with a gold watch on the occasion of his leaving Glasgow to become proprietor of the Carrick Herald and conduct the printing business associated with it in Girvan.

MR. MURCHIE, who is a native of Ardrossan, has been twelve years on the reporting staff of the Glasgow Herald, and prior to that he had experience on newspapers in Aberdeen, Greenock, and elsewhere throughout Scotland.

SIR ROBERT BRUCE, editor of the Glasgow Herald, made the presentation.

MR.-HENRY FORD'S new weekly, known as the Dearborn Independent, Henry Ford's International Weekly, has made its appearance. The paper carries no advertisements, and Mr. Ford says he will spend £2,000,000 to make it a success.

MR. GUY A. ALDRIDGE, the conscientious objector, and editor of the Spur, has been released from prison owing to failing health. He maintained a six-day hunger strike.

MR. C. W. BOWERMAN, M.P., will be one of the British labour delegates to the International Labour and Socialist Conference tobe held in Switzerland on January 13th.

MR. RAMSAY MACDONALD says the time has now come for the Socialistic and Labour movement to have daily papers all over the country. He hopes before many weeks are over the first daily paper will again appear in London.

FORMERLY a Hull newsboy, Walter Gledhill, 7th East Yorks, has won the D.C.M., the M.M., and the Medal Militaire, for bringing in wounded under fire, including Sergeant Jackson, V.C., when he was sniped at Combles.

MR. MANILAL C. Modi, hon, sec. of the Press Association of India, sends us a happilyworded Christmas card, and we cordially reciprocate the greetings. The information with reference to the Indian press is receiving consideration.

THE Publishers' Circular and Booksellers' Record records a total of 7.716 books as having been published during the year 1918. This is a decrease of 415 compared with the previous year, and is the lowest number for many years.

The printing and paper trades contributed £28,003 18s. 5d. of a total of £782,794 10s. 7d. subscribed in the City of London in response to the "Our Day" appeal made by Sir Chas. Hanson, M.P., the late Lord Mayor, on behalf of The Times Fund for the British Red Cross Society and the Order of St. John.

PAPER shipments from Newfoundland mills of the Anglo-Newfoundland Development Co., Ltd., are being resumed. Lately a shipload was sent to France to print Stars and Stripes, the American Army trench newspapes.

Trade Notes.

POSTAL PERMITS WITHDRAWN.—Certain war restrictions on the sending abroad of books and papers have been withdrawn by the War Office. Two Army Council orders, dated May, 1918, dealing with permits, for this class of printed matter have been cancelled. Any books, papers, photographs and illustrated matter which required permits may now be sent abroad by post without these restrictions. Articles for publication and kindred matter, although not requiring a permit, will continue to be subjected to the postal censorship.

Co-operators and Craft Unions.—A further step in the direction of the fusion of the trade union and co-operative movements was taken at the quarterly meetings of the Co-operative Wholesale Society, in London, on Saturday, when a resolution was carried by 298 votes to 4 giving instructions to the directors to ensure that every employee who is eligible shall be a member of the trade union of his or her respective trade, and that the trade union rates and conditions should be granted to all Co-operative Wholesale Society's employees.

THE Kent Messenger, established on January 1st, 1859, as the Maidstone Telegraph, has just celebrated its 60th birthday.

THE Accrington Observer and Times is publishing a Roll of Honour for Greater Accrington. This includes the names of over 1,300 local lads who have made the supreme sacrifice.

At the Park Hotel, Mexbro, gold watches were presented on behalf of the firm and staff of the Mexbro and Swinton Times Publishing Co. to Sergeant Harold Wrigley, M.M. A.S.C. and Air Mechanic Horace Flather, M.M., R.A.F., in recognition of their gallantry displayed in France last March.

It is notified in the London Gazette that the prohibition of export of the following articles has now been removed:—Fountain pens, ink, other than printers' ink, pumice stone, slates and slate pencils, typesetting and typecasting machinery, wall papers.

At the Leicester Borough Police Court, Elizabeth Amy Read, platen feeder, claimed £15s. 8d., wages in lieu of a week's notice, from Messrs. Winton Caven and Co., printers, 27, Charles-street.—The Bench made an order for payment of the amount claimed.

"THE EUSTON WAY," which is the house organ of Messrs. Langley and Sons, the Euston Press, is a bright little publication well produced and edited, and full of interesting matter relating to the personnel of the firm and the trade generally. The current issue contains an excellent selection of readable matter, including particulars of the doings of many of the firm's employees who are in the army.

TENDERS are invited for the binding of books at the Wood Green Library for one year from April 1st; tenders to the Urban District Council, Town Hall, Wood Green, by Io a.m., January 22nd.

THE Department of Material, Santiago, Chile, invite tenders for printing and library articles up to January 30th. The time only allows of instructions to agents by cable.

WHILE washing one of the machines in the Impartial Reporter Printing Office, Enniskilling, a man's clothing was caught in a belt, and he was carried to the shafting, where he remained jammed for half-an-hour. He fortunately escaped with his life.

Replies to Box Nos. to be addressed to the Offices, "BRITISH AND COLONIAL PRINTER AND STA-TIONER," 58, SHOE LANE, LONDON, E C.4.

SPECIAL PREPAID ADVERTISEMENTS

SITUATIONS VACANT, REPPESENTATIVES or MANA-GRES REQUIRING PASITIONS, AGENCIES, BUSI-NESSES WANTED or FOR DISPOSAL, MACHINERY and MISCELLANEOUS.—Charges for Advertisements of the above class are Three Shilling sfor 24 Words or under; One Shilling extra for every line or portion after. Hight words to be reckoned for each line.

SITUATIONS WANTED.—Special Rate for Operatives only 1 One Shilling for Twenty-Four Words, and One Penny per Word after. Minimum charge, One Shilling. Cash to be sent with order.

Telegrams: STONHILL, FLEET, LONDON.
Telephone: No. 8407 CITY.

Machinery for Sale.

DOUBLE ROYAL WHARFEDALE (Newsum's) for sale, with Flyers, Geared Inkers, Double Driving Gear, Counting Apparatus, and Two Sets of Rollers, price £60 as it stands, or near offer considered (specimen of work on application); also a 4-h.p. STOCKPORT GAS ENGINE, with Tube Ignition, Gas Bag, Tank, Exhaust and Fittings complete. May be seen in City. Offer wanted.—Box 13588.

Miscellaneous.

CREAM WOVE PRINTING, Pure Sulphite, 47 by 33-in., 96-lbs.; 500 reams for disposal in London as a whole or in lots of 50 reams. Offers invited.—Box 13612.

N EWS in SMALL REELS and FLATS for sale.
Also Post Card Size ENVELOPES.—Enquiries solicited, in first instance, to Box 13614.

To PRINTERS and STATIONERS.

FIRM of PRINTERS are open to take extra Trade Work; strict secrecy; compact office; ceptral position W.C. Two Cylinders, Five Platens; upto-date plant. French work a specialty.

—For particulars apply, J. P., Box 15736.

FORTY-FIRST YEAR.

Printed and Published EVERY THURSDAY by STONHILL & GILLIS,

at 58, Shoe Lane, London, E.C.4.

COPIES may be purchased at the Offices, as above or from Messrs. W. H. Everett and Son, Ltd., newsagents, 11. St. Bride-street, E.C.4.

THURSDAY, JANUARY 9, 1919.

Reconstruction.

THE printing trade, like every other, is passing through the transition stage from peace to war. It is not a very comforting or comfortable period, truly. But let us hope the future will bring compensation for the trials and anxieties of the past and of the There will, of course, be some present. troubled waters to pass over yet. All the more reason, therefore, why all concerned should keep a clear and level head. symptoms of unrest will pass, and British trade and commerce will come by their own again. In the meantime, masters and men in our own particular trade are trying to put their house in order, and the great scheme for the establishment of an Industrial Council; which we printed in full in our last issue, is before the trade. It has taken many weary months to produce the scheme, and now it

has seen the light of day it has still to receive the sanction of the rank and file, on both sides. What that verdict will be it is too early to say, though generally it seems to be acceeded that it will be approved. There appears to be, so far as one can hear, no very great enthusiasm over it. There is, however, no alternative put up against it, and if the proposals are rejected the position will be worse than it was with-More serious consideration, it out them. would appear, ought to be given to the matter than is now the case. Perhaps the holidays have had something to do with it, and now that the New Year is in hand some definite move may be taken. "Agreed principles." of course, are all very nice; but the practical application of details is quite another story. Everybody naturally approves of the spirit of conciliation, and there are those who can breath piety with fulsome freedom. But in translating percepts into practice we find the great stumbling block. However, the future conduct of the printing trade is not without hope of the question being approached in a broad-minded spirit, with a real intent to do the best by the trade and those who are engaged in it. Mr. G. H. Roberts, who, we are glad to see, is to remain Minister of Labour, has often given a safe lead in industrial reconstruction plans, and he has a real interest in the trade with which he is proud to retain connection. He has already expressed the hope that he may preside at the initial meeting of the Industrial Council of the Printing Trade. That offer will doubtless be accepted readily, and his direction at the outset will be most valuable.

Contralisation.

It is time we were hearing something of the scheme-or is it schemes?-for centralising the printing trade in some comprehensive and suitable building. Movements are afoot to this end, but nothing definite is yet announced. The idea, of course, has been in people's minds for long enough, and it is admirable. But the thing requires pushing along, though the proposal is probably so vast that it will need time and thought to prepare a workable scheme. A centre for printing, or a University of Printing, as it has been called, would lift the craft to the high place in the thoughts of. people which it ought to occupy. Those who think ill of themselves are not likely to be thought well of by others, and it seems to have been a failing of printers to esteem their craft but little. A big advertisement such as an appropriate home for all the activities of the trade would do much to dispel this fault.

The Stationers' Hall has been frequently mentioned in this connection. Whether it will prove the solution of the scheme is yet to be seen. One step has been gained, inasmuch as all are agreed as to the worthiness of the idea, the accomplishment of which would memorialise the return of peace and the splendid part which printers have played in the war. We understand that the idea of a University of Printing, or a technical centre for the trade, first mentioned by Mr. J. R. Riddell, Principal of the St. Bride Printing School, is taking definite shape and is in the hands of an influential committee.

Organisation.

An effort is being made to reach the 1,000 membership mark for the London Master Printers' Association this year. It is a happy New Year resolution, and the task ought not to be impossible. Last year the ranks were increased by 200 and in 1917 by 150. That is a progressive movement which ought naturally to lead to 300 before the end of the present twelve months, although the labour becomes naturally more of a strain as the summit is reached. It is not the beginning of a journey that is difficult, but the end. Still, with the energy which is housed at 24, Holborn, 1,000 members in 1919 is quite on the cards. "Go to it."

Demobilisation.

MASTER PRINTERS are greatly concerned over the slowness with which demobilisation is being carried out. If any trades ought to receive special consideration, it seems to us printing is one of them. Pivotal it is in the real sense, because so many activities revolve around it. Where, for example, would have been our food coupons without it? So now all the new developments for which everybody is waiting will require printing in some form or another. If, therefore, anything can be done to speed the return of printers it would be a service not only to the trade, but to the country as a whole. Of course, it is very easy to grumble, and demobilisation is not so easy as some people appear to imagine. To begin with, peace is not yet declared, and we conless to some personal surprise that American and Canadian troops should be sent back so soon as they were. At the same time the authorities certainly need a due appreciation of values. Mr. J. J. Keliher mentioned at the meeting of the South-West London Master Printers' Association on Tuesday night that men now in this country might be restored to their employers if action were taken promptly,

and a leaflet on the subject of demobilisation just issued by the Federation of Master Printers from 24, Holborn, will assist those who desire to set the necessary and latest machinery in motion.

The Earliest Users of the Linotype.

Which was the first London newspaper to introduce, the Linotype into its printing office? This question having been asked recently, and some doubt having been cast on the replies, we may say that so far as our recollection goes, the Globe was the first of the London newspapers to install the machine in the early days of its appeal to newspaper printers, and the Globe was soon followed by the Financial Times, which may claim the credit of being the first London daily enterprising enough to adopt the then almost untried system of typesetting. The Daily Telegraph followed shortly afterwards. The provinces were quicker to recognise the merits of the Linotype than the metropolis was, and several installations had been made in Manchester. Leeds and other cities. A complete history of the introduction of the Linotype into this country, well illustrated, appeared in our issue of December 26th, 1895.

Mr. Waller Hazell's Appeal.

Mr. Walter Hazell, J.P., who is chairman of the Homes for Little Boys, Farning-Swanley, Kent, and once more makes his annual appeal on behalf of this worthy institution, which is serving the country so well by training boys to become useful citizens. The Swanley School is said to be the only one of its kind in which boys are trained to be officers in the merchant service. The annual record of the institution, entitled "Left in Trust," indicates the very practical and enduring work which is carried on, a fact which is proved by the number of boys from the homes who have helped in the war, both in active service and on munitions. What should also arouse sympathy for Mr. Hazell's appeal is the fact that £4,500 extra has to be raised by personal subscriptions in order to meet the higher costs of maintenance, which before the war amounted to £15,000 a year for the 500 fatherless and homeless boys. In addition, the war has placed upon the committee the burden of a banker's overdraft of £9,600. It would be an appropriate thank-offering for the termination of the war to free these homes, if only in some degree, from the financial strain which cannot but interfere with the attainment of their splendid object.

NEW COMPANIES.

WALLASSY PRINTERS, LTD. — Registered with a capital of £4,000, in £1 shares, as printers, publishers, newspaper proprietors, etc. The subscribers are E. E. Keel and Dorothy Ewbank. Private company. First directors to be appointed by the subscribers. Registered office: 55, Borough-road, Wallasey, Cheshire.

ARESCO, LTD.—Registered with a capital of £5,000, in £1 shares, to take over the business carried on at 320, Broad-street, "City Chambers," Broad-street, and 1, King Alfred's-place, all in Birmingham, by F. C. Bowers, as the "Rubber Stamp Co." or otherwise. The subscribers are F. C. Bowers and F. Bowers. Private company. The first directors are F. C. Bowers, F. Bowers and C. C. Bowers. Registered office: 320, Broad-street, Birmingham.

J. Robertson and Co., Ltd.—Registered with a capital of £5,000, in £1 shares, to take over the business carried on at St. Anne's, Lancashire, as "Robertson and Co.," and to carry on the business of printers, stationers, typefounders, publishers, advertising agents, newspaper proprietors, etc. The subscribers are J. Robertson and S. Coston. Private company. The first directors are J. R. Gibbs, J. Robertson A. K. Whitaker and J. G. Bradshaw.

ROBERT HAYES, LTD.—Registered with a capital of £5,000, in £1 shares, as booksellers, newspaper, periodical, magazine and almanac sellers, publishers, publishers' agents, printers, paper merchants, press photographers, etc. The subscribers are S. A. Belasco, F. J. Claringbull and A. A. Ross. Private company. The first directors are S. A. Belasco, F. J. Claringbull and A. A. Ross.

Kelly's Monthly Trade Review, Ltd.—Registered with a capital of £100, in £1 shares, to take over the business of newspaper proprietors and publishers, carried on by the Kelly Trading Co., Ltd., also to carry on business as advertising agents and contractors, etc. The subscribers are E. H. Grainger and W. A. Plunkett. Private company. The first directors are E. H. Grainger, W. A. Plunkett

Lieut. E. C. Grainger and R. de Toll. Registered office: 60, Wilson-street, E.C.

AGNATO GOLD, LEAF Co., LTD.—Registered with a capital of £1,000, in £1 shares, as manufacturers of and dealers in artificial gold, silver and metallic leaf or foil, etc. The subscribers are J. E. Allen and A. l'Anson. Private company. Table "A" mainly applies. Registered office: 10, Bush-lane, E.C.4.

W. MATE AND SONS (1919), LTD.—Registered with a capital of £12,000, in £1 shares, to take over the business of newspaper proprietors, publishers, printers, stationers, etc., carried on at 58, Commercial road, Bournemouth, and elsewhere, as "W. Mate and Sons," and with a view thereto to adopt an agreement with the National Press Agency, Ltd. The subscribers are A. W. Evans and Major W. J. Evans. Private company. The first directors are J. Owen, A. W. Evans and W. J. Evans. Registered office: 58, Commercial road, Bournemouth.

ARTHUR FOOTE, LTD.—Registered with a capital of £10,000, in £1 shares (5,000 7 per cent. cum. pref.), as stationers, printers, photographic printers, photo-lithographers, etc. The subscribers are H. D. Letts and Miss M. J. Noall. Private company. The first directors are A. F. Jepson and G. C. Bancroft.

SIDNEY COOKE, LTD.—Registered with a capital of £2,000, in £1 shares, as lithographers, letterpress printers, printers on tin, manufacturers of decorated tin and metal-boxes, toys and cardboard and paper boxes, etc. The subscribers are T. A. Cooke and S. T. Cooke. Permanent directors: T. A. Cooke and S. T. Cooke.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 10 of the Companies Act, 1900. (The registration of Satisfaction is not compulsory.)

J. J. Travis and Co., Ltd.—Satisfaction in full between July 27th, 1910, and June 18th, 1915, of debentures dated January 27th, 1910, securing £1.500. Notice filed December 20th, 1918.

Benin and Cronin, Ltd.—Satisfaction in full (a) on December 10th, 1918, of debentures dated 1913–15, securing £2,325 (part of a series of £3,000 registered in March, 1913), and (b) on January 12th, 1917, of charge dated 1915, securing fluctuating amount due to bank.

ILLUSTRATED LONDON NEWS AND SKETCH, LTD.—Mortgage and land registery charge on freehold premises in Milford-lane, W.C., to secure 17,500. Holders—R.S. Gwynne, Lieut.-Colonel R. V. Gwynne and J. G. G. Woodhouse.

JOHN MARKS, LTD.—Assignment of proceeds of Stationery Office Contracts, dated December 9th, 1918, to secure all moneys due or to become due from the company to Barclay's Bank (Trustee Department.)

Johnson, Riddle and Co., Ltd.—Satisfaction to the extent of £500 on December 16th, 1918, of debentures dated 1902, securing £30,000.

HUGH STEVENSON AND SONS, LTD.—Satisfaction to the extent of £4,700 between January 1st and June 30th, 1918, of mortgage dated August 13th, 1903, securing £60,000 first mortgage debentures.

COMMERCIAL ART PRESS, LTD. - Satisfaction in full on December 23rd, 1918, of debenture dated July 26th, 1912, securing £200.

London Cutting and Binding Co., Ltd.—Debenture dated December 21st, 1918, to secure £1,500 at 10 per cent., charged on the company's undertaking and property, present and future, including uncalled capital. Holder—W. J. Hood, 41, Chandos-road, Finchley, N.

ASHTON BAZAAR Co., LTD.—Mortgage on leasehold premises at Ashton-in-Makerfield. Dated December 14th, 1918, to secure all moneys due or to become due from company to L.C.W. and Parrs Bank.

Gazette.

A WORD OF CAUTION.

a giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and acce: no responsibility for inaccuracien, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case a satisfactory explanation which does not appear on the records.—Ed.]

elect Trustee and Commissioners to be heldJanuary 15th, at the Royal Hotel-buildings,
Duke-street, Kilmarnock. Claims by April
30th.

ORDER MADE ON APPLICATION FOR DISCHARGE.

Hancock, George Oliver and Burholt, Henry Joseph, in co-partnership under the

style of Hancock, Burholt, and Co., 45. Queen Victoria-street, London, E.C., paper agents and merchants. Date of Order, December Discharge suspended for two oth, 1918. years and six months on the grounds that the bankrupt's assets are not of a value equal to ios. in the pound on the amount of their unsecured liabilities; bankrupts had omitted to keep such books of account as are usual and proper in the business carried on by them, and as sufficiently disclose their business transactions and financial position within the three years immediately preceding their bankruptcy; had continued to trade after knowing themselves to be insolvent; and had themselves contributed to their bankruptcy by rash and hazardous That the bankrupt Henry speculation. Joseph Burholt had within three months preceding the date of the Receiving Order, when unable to pay his debts as they became due, given an undue preference to one of his creditors.

A STRIKING design in calendars for 1919 is sent out by Messrs. the Ault and Wiborg, London Co., printing ink makers, etc., 4-5, St. John's-square, E.C.I. It consists of a dark-surfaced card 19 by 8 inches, the greater portion of which is occupied by a charming reproduction of a piece of stationery, which stands out well on a deep black background, with narrow orange border. The firm's business announcement is under the picture and the dates, in white figures on a brown ground, are at the foot of the card. Well produced in every way this is a very handsome calendar.

A FINELY produced calendar is issued by Messrs. Coates Bros. and Co., Ltd., printing ink manufacturers, St. Bride's House, Salisbury-square, E.C.4. It consists of a card. 15 by 12½, the ground colour of which is a grey blue, and on this is a picture entitled "Venus and Anchises," beautifully printed in colours, and reproduced from the picture by Sir William Richmond, K.C.B., R.A., in the Walker Art Gallery, Liverpool. The dates are in bold white figures on a grey ground, and the firm's business announcement is neatly arranged at the top of the card and on either side of the dates. A fine production that will be admired and kept by all recipients. A calendar for the year and postal information are on the back of the card.

"SETTLING Down" is the title of a vivacious article in the January Pearson's by Maud Churton Braby, who discourses on some of the differences that Peace will make in the daily life of the average man and woman. Sir Guy Calthrop's paper on "Making the Most of our Coal" is crammed with interesting facts and suggestions, and great stress is laid on the need for a more comprehensive system of distributing electrical power. Elinor Mordaunt, Richard Harding Davis, F. St. Mars, and Cosmo Hamilton are among the writers who help to keep the fiction in this number up to its usual standard.

Roll of Honour.

MR. BEAUMONT FLETCHER, of the Daily Chronicle Parliamentary staff, who was reported "missing" after severe fighting in France on March 25th last, is now officially garded as dead. He was a son of the late Mr. A. E. Fletcher, a past editor of the Daily Chronicle. Though an anti-militarist, and past 40 years of age, he enlisted in October, 1914. At his own request he was sent to the front in France in November, 1917.

LIEUTENANT AMYAS SEPTIMUS QUIRKE, M.C., of the Machine Gun Corps, has been killed in action. Before joining up he was on the staff of the *Brighton Herald*.

PRESSMEN'S MEMORIAL SERVICE.—A memorial service is to be held in St. Paul's Cathedral on Saturday, February 1st, at two o'clock, to commemorate the journalists, printers, and others connected with newspapers, periodicals, and magazines who have fallen in the war. A roll of honour containing the names is being prepared, and the secretaries of the Newspaper Conference, 6, Bouverie-street, Fleet-street, E.C.4, will be glad to receive the names of any journalists or printers unattached to the office of any particular publication which should be included. Tickets will be issued to the relatives and friends.

English and French Printers.

Mr. H. C. Bolton, chairman of the Institute of Printing and Kindred Trades, intends to issue a final appeal in connection with the French Printers' Relief Fund. A thousand pounds has already been raised, and it is hoped that members of the kindred trades will add to the amount, seeing that the need is so pressing. Over 4,000 subscription lists have been sent out to fathers of chapels and overseers in the printing and allied trades, and one of the pleasing results is that a great majority of the societies have forwarded subscriptions varying from five to ten guineas.

The French President has written an exceedingly nice acknowledgment of the assistance given by the printing craft in this country to their confreres in France, and he particularly hopes that the close relationship established between France and England during the war may be continued in the future.

THE London offices of Messrs. Charles Maisden and Son, Ltd., Sheffield, have been removed to 34-40, Ludgate-hill, E.C.4.

THE late Mr. William Ellerby Green, senior partner in the publishing firm of Longmans, Green and Co., has left estate of the value of £117,910.

Anglo-Norwegian Trade.

Paper and Box Board.

Owing to the signing of the armistice the paper and box board trade has been very much affected, says the Anglo-Norwegian Trade Journal, and it appears that business has been very quiet indeed during the last four weeks. Very few contracts have been placed, buyers being of the opinion that prices may come down. This is no doubt correct as far as the so-called free market quotations are concerned, as quantities of paper have been brought in on licence and resold at very high prices, and these prices have been reduced considerably; but with reference to f.o.b. figures, these have not been affected in any way. As a matter of fact, Scandinavian mills have been compelled to increase their prices on account of the exceedingly high wages they are bound to pay for labour, as well as the dearth of raw materials. Shipping opportunities have not improved, and we are afraid that for a short time in the beginning of the New Year shipping opportunities will be as scarce as ever. Rates for freight have been reduced slightly, whilst rate of exchange has, contrary to expectations, again fallen. Insurance against war risk has become practically nil, Lloyds now covering war risk at the rate of 5s. per cent. We understand that prices for unglazed printings in ordinary white shade have been increased, and mills are accepting orders at the following figures: - For double crown 11/12 lbs., 480s, £48 10s., and for heavier substances d.c. 16 lbs., 480s and up, at £42 to £43 per ton of 2,240 lbs., f.o.b. M.G. pure white in substance d.c. 7 lbs., 480s, has been quoted at £66 to £68 per ton net f.o.b. according to quality and shade, whilst d.c. 16 lbs., 480s and upwards, fetches £54 to £55 per ton net. There is no difficulty now in obtaining M.G. 50 per cent. mechanical hard sized envelope paper, as some fairly large quantities of rosin have been sent to Norway and Sweden from America. The price for this class of paper is approximately £56 peaton net f.o.b. Unglazed and M.G. nature brown in thin substances of d.c. 8 lbs., is fetching £43 to £45 per English ton. All the foregoing figures are based on the normal exchange of Kr. 18.16 per £. It appears that Scandinavian mills now hold good stocks of white wood pulp boards, as well as leather boards, and are anxious to secure orders, and in consequence they have reduced their prices slightly. We take it that orders for friction glazed leather boards could now be placed at £32 per ton of 1,000 kilos, whilst wood pulp boards fetch £28 for glazed quality and £24 to £25 for unglazed quality. These prices are, of course, net f.o.b., and also subject to difference in rate of exchange.

SHAME comes to no printer unless he helps it on its way.

WHAT the trade of the country and the public now require, writes Lord Inchcape, is a notification that everything is to be on a pre war basis, with such exceptions as are necessary, a d these exceptions should be clearly set out, because as things now are, and liberty being restored by driblets, no one knows where he is either in or out of Government offices.

PRAYERS ASKED FOR A PAPERMAKER. A strike, involving 700 employees, has occurred at the paper mills of Mr. J. R. Booth, At the Notre Dame Catholic of Ottawa. Church, the Rev. Father Bernier asked the congregation to say prayers on behalf of Mr. Booth, that he might be prevailed upon to accede to the demands of his employees.

The Paper Trade under Control.

Extracts from an Interesting Review of the Paper Trade, 1918, published in the "World's Paper Trade Review," of January 3, 1919.

From Royal Commission to Controller.

The Royal Commission on Paper, which had exercised authority over the trade from March 1st, 1916, came to an end on March 8th, 1918, and was replaced by a Controller of Paper Although, on the face of it, this was no more than the substitution of a dictatorship for committee rule, yet in reality it was a complete revolution in method. It can now be seen that many of the criticisms directed at the Royal Commission, while quite well founded, were aimed at defects arising from its lack of powers, defects which, with the best will in the world, it was unable to rectify. The original functions of the Royal Commission, it must be remembered, were confined to restrictions of import and control of distribution of imported material and paper. Its powers were negative, not positive; it could forbid, but not assist. An extension of powers was given, it is true, in June, 1917, but not to a sufficient degree, and the Commission had neither the executive powers nor the necessary staff to enable it to exercise its widened functions. Moreover, it is difficult for a committee of business men, each engaged in his own affairs, meeting at intervals only, to keep fully in touch with that direction of policy which is requisite for the guidance and control of a whole industry, and it may well be that in such cases many things are done in the name of the governing body of which no member of that body has any personal knowledge. In addition to this disadvantage, which is inherent in all forms of government by committee, a further shortcoming displayed itself as the organisation of the State for war purposes became more highly developed. New departments of the Government kept springing up, each charged with the task of supervising some branch of trade or some sphere of national activity. Each of these departments fought for its own hand, and put up the best possible case for its own commercial interests; and this, not from any hostile view of other phases of existence, but merely because it necessarily regarded, first of all, the functions with which it had been endowed. This being so, if the manufacture of paper was to maintain its existence as an integral part of the nation's war activities, it must be represented, in the hierarchy of Government organisation, by a department of appropriate rank; it must no longer be ruled by a Royal Commission whose voice was the confused sound of many voices, but must have a Controller, who could speak in terms of due dignity and authority with other Controllers and could use the language of power to obdurate departments as well as dictate terms to the members of the trade.

The point of view set forth here may appear fanciful to some readers, but those who have seen anything of the inner workings of official machinery will appreciate its correctness.

The Controller's Task and Its Performance.

The task which faced the Controller on his appointment was one which might have caused the boldest heart to quail. shortage of shipping was at its worst, a reduction of allowable tonnage to one half of the previous year had just been announced, and the trade little knew, at the time, how near they came to a further drastic reduction. The Controller grasped his nettle, and the course of the industry since his appointment forms the best commentary on the manner of his performance. Wisely, he surrounded himself with assistants and advisers who from the Deputy Controller downwards understood the trade which the department was to govern. Equally wisely, he kept himself in continuous touch with all branches of the trade individually; he was always personally accessible to deputations and to individuals, and on certain notable occasions he made public pronouncements to representative gatherings. No administration can be faultless, and no claim of perfection would be made on behalf of the Controller's Department; but, by general consent, as control was necessary (and that is admitted) no better control can be imagined. The cheap gibes which were flung out in the early days at the Controller's personal ignorance of the paper trade were speedily shown to be unfounded; business training and commercial aptitude, without the prejudices and preferences which arise from being engaged in the industry concerned, were seen to be the necessary qualities for the position; and it may well be that in the combination of a Controller who is a business man and advisers with special knowledge Sir Albert Stanley found the ideal principle of trade control under war conditions.

Paper Priorities.

The scheme of paper priority certificates had been in existence in 1917, but its advantages were only slowly recognised by the trade. Under the new rule the system was improved, proper co-ordination between the endorsing authorities was effected, and in proper cases extra import licence was obtainable by its means. Administered with expert knowledge of the trade, the priority system became a practical means of ensuring that paper for purposes of war importance was supplied with its due share of preference. Whether or not a

modified system of priority is desirable during the reconstruction period is a matter on which much may be said on both sides, and the decision may possibly turn on the pace at which imports and supplies increase.

Price Control.

The absence of any direct price-fixing arrangements has been a cause of continuous criticism of the Government's control of paper during the war, and undoubtedly, in some quarters, prices have been demanded and paid which bore no true relationship to the making cost. Price-fixing for a complex article like paper, however, would have led to infinite complications, and would have needed the services of an army of experts. The right of recourse to the Controller's Department, which was always available in the case of ration quantities, has no doubt exercised a general restraining influence, and, after all, interference between a willing buyer and a willing seller is not desirable. In the case of news print, the one grade of paper which can be regarded as a staple article, the Controller's Department instituted a careful costing system, and the monthly price fixed on that basis has It would, apparently given satisfaction. however, have been obviously difficult to apply such a system to paper in general.

Paper Economy.

It is a strange reversal of the normal state of affairs when the paper trade looks on without complaint while a Government department advises some people, and compels others, to use less paper. Yet, such is the result of a state of war, that the various restrictions on the undue use of paper for posters, catalogues, new periodicals, and so forth, have met with no great amount of objection from the trade. In some instances, indeed, the active cooperation of those interested has been readily forthcoming, as for example, in the case of the voluntary agreement of the Drawing Office Material Dealers' Association to cut down the substance of ferro papers. All the same, the announcement of the relaxation of these particular restrictions was greeted with a sigh of relief, though that may have been because it was taken as a fore-runner of favours to come.

Export Trade and Foreign Competition.

The problems of the immediate future which call for urgent attention are mainly concerned with the return from the industries of war to the pursuits of peace, and in this connection special consideration will be needed by the export trade which the high prices of the war period have seriously endangered. Foreign competition, which in pre-war days was such a serious factor in the situation, has been to all intents and purposes negligible quantity during the war, but when the restriction on imports is removed this question likewise will resume its vital importance. Unless some international agreement can be arrived at whereby rates of wages in competing countries can be brought into parity with the current rates in this country, or unless countervailing duties can

be imposed upon paper which enters the country at a price below that demanded in the country of origin, it will be difficult for the home product to maintain its ground. These, however, are matters of high policy on which the fate of the paper trade is bound up with the commerce of the country as a whole, and we can only trust that the farsightedness of the national leaders will be sufficient to discern a solution which will prove generally beneficial.

The Outlook: Reconstruction and Restoration.

He would be a bold man who ventured upon any detailed forecast of the immediate future of the paper trade. The process of the reconversion of any industry from its war purposes will in any event be a difficult one, and although paper manufacture has not experienced such a complete transformation as some of the metal industries, yet its own troubles, due to the drastic interference with its imports of raw materials, will need careful handling before it recovers its pristine vigour in the arts of peace. Those who cry out for an immediate release from all forms of Government control are no doubt actuated by the best of motives, but the fulfilment of their desires might well be a cruel kindness. An industry which has been for nearly three years subjected in an increasing degree to strong measures of control would find itself plunged into unnecessary chaos if control were suddenly removed, and there are, also, many international considerations which make such a course undesirable. Assuming, as we may, that control will continue in a gradually decreasing measure, until reasonable time has been given for the recovery of equilibrium, it may be hoped that, after a certain period, costs and prices will come by easy stages to a more normal figure. lessons of the past four years have taught us that the interests of the producer and of the consumer are intimately connected, and that mutual assistance and co-operation can achieve better results than veiled hostility and cut throat competition.

"PHOTOGRAMS OF THE YEAR 1918."-The past year has not been one to foster pictorial photography, and it is surprising to find that such a high-class collection of pictures could have been got together in the troublous war times that we have been passing through. Nevertheless in this, the twenty-fourth issue, "Photograms of the Year" has kept up its attractive features, and contributions from all over the world (excepting enemy countries) appear in its pages, and the literary contents are quite up-to-date, including an article by Lieut.-Colonel Moore-Brabazon on aerial photography. The printing of the pictures has been admirably effected by Messrs. Hazell, Watson and Viney, Ltd. All interested in pictorial photography should possess a copy of this book, which is published by Messrs. Hiffe and Sons, Ltd., paper covers 5s., 6s. cloth, net.

Australian Notes.

(By Our Sydney Correspondent.)

The recent paper census reveals the fact that stocks of certain classes of paper are very low, and conditions arising out of the war and the shipping position require that there shall be an immediate and substantial reduction in the consumption of paper throughout Australia. This applies to every description of printed matter, from a daily newspaper to a patent medicine pamphlet, and to all kinds of paper, no matter for what purpose it may be used.

THE New South Wales Country Press Association has held a conference to consider the reduction in the consumption of newsprint by 30 per cent which the Controller has ordered from November 11th. Mr. W. G. Conley (vice-chairman of the Federal Advisory Newspaper Committee, and chairman of the State Advisory Committee) pointed out that the consummation of peace was not likely to bring relief, but was likely to make the paper shortage still more acute, because all the available tonnage would be required to bring back the troops. Proprietors in various allied countries which had ceased to publish their newspapers during the war were bound to require stocks of paper immediately hostilities In England the consumption of paper was less than one-sixth of the pre-war quantity. Mr. T. M. Shakespeare (secretary of the Country Press Association) said the industry, under present conditions, was in great Resolutions were carried to the effect that every effort be made to reduce the consumption of paper, that the conference protest against any hardship being caused to newspapers, and that further representation be given to newspapers on the Federal Advisory Board.

MR. THOMAS M. SHAKESPBARE (secretary of the Country Press Association) made some important statements in connection with the manufacture of paper pulp in Australia at the recent convention of the Association. He explained that a company was being formed to acquire from a Cairns paper pulp syndicate its pulping plant and business at Kamma, near Cairns, and its rights to the method discovered or invented by Mr. Joseph Campbell for making paper pulp from blady grass and other suitable plants. Tests and experiments of the manufactured product had been made, and good cardboard and brown paper were the result. It was also learned that the higher grade papers could be produced from blady grass. The pulp, which would be turned out at the rate of 10 to 30 tons per week, could be produced at something like £ 10 a ton, and the price that it was being sold at was £17 per ton f.o b. Cairns. Mr. Norman M'Intosh had been commissioned

to make investigations as to whether there 'was a chance of supplying the requirements of the whole of Australia, as to whether the mill proposed to be erected would be adequate and could be erected for £2,000 as anticipated, and as to whether there was sufficient raw material in sight to produce paper pulp necessary at the price already mentioned. Mr. M'Intosh had telegraphed a most favourable reply, and even said he believed the mill could be put up for £1,500. Supplies of paper could be made available four weeks after the commencement of operations. . . . The State Government had sent samples of wood abroad to ascertain whether it was suitable for papermaking. The Government was now expecting the return of the paper product, and there was a good reason to believe that the experiments had been most satisfactory. It was the Government's intention, he believed, to invest £250,000 in paper mills in the vicinity of Yarrangobilly Caves capable of turning out 30,000 tons of "news" paper a year.

The Provincial Press Association, in its annual report, mentions "the practical efforts now being made to demonstrate that suitable paper pulp can be produced in Australia to meet requirements of the paper trade. Queensland leads the van in this direction. During the year a company was formed to erect a plant for treating the noxious weeds of North Queensland."

It is reported from Melbourne that the Science Advisory Committee, in a report on the paper situation, intends directing attention to the large amount of paper and cardboard wasted in packing goods. It is pointed out that a very large saving in this direction could be effected.

An interesting review of the paper position in Australia during the past year is contained in the annual report presented to the ninth annual conference of the Provincial Press Association at Adelaide on October 29th. "During the year," it states, "the supply of paper to Australia has been most spasmodic. For the first six menths very little came to hand, but since July supplies have been rolling in more freely, including five shipments from Norway and some 15 from the United States and Canada. The price of paper has been steadily increasing, due almost entirely to the increased charges for freight. For instance, the tonnage rate from Norway has increased in 12 months from 25s. to £15 per ton, thus increasing the landed cost from £45 to £72 per ton. Freight from the eastern ports of America and Canada has increased from £10 to £25, and from 'Frisco and Vancouver from £5 to £15, thus increasing the landed cost of paper from £35 to £50 per ton.

THE January Royal Magazine keeps up its reputation for brightness and offers an interesting selection of fiction and other matter. The illustrations are profuse, and the cover in colours is attractive.

Printers' Detergents.

A writer in our American contemporary, the Inland PrInter, in dealing with the subject of detergents used by printers says that:

—"Few printers pay sufficient attention to the correct use of detergents or make proper distinction between the various forms of inkremovers. It is not strange, therefore, that in many shops such carelessness prevails so extensively that it impairs efficiency and causes valuable material to deteriorate. The cleaners now in most general use are benzine, gasoline, kerosine and lye water. To this list may also be added wood alcohol and the various forms of patent compounds found on the market.

"Benzine, the first mentioned liquid, is the cheapest and best adapted to use in cleaning type forms containing wood furniture and plates mounted on wood bases. It is also serviceable in cleaning forms or galleys of matter which are to be again printed from within a short time, for the reason that benzine evaporates quickly and leaves the printing surface ready to receive and transfer ink. Because of this tendency to evaporation, it should never be used as a wash for composition rollers, as it dries out the surface and makes them hard. It may, however, be used for such purpose in an emergency where quick use of the press is required, and it can be used at all times on metallic inking devices, such as brass or steel rolls, tables, discs, etc., where ink has hardened.

"As the vapours arising from benzine are highly inflammable and explosive, this fluid should be kept only in containers made especially for the purpose, and it must be handled with great care at all times in order to prevent fires or accident. On account of its rapidly advancing price, the economical use of this cleaner is very important in larger shops where a considerable quantity is used daily.

"Kerosene is now conceded to be the best liquid for cleaning composition rollers, as it removes the ink readily (under ordinary circumstances) and leaves the surface of the rollers in perfect condition. When carefully washed with kerosene, rollers retain their suction and elasticity for an indefinite period, except when inks containing powerful driers are in frequent use. Although valuable as a wash for rollers, kerosene is not recommended as adapted for removing ink from type forms or at the proof press, because it does not evaporate quickly enough. After its use a film of oil remains on the type for some time, preventing subsequent inking and printing. This liquid is inflammable, but not explosive or especially dangerous under ordinary conditions, and does not require the precantion in Its use that is necessary with benzine. It should, however, be kept in cans that are known to be free from leaks, as a match dropped upon an oil-soaked floor might easily start a serious

"The use of a solution of lye and water as an ink-remover dates back so far that this de-

tergent seems to be almost inseparable from the proper conduct of the trade, yet its use to-day is limited to certain parts of the work for which it seems peculiarly well adapted. Lye water should be made just strong enough to feel slightly slippery between the thumb and finger. The old method was to place a drop on the tongue, an acrid taste indicating the proper strength. This method, however, had an element of uncertainty which made it a poor rule to follow. The proportion of five gallons of water to one tin of concentrated lve is a safe formula to use. Great care should be used in rinsing forms after washing to prevent any sediment or lye powder adhering to the sides or bottom of the type. Especially is this precaution necessary in washing so-called 'self-spacing' type, or that in use on machines using type which has special nicks for the distributing mechanism.

"News forms—whether of plates, slugs or type—are best cleaned with lye, as this liquid is cheap, highly efficient, and does no damage to the materials composing the form, providing wood-base cuts and zinc and copper half-tones are properly cared for after the form is washed. All wood-base cuts must be removed and allowed to dry out as soon as the form is unlocked, and zinc and copper half-tone plates should have their printing surfaces coated with lubricating oil to prevent corrosion from the effect of the lye. Forms containing wood furniture or wood type should never be washed with lye, as this liquid has a most disastrous effect on such material.

"Hot lye water is especially useful in cleaning type forms returned from the electrotyping foundries, as no other detergent will so thoroughly remove the graphite with which such forms are coated and restore the material to its original condition. To properly cleanse such forms they should be tied up on a brass galley and thoroughly washed and rinsed. After receiving such a wash, the type will be about as clean as it is possible to make it.

"Lye water is sometimes used for removing ink which has dried hard upon the metal inking devices of presses, and for such purposes it may be made as strong as desired. After the hard ink has been soaked for a time in the lye water it should be wiped off, and it is a good plan to go over the metal with a clean, dry cloth after the ink is removed in order to prevent the moisture causing rust on the metal. Under no circumstances should lye water be used to remove ink from a composition roller, as it is almost sure to blister the surface and cause the face of the roller to become pitted.

"Where copying-ink is used, soapy water is necessary to remove the ink from both rollers and the metal parts. Some pressmen sheet off all the ink that can be removed from the rollers, wash the plate and metal vibrators or riders, then run on a quantity of soft, black ink. When this is done the press may again be washed with kerosene. If the work that follows is not of a high grade, the rollers need not be washed again. This method does not

harm the rollers. If the rollers are quite hard the first method may be used. Care must be taken to wipe all moisture from both rollers and metal parts after the ink has been removed satisfactorily. The type-form should be tied up, washed and rinsed on a galley.

be tied up, washed and rinsed on a galley.

"For accumulations of hardened ink on brass rules, nothing seems more efficacious than wood alcohol. This should be used freely and applied with a soft cloth. As it is a deadly poison, the hands should be carefully washed as soon as the work is completed. The alcohol should be purchased in small quantities as needed and always kept in a place separate from lunch boxes or food supplies. Occasionally hardened ink is found upon the surface of cuts or half tones, and some workmen are accustomed to remove this by covering with alcohol and setting fire to the liquid, but the practice is hardly to be recommended, and satisfactory results are seldom obtained. Another method for removing dried ink from brass rule, half-tone and zinc plates is to coat the surface with a solution of equal parts of crude carbolic acid and turpentine. This liquid will do no harm to the plates or to the composition rollers if it is used for removing dried ink.

The frontispiece of the December number of the Review of Reviews is a fine picture of the surrender of the "Friedrich der Grosse" to Admiral Beatty. Some Labour views are given with reference to Reconstruction, the editor having induced the Right Hon. George N. Barnes, Mr. J. A. Seddon (British Workers' League), and Mr. T. E. Naylor (general secretary of the London Society of Compesitors), to write their opinions on this all-important subject. The other features of this review are well maintained, and the number closes the year by presenting a variety of reading matter, carefully sifted and edited, that is of present interest and permanent value. (Stead's Publishing House, London. One shilling net).

THE Supreme Court of the United States has sustained the injunctions granted to the

American Associated Press, prohibiting Mr. Hearst's International News Service from publishing the Associated Press news The decision affirms the decrees, enjoining the International News Service from taking Associated Press news appearing on bulletin boards or in the early editions of newspapers, and finds untenable the defendant's contention that the Associated Press relinquished the property rights of news upon its publication. Justice Brandeis dissented, holding that there was no property right in news.

London Master Printers.

Interesting Speeches at the Annual Meeting of the South - West London Association.

The first annual meeting of the South-West London Master Printers' Association attracted an excellent gathering to the Albert Tavern, Victoria-street, on Tuesday of last week. Preceded as it was by a dinner, the proceedings maintained a pleasant social character throughout. Apart from members of his own Association, the president (Mr. T. Mountain. Messrs. Wightman and Co.) was supported by Mr. J. J. Keliher (president of the London Master Printers' Association), and several members of the Council of the parent body. A tasteful programme, improved by appropriate quotations, set forth the order of the proceedings, and after the menu had been dealt with, the serious part of the meeting

was reached. The report of the hon secretary (Mr. C. V. Mold) traced the development of the South-West Association from its inauguration on October 14th, 1917, and referred briefly to the helpful and encouraging meetings that had since been held. Much good work had been done in an unobtrusive way in the district, Pointing out the advantage of a sane method of arriving at cost instead of the happy-golucky method which often meant estimating below cost. In this way they were endeavour-ing to dispel the term of "poor printer," which hitherto had been only too well justified. Notwithstanding the handicap caused by the shortage of labour, remarkable progress had been made in spreading throughout the area a far greater feeling of friendliness among master printers, who were beginning to appreciate the fact that while competition was inevitable, it should not prevent them getting rid of the miserable conditions which had prevailed in recent years. Owing to the widespread character of the district, it was suggested that still better results might be obtained if meetings were held alternatively north and south of the river.

Mr. R. Kent (hon. treasurer) presented the statement of accounts, which showed a balance on the right side.

Re-election of President.

Mr. Trim moved the re-election of Mr. Mountain as president, and spoke of the time and energy that gentleman had devoted to the work since the formation of the association. They were fortunate in having the leadership of a master printer of Mr Mountain's position and ability. Mr. Trim mentioned that almost every master printer in his area (Wimbledon) had joined the Association, which augured well for the future, especially as they had become friends, and understood and were willing to help one another.

Mr. G. W. Young seconded the resolution, and described Mr. Mountain as an enthusiastic leader.

The re-election of Mr. Mountain was unanimous and cordial, and in reply he said he looked for better results from the work in the future, because it was very necessary that they should extend the usefulness of the Association.

Mr. Mountain with an expression of thanks to Mr. Trim for occupying the office of vicepresident during the past year, proposed his re-election.

Mr. J. A. Druett, in seconding, spoke of the solid spade work Mr. Trim was doing in Wimbledon.

The resolution was carried.

Mr. Kent was again appointed treasurer, on

the motion of Mr. H. Bottomley, seconded by Mr. Spring.

With many thanks for his past services, Mr. Mold was re-appointed hon, secretary, and the committee was returned to office with the addition of Mr. Cole, Jun., and Mr. H. Druett.

The president, in asking Mr. Keliher to address the meeting, spoke of his admirable work at headquarters, especially in relation to troublesome labour matters. It was no easy task to face 15, or 16 representatives of various unions, but Mr. Keliher had worthily represented the employers on all occasions. Every member of the council recognised the value of the President's efforts on their behalf. (Applause)

Difficulties in the Way.

Mr. Keliher, who was warmly received, referred to the difficult conditions prevailing throughout the industrial market at the present time and to the constant demands which were being made upon masters. Employing printers, however, could congratulate themselves that they had managed so far to steer through these difficulties without serious trouble. He was aware that the decisions which had been reached were not such as to imbue him with a feeling of pride as their leader; but in all the conferences he thought they had done as well as could have been reasonably expected. He had endeavoured at all the conferences to bear in mind the position of the smaller printer, while the unions seemed to be guided by the terms and conditions they were able to extract from very large employers of labour, who did not represent the trade as a whole, as did the printer with a small staff. The work of the Association in the future would be to devise some means by which the high costs and the hard conditions that were imposed upon them could be passed on to the public whom master printers served so well. It was more than ever necessary that they should have a stronger organisation, because with ninetenths of the master printers of London in the Association they would be in a more effective position, and their businesses would benefit by it. In the near future the Central Association would be in a position to assist the local Associations with the help of an organiser, who would be at their disposal for personal canvas Dealing with the question of de-mobilisation, Mr. Keliher thought the men in this country might be recovered by master printers in a very short time if they fulfilled the conditions which were necessary. He believed it was the intention of the authorities not to waste transport in sending these men abroad and bringing them back again. So he would advise anyone who knew an employee he would like back to make prompt application, for then he might get the man restored to him in a few days. He congratulated the members on the position attained by the South-West Association, and hoped the progress would be enhanced during the year.

Mr. A. Langley, who presided at the inaugural meeting of the South-West Association, offered congratulations on the progress that had since been made and added some jocular references to voters' list tenders.

Mr. R. A. Austen-Leigh, in wishing the company a happy New Year, expressed the hope that they had had a pros-perous last year. Some printers had told perous last year. Some printers had told him they had improved their position. That was not because of lower costs. He thought if was because they had improved their education. They now knew a little more of what their costs really were, and they had improved their organisation. Those two things had helped printers to weather the storms of the past few years. The three great things that would help master printers in the future would be to estimate on the same hourly rates, to join in the imprint movement, and adopt a minimum price for the smaller work. He thought one of the things the Organisation Committee might introduce was a minimum price list, which could be adopted by all the districts, and which he believed would be a great boon to the smaller printer. (Hear, hear.)

The Joint Industrial Council.

Mr. H. C. Hill mentioned that the parent association had increased its membership by some 40 per cent., which was very satisfactory, though he thought the organisation of the trade was still far from complete. He went on to advocate standard estimate forms, and referred to the unfair competition of wholesale houses. With an adequate organisation they might even extract fair conditions and proper prices from the Stationery Office. (Laughter and hear, hear.) But it was not enough to merely join the association, they must each do something for it. He was less pessimistic than some people with regard to the outlook for the printing trade, controlled the plant, even if others controlled the labour; but one was no use without the other. The hope of the future was the Joint Industrial Council-(hear, hear)-and if that body was really approached in the proper spirit there ought to be an end to their difficulties. The duty of every one of them was to give to that council every possible opportunity. If it succeeded in bringing about a better understanding and a true appreciation of each other's difficulties, he for one felt sure that instead of having greater labour troubles to meet, they would possibly find they were largely smoothed away. (Hear, hear.) But to attain that end they must have a strong association, which could then be used to the benefit of the craft, and act fairly and equitably towards the employer, the employee, and the customer. (Applause)

Mr. J. R. Burt asked members of the association to attend the meetings, and give their fellow members the benefit of their experience. He particularly put in a word for the operating printer who set out to become a master man himself.

Mr. Mountain intimated that the suggestion that some of the monthly meetings of the L M P.A. should be held in the evenings was being favourably considered, and the lollowing new members were then elected:—Mr.

PRINTER & STATIONER

Hay Fielding, Westminster; Messrs. Lake, Sisson and Brown, Westminster; Mr. A. H. Ellis, Mitcham; Messrs. Vacher and Son, Westminster; and Mr. F. J. Lamb, Clapham Junction

Mr. Cole proposed a vote of thanks to the

chairman.

Mr. Albert Bennett (Messrs. Jas. Truscott and Son), in seconding, declared there was no need for master printers to sell their productions for a beggarly pittance if they only had confidence in one another.

A Printer's Compensation.

In the Court of Session, Edinburgh, last week, Lord Ormidale gave judgment in an action in which David Duncan, printer's machineman. Musselburgh, sued Thomas machineman, Musselburgh, sued Nelson and Sons, Ltd., Parkside Works, Edinburgh, for £400 damages for injury in respect of one of his hands being, on June 24th, 1918, crushed in a dumping machine used for pressing books in the course of binding. One of the defences was that the pursuer had accepted 25s. a week as compensation under the Workmen's Compensation Act, and that the defenders offered to continue this payment so long as he was incapacitated for work. reply to this the pursuer averred that the compensation he accepted was from a fund the defenders had for compensating their injured workmen, and that he did not accept the payment as a statutory compensation. The Lord Ordinary dismissed the action, holding that it was proved in evidence that the Pursurer had accepted compensation under the Workmen's Compensation Act. The defenders did not ask expenses.

Price of Printing Metal.

Fry's Metal Foundry write to us on the 8th inst, that the official price of English antimony was reduced abruptly on Christmas Eve by £25 per ton, viz., from £80 to £55 per ton. A fall of over 30 per cent. is certainly drastic. This is due to the over-production of antimony for war purposes, which is largely in excess of peace-time requirements. It will naturally affect the price of printing metals, and, coupled with the weak tin market, will, to a large extent, neutralise the recent increase of £11 per ton in the price of English lead. Fry's Metal Foundry are hoping, under the circumstances, that there will be no necessity to increase the price of printing metals, which a few weeks ago seemed to be unavoid-

Ir often takes half of a life to learn how to live the other half and then we don't always practice what we have learned.

Indian Affairs.

SIR,—We are in receipt of your esteemed favour of September 13th and thank you for the same. Your three quarterly issues treating "Paper and Print in India" were interesting, though recent developments in the Indian presses, process block-making, and type foun-dries were not all discussed therein. How difficult it is in India for the last-named institutions to be the linguists where more than 300 dialects are in vogue! However, every effort is made by typefounders to meet these necessities.

By separate post we send you some more information to interest you and the British public. We wish associations on your side would take up this question of the Indian Press Act of 1910, and agitate for the freedom of the Press in India. Securities are being confiscated on one ground or other by enforcing the clauses of this drastic Act, which are

very, very elastic.
Your main article contributor may not approve this idea, but when the question of self-determination, is to be discussed, Indian questions are certainly required to be carefully gone into. Your contributor, in the issue of September 24th, says: "The Act has attained a certain amount of notoriety through the recent unsuccessful efforts of the Indian Press Association." The Association works hard to educate the public mind. It sends deputations, memorials and resolutions in the most constitutional way. If such efforts are unsuccessful, one should not say that the Act has received notoriety through the unsuccessful efforts of the Press Association. Even the Montague-Chelmsford Report says that the Act is unpopular. It is for the Government to see that when the Act is so bad, it ought to be repealed and due consideration should be given to the people's voice.

In conclusion, we beg to add that you are at liberty to make free use of the above, as you may think fit, and solicit your further favours. Yours faithfully

M. C. Modi and Co.

Gaiwadi, Bombay No. 4.—India. December 2nd, 1918.

MANCHESTER MANAGERS AND OVERSEERS.— The Printers' Managers and Overseers Association (Manchester and District Centre) issued an attractive programme for a grand victory concert at the Crown Hotel, Booth street, Manchester, on Saturday last. The artistically designed cover card is ornamented with the crest of the Association, while the folded inset, fastened together by violet cords, sets out what must have been a very entertaining musical programme.

The Printer and Advertising.

Some Practical Hints by Mr. Joseph Stuart, at St. Bride Foundation Printing School.

Printing and advertising are closely associated, though they might be more intimate if the advice were followed which Mr. Joseph Stuart (composing instructor, St. Bride Foundation Printing School) gave to students and others on Friday night at the Foundation. His subject was "The Printer and the Advertising Man." The modern advertiser, said the lecturer, "was entirely dependent upon the printer for the greater portion of his material and mode of expression. Upon the printer rested the responsibility of presenting the advertiser's commodities to the buying public in an attractive manner; not merely com-manding attention, but attention resulting in sales." He firmly believed that the growth of the modern agency, with its advertisement designers and lay out men, was largely due to the fact that printers had failed to give sufficient attention to the typography of advertisements. The copy may have been written by a specialist, a man highly paid for his services, but when it came to presenting this costly message to the public, very often it was done in a most erratic and haphazard manner.

Effect of General Design.

Those who have given close and expert attention to advertising lay great stress on the effect the general design of an advertisement has upon the mind of the observer. He (Mr. Stuart) speaking from experience as a compositor of long standing, ventured to say that very few compositors indeed ever looked at advertisement typography from the manufacturer's or salesman's standpoint. printer was unwilling or incapable of designing and composing printed advertisements in a manner suited to the increasing needs of modern business, then someone must of necessity step in and show him the way. Hence the rise of the agency, the copy-writer, and the lay-out man. While the modern advertising agency highly appreciated the services of an efficient and sympathetic printer, the modern advertising man of repute understood the value of type far better than the average printer did. A copy-writer had said, "The most powerful friend of modern skilled advertiser is type." The advertisement sent in from a good agency, with neat lay-out, and carefully calculated copy, was more highly satisfactory from every standpoint than the roughlywritten matter sent in by many advertisers. The one was sure, and the results clearly foreseen; the other was left for the compositor to pull together, and set to the best of his ability in limited time, with results that were often anything but satisfactory.

Fundamental Principles.

Running over a few fundamental principles as applied to the setting of advertisements, Mr. Stuart remarked that he had heard it said that the minute a compositor began work on an advertisement, that minute he became a salesman, and his main idea should be to set an advertisement that will sell the goods. The man who paid for the printed message looked for profitable results, and unless he got them he was in danger of insolvency. Therefore, this question of advertisement setting should not be a matter of unconcern to the compositor. The essential points in a good advertisement were:-Firstly, the general design or appearance. Secondly, the selection of a suitable type face. The first impression -that subtle influence which either repelled or attracted was conveyed by the design, or the general appearance. It was necessary, therefore, that, first of all, a suitable design should be decided upon. For this purpose, one cannot say too much in favour of the preliminary sketch or lay-out. It had been demonstrated that offices following the lay-out system produced consistently better results, both as to style and time, than other offices where hit or-miss ideas prevailed.

Choice of Type.

After emphasising the importance of supplying the printer with good, clear copy, Mr. Stuart said the choice of type was an important point. The type should, above all other considerations, be clear and easy to read. There was such a good selection of all shades of type faces now in use, that this should not be a difficult matter in any decent office. The old style Romans are yet considered to be the most readable letters ever made, and, if stronger display is necessary, there were always the Caslon Bold, Plantin, Cheltenham Bold, or similar excellent faces to choose from. Due consideration must be given to the value of white space, because the type wanted room for expression. The question of contrast was the most important factor in typographical display. The lecturer proceeded to inquire whether it was yet too late for the printer to enter the advertising field on his own account, and asked if it were really necessary for a middleman to act between the printer and the advertiser and get most of the plums of the trade. They could not get away from the fact that the printer was largely to blame for whatever loss, inconvenience or annoyance had resulted to himself through the coming in of the advertising agent. He asked why the printer should not undertake a complete service for advertising generally, because after all he had the experience and the facilities for

RITISH & POLO

doing this. The printer should at least add to their businesses copy writing and lay-out departments and all they required in addition would be initiative and energy in the field of advertising. 'Now that the war was over the services of the printer would be as greatly in demand as ever. Now is the time to prepare for the coming industrial campaign.

The lecturer called attention to a number of advertisements taken from British American journals which were displayed about the room and mentioned the better results shown in the American journals where the illustration, type and copy all fitted in harmoniously and properly, nothing being haphazard. Mr. Stuart had little commendation for the British trade journals.

For want of space, the Discussion on Mr. Stuart's Lecture is held over till next week.

More Uses for Paper Pulp.

Cord, Screws, Tiles and Glass.

Describing some of the extended uses to which paper and paper pulp have been put in Germany, Mr. G. Basil Barham, in the Liverpool Post, says the oilskins used in the German Navy are of paper chemically treated and impregnated with oil and pitch, and paper-lined clothing has been issued out to men in the German Air Service. Many goods previously made from leather are now of paper, and harness and saddlery are being made of paper pulp moulded on thin sheet metal plates which give the necessary strength. The paper pulp is impregnated with lacquers and gums, and apparently it stands fairly hard usage. For some time past driving belts in Germany have been made of paper, cut into strips and Wrapped to the necessary thickness round thin shell steel strips, which took the greater part of the strain. In many of the textile products Germany has used nettle and other fibre in conjunction with paper. The coarser qualities were entirely of paper, and one of the principal uses to which these paper threads were put was the manufacture of cord and tope. These were spun and twisted out of the thin threads which are made from wood pulp. It is said that these fibre ropes are used more or less extensively in the foundries of Germany.

One of the most curious, and at first sight most unlikely, purposes to which paper has been applied is the manufacture of wood screws. These are said to answer the purpose. admirably and to present certain advantages Over screws made of iron or brass in the ordinary manner. An authority recently pointed out that they are specially suitable for ornamental work where it is desirable to give the heads of the screws the same colour and grain effect as wood.

On the Continent there are some firms which build houses almost entirely of waterproof pasteboard. Wood pulp is likewise

used instead of wood for making furniture, tables, and folding chairs, their chief advantages being lightness and their cheapness of construction. Paper pulp is being actually made up into boards that can be used in a variety of places to supplant the use of wood, and some little time ago a writer pointed out that the ease of moulding into any desired shape and the saving in weight make the use of this product valuable in construction of the ornamentation of ships, such as the facing and frames of doors, wainscottings, panels, etc. This material is also used in making imitation tiling for the walls of bath-rooms. In fact, entire houses, garages, hencoops, etc., have successfully been made of this paper board. When properly impregnated it is impervious to moisture, and forms a good nonconductor of heat. Another product used in house construction is roofing tiles, which are now gaining a reputation for their superior qualities over other roofing material in the market.

By proper treatment wood pulp can be made perfectly translucent, unbreakable, and indifferent to atmospheric changes. While it has not yet been made transparent, it admits abundant, soft, pleasant light where it is used in place of window panes, and it is believed that this paper "glass" will be largely used during the reconstruction period on the Continent.

BRITISH & COLONIAL PRINTER & STATIONER

Trade Notes.

THE death is announced at Broughton, Manchester, of Mr. Peter Hampson, proprietor of the Pendleton Reporter.

THE death has taken place at his residence at Forres, Scotland, of Mr. Hugh Ross, proprietor of the Forres News. He was over seventy years of age.

WILLIAM SEARS, the editor of the Enniscorthy Echo, was sentenced at Dublin to six months' imprisonment for delivering an alleged inflammatory speech.

It is announced that an important book by Mr. J. L. Garvin, the editor of the Observer, on some economic aspects of the League of Nations, is to appear in a few days.

PRIVATE IDWAL HUMPHREYS, a Cardiff journalist, war prisoner, was found in a German quarry starving. He died of consumption twelve hours after reaching England.

The death has occurred of Mr. Ernest Foster, a well-known London editor, who had edited successively Little Folks, Chums, Cassell's Saturday Journal, and other publications of Messrs. Cassell and Co.

AT Dusseldorf the editorial offices and printing works of the Dusseldorf Zeitung, the Dusseldorf Tageblatt, the Dusseldorf Nachrichten, and the Freie Presse have been occupied by the Spartacists, and the journals prevented from appearing.

THE FORTY-EIGHT HOURS MOVEMENT.— Messrs. Cassell and Co. have adopted the forty-eight hours week in their printing office. The printing staff of the Newspaper World has also started the New Year with a forty-eighthour week in all departments.

The members of the council of the Empire Press Union were entertained at luncheon by Sir Harry Brittain, M.P., who is the only honorary member of the union. The meeting discussed the second Imperial Press Conference, which, it is hoped, may be held in Canada in 1920.

"The All-Highest Goes to Jerusalem," being the "Diary of the German Emperor's Journey to the Holy Land," fully illustrated, will be published immediately by Stanley Paul and Co., at 2s. 6d. net. This witty satire on the Emperor's "divine mission" is one of the most successful books on the Continent, and in the U.S.A.

MR. JOHN ALDERSON, chief sub-editor of the Western Morning News, who is retiring in order to take up an important appointment in London, has received a handsome dressing case from members of the editorial staff as a token of their warm esteem and a memento of the happy relations which have prevailed since Mr. Alderson went to Plymouth 14 years ago. Mr. S. Edmund Spender, managing director, made the presentation.

"MORGENBLADET," one of the leading Norwegian newspapers, has just celebrated its centenary.

THE late Mr. Victor Frederic O'Neill, Hale, paper tube manufacturer, has left estate of the gross value of £52,830.

THE death is announced of Mr. Thomas Bell, of the firm of J. Bell and Co., printers, Newcastle. Mr. Bell was 71 years of age.

CAPTAIN WILLIAM GRANTHAM, a popular Yorkshire journalist, has died in hospital at Gottargen, Germany, after undergoing amputation of the leg.

MR. JOHN HENRY COLEMAN, chief of the News of the World companionship for 26 years, who has just died, saw the circulation grow from small figures to 3,000,000 a week.

THE Margam (Port Talbot) Urban Council have circularised the printers in the district to know whether they pay the trade union rate of wages. All replied in the affirmative.

A SERIOUS fire was discovered on Sunday morning at the printing works of Messrs. King and Jarrett, Holland street, Blackfriars. The adjoining property, which was at one time in great jeopardy, was eventually saved, but the printing works, machinery, type, etc., were seriously damaged.

PAPER AND PRINT IN GLASGOW.—It is proposed to start a Labour evening paper in Glasgow, with a capital of £50,000. The trade unions in the city have a printing office, the machinery in which could be adapted for printing a daily paper. At present there are three evening papers in the city, all of which are coalition unionist in politics.

Messrs. James Broadley, Ltd., letterpress and lithographic printers, engravers and account book manufacturers, Accrington, have sent round a useful calendar. The name of the firm is printed effectively in colours over the monthly tear-off sheets, on which the white letters on a dark blue back-ground stand out clearly.

The late Mr. Graham Prockter Spicer, of Messrs. Spicer Bros., papermakers, New Bridgestreet, E.C., has left estate of the value of £46,829. He bequeathed £500 each to five charities, legacies to servants, and land and premises at New Malden, known as the Young Men's Bible Class and Institute, with £5,000 to Dr. Cran to arrange for the permanent carrying on of the institute.

TENDERS WANTED.—Tenders are invited by the Controller of H.M. Stationery Office for printing forms, etc., for H.M. Customs and Excise in the northern area of England, Wales, Scotland and Ireland; forms of tender from the Superintendent, H.M. Stationery Office, Manchester. For printing and supplying forms, notices, etc., for the forthcoming County Council election required by the returning officer for the county of Durham; forms of tender from Mr. H. Jevons, Shire Hall, Durham.

MESSES. GOODALL AND SUDDICE, LTD., the old-established firm of Leeds printers, have opened a new branch of their business at Victoria Works, Otley.

APPARENTLY there is a market for stationery and office fittings in Morocco, and a general commission agent seeks agencies for United Kingdom manufacturers and exporters.

On Saturday a short break was made in the ordinary morning's work in the printing department of the West Herts and Watford Observer to allow Mr. G. L. Diggens, the oldest worker, to present to Mr. C. H. Peacock, on behalf of the staff, a gold-mounted fountain pen in appreciation of the liberality he has shown to his employees. Mr. Diggens said they all recognised the kindly interest Mr. Peacock had shown in their welfare, and hoped that the good feeling which has hitherto existed between employer and employees would continue, and that the continued success and prosperity of the firm would be assured. Mr. C. H. Peacock, expressing his appreciation of the spirit in which the presentation was made, remarked that the one aim in life was to help one another. He was glad to be held in their esteem, and in thanking them again he hoped their friendship would long continue. Mr. Peacock is the president of the Herts and Beds Newspaper Proprietors' Association.

Paper Export Trade.

Will Paper Standardisation Help Shipments?

Foremost among the many problems awaiting solution is that concerning the reclamation and development of our export trade. So far as we are aware, excepting for , the reorganisation of the Board of Trade, with the formation of a Department of Overseas Trade, nothing of a concrete nature has been established. Various schemes have been Put forward and discussed, but very little has since been heard of them. Meantime, the whole business is in a state of flux pending the settlement of side issues which have an important and direct bearing on our future Policy. Among them, those of first rank include demobilisation, relaxation of restrictions, standardisation, and preferential tariff. The first two run hand in hand, and will settle themselves in the course of time. The settle themselves in the course of time. rate of demobilisation, observing that the paper making trade is scheduled as a key industry, may ere long demand an accelerated volume of imported material, for without material to keep the machines running, men are useless. Coal, fortunately, appears to be easing, at least so far as restriction of supply is concerned. It is to be assumed that the Paper Controller has taken into account the importance of resuming our export trade at the

earliest moment, and that with the increasing number of demobilised paper-mill workers, he will be prepared to increase the import of material accordingly. A point of special observance in regard to export trade is that where quality counts as a factor, as it will do in every instance where our goods are up against those of American or Scandinavian manufacture (not to mention the Central Countries), the raw material must suit the needs of the case. Waste papers, sawdust and straw may serve a useful purpose in domestic war paper, but they will not make a saleable product for competing in certain markets.

How far the standardising of our own papers will affect the export trade is a question that can scarcely be approached until our own scheme has been officially adopted and established. The decimal basis is all to the good so far as ream content is concerned. So also is the elimination of odd and unnecessary sizes. Where it will lack utility in cere tain markets will be where it lacks metrical uniformity. Great strides towards the attainment of this end have, however, been made, and the necessity of educating our own trade in the factors of metric measurement appears to have been thoroughly recognised. In these directions, we cannot help but think, that while warmly welcoming the attempt that is being made to institute substance numbers on the basis of inch-thousandths for specifying the thickness of boards, it would-serve the domestic purpose equally as well and the requirements of the export trade an immense amount more, had the millimetre basis been accepted in its stead. Granted a series of even numbers as being all that is requisite, the millimetre numbers would have conveyed a meaning to the foreign element using the metric system which would have paved the way for a development of our export trade.

Mr. Thomas Howard, of 19, Muir-road, Maidstone, a papermaker employed at Tovil Mill, was accidentally knocked down by a motor car in Tovil-road, last Thursday evening. He was immediately placed in the car and conveyed to the West Kent Hospital, but was found to be dead onarrival. The inquest was held by Mr. W. H. Day, the Borough coroner, at the West Kent Hospital, on Saturday morning, when Mr. Robert Brennan represented the driver of the taxi and also the Royal Insurance Co., whose secretary Mr. Reginald H. Monson was present. Dr. Medanhouse, surgeon, said the deceased had a fractured skull, the base of the skull and both bones of the right leg were broken. The coroner remarked that he did not think a jury necessary in this case. It was his duty to bring in a verdict of accidental death from fracture of the skull. He added a rider calling the attention of the borough authorities to the darkness of the road, and that the disused standards might again be lighted.

BLUSTER and blunder are twins; the blusterer blunders and the blunderer blusters

BRITISH & COLONIAL PRINTER & STATIONER

FORTY-FIRST YEAR.

Printed and Published EVERY THURSDAY
by STONHILL & GILLIS,

at 58, Shoe Lane, London, E.C.4.

Tel.: Stonhill, Fleet, London. Phone: 8407 City.

SUBSCRIPTION: 10s. per annum, including postage to any address in the world.

Charges for Trade Advertisements:

(Full page 8 by 51/4 ins.)

Whole Page ... £3 10 0
Half Page ... 1 17 6
One-eighth Page 12 6

Quarter Page ... 1 0 0
An Extra Charge for Cover and Special Positions.

Discounts according to Number of Insertions. Representatives:

London and District—Mr. HENRY C. WILLMOTT. Lancashire and Yorkshire—W. C. FOSTER, 1, Duncanstreet, Higher Broughton, Manchester. Scandinavia—Mr. JORGEN SORENSEN, Bygdo Alle 60,

Christiania, Norway.
United States—Lockwood Trade Journal Co., 10,
East 39th-street, New York.

Representatives also in Australia, India, South Africa, Canada, etc.

All communications for the "BRITISH AND COLONIAL PRINTER AND STATIONER" should be addressed and Cheques and Post Office Orders made payable to—STONHILL & GILLIS, 58, SHOR-LANE, LONDON, E.C.4

COPIES may be purchased at the Offices, as above or from Messrs. W. H. Everett and Son, Ltd., newsagents, 11, St. Bride-street, E.C.4.

THURSDAY, JANUARY 16, 1919.

Current Topics.

A Memorable Week.

This is a memorable week in the history of the Federation of Master Printers. Yesterday (Wednesday) there was a private meeting attended by the largest number of secretaries of master printers' associations which has ever assembled in the annals of the printing trade. Mr. Reginald J. Lake, the director, is to be congratulated on having conceived the idea of calling together at such an important time in the development of the printing industry the men who are, after all, largely responsible for the successful working of local organisations. For some time it has been realised that it was necessary to link up more closely the various associations in group organisations.

Thus a Lancashire and Cheshire Council was formed two years ago, in the Midlands, General Bemrose has been busily engaged in perfecting a similar organisation, and in East Anglia an alliance, constituted a few months ago, has already justified its existence. The idea now is to arrange for similar machinery covering the whole country, the main object being to get every master printer in the kingdom connected with one or other of the local associations. These associations will then be grouped together in an alliance, whose representatives, together with such additional members as may be decided upon, will form the Federation Council. This scheme of reorganisation has an important relation to the National Industrial Council, which, it is probable, will be carried into effect during the next few months, and, of course, it is vitally important that the employers should be thoroughly organised so that their representatives or the Industrial Council will not only be able to voice the opinions of the whole of the employers, but will have the support of them all in carrying out any decisions which are arrived at. Questions relating to hours and conditions of work, holidays and payment for same, and other subjects important to the industry must come up for settlement at a very early date, and it is now fully recognised that such matters must be dealt with on a national basis. Other developments are proceeding under the direction of the Costing Committee, which has already met to prepare the programme for 1919, What may be regarded as a Reconstruction Congress will, in all probability, be held at the end of May, by which time no doubt the many problems arising from demobilisation and the freer supply of metals will have reached a stage when the best brains of the industry should be brought to bear upon them. In the meantime the Federation Council is to-day (Thursday) holding a full session in London on all these important matters.

A Newspaper and Demobilisation.

A CONSIDERABLE amount of dissatisfaction exists in connection with the demobilisation of men who are wanted urgently in various trades where their jobs have been kept open and are waiting for them. Printers, in many cases, who have applied for the release of their former employees have had no attention paid to their applications, and still wait for the much-needed men they expected. The experience of the Western Mail Co. shows that there is a regrettable lack of cohesion amongst the departments concerned

Digitized by Google

BRITISH & COLONIAL

with the release of men, and that the whole machinery requires an overhauling and "gingering up." Mr. Robert J. Webber. manager of the Western Mail, Ltd., says that "out of 52 'pivotal' men applied for, only one has been released. Letters have been despatched to no fewer than four different Government departments without eliciting even the courtesy of replies. The personnel of the different departments of the firm are. with one exception, on exactly the same basis as on Armistice Day, and in view of the fact that the company did everything possible to encourage their employees to join the forces, when men were so badly needed in the early days of the war, this treatment is considered to be very unfair. Two hundred and twenty Western Mail employees have joined the colours, and of this number the 52 are urgently needed, as are the remainder when they can be secured. It is manifest that something should be done by the authorities to straighten out such a tangle."

The Apprentice and the State.

An important conference of representatives of trade unions affiliated to the General Federation of Trade Unions, was held in London the other day to discuss the questions of State unemployment compulsory insurance and the conditions which should govern the return to industry of apprentices who have served with the colours. In connection with the question of apprenticeships, Mr. Johns, representing the Ministry of Labour, attended, and explained to the conference the scheme proposed to be set in operation by the Government. The emphatic view of the conference was that no returning apprentices should be made to suffer any sort of industrial penalty as the result of their war service. The unanimous contention was that once the actual commercial value to the employer of the demobilised apprentice had been arrived at the difference between that amount and the rate of wage which the apprentice (if over 21 years of age) would have obtained as a journeyman should be made up by the State. After discussion, the following resolutions were unanimously carried: -" That, in the opinion of this conference, the State ought not to exact any further sacrifice from the young men whose apprenticeship has been interrupted by military service, and that their wages should be made up by the State to the craftsman's scale and producing capacity." "That, in view of the great diversity of conditions existing in the various industries affected by the apprenticeship question, this meeting recommends that the Government should make efforts with the employers concerned to effect a settlement on a national basis for each industry." A further resolution was passed, 'That this conference is opposed to any scheme of compulsory State unemployment insurance."

The Value of Trade Associations.

The Master Printers' Association Worthy of Emulation.

Our contemporary, the World's Paper Trade Review, in referring to the services of the Papermakers' Association, points out that there is a feeling that the Association representative of the trade is not so live as it ought to be in these days. Doubtless a great amount of good work is performed to the benefit of the trade; but if this is the fact, it is done so quietly that only at intervals is the greater portion of the paper trade reminded of the existence of the body. There may be occasions when silence and exclusiveness are desirable, but there are also occasions when publicity is imperative and essential. We would commend to the Papermakers' Association the mode and method of the Master, Printers' Federation. a body which works in the light of day, at least so far as its associates are concerned. The printers, boxmakers, manufacturing stationers and engravers have long since recognised the wisdom of appointing trade journals as their publicity medium. By such aid, grievances are ventilated, problems of the trade expounded, and the trend of thought indicated. The trade press gathers and publishes in concise fashion the views of the leaders of trade and manufacture; it exists for the good of the trade concerned. It is fitted for spade work and publicity campaigning which cannot be so efficiently performed in any other way or through any other channel. Other trades have recognised these facts more readily than the paper trade. Great issues and intricate problems are now at hand; the Association representative of the mills of Great Britain is in existence for the purpose of solving these problems for the mills con-cerned. The solutions of the problems will be so far-reaching as to affect not only the papermaking but also the paper-using fraternity. In the common interest, therefore, we commend our views to the notice of the members of the Papermakers' Association.

COLLAPSIBLE CARDBOARD BOXES. — Mr. Alfred Aviss, 161-3, Station-road, Rugby, has taken out a patent relating to collapsible cardboard boxes. The object is to secure increased rigidity of such boxes when set up for use, and this is achieved by the provision of a strip or strips forming the permanent pocket or pockets at one or both ends of the sides of the box.

a paper merchant. Claims by January 29th, to W. Durrance, official receiver, 12, Duke-street, Bradford.

NOTICE OF DIVIDEND.

Haynes, W., 22, Queen-street, Bridlington, Yorks, post card dealer. Supplemental dividend of 8s. February 10th, at the official receiver's office, 48, Westborough, Scarborough. NOTICES OF RELEASE OF TRUSTEES.

Cooke, W. H, 323, Cleethorpe-road, late 83A, Hilda-street, Great Grimsby, post card dealer. Trustee, J. F. Wingtringham, official receiver, St. Mary's-chambers, Grimsby. Released December 11th.

Durdey, B. J., Misterton, Notts., printer and stationer. Trustee, F. C. Brogden, official receiver, 10, Bank-street, Lincoln. Released December 11th.

Trade Organisation

Chamber of Commerce Proposals.

Some interesting passages occur in the fourth report which the special committee of the London Chamber of Commerce has issued on questions connected with trade after the war. After stating that the case for Imperial Preference is stronger than ever, the committee, as a prevention of dumping, advocate a scheme under which "the home consumption values in the country of orgin, substantiated by consular invoices or certificates of origin, shall be the basis upon which admission is granted." While recommending Government aid in the continuance of new or "key industries," the Committee consider that as a general principle the State manufacture of commodities of any kind is not desirable. Having regard to altered conditions caused by the war, it is recommended that the Government should appoint a Minister of Commerce of Cabinet rank, to whom certain of the functions of the Board of Trade and other Departments should be relegated. The new Department of Overseas Trade may form the nucleus of such a Ministry.

On the subject of commercial organisation, the Committee say they are fully justified in their view that Government intervention is

only desirable within defined limits.

After referring with approval to the progress made in connection with the formation of industrial councils the report deals with the question of wages. The principal of "equal pay for equal work," it states, strictly applied involves equality of output and efficiency, a consideration which is not always appreciated by labour or by the public. It is generally admitted, and this view finds support among labour leaders, that the maintenance of wages on a higher scale than in prewar times, leaving out of consideration such war bonuses as have been granted purely on account of the increased cost of living, depends upon increased production. The effect of foreign competition upon wages must also

be borne in mind so far as industries which depend to any material extent upon export trade are concerned. In their competition with foreign countries British manufacturers have suffered severely in the past from the limited output of their employees, whether due to trade union restrictions or other causes. It is, therefore, essential that this fact should be emphasised in the proper quarters, as if anything like the present standard of wages is to be maintained after the war a substantial increase in output must be assured, in the best interests of employers and employed, in which both must do their share. In regard to research work the Committee support the suggestion that firms engaged in research work of extreme national importance should have greater facilities in obtaining certificates to enable them to put down experimental plants.

The policy of trade organisation which is now in evidence is welcomed by the Committee as furnishing a sound basis for the grant-

ing of credit facilities to industry.

A report on similar lines has been issued by the Committee on the Provision of Financial Facilities for Trade after the War which was appointed jointly by the Chancellor of the Exchequer and the Minister of Reconstruc-The opinion is emphatically expressed that the primary factor in repairing the wastage of capital caused by the war lies mainly in increased production and actual It is pointed out that it would be of great assistance to manufacturers in making plans for the future if the future policy of the Government were made known as early as possible in regard to fiscal policy, the rationing of raw materials and so on. Suggestions are made for enabling banks to give extended credit, and in this report also it is proposed that a proportion of new preference shares should be reserved for the workpeople. In regard to State aid, it is considered that cases of hardship may arise in connection with firms who have undertaken, under considerable pressure from the Government, the manufacture of munitions of war. To meet such cases, the Committee suggest the establishment of a small committee of Government officials and business men in leading industries to consider claims of this kind in the first instance, or to act as a tribunal to which applicants can make appeal.

DISSOLUTION OF JOINT STOCK COMPANIES.—A notice appeared in the London Gazette for January 3rd. to the effect that the following, among other companies, were on that date struck off the register and thus dissolved:—

Artistic Publicity Co., Ltd.
Associated Guide Publication, Ltd.
Bournemouth Advertising Co., Ltd.
Display Printing Co., Ltd.
Hart Publishing Co., Ltd.
High-Speed Printing Telegraph Co., Ltd.
James Watson and Sons (Printers), Ltd.
Modern Chart Publishing Co., Ltd.

BRITISH & COLONIAL

Personal.

MR. A. J. STEPHENS, founder and editor of Aircraft, points out that Mr. Pemberton Billing, M.P., has never had any connection with that journal.

SIR HORACE BROOKS MARSHALL has been elected treasurer of the Royal Masonic Institution for girls in succession to the late Lord Barnard.

COMMANDER OLIVER LOCKER LAMPSON, M.P., has purchased the Peterborough Standard and the Huntingdonshire Post, Unionist weekly newspapers owned by Mr. H. Butterfield, of Peterborough.

MR. G. H. ROBERTS, after all is not to remain at the Ministry of Labour in the new Cabinet, but takes over the duties of the Controller of Food. This should provide another opportunity for a visit of Mr. Roberts to the monthly lunch of the L.M.P.A., though on the last occasion he came in too late to partake of the fare.

The appointment of Sir Robert Horne as Labour Minister is rather an experiment, says the Manchester Guardian. A conservative lawyer does not seem the likeliest man for dealing with labour problems, but he is a man of great shrewdness and much experience of men. Master printers and trade union leaders will doubtless know more of him hereafter.

MR. A. E. NEWBOULD, president of the Cinematograph Exhibitors' Association, who is a member of the London Master Printers' Association, at the annual dinner of his Association last week asked the Government to remove the shackles from the trade, so that it might meet the threatened American invasion.

MR. ALBERT BENNETT (Messis. James Truscott and Son) mentioned at the annual meeting of the South-West London Master Printers' Association last week that efforts are being made to form an association for South Kent and Sussex in order to develop the organisation in the coast towns.

The printing trade is again honoured by the addition of Mr. Wm. Alfred Waterlow to the list of Knights Commanders (Civil Division) of the O.B.E. As the managing director of Messrs. Waterlow Bros. and Layton, he holds a high and responsible position in the craft. His experience is also of value to the Council of the London Master Printers' Association, and among his past services he has to his credit two years as president of the Federation of Master Printers.

MR. W. ARTHUR NORTHAM, who receives the honour of officer (Civil Division) is connected

with the Ferrestone Press, West Norwood and was president of the South-East London Master Printers' Association last year.

MR. C. W. BOWERMAN, M.P., has withdrawn from the trade union section of the British delegation to the International Socialist Conference at Lausanne.

MR. OSWALD G. VILLARD, editor and proprietor of the New York Nation, is in England and hopes to promote the circulation of his paper in this country.

The next lecture to be given by the St. Bride Foundation Printing School will be delivered by the Rev. Arthur Taylor, Vicar of St. Bride's Church, and formerly secretary of the British and Foreign Bible Society. His subject will be "Strange Speech and Type."

MR. T. W. McAra, J.P., joint secretary of the Newspaper Proprietors Association, will preside.

MR. T. M. Tyson was due at St. Bride's last (Wednesday) night to give a chat on "The effect of colour chemicals in printing processes," with Mr. H. C. Bolton (chairman of the I.P.K.T. Council in the chair.)

CAPTAIN (ACTING MAJOR) CLARENCE H. Rose, who, previous to joining the Army, was on the editorial staff of the Scarborough Daily Post, has been awarded the Military Cross.

MR. R. LUXFORD and Mr. A. Beckwith have been re-elected president and vice-president respectively of the Leeds Typographical Society, with Mr. J. E. Nettleton, treasurer, and Mr. R. M. Lancaster, secretary.

SIR ARTHUR PEARSON is in Canada, where he is conferring with Ministers on the subject of vocational training for blinded Canadian soldiers.

SIR HENRY BUCKINGHAM at a dinner at the Carlton Hotel on Friday, which was attended by many representative London journalists, said he had never met a body of men more ready to give an example of patriotism to others than the Press, and particularly the London Press. At the beginning of the war the great London firms had in their employ about 10,000 men of all ages Of the 10,000, the number who served in the Army reached 5,000; but there was a still more remarkable figure to disclose. At the time recruiting ceased there were under 30 men still employed by the London Press of military age and fit for general service. If that did not do credit to the patriotism of the London Press, he did not know what did.

SIR HENRY BUCKINGHAM was chairman of the Advisory Committee of the City of London Tribunal who had specially to deal with

Digitized by Google

BRITISH & COLONIAL

matters affecting the enlistment of pressmen for military service.

SIR AUCKLAND GEDDES, who was present at the dinner, said there could not possibly have been a better record than that shown by the Press of London with regard to recruiting during the war. It was really marvellous, and the best record he had any knowledge of. It was indeed a great record, of which the Press of London might well be proud.

MR. GEORGE NELSON, the Labour candidate, who was defeated in December, has decided to stand again for the West Derby Division of Liverpool, notwithstanding Sir F.E. Smith's majority of 6,004.

THE PRESIDENT (Mr. J. J. Keliher) and officers of the Central Districts Branch of the London Master Printers' Association, have organised a striking patriotic victory concert for January 22nd, at Anderton's Hotel. The programme is of a very ambitious character, and Mr. Keliher himself is down for a couple of solos on the flute, an instrument of which he is a master The rest of the items ought to attract a very large gathering.

MR. ALBERT BENNETT (Messrs. Jas. Truscott and Son, Ltd.) is announced to give an address on "Co-operative Buying" for paper, ink, stereos, and all other material used by Printers at the meeting of the Central Districts Branch of the London Master Printers' Association on February 5th.

MR. ERNEST J. P. BENN presided the other day at a meeting representing the paper trade, at the Ministry of Reconstruction, where it was decided to form an Interim Reconstruction Committee for the paper trade.

The representatives of the employers side on the Committee were nominated as follows:—Messrs. H. Green, H. A. D. Wathen, W. L. Tod, C. R. Seddon, P. Denson, and J. E. Dobson (Papermakers' Association), A. Baker, E. W. Allen, J. M. Arnot, Stanley Cousins, and Flowerdew-Lowson (Employers' Federation). The representatives of the unions were left to be arranged.

MR. H. A. VERNET (Paper Controller) attended and made an interesting speech. He said they were anxious to see shipping conditions improved so that more pulp might come into this country from Canada and Newfoundland, and added that the Control Department must continue for a little while longer.

MR. C. R. SEDDON and MR. LEWIS EVANS represented the Employers' Federation and Association respectively; and Mr. Newlands Mr. W. Dyson, Mr. W. Ross and Mrs. Bridge were speakers on behalf of the Unions.

MR. JORGE A. MITRE, editor of La Nacion, Buenos Aires, is establishing an office in London. One of its functions will be to assist in developing trade with South America.

Canadian Pulp and Paper Industry.

According to Mr. F. J. Campbell, president of the Canadian Paper and Pulp Association, there are now over 90 companies engaged in the industry, having a total capital investment of close to \$200,000,000. The annual production exceeds in value \$100,000,000. The number of persons employed is about 25,000, exclusive of woodsmen, who vary in number from 10,000 to 20,000, according to the season and the condition of the labour market and the annual wage bill is about \$20,500,000. A comparatively minor percentage of its products are consumed in Canada. The last annual exports of pulp and paper products reached a total value of more than \$71,000,000.

Mr. Campbell says: Our foreign market for pulp and paper products is most extensive. We supply direct one-fourth of all the paper used in the printing of newspapers in the United States, as well as the raw material, including pulp and pulp wood, from which American papermakers manufacture at least another one-fourth of their paper. Our pulp and paper products are in demand in Great Britain, France, Australia, New Zealand, the South and Central Americas, China and Japan, and other countries, in addition to the United States. With anything like a fair opportunity, this industry should expand and develop after the war at almost as great a rate as it has in the last decade, during which time the capital invested first in the industry increased from \$50,000 close to \$200,000,000. The pulp and paper industry of Canada rests upon the possession of large areas of suitable forest growths, together with abundant and permanent water-powers. In these regards Canada to day is probably better off than any other country. In the year 1917, alone, the United States consumed 5,536,802 cords of spruce wood, nearly two-thirds of which was exported from Canada in one form or another.

THE INDUSTRIAL RECONSTRUCTION COUNCIL.—The second lecture of the series arranged by the Industrial Reconstruction Council will be held in the Saddlers' Hall, Cheapside, E.C.2, on Wednesday, January 22nd. The chair will be taken at 4.30 by the Rt. Hon. Lord Balfour of Burleigh, K.T., and a lecture on "Industrial Reconstruction in Government Departments" will be delivered by His Honour Judge Edward Parry. Applications for tickets should be made to the secretary, I.R.C., 2 and 4, Tudor-street, E.C.2.

Printing, Bookbinding & Kindred trades overseers' association.

The monthly general meeting of this Association was held at St. Bride Institute on Tuesday, January 7th.

Mr. James Walker, the president, in taking the chair, delivered his New Year greetings to a record attendance of members. He drew attention to the topical keynote of "Reconstruction" as appertaining to the Association in no lesser degree than to the State. The task involved the co operation of every member, firstly in introducing desirable overseers to membership, and, secondly, in following the lead of Mr. Frank Arnott in giving lectures of technical interest for the mutual education of all.

The minutes of the previous meeting, moved and seconded by Messrs. Hellery and Stroud,

were duly carried.

The candidates for membership were Mr. A. J. Gorbold, of Messrs. Waterlow and Sons' binding department, Dunstable, and Mr. W. H. Parrack, of Odham's photo engraving department, Long-acre, the latter being proposed and seconded by Messrs. A. E. Wood and J. Rawlings. The nominations were carried with unanimity, and the president, in voicing the Association's welcome to membership, again referred to the propaganda work, in which new members were invited to cooperate. Mr. Parrack suitably responded, promising his best efforts on behalf of the Association.

The election of auditors resulted in the retention of Mr. J. F. Stroud and the nomination of Mr. A. H. Smith, both being unani-

mously confirmed by the meeting.

Mr. J. Walker appealed for the hearty support of the members and the ladies on the occasion of the annual Bohemian concert at Anderton's Hotel, on Saturday, February 8th, for which a high-class programme had been arranged, and again for the reinstated annual dinner at the same rendezvous on April 5th. The latter event would stand unique in being the first Association dinner for which ladies

were to be invited; its success was therefore assured.

The ordinary business of the meeting having been disposed of, the chairman called upon Mr. Arnott for his address on "Costing."

In introducing his subject, Mr. Arnott was careful to explain that he was not there to give away" any particular individual's system, but would attempt a résumé of the principles of costing on broad lines only. The many pitfalls of the estimator were exposed, and the methods of arriving at "real cost' explained in such a way that the otherwise elusive "overhead charges" and the inclusion of the essential non-productive labour-overseers', in particular-made imperative. Actual figures were available from many good books now on the market, but the lecturer emphasised the need, nay—the fallacy, of omission —of some such costing system, not only for the benefit of the employer, but as a means to the tranquil longevity of the overseer!

The questions at the conclusion embraced the human element and the difficulty of accounting for variable individual output. In his reply to Mr. Daines on this matter, the lecturer further insisted upon a known flat rate to cover the various workers in a factory based upon the best possible equity.

Mr. F. C. Peacock pointed out the need of a thoroughly practical man in the bindery supervision, the many details of which far exceeded any other department in the factory.

The meeting was brought to a close by a hearty vote of thanks to Mr. Arnott for his efforts on behalf of the members, and in making a somewhat difficult subject so entertaining and instructive.

TENDERS FOR PRINTING.

TENDERS are invited by the Controller of H.M. Stationery Office for PRINTING FORMS, etc., for H.M. Customs and Excise in the Northern Area of England, Wales, Scotland and Ireland—Jobwork Groups 167, 168 and 169—for delivery to H.M. Stationery Office, Manchester.

Forms of Tenders, due not later than Monday, January 27th, 1919, are obtainable on application to the Superintendent, H M. Stationery Office, Manchester, where specimens of the work required can be seen. 15740

TENDERS WANTED.

LONDON COUNTY COUNCIL.

THE Council invites tenders for the supply of pulp for Tramway Tickets during the six, and alternatively, the twelve calendar months commencing approximately March 1st, 1919. Particulars of the materials required, the form of tender and conditions of Contract may be obtained from the General Manager, London County Council Tramways, 23, Belvedere-road, S. E. 1.

The person whose tender is accepted will be bound by the contract to pay wages at rates not less, and to observe hours of labour not greater, than the rates and hours set out in the Council's List. Particulars of the Council's Standing Orders as to its conditions of Tender and Contract are given in every issue of the London County Council Gazette. No tender received in the County Hall after 4 p. m. on Monday, February 3rd, 1919, will be considered. The Council does not bind itself to accept any tender.

JAMÈS BIRD, Clerk of the London County Council. 15739

For the Children of Printers.

B.-S.-C. Charitable Effort.

What is believed to have been the first concert by an auxiliary of the Printers' Pension Corporation on behalf of the grants to children of printers killed in the war was held at the Loughborough Hotel, Brixton, on Saturday night by the B. S. C. (Brixton-Streatham Clapham) Fund. The chairmen who preside at the monthly concerts choose the object to which the "plate" shall be devoted, and on this occasion Mr. W. Tanner (overseer of the Times press-room) selected this particular effort of mercy by the Printers' Pension Corporation. Under the scheme grants are made so that the children of printers who have made the supreme sacrifice may be given a helping hand at a time of great need. In a variety of ways this patriotic and humane service is rendered, and so far nearly 300 children are receiving relief. It is the proud boast of the Corporation that no application has been refused, a record which is all the more deserving considering that the fund is not confined to the children of fathers who were members. Mr. Tanner, therefore, chose a worthy object for his support, and the evening's effort produced the satisfactory sum The chairman was supported by of £103. most of the fathers of chapels in the Times office, all sections being represented, while the officials and members of the B.-S.-C. Committee who organised and carried out the arrangements were Mr. A. O'Connor (chairman), Mr. P. M'Ginty (hon. treasurer), Mr. H. S. Francis, Mr. T. Abrey, Mr. C. F. Witcombe and the hon. secretaries (Messrs. G. E. Clow and T. Wheeler). By their efforts the committee have contributed substantial sums to various charities connected with the printing and allied trades, thus being the means of giving assistance to many a printer who has needed medical or other aid. One of their enterprises is to establish a Bowerman Pension in association with the Printers' Pension Corporation, and already nearly three quarters of the £400 required have been raised by steady and persistent effort.

Saturday's concert produced a record collection, thanks to the generosity of the chairman and his friends, and the company present at the same time were entertained by a varied During the evening Mr. programme. O'Connor, on behalf of the committee, thanked Mr. Tanner for the excellent result he had attained, acknowledged the assistance of the various Times' chapels, and referred to the splendid object to which the "plate" was to be devoted. Mr. Tanner, in reply, said it was their duty to the dependents of the glorious dead and the maimed and shattered on sea and land to see that their sacrifices had not been in vain.

Mr. A. B. Maitland contributed largely to the success of the evening by his efforts both financially and musically, and others who entertained the company were Miss Nellie Marshall, Mrs. T. Abrey, Miss May Duke, Miss Lily Bradford, Mr. Claude Henry, Mr. W. B. Bowles, Mr. Charles Easton, Mr. Arthur Rose, Mr. Tommy Walter, Mr. S. H. Phillips, Mr. Fred Hylton, Mr. Syd Murray and Messrs. C. Grey and C. Hollingshead; Miss Rosie Rolfe was an able and accomplished pianist.

Mr. G. Combear (St. Clement's Press) will preside at the next concert on February 8th.

Awards for War Service

The King has been pleased to give orders for the following promotions in, and appointments to, the Most Excellent Order of the British Empire for services in connection with the war:—

Knights Commanders (Civil Division).

WATERLOW, WILLIAM ALFRED, Esq., Managing Director of Messrs. Waterlow Bros. and Layton.

WILLERT, ARTHUR, Esq., Correspondent of The Times at Washington; late Secretary of the British War Mission in Washington.

Commanders (Civil Division).

ASPDEN, HARTLEY, Esq., J.P., Honorary Or ganiser of the "Beyond Seas" Association.

GARNETT, JAMES CLERK MAXWELL, Esq., Principal, Municipal College of Technology, Manchester.

GODDARD, ERNEST HOPE, Esq., Acting Editor of the Illustrated London News and the Spetch

GRANT, NEIL FORBES, Esq., Editor, Cables and Wireless, Ministry of Information.

Officers (Civil Division).

Nicholson, Ivor Percy, Esq., Officer in Charge of Periodicals, Ministry of Information.

NORTHAM, WALTER ARTHUR, Esq., General Manager, Cinematograph Department, Ministry of Information.

Members (Civil Division).

Spence, Alfred, Esq., Officer in-Charge of Printing Section, Ministry of Information.

YOCKNEY, ALFRED, Esq., Secretary to the Pictorial Propaganda Committee.

Mr. F. S. Malan, Minister of Industries, speaking at the Printers' Exhibition in Johannesburg, expressed the belief that South Africa was at the beginning of an industrial development which was going to have a farreaching effect. As to raw material for the printing industry, the Government had been sending samples of all kinds of fibre to the Imperial Institute for testing, and had received excellent reports, especially of the tambookie grass and wattle bark fibres. There was no-doubt South Africa had the materials, but nobody seemed to have the requisite energy.

Colour Chemicals in Printing.

Mr. T. M. Tyson explains their action to Members of the Institute of Printing and Kindred Trades.

Thanks to the initiative of Mr. H. C. Bolton (chairman of the Council), the members of the Institute of Printing and Kindled Trades were given an insight into "the effect of colour chemicals in printing processes" by Mr. T. M. Tyson, at the St. Bride Institute, on Friday last. Mr. Bolton, who presided, briefly introduced the lecturer.

Mr. Tyson in the course of his remarks said:—"I will endeavour to put before you the effect of the chemical constituents of the colours used in printing inks, and the varied actions which they have on the completed inks, and through this, their action on your numerous blocks and stones. Umber is chiefly composed of either barium sulphate or silica combined with manganese, iron, lime, and a small amount of alumina silicate. Its colour is obtained from the manganese which gives it the brown tone, and the iron which gives it a red tone. When the raw umber is heated in a furnace, the red tone is developed, and you get what is known as burnt umber. The umbers are quite permanent on exposure to all atmospheric conditions. They mix well with all other pigments without themselves undergoing any change or bringing about any change in other pigments. Umbers are not attacked by any acid ordinarily used in printing processes, alkalies also have no effect

"Sienna is chiefly composed of iron and silica with little or no manganese or calcium, in contrast to the umbers. Burnt sienna is formed in the same manner as burnt umber, by heating in a furnace. Like the umbers they mixwith all other colours without change, and are equally permanent to light, and fast to acids and alkali.

"The ochres have the same composition as the umbers with the exception of manganese, which is entirely absent and alumina is present to a larger extent. By heating in a furnace the red tone may be developed and thus form venetian and indian red. Like umbers and siennas they mix with all other colours, are permanent to light, unaffected by acid and alkali. Iron oxides, as far as we are concerned, are the indian and venetian reds mentioned above.

"The next type of colours are those which are a simple salt of one metal prepared chemically and which include vermilion, lead and zinc chromes, orange lead, zinc white, white lead, guignet's green and blanc fixe, to name the most important. I have placed vermilion first because this can be classed as an earth colour, the ore being mined in various parts of the world. But we are only concerned with the manufactured product. Metallic mercury when heated with sulphur produces a sublimate of vermilion, having the chemical composition of mercury and sulphur. It is a fairly permanent pigment having a slight tendency to deepen on exposure. With the exception of white lead it will mix well with other colours for shading purposes. It is un-

affected by acids or alkalies.

"Lead Chromes. - These very valuable pigments consist of lead chromate and lead sulphate. The percentage of lead sulphate increases according to the paleness of the colour, and in the deep shades is almost, if not entirely absent. Pure lead chromate being a deep lemon shade and least sulphate being white, you will at once understand the reason.

for this

'Zinc chromes are simply chromate of zinc,

and do not offer the variety of shades which lead chromes do and are very much weaker, but have the advantage of being unaffected by sulphur or alkali, mix well with ultra blue and cadmium yellow, but are more readily attacked by acids. They are permanent on exposure.

"Orange lead is an oxide of lead formed by heating white lead in a furnace with air. Like all lead compounds it is affected by sulphur. Before proceeding, I should like to explain why all the lead compounds are affected by sulphur or colour containing sulphur. Lead in any form has a great attraction for sulphur with the formation of black sulphide of lead this of course causing the deepening of the shade. I should also like to explain the drying action which all lead colours exert on printing ink. In the grinding of inks, in which friction and heat, to a certain degree, play so great a part, the lead compound comes into such intimate contact with the linseed oil vehicle that a certain amount of amalgamation takes place, with the formation, in a more or less degree according to the actual condition of manufacture, of linoleate of lead which is one of the most powerful of driers used in the manufacture of varnishes. Zinc white or pure oxide of zinc with the exception of blane fixe is the most staple white we have. Blanc fixe, or permanent white, is not used as a white in the printing trade, but in conjunction with aniline dyes to get a more solid effect, especially in those well known geranium shades of red. As its name implies it is fast to everything. The chemical name is barium sulphate

"Bronze or prussian blue is essentially a compound of iron carbon and nitrogen, the iron being present in two conditions, in one it is as a base, while in the other it is in intimate union with the carbon and nitrogen to form a chemical known as ferrocyanogen. They are permanent on exposure to light, unaffected by acids, but readily attacked by alkalies. These blues, though not containing any of the metals usually associated with increased drying action, exert a strong drying action on linseed oil varnishes. Bronze or prussian blues mix well with all other colours without any ill affects."

After dealing with other important pigments the lecturer dealt with colours derived from aniline dyes which struck on aluminium hydrate give those bulky and transparent colours so much used in helio work, and for tin printing. Aluminium hydrate is also the base used in pure alizarine madders, giving them their bulk and is the cause of them reducing down to such clean, bright tints.

Dealing with the chief metals present in printing ink colours, the lecturer said:—Lead in a colour tends to darken when exposed to sulphur, exerts a rapid drying property in the ink vehicle and makes the inks heavy and poor when viewed from the standpoint of bulk, but has the counter advantage of solidity. Manganese, h s little or no effect on the colour, but very materially increases the drying property of the vehicle. Mercury, like lead gives opacity, but is very heavy and therefore of poor bulk, has little or no action

on the vehicle. Aluminium gives transparency and bulk, under normal conditions has little or no action on the vehicle but in time forms in conjunction with the oxygen absorbed by the oil a thick gelatinous skin, due to the formation of an aluminium soap. Zinc gives the whiteish bloom and a certain degree of opacity to the pigment and has very little action on the vehicle, if anything slightly increasing the drying property, and causing, when used in a very large percentage what is known as fattening. Of the other elements our chief enemy is sulphur, which forms with lead itself, colours containing lead, or even metal which contains lead, the black sulphide of lead and of course causes a more or less dirty looking metal or colour according to the quantity of lead present.

The chief diluents used, apart from various makers specialities are turpentine, turpentine substitute, paraffin, terebine, copal varnish, gold size, litho varnish and boiled oil. Of these the first three I have arranged in the order of their volatile constituents, turpentine and turpentine substitute have what one might term a very harsh action on the ink, if used at all carelessly or added to the ink in at all large quantities, their first action is to dissolve the vehicle and leave the small particles of colour more or less in a state of division and suspension in the liquid composed of diluent and Paraffin has a somewhat similar vehicle. effect, but its action is not so drassic. Terebine, gold size and copal varnish have still less effect, terebine is the most drastic, gold size much less and copal varnish least of all, on account of the more drastic action of the turpentine and turpentine substitute being absorbed by the other ingredients in these Litho varnish and boiled oil, materials. being similar in their construction to the vehicle are theoretically the best diluents whenever possible for the reduction of an ink, except of course those proprietary articles offered by many ink manufacturers, especially compounded to give the same effect as the materials I have criticised, without the cor-This brings me to the responding defects. point that I wish to discuss. My contention is that for the purposes of printing ink manufacture for normal uses it is not so much a question of actual drying that is required, as it is of the vehicle being of such a nature that. it carries the particles of pigment into the pores of the paper and holds them there without being sticky and causing a set off on the next sheet.

To make my meaning more clear you can grind a pigment in vaseline and this will both print and "dry" satisfactorily, yet vaseline does not absorb oxygen to form a hard solid mass and if it is spread on glass, will not dry hard in six years. But the vaseline carries the particles of colour into the pores of the paper and holds them there in much less time than an average ink.

I am of course speaking of ordinarily absorbent papers, not of hard-surfaced papers and boards as used for book covers, in which case the ink fulfils the same purpose as a paint. I have of course taken two extremes

to explain my theory and to promote discussion of the subject.

These are points to which I have given a lot of thought and attention and I should very much like to hear the opinion of practical printers on this subject.

DISCUSSION.

In the course of the discussion which followed, Mr. Workman asked Mr. Tyson why he desired to carry the particles of pigment into the paper, to which the lecturer replied that the object was to procure a quick drying effect; otherwise printing ink became nothing more than a paint, which never dried in a few

seconds as printers required it to do.

Mr. Riddell said it was the art of printers to put the colour into the paper so that they could build up properly. It was necessary to have a vehicle which carried the colours right into the paper. With regard to the first colours, it was the great difficulty, particulatly in process colour work, to get those so mixed as to suit the requirements in process printing. In lithography there was greater scope, but in process work they had to find three strong body colours, and had to place one on top of another to maintain colour value. He went on to mention the destructive effects of ultramarine on electros, and mentioned nickel plate and nickel type. Nickel, however, did not prevent the colour eating right into the plate.

Mr. Tyson said nickel had the same effect as

copper, only it was slower.

Another speaker complained that mixing with vaseline in a small degree even was a great nuisance to set-off, to which Mr. Tyson replied that when he used the term "dry" he did so in the sense that the printer would use it. He added that the colour was absorbed by the paper and did not set off. He had tried experiments and had pulled proofs

from which they could not rub the colour off. With this view the previous speaker dis-

agreed.

Mr Tyson said he had taken two absolute extremes, and added that when an ink was skinned they had got what was theoretically

Mr. Workman said they had to consider what was the particular object for which they wanted the ink to dry. He had experience of colour work, and his idea was if they wanted to get good colour work of any kind they must permit it to dry slowly and it must not sink into the paper. He was, of course, speaking particularly of coated papers. the printing of newspapers, of course, they wanted immediate drying and the work must come off the machines practically dry. He went on to refer to intaglio as in the case of the Illustrated London News, where they found the pigment lying right on the top. The larger part of the vehicle had perhaps sunk into the paper, but that was not the case with the colour. The whole question was mixed up with the class of paper and the class of ink, and they could not make a general rule.

Mr. Tyson said he had based his remarks on

experiments with papers which included M.G. poster, fine art, and label chromo.

Mr. Riddell argued for a basis on which to build up colour, and to this end the printer

generally took yellow as the base.

Mr. Harrup, in the course of his speech, observed that brilliant reds in litho died some 35 years ago, since when they had not tried to print brilliant colours. He added that nickel was not affected in the same way as copper and was not readily acted upon by sulphur. He proceeded to raise the question of bleeding and gritting.

Mr. Tyson, in taking up the question of bleeding, said that was very often caused by the pigment that was used. In most cases a little strong, or extra strong, varnish would obviate the fault to a great extent. He mentioned that he was trying experiments in this connection, but he was not yet in a position

to report the results.

On the motion of Mr. Harrup, seconded by Mr Workman, a cordial vote of thanks was passed to the lecturer, a similar compliment being paid to the chairman, to whom the audience was indebted for Mr. Tyson's appearance.

Mr. F. S. Roberts.

Mr. F. S. Roberts, labour secretary of the Federation of Master Printers, has now taken up his new duties as a manager for Messrs. Hulton's, in Manchester. He has not been allowed to leave the Federation without a acknowledgment of his valuable services both from his colleagues and the officers.

Mr. Lake, the director, has paid a high testimony to the character of his work in a report presented to the Council of the Federa-

tion.

Mr. A. F. Blades, president of the Federation, has congratulated Mr. Roberts on behalf of the Council, and at the same time expressed the regret which all feel at losing him. It was only because Mr. Blades felt he could not hinder Mr. Roberts in his career that he gave him permission to accept a very flattering offer received from the great Manchester firm. In offering him hearty congratulations and expressing appreciation of his ability Mr. Blades expressed the hope that Mr. Roberts might still be of service to the Federation.

The late labour secretary was obviously touched by the expressions made at the council meeting which he appropriately acknowledged, adding that he had always done his best for the Federation and he fully appreciated the manner in which they had treated

THE death has taken place of Herman Whitaker, author, war correspondent, and contributor to American magazines. He was a native of Huddersfield, Yorkshire.

BRITISH & COLONIAL PRINTER & STATIONER

Printing Trade Organisation.

Important Work by the Federation.

Important work is being undertaken by the Federation of Master Printers in organising the whole of the trade on a sound, solid and That this is so, was indiprogressive basis. cated at the meeting of the council last week when most of the subjects under discussion revolved around this important question. It was demonstrated by the size of the gathering, which was of record dimensions, that master printers are beginning to appreciate the value of thorough organisation, and there are signs that before long the whole printing industry, from the employer's point of view at all events, will be knit together from one end of the country to the other.

Organisation loomed large in the report of the director, Mr. R. J. Lake, which was pre-sented to the council. It was emphasised that the views and opinions and even the prejudices which might exist among the members of the Federation all over the country should be studied, and that any scheme which was decided upon must be elastic. For the time being attention is being focussed upon general principles, and the de-Others who tails will follow in due course. took part in the conference also dealt with the subject of organisation, Mr. Goodwin instancing the formation of various associations and alliances in the provinces. Closely associated with the question of organisation is that of securing more orders, effecting better printing, and maintaining prices, an aspect of the subject in which the employees are

equally concerned. General Bemrose, who is the author of the scheme now before the employers, went into some of the details at the council meeting. It was pointed out that in developing the organisation the Federation were carrying out the wishes of the Government, who desired that each industry should be fully organised on both sides. General Bemrose urges an organisation so complete that it will be able to deal with any matter affecting the trade. He wants to see the printing industry organised from top to bottom, and has drawn up a scheme by which this can be carried out on a geographical basis, so that no master printer need be left out. It is urged on all sides that with complete organisation the trade will be able to speak with certainty on all the problems with which master printers are faced now and which may arise in the future. One of the advantages of General Bemrose's plan will be that the opinion and feeling of each district and the country as a whole can be correctly gauged and the difficulties of different localities understood, and at the same time opinions can be sent forward from districts to the centre, with the result that confident action can be taken from headquarters on main principles. It is necessary, however, that the scheme of organisation

should be pressed on with all speed, and to that end master printers throughout the country should concentrate their attention upon it.

Yorkshire & Durham Master Printers

A special meeting of the North-East Yorkshire and Durham Master Printers' Alliance was held last week, and was very well attended by printers from Yorkshire, Northumberland and Durham.

Mr. W. H. Thomas presided, and in his opening address dealt with the importance of employers keeping in close touch with their Associations and the necessity for studying closely the important questions which now have to be decided by these bodies.

Mr. C. F. Bowes, president of the Newcastle Association, had been invited to attend and explained the proposals which were under discussion by the Federation to link up the Associations throughout the country into district organisations.

Mr. A. E. Goodwin was also present and contributed further information on this topic, and as regards the first Industrial Council and the proposed settlement of wages on a national basis. It was unanimously decided to approve of the principles which were outlined, but to await further information on points of detail.

Hearty thanks were accorded to Mr. Thomas for his hospitality to the members and for the keen interest taken by him in the work of the organisation.

Printers' Managers and Overseers

MANCHESTER & DISTRICT CENTRE.

A grand "Victory" concert was recently held at the Crown Hotel, Manchester, when Mr. J. H. Nuttall (president) had the support of Mr. Thos. Rignall (vice-president), Messrs. Thos. L. Whitehead, Richard Bates, Robt. Marshall, Edward McVay (past presidents), and about eighty ladies and gentlemen. musical directors were Messrs. A. Hellewell, F. E. Robinson; the stewards: Messrs. Chas. N. Knowles, R. F. Singleton; the artistes: Miss F. Newton (soprano), Mr. J. Roddy (tenor), Miss C. Grundy (contralto), Miss Elsie Wade (elocutionist), Mr. S. Fyans (comedian), Mr. L. Robinson (paritone), Mr. A. Hellewell (descriptive vocalist), Mr. W. A. Taylor (violin soloist), Mr. Ashton Massey (pianist). The influenza fiend caused the absence of past president Mr. Thos. Kirkwood. A delightful programme of music was gone through, after which Messrs. Marshall and Whitehead moved a vote of thanks to the artistes, which was vociferously carried.

LEEDS AND DISTRICT Moster Printers' Association

At the annual dinner of this Association, held in Powolny's Rooms, Leeds, on Monday, January 19th, the opportunity was taken to make a presentation to Mr. Henry Jenkinson, of the Abbey Printing Works, Kirkstall, Leeds. The testimonial consisted of a solid silver coffee set, with tray, engraved as follows:-

"Presented to Henry Jenkinson, Esq, by the members of the Leeds and District Master Printers' Association, as a mark of personal affection and as an acknowledgement of work well

and truly done.

20th January, 1919."
The president (Mr. Harry Cooke) referred to the sincere and helpful advice given by Mr. Jenkinson at the meetings of the Association, and Messrs. Wesley Petty, Fulford, H. Wood and Storey referred to the many phases of the work which he had done for the Association, viz., as president for two years, deputy president three years, representative on Federation of British Industries two years, Leeds representative on the Federation Council five years, printers' member of the local advisory committee under the National Service Department over three years.

Mr. Jenkinson, in acknowledging the gift

gave some particulars of the pleasures and the difficulties which his work for the Association had given him. He stated that he hoped for many years, if his health permitted, to continue any work that he had been able to do in the past. He mentioned, however, in his usual sincere and modest way, that he could not really claim to be worthy of all the kind and nice things which had been said about him.

Non-Ferrous Metal Industry Act, 1918. The Board of Trade draw the attention of all companies, firms and individuals dealing in non-ferrous metals to Section 10 (2) of the Non-Ferrous Metal Industry Act, 1918, which provides that the Act shall continue in force for a period of five years after the termination of the war. The provisions of the Act are in no way affected by the relaxation of the control over certain non-ferrous metals exercised by the Ministry of Munitions during the war: and it is still necessary for companies, firms and individuals doing business of a kind to which the Act applies to be licensed by the Board of Trade.

Гив handy "Engineering Directory," issued from the offices of Engineering, is now in its 65th issue, and contains the names and addresses of all the leading engineering firms in the kingdom together with their telegraphic addresses, codes and telephone numbers. A most useful little volume for the practical man.

EMPLOY THE WHO FOUGHT FOR YOU

To to the nearest Employment Exchange and get a man who did the Big Job for you. He is waiting to do your Peace Job, no less thoroughly.

The Ministry of Labour is determined to make the Employment Exchanges (one is in every district) the means of bringing both master and man together to the complete satisfaction of each.

The Employment Exchanges have an efficient businesslike organisation that in the quickest possible time will introduce the right man to the right job.

If you want a good Man-if you want a good Job-go to your nearest Employment Exchange and get one.

BRITISH & COLONIAL PRINTER & STATIONER

Trade Notes.

AT Newcastle-on-Tyne, the local association of master printers is convening a meeting of printers of the North-Eastern counties to consider the formation of an alliance for this area.

In the paper and printing trades during 1918 the changes in the rates of wages affected 98,000 workers as as against 92,000 in 1917. The net increase in the weekly wages in these trades in 1918 was £65,700, as compared with £30,800 in 1917.

LONDON printers are organising a matinee concert for the afternoon of Sunday next, when it is hoped to raise £1,000 by gifts and the sale of reserved seat tickets for the benefit of soldiers blinded during the war who are undergoing treatment at St. Dunstan's Hostel.

An important meeting of the printers of Kent, Surrey and Sussex, is to be held at Tunbridge Wells, on February 1st, to consider the measures for strengthening the whole organisation of employers in this area. Mr. Murray, of the *Courier* Office, Tunbridge Wells, is acting as secretary, and a large attendance is anticipated.

According to the Labour Gazette, employment in the paper, printing and bookbinding trades continued good last month, except with lithographic printers in the provinces, for whom, on the whole, it was only moderate. There was a general scarcity of men, and a good deal of overtime was worked, especially in London. There was still a shortage of wood pulp and of other materials.

MR. A. WILLIAMSON, assistant secretary of the Federation of Master Printers, visited Ireland recently and had a very interesting meeting in Dublin with the Irish Provincial Newspapers' Association, when the Federation costing methods applicable to newspaper offices were discussed from 8.30 to midnight. Eight firms in Dublin are now installing the system, and the whole of the provincial newspaper offices in Ireland have decided to affiliate with the Federation.

It has been decided to broaden the character of the Journalists' and Printers' National Memorial Service in St. Paul's Cathedral, which had been arranged for Saturday, February 1st. The date has now been postponed to Saturday, February 22nd, at two o'clock, and the roll of honour will now include the staffs and workmen in general and jobbing printing offices, as well as journalists and printers engaged in the production of newspapers, magazines, and periodicals.

SCOTTISH PRINTERS' DEMANDS—A circular has been distributed among branches of the printing trade in Scotland which states that the combined Edinburgh Committees of the Scotlish Typographical Association have agreed strongly to resist any attempt to lower the present rates of wages in the trade. A reduction in the working week to 40 hours,

without any reduction in wages is also put forward as part of the association's programme, and a new scale of wages for apprentices is called for on the basis of 10s. for the first year, rising annually to 12s. 6d., 16s., 20s., 26s., 32s., and 38s.

A CONFERENCE on "The Workers' Interest in Costing: A Factor of Industrial Reconstruction," will be held under the auspices of the Industrial Reconstruction Council on Tuesday, January 28th, at 6 p.m., in the hall of the Institute of Journalists, 2 and 4, Tudor-street, E.G.4. The chair will be taken by Mr Jack Joseph, of Messrs. J. Lyons and Co., Ltd., and the opening address given by Mr. M. Webster Jenkinson, C.B. E., F.C.A., controller of factory audit and costs at the Ministry of Munitions. Questions and discussion will follow. No tickets are necessary.

DISSOLUTION OF JOINT STOCK COMPANIES.—A notice appeared in the London Gazette for January 10th, to the effect that the undermentioned, companies, among others, were on that date struck off the register and thus dissolved:—

"Bindabook," Ltd.
Co-operative Publicity Co., Ltd.
Illuminated Posters, Ltd.
Illuminated Posters, Ltd.
Leavis Press, Ltd.
London and Midland Printing Works, Ltd.
North of Eugland Advertising Co., Ltd.
Patriotic Publishing Co., Ltd.
Press and Artistic Advertising Agency, Ltd.
Tresto" Pencil Co., Ltd.
Style Parisen Publishing Co., Ltd.
Sundry Publications, Ltd.
Wild Life Publishing Co., Ltd.

STATIONERS' HALL. - Mr. A. F. Blades, president of the Federation of Master Printers, is very anxious to complete his scheme of a Central Home for the printing industry, in London, in connection with Stationers' Hall. The Stationers' Company have approved of the scheme by which all the associations connected with the printing trade can come together in a new building on the historic site. The broad outlines of the scheme, we understand, have already been prepared, and will be put before the parties concerned in due Mr. Blades, however, is losing no time in the matter, because he is exceedingly anxious to provide master printers with suitable accommodation worthy of the trade. It will be very interesting, of course, to learn something of the details of this ambitious proposal, but the time is not yet ripe for that.

THE twenty seventh annual general meeting of the members of the Newspaper Press Fund in the Glasgow and West of Scotland District was held in the Religious Institution Rooms, Glasgow. Mr. W. S. Ballantyne presided. During the year, it was stated in the committee's report, the council had voted in grants to members or their dependants between £4,000 and £5,000. Between 20 and 30 members of the branch had enlisted, and so far as was known four had fallen in the fighting line. Mr. Arthur S. Charteris, who has acted as hon, secretary of the district for 27 years, retired from that office, and was elected chairman. The following other office bearers were appointed:—Mr. T. W. Ferguson, hon secretary; Mr. J. A. Buist, assistant secretary; members of committee (to fill vacancies), Mr. D. S. Robertson, Mr. George Adam, Mr. James Gibson, Mr. D. J. Love (Motherwell), and Mr. Alan M'Donald (Greenock).

St. Bride Institute.—On Friday, January 31st, a lecture will be given on "Strange Speech and Type," by the Rev. Arthur Taylor, Vicar, St. Bride's Church, formerly secretary. British and Foreign Bible Society. The chair will be taken at 7 p.m. by Mr. T. W. McAra, J.P., joint secretary, Newspaper Proprietors' Association. The lecture is open to all interested and will not exceed one hour, time being allowed for questions and discussion.

Fire.—Damage estimated at £50,000 was caused by fire, last week, at the works of the Alliance Box Co., Ltd., Warrington. With the exception of a large warehouse the manufacturing portion of the works was completely gutted. The whole of the plant, including new machinery which had just arrived from America and had not been unpacked, was destroyed. The company employ about 200 hands, mostly females. The damage is covered by insurance.

RECENT WAGE MEMORIALS.—A number of wage memorials have lately been settled in various parts of the country. In Yorkshire an advance of 7s. 6d. has been conceded. In the South-Western Group area an arrangement has been made by which the group is divided into three grades, receiving respectively. 6os., 57s. and 54s.; 7s. 6d. of which is to be paid immediately and the balance in April. The circle is completed in North Wales, with an advance of 7s. 6.1., 2s. 6d. of which is deferred until March; this brings the rate up to 52s. 6t. n all towns, except Wrexham, where it is 55s. In the home counties there is a flat rate now of 50s., and in East Anglia 58s.

The annual meeting of the Northern Dis-trict of the Newspaper Press Fund was held on Saturday, at the Newcastle Chronicle offices. Mr. E Tattersall Hawkes, South Shields, pre-The hon, secretary reported that during the year the Press Fund had made grants amounting to £5,591, including £1.555 pen-sions. The total membership was 2,617. The membership of the Northern District was 91, of whom 54 were life members. The grants in the district during the year had been £60, and there were, in addition, two pensions, amounting to £70 per annum. The report was adopted, and the committee was appointed as follows: Mr. E. Tattersall Hawkes, Shields Gazette; Mr. F. W. Betty, North Mad, Sundant Hawkes, Shields derland; Mr. Thos. Greene, F.J.I., Newcastle; Mr. Joseph Quin, Blyth; Mr. M. Young, Jarrow; Mr. D. Jamieson, Newcastle Daily Journal, South Cities Mr. J. Dorran Newcastle South Shields; Mr. P. J. Dorrian, Newcastle Daily Journal, North Shields; Mr. A. J. Harker. Newcastle Daily Journal; Mr. Burgess, Carlisle Patriot; Mr. Edward Allen, Newcastle Weekly Chronicle; Mr. J. N. Back, Newcastle, hon secretary.

GIVE some printers their pick, and they will pick flaws every time.

Personal

THE next annual meeting of the Federation of Master Printers in May, is to be held either in Manchester or Southport.

MR. WALTER HAZELL is making a steady recovery after his recent operation.

DURING a recent visit to Ipswich, Mr. A. E. Goodwin installed the costing system in five printing offices, and the hourly rates were accepted for the district.

MR. E. R. ALEXANDER (president) was in the chair at the monthly meeting of the East and North-East London Master Printers' Association on Tuesday night at Stratford.

MR. WM. WHYTE, assistant secretary of the L.M P.A., attended and afforded much enlightenment on questions now confronting the trade. "The man with a grievance" was in evidence, much to the satisfaction of the secretary, Mr. A. D. Phelp, and he was readily supplied with information from headquarters.

MR. A. LANGLEY gave an interesting and practical address to the members of the West and North-West London Master Printers' Association last week, and we hope to refer to it in some detail in our next issue.

Co-operation Among Papermakers.

In the face of the many handicaps of the past two years the papermakers in Canada have shown commendable enterprise. Five of the larger producers, grouped in the Canadian Export Paper Association, have now in effect a plan of co-operation by which all data bearing on production are exchanged among the mills, with each at liberty to adopt what proves to be best suited to his requirements. Meetings of all departmental heads are held quarterly at the plant of one or other of the companies. There are no trade secrets among the five companies. The object of this clean cut plan of co-operation is so to improve the quality of the output of the respective mills that Canadian news print will become a standard in the world's markets. Worked to its natural conclusion that will ultimately mean a preferential price for the Canadian product, says Messrs. Greenshields and Co. in their monthly review. This is a decidedly interesting development from the standpoint of the shareholders who It will enown the respective properties. courage good management and progressive methods, and in the long run these count as chief factors in the success of a business enterprise.

THURSDAY, JANUARY 23, 1919.

Current Topics.

A New Feature.

THE conference of secretaries of Master Printers' Associations throughout the country which Mr. R. J. Lake organised in London last week turned out to be an even greater success than anyone had anticipated. Over sixty secretaries altogether attended, and were the guests of the director (Mr. Lake) during their stay in London. This is the first time in the history of the Federation that such an assembly of officials has been The whole of Wednesday got together. afternoon was devoted to consideration of the various problems which face master printers at the present time, and which are particularly acute in view of the re-construction

arrangements which have to be made. The result of a free and open discussion of a variety of questions was so good that there is a general feeling that such a conference should be held every year. In fact, now that it has taken place, everyone is wondering why so useful a fixture had not been put into operation years ago.

The Return of the Contents Bill.

Towards the end of last week the longvanished newspaper contents bills began to appear again at the pitches of the street newsvendors, and this week nearly all the papers have their placards on the streets again, thus restoring a feature of city life that had been much missed during the time of suppression, for the contents bill had become so great a part of London's life that newsvendors adopted all kinds of substitutes The pavement became the in its place. poster, and there was rivalry between the different vendors as to who could make the best use of white chalk. Brown paper was popular, so were rough boards, and chalks were used in all colours for the lettering. The return of the contents bill will be appreciated by the public, and make for the contentment of the man who likes to get his news for nothing.

Why Books are Dear.

THE day of the cheap book has, for the moment, passed, and the wonderfully low priced series in fiction and the classics that were so popular before the war have, in many instances, nearly doubled in price, and are difficult to procure. Mr. J. M. Dent, the publisher of the "Everyman" series, has been interviewed on the subject of dearer books, and told a representative of the Press Association that the "Everyman" series was at first published at a very close profit, as can be imagined when the price was only is., but the plan was to sell large quantities, so that people might have free access to the big things in literature. The scheme was entirely successful. During the war the price of paper went up from something like 3d. a pound to is, and there seems no prospect of a material reduction for some time to come. addition to this, the material with with which books are bound has gone up tremendously. The boards with which "Everyman" are bound used to be bought at something like £5 a ton, but the last quantity purchased cost as much as £81 a ton. The same applies to the cloth, which originally was bought at from 5d. to 6d. a yard, and now is

15. 4d. a yard. Therefore "Everyman" was necessarily increased to 25. The bookbinders and printers are asking for considerably more than twice the wages they received before the war. Now the bookbinders are demanding a 45-hour week and another 8s. increase, although they had an increase of 9s. 6d. in November. All these factors are making it impossible to produce books as before the war, and it is quite clear there never can be again books at such a cheap price. The shilling book of almost any kind is out of the question. The paper scarcity greatly hindered us (Mr, Dent continued), but I could never understand why we were limited to 25 per cent. of the pre-war quantity while all kinds of ribald journals could be published at almost their full. Surely if the Government were looking after vital things at this time, and it were necessary to stop any printing at all, it should not have been that of the great classics of the world.

The Federation of Master Printers.

The Next President.

We understand that Mr. A. F. Blades, president of the Federation of Master Printers, is to be asked to occupy the position for another year. Whether Mr. Blades will be able to accede to this request is not yet certain. He is, of Course, a very busy man, with the direction of the firm of Blades, East and Blades largely upon his hands, for it is to be remembered that his partner, Sir Rowland Blades, has recently been elected as Member of Parliament, so that his time will be fairly well occupied with political matters. ever, Mr. sever, vice president of the Federation, who would in the ordinary course become President next year, is not only willing, but art xious in view of the existing circumstances, to defer acceptance of the honour in layour of Mr. Blades for another 12 months.

Of Course, it is obvious that during the past year many important questions have been raised and are only now in process of of the details at his finger ends it will process of of the details at his finger ends it will process that he should continue in office until definite settlements are arrived at. These questions cover a wide field, and some of the most important problems that have ever faced master printers are is the Joint Industrial Council, upon which both employers and men are deliberating at the present moment.

A matter of almost equal importance is that of the national wage basis, which, if satisfactorily agreed to, ought to make the relations of master printers and the union representa-

tives much more easy and amicable in the future.

In addition to these two questions there are of course all the multitudinous affairs arising out of demobilisation which are at the moment in a transitory stage, not to mention the matter of hours. Hence it is that Mr. Blades has received the unanimous request from the Federation to allow himself to be nominated once more for the position of president, and we believe that if he can possibly see his way he will continue his valuable services at the head of the Federation.

Sir William Waterlow.

Sir William Waterlow came in for warm congratulations from his colleagues on the council of the Federation of Master Printers when they met last week in London. The president, Mr. A. F. Blades, voiced the unanimous feeling of a record gathering when he offered Sir William warm congratulations on the honour which had been recently conferred upon him. Acknowledgement was made of the enormous amount of work Sir William (head of Messrs. Waterlow Bros and Layton), had performed for the benefit of the printing trade, while special reference was made to the valuable services rendered by the firm to the country in the matter of currency and other printing work which the nation required during the war. Mr. Blades regarded it as a matter of congratulation for the whole of the trade that Sir William Waterlow should receive an appreciation of his work from the

Sir William's appearance at the council meeting was cordially hailed, and in acknowledging the congratulations, he mentioned that his firm had been privileged during the war to carry out a very considerable amount of work for the Government; work which he described as vast, not only in quantity, but in the responsibility attaching to it. While fully appreciating the honour which had been conferred upon him, he looked upon it as a compliment to the trade. He was glad to think that the printing trade during the war had been recognised as it had never been recognised before. 'He recalled the early days of conscription when as president of the Federation he had to deal with so many matters relating to the retention of labour, and he remembered what difficulty they had in impressing upon those in authority the absolute necessity of permitting the trade to retain a large number of their men, so that the work of the country and of the war might proceed unhindered. It was not an easy matter to make the authorities understand the essential character of the printing trade from the point of view of the good of the community. Sir. William thought that master printers should be pleased that the trade during the terrible period of stress came out in an enhanced position among the trades of the country.

THE BANKRUPTCY ACT, 1914. ORDER MADE ON APPLICATION FOR DISCHARGE.

Watts, J. H., 45, Lombard street, London, E.C., agent for a newspaper. Date of order, December 10th. Discharge suspended for 21/2 years, on the grounds that the bankrupt's assets are not of a value equal to 10s. in the pound on the amount of his unsecured liabilities; that he had on two previous occasions been adjudged bankrupt; and had been guility of misconduct in contracting certain debts to two creditors without informing them or either of them that he was an undischarged bankrupt.

NOTICE OF DIVIDEND. Proctor, W. T., 29, Stockton-road, West Hartlepool, stationer, etc. First and final dividend of 2s. 21d., January 22nd, at the official receiver's office, 3. Manor-place, Sunderland.

THE DISCUSSION.

The chairman in opening the discussion, recalled the effort of a newspaper proprietor who set out to produce an engineering trade journal at a very high standard, but the result of all his ideas was the presentation of advertisements in heavy black sans all the way He mentioned the case of one business man who gave orders for advertising or printing to the amount of £100,000, but he could not get the service he wanted from the The chairman went on to refer to an extensive advertiser who died recently, and who had made a vast fortune by advertising in the old style.

The Printer's Work.

Mr. J. R. Riddell, principal of Sk Bride Printing School, thought it was a very low level to place a man's ideals, on a cash basis. He believed a customer who was shown something better in the way of displayed advertisement would be induced to accept it. The Lady's Home Journal, of Philadelphia, he said, exhibited very high class work, and would not accept advertisements unless they were set up in their own style. They preferred to submit designs of their own, and he (Mr. Riddell) thought much could be done in that way in this country if printers here had more backbone. With regard to the advertising agents, many of them had imagination and a style of writing up matters which made it easy for the practical man, such as the compositor, to be trained along the lines of begood copy writers. With their knowled ge of type, an artistic sense of layout, balance and harmony, and the value of spacing, he believed it was the compositor's work to become a lay-out man. He was not in favour of the advertising agent taking the printer's legitimate work. The printer ought to create the work, and hire the advertising agent to carry it out.

Harding, as an operator for a good tising years, spoke of the recent war adver-nience by the Government, and of the convenience to local papers of receiving just before to press copy for an advertisement Which was nicely displayed and properly drawn up, so that compositors could follow it

easily during the last rush. Mr. A. H. Wilson pointed out that the lecturer had confined himself to Press advertising the reas advertising went beyond that and em braced the whole field of publicity. He held that the modern advertising man certainly was dependent upon the printer for carry ing out his ideas. It had been deplorable, ho wever, to see some of the efforts made by compositors, although he admitted a com-Positor was put into a very great difficulty.
To the students at St. Bride's he would suggest gest, after they had finished their course, that they should spend another couple of years in studying the whole question of publicity as put forward by the advertising man; then they would be able to go out into that sphere of life as experts, and would find very re-

munerative employment.

Mr. R. A Austen-Leigh put in a word on behalf of the printer who had been rather abused that night. This was an age of specialisation, and the advent of the advertising agent had increased advertising and improved the work of the printer. He showed how various processes which at the beginning were all done by one man had been sub-For instance, Caxton probably began by writing a book, setting up his own type, and printing and publishing it. Now-adays the publisher filled a much-felt want, and Mr. Austen-Leigh believed there would not be the number of books to print if the printer also did his own publishing. He agreed with the statement as to the beauty of the publications of the Curtis Publishing Co. in America. It was the newspaper proprietor, he added, who decided the question of the type, and the printer who was producing a weekly paper could not lay down the rule about that matter.

The lecturer, taking up the discussion, held that as American printers were able to achieve their object by presenting a solid front to the advertisers, the English printer could do the same. He was not exactly sympathetic with the advertising man, but one had to be just, and the fact was that the advertising man had lifted advertising out of the ruts, and had placed printers on their metal. Quoting from his experience of canvassing, he showed that when he went out on to the road, the advertising knowledge he possessed, in addition to his technical training, was valuable believed that with specimens they could influence business, and advertisers were glad to come across a printer who knew something about advertising. Time and again one had obtained splendid orders by being able to sit down and sketch out an advertisement on paper. It was also an advantage at the same

time to be able to give an idea of the price.
Mr. Fraser, of Woking, said the fault with the printer was that he did not advertise.

The chairman: You mean the printer is the worst advertiser?

Mr. Fraser: Yes.

Mr. Wilson proposed a vote of thanks to the lecturer, and acknowledged the good work Mr. Stuart was doing in connection with the St. Bride's classes. The advertising man, said Mr. Wilson, was a small salesman under another name.

The resolution having been cordially carried, Mr. Stuart, by way of acknowledgment, said he had not thought of belittling the work of the advertising agent of repute, to whom they owed a great deal, because not only did he bring orders to the printer, but he lifted advertising out of the common rut. The men who had brought the profession into disrepute were the novices who sent in impracticable ideas for composition.

A vote of thanks to the chairman closed an interesting meeting.

Bookbinding Notes and News.

The stationery bookbinding trade has fallen off slightly in recent weeks. Companies and other large users of account books are loth to place orders and contracts against what they consider to be a falling market. The popular conception of a falling market is likely to prove a fallacy in many respects. Materials such as paper and board may reduce a trifle below present figures, but it will be many months before an appreciable decline will be visible in the selling price of manufactured stationery. Wages and establishment expenses may be accepted, generally, as a fixture, Should tariff reform become an institution, all hopes of even a slight fall in cost of material will be doomed. There is little justification for the reluctance of buyers to place their orders for bound goods, and it is hoped that trade will improve sufficiently in volume to absorb the men who are gradually being demobilised from the ranks.

As regards the markets, boards are now becoming available in larger quantities, but the optimistic hopes engenderedly the forecast of prices given by a member of the Control staff are not being realised. The figure named as likely to prevail about this time, for strawboards was in the region of £30 per ton. We have known of recent orders filed at £33 and £37 Ios. per ton, but the average price runs nearer to £45 for thick boards. There is not nearer to £45 for thick boards. the slightest doubt as to what the selling price should be, for a reasonable profit could be secured on sales at £30 to £32 per ton. Under such circumstances buyers are rightly counselled to withhold from ordering, and where necessary to invoke the aid of the Paper Controller in the matter of price charged.

Millboards are obtainable at £50 and £52 per ton for good rope qualities, and mills are now at liberty to make for private concerns. Marble paper is again figuring in the lists, but prices are on the top rung. In this commodity there should be a drop when still larger supplies become available. Leather is still scarce, and the better sorts of russia, calf and morocco are almost impossible to secure. Prices have not eased, and a big effort will certainly be made to keep them up. Basils are listed at 1s. 2d. and 1s. 3d. per square foot; pigskins at 2s. 3d. to 2s. 6d.; skivers at 1od. and 1s.; pastegrains about the same figure.

In the British Science Exhibition volumes are shown, bound in waterproof paper. Their appearance is good, and the covers are fairly durable. It is obvious that in letterpress binding there are fields of material unexplored in a commercial sense. If the present high cost of leather and its textile substitutes is maintained we may look to the time (not far

ahead) when treated paper bindings will become the recognised mode for popular editions.

Among the many interesting war-time types of economical edition binding in vogue just now, may be mentioned that of which the covers of a series of 2s. novels published by Skeffington's is a good example. strawboard covered with stout paper in the same way as cloth would be used, forms the basis of back and sides, the title being letterpress printed in black on the former. No tapes are visible, the signatures being sewn on to a piece of mull which forms the connecting link with the covers, further attachment being provided by the first leaf of the first signature and the final one of the last-which would usually be fly leaves-being pasted down inside the covers to form the end papers. The upper cover has a quaint conventionalised floral design stamped in blind, while the lower one is innocent of decoration beyond what is furnished by a small two-lobed design blind-stamped in the centre, which on further inspection turns out to be an advertisement of Fry's cocoa! Does this mean that the manifold advertising possibilities of the covers of cheap reprint series, in permanent bindings, have at last been realised?

The bookbinding trade has not done so badly during the last year, at least if the number of new books published be taken as a guide. There was a total of 7,716 books published during the year 1918, a decrease of only 415 compared with the previous year. When it is remembered that the period has been one of the exhaustion of labour and materials and enormously increased cost of production the total is one which gives proof of the vitality and enterprise of British publishing. The demand for works of fiction was as great as ever, and the decrease in the more serious reading is due, it is supposed, to the fact that so many young men of the student class were with the army.

In announcing an increase of price in the Loeb Classical Library, Mr. Heinemann says that in order, however, to give students an opportunity of securing the volumes at the lowest possible rate, he is binding up a small supply also in paper boards which will be sold at 6s. net. While he hopes to be able to keep up the original form in cloth and leather, this cheap form is only intended to serve until it is possible again to reduce the price of the cloth and leather bindings, so that purchasers of the books in paper boards must understand that no guarantee is offered to them that they will be able to purchase sets in this binding, or that this style of binding will be continued indefinitely.

In this connection, Mr. J. M. Dent has also been giving his opinions on the rising book Taking the popular "Everyman" series of classics, originally published at a shilling, he quoted some startling facts. During the war, he stated, the price of paper has gone up from something like 3d. a lb. to is, and there seemed no prospect of a material reduction for some time to come. In addition, the material with which books are bound had gone up tremendously. The boards with which "Everyman" are bound used to be bought at something like £5 a ton, but the last quantity purchased cost £81 a The same applied to the cloth, which originally was bought at from 5d. to 6d. a yard, and now is 1s. 4d. a yard. Other factors which he pointed out were that bookbinders and printers are asking for considerably more than twice the wages they received before the war. Bookbinders are demanding a 45-hours week and another 8s. increase.

Although the users of bookbinding leathers have all felt the pinch of an inadequate supply and soaring prices, many of them, par-licularly the smaller binders and publishers, have not used the excellent substitutes available, because of lack of knowledge as to their application and service qualities. A booklet that will interest binders, publishers, librarians and manufacturers who issue catalogues or other bound volumes is now being distributed by the Du Pont Fabrikoid Co., of Wilmington, Del., U.S.A. The booklet has an interesting description of the character, appearance, wearing qualities and economies of substitute leather, and gives technical instructions for its use in the bindery. Many kinds of blank, loose leaf and text books bound in artificial leather are shown in their actual colours with specifications covering the binding materials used.

The Ruhleben Exhibition, which is now open at the Central Hall, Westminster, is of interest to bookbinders, as it contains many examples of their art executed by the British prisoners of war while they were enjoying (?) Hun's hospitality. There are books bound with portions of old boot leather, corduroy, velveteen, and other materials, but it seems as if Ruhleben also contained some amateur tanners, as the skins of rats killed in the camp have been dressed, and cleverly converted into book covers, purses bags, etc. Book inding, in fact, was quite a popular craft at this notorious camp, and the ingenuity of the men in improvising materials was wonderful.

In a catalogue issued by Messrs. Ellis, of New Bond-street, some interesting particulars are given of armorial stamps impressed on the covers of books to denote the owners of the volumes. Most of the examples are from 16th and 17th century books, and among the owners of the books thus decorated were Archbishop Abbot (1033), Lord Burleigh (1520-

1598), Charles I., Charles II., James I., and Queen Anne.

Dealing with the offset printing process in the Printing Art, a writer points out that some most remarkable results are being obtained by several leather novelty houses by printing pictures in fine screen half-tone. The plates are made by the high light process, and are printed on the rough leather as perfectly as if they were printed on fine-coated stock. They are printed on several colours of leather, and in large sizes, as many as 6 by 8 up, on a large skin; this is afterwards cut out in the form of a small skin by die cutting; it is then stained in the different brown tints along the edge and hand coloured with an airbrush. This produces a rich Spanish painted leather effect that is truly remarkable. One firm is experimenting in printing in colours by the same process, but unless the leather is mounted first on a good heavy sheet of paper the register is not so good. The leather people say that they can get certain kinds of leathers that are shrunk in the tanning process, which will obviate most of the registratien difficulties. This opens a new field for the offset process, and, incidentally, may give a hint to some of our bookbinders who by adopting the method could turn out finely decorated covers at a comparatively small cost. The many different uses to which the offset process is applicable will come to be known only as time goes along and the pro-cess becomes better known to manufacturers, who are, so to speak, outside of the printing fraternity. Bookbinders certainly should not be the last to benefit by any advantage that may be gained by the use of offset printing on leather. Of course it would be equally serviceable for printing on cloth or other covers.

By the courtesy of Messrs. Edward and James Richardson, a visit was made by the students of the Agricultural Department, Armstrong College, to the Leather Works at Elswick, recently. The Leather World, in describing the visit, notes that hair seal and goat skins for bookbinding and fancy articles were the principal skins manufactured, but, owing to the war demand, almost the whole output has for some time been of military leather. Much interest was evinced in the use to which the various by-products of the tannery were put. The treatment of spetches and trimmings was gone into, and it was explained that these are washed, treated with a little sulphurous acid, boiled with steam, and the gelatine solution so obtained concentrated in a vacuum evaporator. The hot concentrated gelatine solution is poured on to glass sheets cooled by water flowing underneath. After a few hours, cakes of moist gelatine are removed and dried at gentle heat on wire netting. The best qualities are sold for gelatine and the darker sorts are used for glue. Blubber from the underside of sealskins is pressed by hand, and the oil subsequently passed through a filter press to clear The residue from glue and gelatine

BRITISH & COLONIAL PRINTER & STATIONER

making, as well as the residues from seal blubber, are fibrous and very rich in nitrogen. These are reduced to powder in a disintegrator, and then serve as a manure with valuable chemical and physical properties.

Seated one day recently at a desk in the reading room at the British Museum, the writer noticed that the outer leather covers of the extensible reading stands are tooled in blind to a uniform pattern, on the lines of a book cover opened out, the oblong central panel representing the back, being of course blank, as there is no lettering. The design of the tooling is of the character which was illustrated in an article in our Bookbinding Number of September 16th, 1915, and was there dubbed the "George IV. Style." It dates from the twenties and early thirties, but as the reading-room at the Museum was fitted up in the fifties, the style adopted for the decoration of the desk accessories must have been twenty years out of date even then!

In concluding a series of eleven articles on the cost of bindery operations in our American contemporary, the Inland Printer, the writer says: - " Many estimators seem to have the idea that they know all about what a job should cost, and have a wonderful method of their own, or through a wonderfully developed brain and memory can at once, without reference to any tables, scales, statistics or anything else, give a price on any kind of work. This is not estimating, it is even worse than guesstimating.' In fact, it is nameless, and but pure conceit. The reliable estimator, the true estimator, has somewhere a book with tables, experiences and costs, and never gives a price without first referring to that book; moreover, he does not brag about his wonderful knowledge, but is mighty humble and thoughtful. Many estimates do not run true to form. Every estimator worthy of the name gets too many bumps to brag very much. Were it possible for a man to absolutely figure out the cost of every job and never miss it, he could command almost any salary he wished. But, so far, there is no such man. Instead, we are all prone to figure out a price that will please the salesman and help him to land the job, or, if the price is too high and the job is lost, to stand on our dignity and tell the boss that it can't be done at the price. But, someway, it is always done. Tables. scales and statistics have a way of always being the same, and if used by estimators they will stop the terrible variation in prices . so often made."

The following thoughts on Reconstruction are by a Philadelphia bookbinder who thus expresses himself on the subject:—"As we go along endeavouring to study human nature, we find it a difficult problem; however, public opinion is becoming sensitive on the subject of over-fatigue, and recognises that the demand for reasonable hours and good wages has a sound physiological basis. To-day the intelligent employer knows that

labour without organisation is labour inefficient, the right of labour organised is not only recognised but welcomed by the intelligent employer. He knows that his profits come from the man and the pay of those who work, that his welfare depends on the general The intelligent employer asks only welfare. fair competition; let him hire good workmen, paying as much as other employers, and he'll take his chances. This has proved itself since employers deal directly with the unions. These have been proven to be facts among the ruling and blank book trade; the old methods cut throat competition are a thing of the past, through the co-operation with locals and the round-the-table talks helped to put the trade on a higher plane, and employers openly admit that by the hearty co-operation of the unions the vexing problem was solved. The solving of the problem to see that each has enough, that no one oppresses the other, that ability receives its just reward with no man stirring up bitterness and false jealousy, is gradually being attained.

Northern Monotype Users'

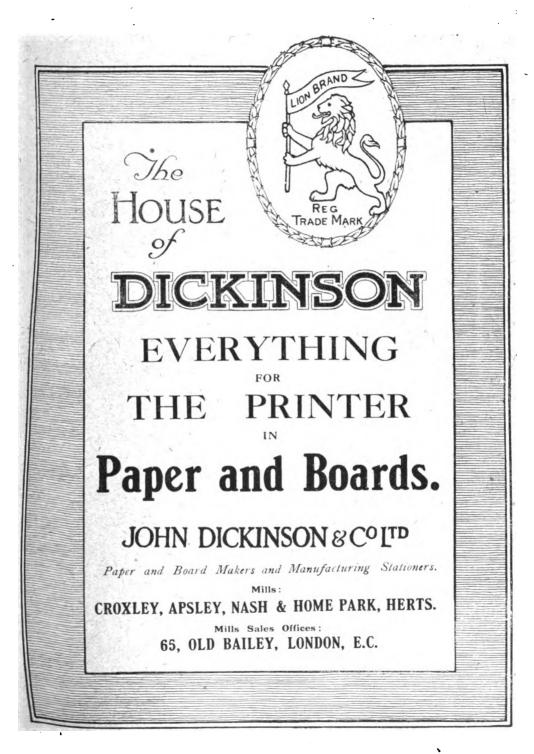

An important meeting of this Association was held at Leeds last week under the presidency of Mr. E. G. Arnold. It was attended by members from Liverpool, Manchester, Newcastle, Carlisle, Hull, Wakefield, York, Leeds, Bradford and other centres.

Mr. A. E. Goodwin, secretary, of the National Committee of Monotype Users, was present, and introduced an interesting discussion on the cost of Monotype composition, and presented a number of figures of output and cost calculated from various sources. The members present, expressed themselves freely as to the output in their own establishments, and it was finally decided to issue the figures, with the recommendation that selling prices should be based thereon.

The officers for the ensuing year were elected, Mr. Arnold being re-elected chairman, Mr. J. B. C. Percy, Councillor Hichcliffe, and Mr. A. M. Beaty were appointed vice-presidents, Mr. F. Waterhouse, treasurer, and Mr. C. W. Varley, secretary. Other important business of special interest to Monotype users throughout the country was thoroughly discussed, and several questions referred to the National Committee.

The attendance and interest shown indicated the useful purpose which this organisation is serving.

THE King's Library, at the British Museum, was opened last week after having been closed for more than two years. The possibility of damage by air raids made it essential to take the principal treasures from the library to a place of safety. The room adjoining the library has also been re-opened with its interesting collection of autographs.

Employment for Soldiers.

No more urgent task follows upon the demobilisation of the Forces than the re-instatement in civil life of the soldiers and sailors. The number of men to be dealt with in this country alone makes the labour gigantic; but the machinery exists for performing it, and it only remains for intending employers and employees to avail themselves of their opportunity. The employment exchanges, assisted by the Local Advisory Committees, which represent equally the interests of both parties in every neighbourhood, have the organisation ready for use. The staffs of the exchanges have been considerably strengthened in order to meet the extra strain thrown upon them. It is not generally known that branches have been set up to deal with discharged men only, and in a great number of cases special sections for disabled men have been established. As far as possible, the work in these new additions to the exchange system is carried on by men in the same position as those whom they are helping back to civil employment. Discharged men, with no small proportion of disabled among them, superintend the placing of discharged and disabled men. It has been found that the loss of an arm, of a leg, of two legs, and even of eyesight, is no insurmountable obstable to the performance of efficient work, given employers who will employ the men, and the exchanges which make use of such men are patent examples of the fact that war, even when it has dealt serious bodily injuries, does not unfit the fighter for successful life as a civilian.

Should Employees Fix Prices?

The members of the New York Photo Engravers' Union No 1 have sent to employing photo engravers notice of a minimum selling base for which all work made in engraving

shops shall be charged.

Under the new scale the minimum charge for a line block, which was \$1.25. is \$2.00; the minimum for half tone is \$3.00 where it had been \$2.00. Prices on engravings under the new scale average about 50 per cent. higher than on the scale it supersedes.

The employers do not think that any court will find that a labour union has the right to dictate to them the price at which they shall sell their product, of which labour is only a partial item cost. This is what has been done, and the union proposes to enforce with a threat of calling out their men from any engraving house wherever the price scale is not adhered to.

It is understood that legal action in this latest development of the engraving situation is being planned, and that the matter has already been taken up with the District Attorney Swann and with the Federal Trade Commission in Washington.

A Chat to Master Printers.

Mr. Alfred Langley discourses on Costs to the West and North-West London Association.

The first of a series of district meetings of this Association in pursuance of the scheme for increasing its membership was held at Hammersmith on January 13th, the president (Mr. F. A. Perry) in the chair.

A vote of condolence with Mr. D. A. Whitehead, hon. treasurer of the North London Association, on the loss of his son who has made the great sacrifice in France was

Congratulations were expressed and forwarded to Mr. S. Sidders on the honour which has been conferred upon his son, Lieut. Sidders (also a member of the Association) by the award of the Military Cross, "won two or three times over" at Marcoing.

It was also decided that the congratulations of the Association be conveyed to Sir W. A. Waterlow and to Mr. W. A. Northam on the honours they have received as K.B.E. and O.B.E. respectively.

After the election of two new members and other routine business Mr. Alfred Langley gave a most interesting and valuable address in the form of a "Chat to Printers," from which we extract the following:—

I do not presume for one moment that I am in a position to teach you anything as you are all practical printers, but I only desire for a short space of time to run over a few of the things that one is apt to forget when reckoning up costs. To those who have installed the Federation Costing System these reminders may be unnecessary.

Many of the items of which I desire to remind you are included and provided for by that system. Still it is wise to keep everything in mind so that the amount of work involved in our many processes shall be covered by the estimated time when preparing prices.

It is of very little use to know our hourly cost rates if we do not fully appreciate the amount of time required for the process for which we have fixed the hourly rate. Herein to my mind is the difficulty that frequently obtains when we hear sceptics criticise the costing rates. Many of us here have heard the same old reply made in response to our appeal to put in the costing system, "Yes, but we could never get those rates; if we estimated on those lines we should never get an order; besides our rates don't come out anything like those figures," and so on.

Now where is the discrepancy? Where is it that the printer with the costing system varies in costing rate from that of the printer without?

My reply is that the costing system being based on scientific knowledge of cost has brought to mind and to light the multitude of minor costs in the printing office that have been overlooked in the past and the man who has not installed a scientific system misses those items altogether by reason of not having them perpetually in front of him when estimating.

It is my purpose then to-night to runhurriedly through a few of the formerly unconsidered trifles which estimators in a hurry who do not use Federation costing rates and many who do sometimes overlook when they deal only with wages figures and rely on a percentage to cover overhead charges and profit.

A frequent point overlooked in estimating is the cost of handling owing to the variation of the substance of the material. The number of sheets that can be put up on the board at one time, and the cost involved in clearing them off the board when printed. Thin paper:

is very difficult to some feeders; other paper will not go over the flyers satisfactorily. Thick paper and boards are costly in handling, specially when we have to depend upon female labour at full men's rates. Porterage and general handling expenses have increased beyond the proportion that skilled labour has advanced, and the work is taking much longer. Your rate of output is the rate of the slowest unit, and many jobs that look easy when estimated for take twice as long as we anticipate.

Further, we find other troubles develop when the paper gets to the machine. Art paper may give trouble owing to dampness, and picking develops. Some papers are full of dust and white fluff from the mills, and need freeing unless you desire a stoppage every few minutes to clean out the form. No wall these troubles are chargeable to the customer, I contend, according to the nature of the paper selected, and should be borne in

mind at the time of estimating.

The hurried supply to oblige the customer, interleaving, backing up the first supply, French chalking, and the other numerous services must not be overlooked, and we must abandon the idea that in order to get our living we need to be the general slaveys of every customer with an all-in policy and no extras, or the other idea far more prevalent that printers were intended to be philanthropists. Things that are got for nothing are generally worth it, and seldom appreciated.

Do we charge to the customer the full cost and value of the materials we use? The special pound of ink to match his pattern. The opened tin that seldom gets used up? The extra proofs for his convenience? The clean proof which is so costly in alternative colours? The overs for the job, are these always thought of? The higher the standard the more the waste and overs necessary.

Three colour work especially needs consideration on the part of the printer before his estimate is sent in. The selection of paper, the maturing of paper, freeing from dust, the time required for degree of drying between each working, or the holding up of the inks in each colour on a long run that uniform results may be obtained throughout. The waste in three colour work is not merely three times that of one colour work, but naturally the number is cubed. The frequent stoppages and washing out of plates means less output. The washing up of the machine involves a greater cost in ink waste than for any other work. The wash up for yellow must be a skilled job, and must be perfect if best results are to be obtained. points are forgotten when estimating all the Federation hour cost rates will not save the jobbing printer from Carey-street.

Now a word as to the possibility of errors in

estimating the warehouse costs.

A booklet or catalogue may in the estimating stage look simple as regards trimming. As the job progresses sometimes it changes its character. The customer may change his mind as to the paper. He may add another section or decide on an overlap cover.

The question of allowing customers to select type is one that needs a thought. A customer takes a fancy to a particular booklet letter and you obtain it for him if you do not happen to have it or if you already possess it you let him have the run of it. It may be a fount not overstrong. His job sets the cases out and for all practical purposes those cases are barged and out of action. When you charge rental for the standing type, which I trust you all do, being wise men, do you overlook the weight of the barged sorts left in those emasculated cases? That is a dead charge as much as the setting of the job.

As printers many of us like long runs. Well in quoting we must remember two things. First, if we run from type, a long run finishes the type, it is not fit to go back in the cases. Secondly, if you stereo the job the depreciation is almost as great. Bear it in mind

when giving reductions for long runs.

Customers' Blocks.

We have recently had a problem to face that brought home rather forcibly the cost of warehousing customers' blocks. Over many years we have accumulated a matter of from one to 2,000 blocks belonging to one firm. Parcelled and cared for we have had a mutual advantage with the customer in being able at short notice to produce reprints. Suddenly the customer has expressed a desire to warehouse his own property and overhaul the blocks and desires us to forward the lot. Now the checking, proofing and obtaining signatures for this number of blocks is a considerable item apart from the packing and delivering, and one only realises it when it comes in the aggregate. Nevertheless it is a reminder of what is going on silently all the year round in small instalments in our offices and has to be borne in mind when taiking or thinking of printers' costs.

Then there is the question of insurance on customers blocks. Now, originals are costly things to replace in case of fire. We take out a policy in the customer's name and he pays

the premium.

How frequently the printer is expected to hold stock for customers especially when it is bulky. Few printers have space to spare, and if they have it it is not often low in rental value. Furniture warehousing is not cheap and I believe it is a very remunerative business. The printer should note that and make his charges based on a figure that would save him from an accusation of unfair competition with one who may be a good customer of his, the furniture warehouseman.

I have already touched on the question of handling paper, and, of course, I assume you all charge a percentage on the value of any customer's paper sent into you to print.

To enumerate rapidly a few of the items

sometimes overlooked-

In envelope printing, opening and closing. In tag printing packing is a time-consuming job.

Interleaving. Racking. Double rolling.

Waiting on machine. Stop-press corrections.

Retreeing.

Special messengers—urgent supplies.

Delivery-Now that the errand boy has qualified for assessment under the income-tax demands.

We as printers are frequently too modest in the matter of profit, even when we have been able to check and substantiate our costs. There is a comparison I always endeavour to keep in mind. The question of risk the printer runs, of the many booby traps and unforeseen contingencies that beset him in

every job.

The human element of error. The break-off or draw-out on machine, "set-off" under the clamp of the guillotine for a hurried job, hurried at customer's request. Now place yourselves in the position of a papermaker or fabric manufacturer. The first may make 10 tons of paper and have it rejected on account of failure to match pattern or of variation of shade. The fabric man may make 20,000 yards of cloth, and have it rejected on a similar account. Both these men can job their rejected products off at a price that will always cover their costs. The printer may run two or three tons of paper with a typographical error, on art paper, costing 1s. 8d. per lb, and scrap it. There is no market that will procure for him recovery of even 5 per cent. of his costs For this risk a printer needs a larger insurance fund, or, in other words, a larger percentage of profit.

The messenger question in our business is one to be considered. Very few other trades necessitate so much sending, fetching and carrying. The customer of the printer seems to demand more waiting on than those of other businesses. Send for the order, collect the copy, fetch the blocks, send proofs, send further proofs, and then a few advance copies, and keep up a regular supply, as our people are sending them out at so many thousand a day, and all this means money to the customer, and the cost is borne by the printer. What other business man would give such services and omit to charge for them?

Just a word to those printers who graduated in large offices, either as compositors or machine minders, and have subsequently started in business for themselves. They run the risk of a danger in estimating that the master printer who served his time in a small jobbing office does not always run. The risk of estimating the time required for various operations by basing it upon the time the job took in their old office where supplies of material were plentiful and perfect system existed. Offices of that character cannot be compared to those of the small jobbing printer.

The only figures that cut any ice are the figures that represent the margin between the actual cost of the job in your works and the money the customer pays you, should the latter be larger, and that is the money that

will buy the baby a new frock.

The lact always remains that only a charge based upon the actual cost of the work under the circumstances it is produced in, plus a fair rate of profit, can enable the printer to live, and that charge, plus profit, should come out of the customer.

An interesting discussion followed in the course of which the president, Messrs. Hastie, Woodgates (sen. and jun.), Skelton, J. R. Burt, Pollock and others, took part. Messrs H. Searle and Jones (Hounslow) both testified to the benefits they have derived from membership of the Association, and Mr. Davis (a new member) expressed his regret that he had not earlier known of the existence of an Association which he could see was of great value to the trade.

A hearty vote of thanks to Mr. Langley for his address was moved by the president and carried unanimously. On February 10th at 7 p.m. addresses will be given at Westbourne Park Institute by Mr. J. R. Burt, on "Co-operation and Competition," and by Mr. Hill, of the North London Association, on "Standard Estimating and Charging," to which all master printers are cordially invited.

Wood Engraving is, in this country, almost an extinct art, but on the Continent it is still cultivated, and mostly along original lines, in spite of the war. Our Italian contemporary, Il Risorgimento Grafico, has lately included several examples, and we have received from the engraving house of Bertieri and Vanzetti, Milan, a copy of an oblong folio album, entitled "Roma," which contains a dozen woodcuts by Giorgio W. Marini, illustrative of some of the principal buildings in the Italian capital. The distinctive feature about these illustrations is the practical absence of line, the pictures being made up of masses of light and shade, producing somewhat the same effect - having regard to the different medium employed-as the wellknown etchings of Piranesi. The preface to the work refers to them as "aristocratic and expressive," 'a statement which we can quite endorse. Apart from a touch of crudity here and there, these cuts demonstrate that there are yet possibilities in the ancient art of wood engraving. We understand that "Roma," which is published at 10 lire (about 8s.) is intended to be the first of a series of similar works, illustrative of Italian architecture

Messes. Hickman and Goulding have patented a composition for treating paper, linen, or other fabric for covering jars or bottles containing fruit or vegetables, consisting of resin, beeswax, and tallow melted together, with the addition of oil of cloves and a solution of carmine. The composition being adhesive while hot, the paper, etc. covers can be directly applied to the jars, etc.

MESSRS. STRONG, HANBURY AND Co., LTD., are sending out to their customers a useful office calendar of an attractive character. It is 15 by 10 inches in size, and consists of a dark-surfaced card, on which is mounted a picture of the river Dart above Buckfast. The dates are on tear-off sheets at the foot of the card, the figures being in white on a brown ground.

Printers and Parliament.

Sir Rowland Blades, M.P., Addresses the Members of the London Master Printers' Association.

Sir Rowland Blades, M.P. for the Epsom Division of Surrey, was the guest of the London Master Printers' Association at their monthly lunch on Tuesday at the Holborn Restaurant, and provided the goodly company of members with a diverting account of

his recent election campaign.

Mr. J. J. Keliher, president of the Association, who was in the chair, said there was no need at a gathering of London Master Printers to introduce Sir Rowland Blades. They had had him with them from the time of his irresponsible juvenility to the present period of. his wisdom and ripe maturity. They knew him to be a very active worker. Besides his labours in the expansion of one of the leading businesses of London, he had shown his capacity in many directions. Mr. Keliher remembered him taking a prominent part in the development of the St. Bride Institute, filling the office of president with distinction. From the time of his being elected as a member of the Common Council he had been much in the public eye. So well did he serve the citizens on that body that they elected him to fulfil the very onerous duties of Sheriff of London, his services in that office being recognised by the King, who conferred upon him the honour of knighthood. (Applause.) During his occupancy of that high office he presided at the annual festival of the Printers' Pension Corporation, and he was entitled to their gratitude for the energy and effectiveness of his methods, by which he raised the magnificent sum of more than £12,000. Now in the election of Sir Rowland to a seat in Parliament master printers had at last realised hopes of having one of their number as a legislator. With the present tendency of the Government to control much of our national industry, it was a great satisfaction to them that Sir Rowland would be in the right place -a place where he could exercise some influence with the Parliamentary forces for the protection (perhaps the benefit) of the printing industry, and be able to help the Government in bringing about an industrial armistice followed by a peace as promising as that now in sight at Versailles. (Cheers.) Sir Rowland Blades, M.P., who was received

Sir Rowland Blades, M.P., who was received with cheers, acknowledged the kindly references which Mr. Keliher had made to him, and went on to say that if he had known when he was entering upon a Parliamentary career that he was to be the only member of the trade in the House, he might have hesitated to proceed; but as far as possible he should do all he could to smooth over any difficulties that might arise. He had the privilege of knowing many of the splendid Labour members of the House of Commous, and he felt sure that friendship and the com-

monsense of their trade would prevent any serious difficulties ever attacking their industry. (Hear, hear.) Sir Rowland attributed part of the kind reception accorded him that day to the association of his cousin, Mr. Alfred Blades, with the Federation of Master Printers, whose interests he had at heart. They had been partners since 1890, and never had a cross word. (Applause.) He (Sir Rowland) felt that the energy, tact, and straightforwardness of their council in managing matters had had a great deal to do with the success of their association. The speaker went on to describe his election experiences with excellent humour, and incidentally suggested that master printers might raise a sum to supplement the allowances to war widows. Sir Rowland went on to say that it was very pleasant to know that in their trade there was such an excellent understanding between the employers and the various trade unions, who realised that the interests of employers and employed were identical, and that it was essential that conditions, both as regarded cost of production and labour, were to be such as to enable a profit to be made. They appreciated that if wages reached a point where they ate up all the profits, trade must collapse, and the livelihood of the people employed in that trade disappear.

Mr. Keliher, in asking Sir William Waterlow to propose a vote of thanks to Sir Rowland Blades, said he was sure that the company would accept the opportunity of expressing their appreciation of the honour which had been conferred upon Sir William by his Majesty for the very prominent part he had taken in providing the means by which the Government had got over their difficulties in regard to printing during the war, especially of the ration books, with which they were not too much in love, although they, as printers, appreciated the magnificent way in which they were arreduced. (Applement

which they were produced. (Applause.)
Sir William Waterlow, who was cordially received, in thanking Sir Rowland Blades for his interesting and amusing address, said master printers had long looked forward to have a man whom they knew as their representative in the House of Commons. (Hear, hear.) There had been a few members in the past connected with the printing trade, but they had not been so intimately connected with it as anyone bearing the name of Blades would be. He went on to speak of the value they all attached to the work of Mr. Alfred Blades in connection with their organisation, and were sure that Sir Rowland would give every useful service to the country, and, incidentally, to the printing trade.

Mr. C. A. Bates, in seconding the vote of thanks, mentioned the assistance which he

had been able to give to Sir Rowland Blades in the matter of the Lloyd George portraits, which were produced by Messrs. Johnson, Riddle. He said the name of Blades in the printing trade was an absolute top-notcher. They had all observed the sincere activity with which the members of the family, including Mr. Laurence Blades, entered into any work which aimed at uplifting the printing trade in any way.

The resolution was cordially carried, and Sir Rowland Blades, in replying, spoke of the valuable aid which the Lloyd George posters had been during the recent election. He also mentioned the great assistance which Sir Wm. Waterlow's firm had been in helping the nation out of a great difficulty by the speedy

production of Treasury notes.

A hearty vote of thanks was passed to the president on the motion of Mr. Blades, who acknowledged the self-sacrificing labours of Mr. Keliher.

Social City Printers.

Patriotic Victory Concert at Anderton's Hotel.

There was an agreeable departure from the usual business meeting of the Central District Branch of the London Master Printers' Association on Wednesday last week, at Anderton's Hotel. For the evening members and their friends forgot the worries and anxieties of printing, and gave themselves up to the enjoyment of a patriotic victory concert. The presence of ladies added to the pleasure of the gathering. The innovation, which owed its inception to Mr. William H. Burchell, the energetic and enterprising hon secretary, was warmly supported by the president (Mr. J. J. Keliher) and the chairman of the executive committee (Mr. J. D. McAra, F.C.1 S.), was a gratifying success, and cannot but have the effect of promoting the beneficent

objects of the Association.

Mr. J. J. Keliher presided over a large assembly, and among those present were Mr. D. McAra, Mr. Albert Bennett, Mr. and Mrs. Oscar Griffith, Mr. and Mrs. Diprose, Mr. H. C. Mr. Wm. H. Burchell, Mr. Burchell, jun., Mr. and Mrs. W. Whyte, and Mr. and Mrs. C. V.

Mold.

In a few words of cordial welcome, addressed to the visitors, Mr. Keliher said that meeting was held in order to celebrate the glorious victory which had been achieved by our gallant Navy and Army overseas, in which master printers and every office associated with the craft had taken their full share. For the past three or four years they had been denied many forms of recreation, and printers had had to work very hard under trying conditions. Now the committee of that Association had, he thought wisely, arranged to have something different from what they had been used to during the period of the war, and the number of those who had accepted the invitation was evidence of the

wisdom of that course. (Applause.)

The programme for the concert, which followed a reception by the president and chairman, was of a full, varied, and high order, and it held the audience together for three hours. Among the performances there stood out prominently the finished flute solos of Mr. Keliher himself, who with his fine sporting spirit, played the double role of chairman and entertainer. And it was a real pleasure to listen to the beautiful tones of his instruments. Of course, it was not his first, as we hope it will not be his last, public appearance, Mr. Keliher, in fact, has made a big reputation as a flute player in the musical world, and he fascinated his friends on Wednesday night with the real music he produced. For the rest, the concert direction was in the capable hands of Mr. Charles Wigg. An appropriate feature was introduced by Mr. Robert Tattersall in his ventriloquial turn. His facetious patter on printing and printers was greatly enjoyed, even by those to whom his remarks applied. One of "the boy's" sallies was that "printers don't know what swearing is because it is their ordinary language," and there was a playful association of the name of Burchell with printers' devils. Mr. Arthur E. Cox exhibited great skill on the violin; finished singing was provided by Miss Clarice le Roy (soprano), Miss Evelyn Clifford (contralto), and Mr. John Humphreys (baritone); capital humour came from Miss May Phillips and Mr. V. Baynes Lucraft; and Mr. Alpe Barbour added impersonations and a marionette scena. Throughout Mr. Fred McGrath was a great help at the piano

Towards the close of the concert Mr. Keliher acknowledged the organising ability of Mr. Burchell and his friends on the committee. They of the Central Council, said the president, were indebted to Mr. Burchell for the immense services he had rendered in bringing into being the very successful Central Districts

Branch.

The audience cordially endorsed the expression of appreciation and Mr. Burchell responded on behalf of the committee, adding that in the future they hoped to provide something even better than the programme for that evening. Social gatherings had been interrupted by the war, and now they were resumed he hoped they would receive the support of their friends.

THE pocket diary and note-book issued by Linotype and Machinery Limited, is a most useful article, $5\frac{3}{4}$ by 3 inches, neatly bound in leather, with pockets for papers, cards and stamps. The diary has a week to a page, and the note-book gives space for memoranda, notes, etc. Illustrations and particulars of the Linotype Composing machine are given, and there are a number of useful tables and other information of value to the printer.

BRITISH & COLONIAL PRINTER & STATIONER

Trade Notes.

TENDER WANTED.—For printing and supplying notices, forms and ballot papers required for the Glamorgan County Council triennial election; particulars from Mr. J. Evans, Central Chambers, High-street, Bargoed.

A copy of President Wilson's "Fourteen Points," specially signed by himself for presentation to British journalists after his recent visit to this country, is to be offered by auction at the London Coliseum on Sunday, February 2nd, in aid of the fund for dependents of British sailor and soldier journalists.

AT Dublin, on Saturday, the jury failed to agree in the libel action by the Lord Mayor of the city against the *Irish Times*, and were discharged. The alleged libel was contained in an article which suggested that the Lord Mayor had made an attempt to smuggle through to America a petition to President Wilson.

The third lecture of the series arranged by the Industrial Reconstruction Council will be given in the Saddlers' Hall, Cheapside, E.C.2, on Wednesday, February 5th. The chair will be taken at 4.30 by the Bishop of London, and a lecture entitled "The Industrial Awakening" will be delivered by Mr. Ernest J. P. Benn, chairman of the council. Applications for tickets should be made to the secretary, I.R.C., 2 and 4, Tudor-street, E.C.4.

VISCOUNT CAVE, the ex-Home secretary and mow one of the Lords of Appeal, was the plaintiff last week in an action for alleged libel brought against Messrs. Hulton and Co. and the London Publishing Co. in respect of a statement published in the Daily Sketch last October. The statement accused him of neglect of the interests of British prisoners of war. The defendants apologised, and it was agreed they should pay the plaintiff's costs and give £500 towards a Prisoners' of War Fund.

THE annual general meeting of members of the Newspaper Press Fund will be held at the offices, 11, Garrick street, Covent-garden, W.C., on Saturday, February 22nd, at twelve o'clock. The splendid subscription of over o'clock. £9,000 resulted from the collection at the annual dinner. During the year 95 new members have been elected, 50 have died, and 17 have been removed from the roll, which now comprises 2,602 members, of whom 1,144 reside in London, 1,412 in the country, and 46 are abroad. Five new pensions have been granted. Fifty pensions are now being paid, 11 from the Campbell Clarke Fund amounting to £352, II from the Sir John Willox Fund amounting to £323, and 28 from the General Fund amounting to £932. During the year £8,250 has been invested in National Five per Cent. War Bonds, and grants have been made amounting to £4,656 in addition to the pensions.

THE late Mr. Edmund James Arnold, of Leeds, printer and publisher, has left estate of the value of £109,469.

THE Royal Magazine for February is a bright and readable issue, the fiction being original and the general articles of an interesting character.

THERE is to be published in February a new monthly periodical, the Anglo French Review, which will contain articles in both French and English.

MR. HARRY JONES has been appointed Parliamentary correspondent of the Daily News, and will take up his duties at the opening of the session on February 4th.

MR. WILSON has sent the president of the Institute of Journalists his thanks for an address of welcome, and his assurance that it affords him great pleasure "to know that you think of me as you do."

At the Ruhleben Exhibition, Westminster, there are now on view two volumes of the Camp Mazagine which are bound in the skin of a rabbit caught in the Berlin camp where the British civilian prisoners were interned. The skin was tanned there, and some 30 men took part in the work.

At the monthly meeting of the board of directors of the Booksellers' Provident Institution, held at Stationers' Hall, the sum of £116 7s. 10d., was granted for the relief of members and widows of members. On the recommendation of the board, the trustees have invested a further sum of £500 in National War Bonds.

Mr. E. Taylor Thomlinson.

We regret to say that Mr. E. Taylor Thomlinson, for many years secretary of the Linotype Users' Association and assistant secretary of the Federation of Master Printers, died on Thursday last at his residence, St. Neots, Hornchurch, Essex. Mr. Thomlinson had been ailing of late years, but he was quite active until a few days before he passed away, and the news of his death came as a surprise to his many friends in the printing trade. It is little more than a year ago since Mr. Thomlinson resigned his official connection with the associations mentioned above, and in December, 1917, he received a handsome testimonial from those with whom he had worked for so many years. A feature of this gathering at the Holborn Restaurant, at which the presentation of a cheque for some 8 o was made to him by Mr. Meredith T. Whittaker, was the presence of master printers and prominent officials of the trade union movement. Before becoming secretary of the

BRITISH & COLONIAL PRINTER & STATIONER

Linotype Users' Association, some 21 years ago, Mr. Thomlinson had been an official of the L.S.C., aud at the Holborn gathering testimony was paid to the high respect which he had gained both from the men's side and for his earnest labours on behalf of the employers. The deceased gentleman had a thorough grasp of printing trade conditions, and was extremely tactful in all the negotiations in which he took part, and which made him a familiar figure throughout the country. Furthermore, he was of a sociable disposition, and made many life long friends among masters and men. After retiring from his official duties, Mr. Thomlinson continued as secretary of the Standard Building Society, but he has not lived long to enjoy the leisure he had planned for himself. The funeral took place on Tuesday at Hornchurch, and many of his old colleagues attended to pay a tribute of respect to his memory.

The death has taken place of Mr. Alfred Mason, for many years manager to the Cambridge University Press. Mr. Mason was in his 80th year, and was in harness to within a few days of his death.

The death has occurred of Mr. Francis Thornton Barrett, the chief librarian of the Glasgow municipal libraries. Mr. Barrett hadbeen associated with the Glasgow libraries since 1877. He was over eighty years of age.

The death has taken place of Mr. George Wetton, a director and advertisement manager of the Daily Express. Mr. Wetton was in his fifty-third hear.

Drawing Office Material.

Annual Meeting of the Manufacturers' Association.

The annual general meeting of the Drawing Office Material Dealers' Association was held last week, at the Euston Hotel, London In order to describe the functions of the organisation more precisely the name was changed to the Drawing Office Material Manufacturers' Association. Mr. W. Monkhouse (Messrs. J. Halden and Go., Ltd.), was re-elected president, and Mr. E. H. Hickman (Messrs. Norton and Gregory, Ltd.), was reappointed vice-president.

The annual report, which was signed by the president and by the secretary (Mr. Alfred W. Foster), referred to the restrictions placed upon the import of paper and papermaking materials, which brought about a diminishing supply of body paper for ferro-prussiate and ferro gallic paper, while at the same time the demand greatly increased owing to the multiplication of Government requirements. The council were able to exert influence in the necessary quarter which secured the issue of

special import licences for materials, and placed this branch of the industry in a satisfactory position. In the same connection, in order to assist the Government by reducing the demands on shipping tonnage as much as possible, the council arranged a voluntary agreement for the reduction of the substance of the paper used for this purpose, and for this action received a formal expression of thanks from the authorities. The council's thanks from the authorities. The council's relationship with Government Departments has not, however, been limited to action connected with war-time restrictions, but has extended to preparation for the reconstruction period; and with a view to assisting British enterprise to take the place of foreign industry, negotiations have been proceeding with the Ministry of Reconstruction as to a possible central factory for the production in this country of the requisite supplies of drawing instruments. These negotiations are still pending, and much will depend upon the extent to which the Government is prepared to So far as the council is assist the scheme. concerned, no pains will be spared to bring the matter to a satisfactory conclusion, and in their opinion, the whole trade, down to the smallest members, should be invited to take a financial interest in any such scheme.

Turning to that side of the Association's work which is concerned with the normal operations of industry, it is confidently claimed that the success of the first year's work has amply justified the policy on which the council has proceeded. The future stability of British commerce depends largely on the reconciliation of what in former times were regarded as conflicting interests, and the council has acted continuously on the assumption that close contact between the different sections of industry would lead to co-operation for mutual benefit. The success of this policy has been evidenced to members by the series of price circulars issued during the year, in which, by joint agreement between manufacturers and dealers, a proper margin of profit has been secured in respect of tracing cloth, photographic material, woodwork, and other articles which they have been able to standardise. The council regards the amicable relations thus established between members and associates as a matter of the utmost importance, and as affording ground for hope that a working alliance can be set up for trade purposes after the war.

It is explained that associate membership of the Association affords an opportunity for joint action between manufacturers and the trade, and this system is to be extended in another direction by the creation of sectional membership. The first section to be founded will be that of photo printers, which is already assured of adequate support, and further sections can be established as necessity arises.

Pushers boost each other and so, boost all. Pessimists knock each other, and thus they fall.

THURSDAY, JANUARY 30, 1919.

Current Topics.

Printers and the 48-Hour Week.

THE negotiations which are proceeding between the Federation of Master Printers and Allied Trades and the Printing and Kin-Trades' Federation-the dred respective organisations of the employers and the unions -with the object of instituting a 48 hour week, payment for statutory holidays, and an annual holiday of one week have resulted in an agreement on principle. The payment for the annual holiday of one week has been referred to a joint sub-committee selected from the employers' and the union's federations, who will report to the adjourned conference at as early a date as circumstances permit. It is only natural, of course, that printers should be in the van of progress. Shorter working hours and payment for holidays have already been in operation in many establishments, and the agreement between the employers and the men's representatives should bring more uniformity throughout the trade. But progress is not summed up in the terms of shorter hours and higher wages. It requires more work, greater efficiency, and better output to enable a trade to meet the higher cost of production. Unless these conditions run hand in hand, the result can only lead to disaster. The responsibility in this matter rests equally upon all who are parties to industry employers and employed alike. The cause of the present industrial unrest lies deep. Broadly, it is to be attributed to the war; but really the rapacity which has been displayed in many quarters by profiteers has had a great influence in arousing the demands of High prices for all the working people. commodities of life have created not merely a desire but a necessity for higher wages and better conditions. This was the food upon which all were fed during the war, and the time has arrived when the promise has to be made good. We are glad to see that the printing trade is setting so good an example to the other industries in the wise and friendly manner of conducting the negotiations. After all, much more can be gained by sympathetic, if firm, negotiation than by harsher measures, which not only bring unnecessary misery and injury in their tracks, but leave behind an enduring feeling of bitterness. The progress which is being made in the printing trades shows that wise counsels are prevailing and that the true spirit of the Joint Industrial Council is already in operation.

New Conditions.

But new conditions, such as shorter hours and increased cost, place a burden on industry which all have to shoulder. A business cannot live on its capital any more than can an individual without becoming bankrupt in the end. And in the present state of transition the printing industry, more than some others, is heavily handicapped in its efforts to meet the new conditions. It is difficult if not quite impossible to replace worn-out machines or introduce new devices which will give that speedier output that is necessary. must be a greater volume of business if the industry is to be in a healthy condition, and of equal importance is the need of better printing in the aggregate. The unnatural times through which the world has just passed have caused a sad deterioration in the

BRITISH & COLONIAL

quality of printing as of so many other arts and crafts. Everything, it would seem, has got out of gear. It will, therefore, take time to get into something like regular order again. But it behoves everyone to set his thoughts and energies into that channel. As the level-headedness of the British people has brought the country safely through the ordeal of the last four and a half years, so we believe it will stand us in good stead in the still difficult period of transition from war to peace.

The Value of Master Printers' Organisations.

The value of organisation among master printers is becoming more and more evident, as was indicated by the many important subjects which occupied the attention of the Federation recently in London. Time and again one hears the remark that the cost of membership of one or other of the organisations is fully returned by the value received in advice from headquarters. The reason there are still a number of master printers outside the fold is that, not knowing the advantages of membership, they do not realise the complete service which is at the disposal of members. The Federation, for instance, has not only to deal with the broad issues which are often debated in public, and which are of great moment, but there are an infinite variety of details which confuse the mind of the master printer, and solutions for which are provided by the expert staff at 24, Holborn. The work at headquarters, however, has grown so great in recent years that it is now seen to be necessary that there should be some decentralisation. With this object in view, arrangements are being made for strengthening local organisations, while, at the same time, solidifying the whole structure. In this way, it is hoped that much of the detail work will be done in the districts, to the advantage of the master printers on the spot, while at the same time the main stream of inspiration will still come from London, and percolate throughout the whole country. In fact, the benefits to be derived from organisation are of a very substantial and extensive order.

Receipts for Wages.

A CURIOUS point was raised the other day in a case that came before Judge Cluer, in the Bloomsbury County Court. Some receipts for wages were produced and as they did not bear a revenue stamp the Judge impounded them and said he would send them to the Inland Revenue authorities, as the workmen who gave the receipts had rendered them-

selves liable in a fine of £ 10 in each case. This raises quite a new point, as in paying wages the general custom is to dispense with the use of the stamp, but on looking up the Stamp Act of 1891 we find that anyone who does not affix a penny stamp to a receipt for a sum of £2 and over is liable to the penalty and the same penalty is attached to a refusal to give a stamped receipt, and also for dividing a sum over £2 and giving two receipts so as to evade the tax. The general impression is that in the case of wages no receipt is necessary, and if the law says it is then the law is ignored all over the country, and if enforced would act rather unjustly to those who are paid weekly, as the yearly stamp dues would amount to four and fourpence, while in the case of the man who is paid monthly only one shilling would go to the revenue authorities. The bulk of the employees in the printing trade are in receipt of a weekly wage of considerably over £2 per week and it will be interesting to hear the result of the prosecution instituted by the action of Judge Cluer. If the penalties are enforced in that case, then it could be taken as a precedent and the working man would have to shell out his penny a week; but what a task for the cashier to take a receipt from every man he pays, especially in a factory where thousands are employed. The thing is practically impossible.

Printers and Demobilisation.

Correspondence has taken place between Mr. R. J. Lake, secretary to the London Master Printers' Association, and Sir Eric Geddes on the subject on the subject of the release of pivotal men. Mr. Lake called Sir Eric's attention to the delay in the release of pivotal men in the printing trade. He states that a number of cases have been reported in which the papers of pivotal men, endorsed by the proper advisory committee and otherwise in order, have been sent in without any results following even after the lapse of several weeks, while ordinary, workers without special qualifications are released at once without any delay. The result is, Mr. Lake points out, that men are being released whom it is not possible to reinstate in employment for want of the key men in the department, and he expresses the hope that this state of affairs may be remedied.

The reply received to this communication is that Sir Eric Geddes and Mr. Winston Churchill are doing everything possible to speed up the release of pivotal men from the fighting forces. It is anticipated that shortly there will be a large increase in the numbers of men

demobilised.

NEW COMPANIES.

WILKINSON NEWSPAPER Co., LTD.—Registered with a capital of £6,020, in £1 shares, as newspaper, magazine and book publishers and proprietors, printers, etc. The subscribers are Mrs. R. Wilkinson, and H. A. M. Fishwick. Private company. First directors—Mrs. R. Wilkinson, H. A. M. Fishwick, Mrs. E. R. Fishwick, and Mrs. F. M. Rushton. Registered office, 2, Mitre-court, Temple, E.C.

ALLIANCE TRADE EXTENSION AGENCY, LTD.—Registered with a capital of £500, in £1 shares, to take over the business of the Alliance Trade Extension Agency and to carry on the business of printers, stationers, typefounders, paper and ink manufacturers, engravers, manufacturers of stationers' requisites, publishers, advertisement agents, etc. The subscribers are F. A. Roberts, and Mrs. A. Roberts. Private company. First director—F. A. Roberts. Registered office, 85, Gresham-street, E.C. 2.

Rosebery Press, Ltd.—Registered with a capital of £2,000, in £1 shares, to take over the business of printers, engravers and publishers carried on by A. A. Scudamore, at 19, Rosebery-avenue, London and elsewhere. The subscribers are D. Harding, and I. G. Butler. Private company. First directors—D. Harding, and I. G. Butler. Registered office, 19, Rosebery-avenue, London.

J. G. M. MACHINERY Co., LTD.—Registered with a capital of £1,000, in £10 shares, as machinery, metal and paper salvage merchants, etc. The subscribers are E. Gayter, and J. E. Jolley. Private company. First directors—E. Gayter (chairman and managing director), and J. E. Jolley.

HAROLD MOORE, LTD.—Registered in Dublin with a capital of £20,000, in £10 shares, to acquire the business of manufacturing stationers carried on by Harold Moore, at Howard street, and Hawthorn-street, Belfast.

The subscribers are H. M. Moore, R. Martin, and W. Peel. Private company. First directors—H. M. Moore, and R. Martin. Registered office, 6, Howard-street, Belfast.

ELECTRICAL REVIEW, LTD. — Registered with a capital of £45,000, in £1 shares (5.500 non-cumulative 10 per cent. preference), to take over the business formerly carried on by H. Alabaster, T. E. Gatehouse, and H. R. Kempe, at 4, Ludgate-hill, E.C., as "H. Alabaster, Gatehouse and Kempe," and to carry on the business of publishers of the Electrical Review and other works connected with the electrical technical industry, etc. The subscribers are H. Alabaster, and T. E. Gatehouse. Private company. H. Alabaster is chairman and managing director, and T. E. Gatehouse is editorial and technical director. Both are permanent. Registered office, 4, Ludgate-hill, E.C.

LANGHAM GALLERIBS, LTD.—Registered with a capital of £1,000, in £1 shares, as holders of exhibitions, dealers in books, makers and sellers of picture frames, artists' colours, publishers, book and print-sellers, newspaper and magazine proprietors, art journalists, purchasers and sellers of copyrights, pictures, music and songs, dealers in antique furniture, etc. The subscribers are H. Dulley and Mrs. C. L. Dulley. Private company. Permanent managing director: H. Dulley. Registered office: 30, Langham-street, W.

HENRY CHRISTMAS AND Co., LTD.—Registered with a capital of £2,000, in £1 shares, as printers, stationers, publishers, advertising agents, electric photographic printers, type founders, stereotypers, engineers, die sinkers. etc. The subscribers are H. Christmas and Miss E. E. Young. Governing director, H. Christmas. Registered office, 05a, Southgateroad, N.1.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligation: registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 15 of the Companies Act, 1900. (The registration of Satisfaction is not computsory.)

A.M. PEEBLES AND SONS, LTD.—Satisfaction in full on December 31st, 1918, of mortgage dated September 2nd, 1897, securing £4,000.

PEEBLES AUXILIARY Co., LTD. - Satisfaction to the extent of £2,025 on November 28th, 1918, of supplemental mortgage dated March 20th, 1906, securing £12,000.

STANDARD CATALOGUE Co., LTD.—Issues on December 7th, 1918, of £2.250, and on January 6th, 1919, of £3,750 debentures, part of a series already registered.

COMPANY NOTICES, etc.

MEDICAL WORLD, LTD. (in voluntary liquidation.)—Notice is given that a meeting of the company will be held at Cambridge, on February 26th, for the purpose of having an

account laid before them, showing the manner in which the winding up has been conducted and the property of the company disposed of, and of hearing any explanation that may be given by the liquidator.

Personal

MR. WILLIAM JAMES TOWNER, who for more than 70 years has been actively associated with the *Brighton Gazette*, celebrated his 84th birthday on Wednesday, last week, when Dean Hannah, of Chichester, handed him a cheque for £500 as a token of the regard in which he is held by his fellow townsmen.

MR. J. W. CARLEY, head of the contractors' accounts section, H.M. Stationery Office, Manchester, and late assistant works manager to Manifoldia, Ltd., is leaving his position to take up the post of factory manager for Messrs. Alfred Couldrey and Co., Tooley-street, London, S.E. Mr. Carley is an expert in scientific management for the printing office.

MR. J. R. CLYNES, M.P., it is hoped, will give the address at the next monthly lunch of the London Master Printers' Association.

SERGEANT H. P. LEWRY, a former member of the machine-room staff of the Star, London, has been awarded the Military Medal.

MR. ERNEST J. P. BENN has resigned his post as Chief Industrial Organisation Commissioner of the Ministry of Reconstruction to take up work in the city as managing director of Messrs. Benn Bros., Ltd.

MR. J. Johnson is joining the staff of the London Master Printers' Association as organiser. He has had a long and varied experience of the printing trade, and is known not only to the London members, but also to a very large proportion of the trade outside the Association.

A HAPPY sign of the times is that the Labour Committee of the Federation of Master Printers are to meet the representatives of the unions at the olfices of the latter to-day (Thursday), when they will discuss the question of hours and holidays. The meeting is to take place at the new offices of the Federated Trades in Kingsway, and the employers will be entertained to lunch by the union officials for the first time.

MR. W. H. BURCHELL (the Caxton Press, Ltd.) will this year celebrate "fifty years in printing" if he is spared until November 2nd.

HE began at the age of seven, and has occupied every position in a printing office.

MR. BURCHELL has founded three important printing organisations in London—the Printers' Managers and Overseers Association, which recently celebrated its coming-ofage; the Institute of Printing and Kindred Trades, which is 20 years old; and the newly-

formed Central Districts Branch of the London Master Printers' Association, which in three months has attained a membership of sixty-two.

Printers' Wages.

The Labour Gazette records the following changes in wages during December:

Hull.—Bookbinders and machine rulers; increase of 7s. 6d. per week and an additional war bonus of 2s. 6d. per week. Minimum rate after change, 57s. 6d. plus war bonus of 5s.

Certain other towns in Yorkshire.—Lithographic printers; increase of 7s. 6d. per week. Bookbinders and machine rulers; increase of 7s. 6d. per week. Minimum rate after change, 57s. 6d. plus war bonus of 5s.

Grimsby.—Bookbinders and machine rulers; increase of 6s. 6d. per week. Minimum rate after change, 57s. 6d. plus war bonus of 5s.

Great Yarmouth.—Compositors and machinemen (book, jobbing and weekly newspaper); increase of tos. per week (45s. to 55s.).

Buth. Compositors, machinemen and linotype and monotype operators (book, jobbing and newspaper); increase in the minimum rate of 9s. per week or 2d. per hour. Minimum rate after change for compositors, 60s. per week or 1s. 2d. per hour.

Brighton.—Compositors, machinemen and linotype and monotype operators (book, jobbing and newspaper); increase of ios. per week in the minimum rate. Minimum rate after change for compositors. 585.

after change for compositors, 5. s.
Eastbourne. — Compositors; machinemen and linotype and monotype operators (book, jobbing and newspaper); increase of 5s. per week in the minimum rate. Minimum rate after change for compositors, 53s.

Hastings, St. Leonards and Bexhill.—Compositors, machinemen and linotype and monotype operators (book, jobbing and newspaper); increase of 10s. per week in the minimum rate. Minimum rate after change for compositors, 58s.

Abertillery.—Compositors and machinemen (book, jobbing and weekly newspapers); increase of is, per week. Minimum rate after change, 63s. 6d. (including war bonus).

Belfast.—Cutters; minimum rate fixed at 40s. for those employed under two years on a cutting machine, at 45s. per week for those employed over two and under five years, and at 52s. 6d. per week for those employed five years and over. Labourers (including embossers); minimum rate fixed at 30s. per week. Women employed in lithographic, letterpress and binding trades; increase of 4s. per week in minimum rate (18s. 6d. to 22s. 6d.) after fourth year of service.

Cork.—Compositors, machinemen and linotype and monotype operators (book, jobbing and newspaper), lithographic printers, bookbinders and machine rulers; increase of 6s. per week. Minimum rates after change; jobbing and evening news compositors, 6os.;

morning news compositors, 63s.; book-

binders and machine rulers, 57s. 6d.
Wexford, Enniscorthy, Wicklow and New
Ross.—Compositors, machinemen and monotype operators; increase of 2s. 6d. per week. Minimum rate after change for compositors, 458. Linotype operators; increase of 2s. 6d. per week in time rate, and 1d. per 100 lines (brevier) in piece rate. Minimum rate after change, 55s. per week or 101d. per 100 lines.

The East London Master Printers.

Members of the East and North-East 'London Master Printers' Association held another interesting and useful meeting on Monday week, at the Swan Hotel, Stratford. Mr. E. R. Alexander presided with his usual geniality, and gave a helpful lead on each subject under discussion, all present taking an active part. The hon. secretary, Mr. A. D. Phelp, had introduced a happy innovation in asking the members by post card to choose the date of the meeting, and more than those who had replied put in an appearance. Mr. Phelp's interviews with the postal officials in connection with this matter would make interesting reading.

Following the customary tea and talk round the table, the members started off on the discussion of a variety of subjects. Satisfaction was expressed at the prospective appointment of an organiser at headquarters whose chief duty would be to call upon printers still outside the organisation, with a view to introducing them to the increasing benefits of

membership.

The Industrial Council scheme was fully discussed, and it was agreed it would serve a very useful purpose for the whole industry, provided the unions took it up, as it was expected they would, in the right spirit. 48-hours' movement was also considered in all its bearings, and the hope was expressed that the present restrictions on output would be removed, as otherwise increased cost of production would be ruinous to the export trade and discourage the looked for improvement in the use of printing by the trades at home.

Mention of the return of enlisted apprentices when demobilisation proper is in full swing brought up the question of the existing agreement with the unions on the subject, which it was thought should be considered in a generous spirit in view of the sacrifices the boys had been called upon to make in the interests of

the country.

THE Ault and Wiborg Co., of Cincinnati, U.S.A., are establishing agencies in South America and the Orient with the purpose of developing American trade in these countries in connection with the sale of paper, pulp, printing machinery, bookbinders' materials, type, etc, and invite correspondence from manufacturers.

Calendars for 1919.

A PICTURE of the Mount of Olives decorates the calendar of Mr. Robert K. Burt, papermakers' agent and merchant, 19-21, Farringdon-street, E.C.4. It is mounted on a creamtinted card (15 $\frac{1}{4}$ by $10\frac{3}{4}$ inches), and is interesting as being a real photograph taken by Mr. Burt himself. The lower portion of the card contains Mr. Burt's business announcement and the dates, which are in white figures on a chocolate ground. A really handsome calendar, and one that will be appreciated by recipients.

THE diary issued to advertise the business of the Jaenecke-Ault Co., printing ink manufacturers of Newark, New Jersey, U.S.A., is quite a mammoth affair, and consists of monthly tear-off sheets, each of which measures 28 by 20 inches. The firm's advertisement appears at the top of each sheet printed in light-tinted lettering on a darker ground, and the dates appear underneath in figures two inches in height, those of Sundays and holidays being printed in lighter tints. This is a really striking calendar, and one that will attract attention wherever shown.

A CHARMING calendar is sent out by Messrs. Millington and Sons, Ltd., manufacturing stationers, Budge-row, E.C.4. On a light surfaced card, 17 by 91 inches, is mounted a well-executed portrait of a girl, tastefully worked in colours, and placed on a multiple mount, the outer green edging of which is very effective. The firm's business announcement is daintily embossed underneath, and at the bottom of the card are the dates, on neat tearoff sheets, printed in black on a tinted surface. A very fine calendar, and one to be

A HANDSOMELY got-up "League of Nations" calendar is issued by Messrs. Petty and Sons, Whitehall Printeries, Leeds. It is 12 by 8 inches in size and has a boldly executed emblematical design in which the figure of Britannia holds a trident from which depends a banner with an inscription relative to the League of Nations. The design is worked in colours, with a heavy gold border, and is an excellent example of printing. The dates are at the foot of the card on monthly tear-off sheets, and on the back of the card is the firm's greeting for 1919 to its customers.

THE consumption of pulp-wood in Canada continues to increase owing to the exceptional prosperity this industry has enjoyed since the beginning of the war. The abnormal competition from the Scandinavian and German countries has favoured manufacturers to a singular degree to say nothing of the fact that continual decrease of supplies of pulpwood in the United States has compelled many American pulp and paper manufacturers to buy a considerable portion of their wood or pulp in Canada, or transform their mills for the manufacture of other products.

Health in the Printing Office.

In the current issue of the Master Printers' Federation monthly Circular, Mr. Ralph C. Hazell comments on an article that recently appeared in the Lancet dealing with "Phthisis in the Printing Trade," and puts forward the following suggestions for remedying the insanitary conditions under which printers too often have to work:—

(1) Where workshops are dark and illventilated, the defects should be remedied by natural means wherever possible Where this is impossible, artificial lighting and the methods of heating should be improved, and mechanical means of ventilation, scientifically designed, should be introduced. It should be borne in mind that ventilation by power fans can only be successful if it is properly installed. If you merely knock a hole in the wall, and insert a power fan which creates an unpleasant draught, you will be bitterly disappointed with the result. Employ a ventilating and heating engineer who has expert knowledge, or ask the Factory Department of the Home Office to send an expert in ventilation to advise you

(2) Works should have proper cloak-room accommodation, or failing this, lockers or

pegs fixed in convenient positions.

(3) Sanitary and lavatory accommodation should be adequate, clean and well ventilated. Long washing troughs where the workers wash under a spray of running water

are preferable to basins.

(4) Greater attention should be paid to cleanliness and neatness in the workshops. Dry sweeping should be forbidden, and wet sweeping substituted where vacuum cleaners are not available. More attention should be given to keeping type cases free from dust. All large offices should have a special vacuum type case cleaner. The workers should be encouraged to greater tidiness and neatness of dress by the introduction of overalls. The improved standard in this respect, which is practically universal in munition factories, should be extended to printing works.

(5) The eating of meals in the workshop should be forbidden, and the work-rooms should be closed to the worker during the dinner hour. Where a canteen serving cooked dinners is unnecessary or impracticable, a mess-room should be provided where brought food can be warmed up and eaten under con-

ditions of cleanliness and comfort.

(6) If the Whitley committees are to be established in our trade, they should tackle seriously health and safety problems among the workers. A special health committee consisting of representatives of the nanagement and the workers could do much in calling attention to cases of ill-health, in investigating the cause of accidents, and in putting down spitting and other unhealthy practices.

(7) Excessive overtime ought to be still further curtailed. This is a matter which, in their mutual interests, employers and em-

ployed should face fearlessly.

(8) Every factory should have, in connection with its sick club or otherwise, the means of sending to a convalescent home employees who are recovering from illness or in need of a rest. A three weeks' change and rest often saves the worker from a complete breakdown.

(9) A scheme of medical inspection and advice should be adopted in all printing works.

I have, perhaps, gone beyond the scope of the title of this article, but consideration of the means of fighting consumption naturally suggests a survey of the whole health question in the printing trade. If we are to have a reconstruction programme in the printing trade worthy of our craft, the improvement of working conditions, and consequently of the health of the worker, should be one of its most important items.

st. Bride Foundation Printing School.

Results of the Cost-Finding Examination.

Mr. W. Howard Hazell and Mr. Harold Curwen, the examiners appointed by the Costing Committee of the Master Printers' Federation, have issued their awards of the examination held at St. Bride Printing School on December 11th, 1918. The following are the names of the successful candidates with the marks awarded:—

Totham, W. M.		139 1	marks.
Flateau, H. E. (Miss)	137	••
Knowles, D		147	**
Parsons, F		120	,,
Rose, F. P		123	,,
Cole, F. H		122	••
Pond, J. F		121	,,
McMurdo, R	• • •	112	,,
Berner, G		112	,,
Golder, J. H		107	,,,
Brownjohn, C. H.		102	

The students gaining the first and second places obtain the Costing Committee's prizes. Mr. Totham is employed with Messrs. Eyre and Spottiswoode, Ltd., an office which in the past has produced a number of prize winners in the examinations. Miss Flateau is engaged at H.M. Stationery Office, Hare-street, Bethnal Green. It is interesting to learn that a number of this year's successful candidates are employed at H.M. Stationery Office, and it is to be hoped that their example in taking an opportunity to ascertain how costs are arrived at in the printing business, will be followed by many more of their confrères.

The next term for instruction in cost-finding commences on the first Wednesday in May and continues until the end of June. Those desirous of taking up the stndy of costing during the summer term should make application to the principal without delay. We understand that a number of enrolments have already been made for this special course arranged for those who cannot attend during the winter evenings.

The Printing Press and Strange Languages.

The Rev. Arthur Taylor Indicates at St. Bride's the great services which Print and Printers render to the World.

The relation of printing to the spoken language was developed by the Rev. Arthur Taylor, vicar of St. Bride Church, and formerly secretary to the British and Foreign Bible Society, in the lecture which was delivered under the auspices of the St. Bride Foundation Printing School at the St. Bride Institute on Friday night, Mr. T. W. McAra, J.P., joint secretary of the Newspaper Proprietors' Association, being in the chair.

Mr. Taylor drew upon a wide experience in foreign travel for the purposes of his lecture, which was extremely interesting from many points of view, and especially to the printer. He mentioned the great diversity of languages which existed in the world, and pointed out that writing was written speech. Printing followed script just as script followed speech. He mentioned that there were at least 60 or 70 kinds of script to-day which had been ultimately used in the form of print. He went on to speak of the earliest methods of putting language into script, which was by word pictures. After a time people forgot the precise meaning of the picture, which came to stand for the word itself. From that there was a development in some countries towards alphabets, in which spelling was introduced, and certain signs were adopted by which any particular word could be expressed. When they came to those languages where there were word signs, as in the Chinese, the difficulty of not having an alphabet was very apparent. When they had to learn a distinct character for every word, it was liable to make the number of signs somewhat uncomfortably large.

Chinese Composing Room.

A Chinese composing-room was a more formidable affair than the English compo-The Chinese word characters were counted by the thousand, and were distributed into departments, and were collected with considerable trouble. The Chinese compositor had no need to take any other walking exercise. (Laughter) In the English alphabet there were sometimes 300 different characters in the lower case, which made composition a much more interesting thing. and learning and reading a much greater Type as compared with script was a compromise. It was difficult to get up script in such a way that it would always fall on the top of the type, so it became a rule to have letters which were independent of each other. That was to say, practically every letter was a small cap. It was possible to run letters together, and in some of the Eastern types they had the added difficulty of diacritical marks, accents, points and sometimes overhanging lines, which seriously inconvenienced the compositor. So they would understand how difficult it was to set up books in some of the Eastern languages.

Eastern Printing.

Referring to printing experiences in the East, the lecturer remarked that there was very excellent printing being done in Japan to day—printing of the highest quality. In China the printing in many places was excellent. In India it was good and improving. But it was not easy to get careful work done. Composition was as a rule cheap. Heexpressed

the opinion that it was not wise to set up books in these foreign languages in this country because the cost was so much greater, and it was more sensible to have them set in the country where the people understood the language. Because of the cheapness of composition in India, China and Japan, it was not often worth while making plates, because they were expensive compared with composition. Most books, therefore, were printed from type. But type got very much battered because the native was not always as careful in making ready as he ought to be, and type was apt to get extremely dirty as time went on, though he had heard similar criticism about type in other countries. (Laughter.) Anvhow, it was astonishing how good printing could be in these places. He would like them to imagine themselves working in a printing office with a temperature of about 100 degs. in the shadeif there was any shade—and with as much moisture as the air would carry and a little more. He thought they would realise under these circumstances that it was not easy to print well, and he had heard of trouble with the rollers. (Laughter.)

Printing and Speech.

Coming to the relation of printing to speech, Mr. Taylor said whenever there was no literature in the form of books or papers, speech had a habit of changing very rapidly. He did not mean merely that dialects sprang into being, which they always did, but the actual changing of words and idioms and pronunciation became very great in two or three generations. He went on to show how literature and print preserved a language, and instanced Shakespeare and the Bible in this connection. He described in a fascinating manner how missionaries in many far-away lands had to learn the language themselves in the face of many difficulties, and in this respect he regarded them as amongst the greatest pioneers of benevolence that the world knew. He was bound to say, however, that the commercial world never justly appreciated the benefits it derived from the year-long devotion of these men, who for the first time put down in writing some language which hitherto had never been seen upon paper. Incidentally he mentioned, as showing the difficulties of picking up a new language, that in one of the languages of India, "ba," by altering the vowelsound in seven different ways, could be made to construct a wonderful sentence. This opened up a very difficult problem in printing, because how were they going to differentiate these signs?

Amateur Printers.

Mr. Taylor mentioned Mr. John G. Paton, who showed him one of the early pages he had printed in one of the islands of the New Hebrides. He went on to pay a tribute to the extreme versatility of some of these men, who began life in this country with no relation whatever to translation work or printing, but who became translators out there, got a small printing press and a fount of type, and then

set to work and became compositors, setting up their work and pulling it off, and producing a remarkably creditable book. The page which Mr. Paton had shown him contained an amusing feature. In the language upon which he was engaged the letter "k" was used a great deal, and unfortunately in the English cases that letter was not one of the more numerous ones. The result was that when Mr. Paton had got halfway down a page he ran out of small "k's" and had to draw upon his capitals, so the second part of the page was all capital "k's." However. that didn't matter; it was only the beginning of things.

Reproducing Script.

Dealing with one or two questions of printing, Mr. Taylor said most tongues were printed from types. It might be a difficult matter in Chinese, but still it was done. He exhibited a red cloth on which was embroidered a large Chinese sign. He went on to say that the books set up in these characters were very costly to produce in the first instance. He remarked that in some parts of India people who were Mahommedans pre-ferred their books to be in the script in which the Koran was written. There was a type prepared in Hindustani, but if they issued a book in that type it was not popular with the people. Therefore they were practically compelled to reproduce the script.

Lithography.

Lithography was the device used for this purpose. It was usually very badly done, and always looked inartistic and very dirty. Another device to which they resorted was to get a scribe and put the fear of man into him, it nothing else, and tell him that he was to do his very best handwriting and write the whole manuscript out. It they were producing a book, and wanted to know how many pages it would make, they had to get the size of type which was most convenient, and plot out for the scribe a certain piece of the manuscript, and say, 'You have got to get this into this page." It might take him a week's practice before he got exactly the size of writing which would just carry that amount of matter into the page, and then they had to watch the he worked to that page by page, so that at the last they had the proper number of pages and every page complete and perfect. It might take the man a week to write three pages in his very best copperplate handwriting. Then the pages were sent home to this country, and they were reproduced by photographic process upon zinc plates. The early attempts in this direction were not very successful when they had an elaborate system of points and dots in the letters, because in the old process of the bath when the acid got a little way in it began to eat under the protected letters, and they peeled off So it was only possible to have a very shallow plate, and a shallow plate with very small dots was a very be-wildering thing. However, some very creditable books were produced in this country. Of

late years it had been possible by improvements in the way of applying acids to the plates to get a much greater depth. In that way there had been produced some very useful modifications of script on zinc plates.

Limitation of Founts.

The speaker went on to indicate the difficulties imposed by the size of book required in reproducing a new language. Here in England we had got a very wide range of types, and the compositor adopted the size of type that was required to make up a certain number of pages, but in the Eastern types. they could not expect to have many founts. There might be one and sometimes two, and that limited them as to the size of book. Mr Taylor mentioned a case in which they were asked to reprint a book of Ethiopic character, but of which the type had been "dissed" very effectively. Accordingly, they had tried an experiment with the offset process, and there was handed round the audience a copy of the Bible produced in this way. The only difficulty was that as the workmen had no knowledge whatever of the language, and every page looked alike, there were occasional lapses in pagination. Sometimes a page was upside down, but that was soon put right.

The Future.

Referring to the possibilities of the future, the lecturer said probably every six weeks some new language was reduced to writing and printing. The result had been enormously to increase the possibilities of intercourse, and the war had perhaps done more in this respect than anything that had happened in history. In the year immediately in front of us, the world was going to make immense strides. These were some problems that had to be faced and faced quickly. China and Japan, in his judgment, could not long retain their present system of writing for the purposes of business. The peoples of the world had been brought very close together and their presses would have an equally great demand made upon them. The press was, after all, a vehicle by which the ideas and thoughts of people were communicated from one to another, and the message that any nation had to the world was ultimately passed through the medium of the printing press, and the presses of the world would be busy in the near future bringing to all nations that spirit of true brotherhood which could alone guarantee peace.

DISCUSSION

The chairman, in inviting discussion, observed that some of them were familiar with the little troubles of a warm day and the effect on rollers. Some of them had heard of printers talking of rollers that had "spewed"; when that had happened, dirty printing followed for some time after.

A member of the audience asked what would be the future of German text, against the use of which there was now a prejudice. He asked the lecturer if that prejudice would be overcome, and whether the Germans would

be fully converted to the use of the Roman character.

Mr. J. R. Riddell, principal of the St. Bride Printing School, referring to the offset experiment mentioned by the lecturer, asked how it was they could lay down pages to back up in perfect register, mentioning that the pages were line to line register.

The lecturer, replying to Mr. Riddell, said he recognised the difficulty, but with a modern photographic machine, a really scientific one, they could get a very perfect register on the plate. It was purely a matter of the accuracy of the photographic machine when they were making the plate.

Mr. Riddell said they knew the step-andrepeat machine, but that was for duplicates of a particular design, but this type work depended upon line-to-line register.

Mr. Taylor handed to Mr. Riddell the book which illustrated his point, but Mr. Riddell pointed out, amid much laughter, that the lines did not register at all.

Mr. Taylor referring to the German use of Gothic type, said, while it was still in common use in Germany, the Roman was gaining ground, chiefly because it was more compact than the Gothic. They got a smaller letter that was equally legible, so there was an advantage in having the Roman character in very large books. A good many text-books in Germany to-day were being produced in the Roman character. He would not prophesy what was going to happen. People were very sensitive over these things.

On the motion of Mr. George Eaton Hart a cordial vote of thanks was passed to Mr. Taylor for his interesting lecture.

Customers' Proofs.

A Philadelphia firm of printers attaches a printed slip to all proofs sent out to customers, which reads as follows:—The enclosed proof is sent for your approval. We will not print the job until the proof is returned, unless we receive your special orders to do so. Neither the paper nor the printing of the proof is a sample of the work as it will actually appear when your order is completed.

Alterations (other than typographical errors) will be charged extra.

1. Read the proof carefully, especially for names, addresses and technical words, and mark all corrections legibly on the margins.

2. Return the original copy with the proof, otherwise we cannot hold ourselves responsible for typographical errors, except such as are marked on the returned proof.

3. Mark "O.K.," or "O.K. with corrections." as the case may be, on the proof, signing your name so that we may know that the proof has reached the proper authority.

An observance of these few suggestions will prevent most of the typographical errors which sometimes occur in printing.

Paper Weights and Measurements

The Paper and Pulp Section of the War Industries Board suggest the adoption of the Decimal Manufacturers. System by American Paper

Until shortly after the armistice all papermaking was centralised in the pulp and paper, division of the War Industries Board at Washington. The outstanding facts that impressed themselves upon the heads of the Paper and Pulp Division are, first, the great number of different classes of paper made and the magnitude of their tennage, and second, that these many classes of paper have no common standard of weights and that none of the many separate standards now in use have ever been reduced to the decimal basis for the sake of speed and convenience in

Americans are accustomed to laugh at their English cousins for stubbornly clinging to their cumbersome system of pounds, shillings and pence, and yet one can imagine the utter astonishment of one of our French Allies, should he attempt to unravel the much greater complications of the American system

of paper weights and measurements. The paper manufacturers and merchants have during the past two years established what is known as a system of "substance numbers" or weights, i.e., have established the weight of a particular stock size as the standard for weight for that particular class of paper. For example, in book papers, 25 by 38 has been adopted as the standard or basic size, and the weights in this size are known as the substance weights for book paper. Other stock sizes are made in weights equivalent to the weight of the standard or basic size. For instance, basis 25 by 38-50 lb. in size 28 by 42 weighs 62 lbs.; it was formerly ordered 28 by 42-60 without regard to any standard.
This standardisation of weights is undoubt-

edly a distinct saving in paper manufacturing, and this saving is indirectly passed on to the printer and the public, for under this system, if an order does not "fill" the paper machine, the side roll can be cut into a stock size, as

the thickness is standard.

But a particular substance number or weight is applied to one class of paper only. Book papers, writing papers, cower papers, etc., all have their special substance numbers, or weights, and to-day there are the following thirteen different classes of paper more or less commonly used by the printer, each with its own standard of sizes and substance numbers. This list does not include the many classes of pulp, binder and other coarse boards, or many paper specialities.

17 by 22—writing papers.
17 by 28—still used by many for ledgers.

19 by 24-blotting.

20 by 25-covers.

20 by 30—(480 sheets to ream) tissue. 20 $\frac{1}{2}$ by $24\frac{3}{4}$ —index bristol.

22 by 28 -blanks, railroad blanks and tough

22½ by 20½—cardboards, bristols (some lines figured by weights and some lines by ply. Ply does not mean same in different classes of bristols and cardboard; also some cover

22½ by 30-envelopes (although this is the standard for weight, sheets of this size are

never made nor used).

21 by 31 -fine stationery paper.

24 by 36-(480 sheets to ream)-wrapping and tissue.

24 by 36—(500 sheets to ream)—manilla, news print.

25 by 38-book papers. The "substance" used for one class of paper has no relation to a similar "substance" another, and a weight that is substance in book paper does not apply as a substance in other grades, such as manilla, cover, or

writing, etc.

The present system is complicated enough to the printer, but to the lay buyer it is a Chinese puzzle, and often leads to serious misunderstanding. The basic sizes do not misunderstanding. readily fix themselves in a layman's mind. He cannot understand why a 50 pound, or No 50 cover, and a 50 pound, or No. 50 book should mean two different weights; why a 50 pound, or No. 50, white wove envelope and a 50 pound, or No. 50, manilla envelope are not the same; or why bonds and fine writings should be designated by different standards. Even old buyers of printing are confused. A publisher using a 31 by 41 pap r speaks of it as a 60 pound paper, sometimes to designate the basis of 25 by 38-60 pound, and sometimes to designate that the 31 by 41 sheet itself weighs 60 pounds to a ream.

The present system is also complicated as to the process of figuring, increases the cost of estimating and checking, and greatly increases the chances of error. To find the weight of a sheet 31 by 41 on the basis of 25 by 38-60, four distinct operations are necessary-31 by 41 must be multiplied; 25 by 38 must be multiplied, the product of 31 by 41 must be multiplied by 60; and the result divided by the product of 25 by 38.

Under the present system, a purchaser buys his paper by the five hundred count, and, in converting it into books, catalogues, letterheads or business cards, sells it by the thousand count. This causes not only a constant clerical effort in translating five hundreds into thousands, but there are few printers of experience who have not been embarrassed at some time, either by their own or their competitors' errors in figuring half the amount of paper necessary.

BRITISH & COLONIAL PRINTER & STATIONER

west and north-west London Musier Printers

In connection with this Association a very successful "ladies night" was held at Pagani's restaurant, Great Portland-street, W., the other evening. It is the custom of the Association to lunch together on the fourth Tuesday in each month, and for this occasion it was decided to substitute for the mid-day lunch a dinner in the evening, and to invite ladies to participate. The idea was enthusiastically taken up and a good gathering resulted. The president (Mr. F. A. Perry) occupied the chair, and after an excellent repast reminiscent of pre-war days, the usual loval and trade toasts were duly honoured.

loyal and trade toasts were duly honoured.

The toast of "Proper Profits for Printers" was submitted by the president who humorously suggested that if the British nation were descended from the lost ten tribes of basel it would be interesting to know how many master printers were descended from Isacher who was described as "an ass crouching between two burdens." On the one side On the one side the burden of labour troubles, and on the other that of excessive competition and mutual distrust. That burden could be lightened by a spirit of goodwill and friendliness leading to the possibility of obtaining Mr. F. Scarsbrook responded, proper profits. and informed the company that a lady had informed him that she considered 100 per œat a minimum proper profit.

Mr. J. J. Keliher (president, London Master Printers' Association), proposed "The Association of Master Printers of West and North-West London." He eulogised the work done by the Association and paid a well-deserved tribute to the services of Mr. J. R. Burt, the first president, with whose name the toast was coupled.

Mr. Burt responded and advocated a greater spirit of friendliness. They should not be too ready to believe all they were told to the disadvantage of their competitors. Let them credit their competitors with the same honesty of purpose that they claimed for their own actions.

Mr. A. Langley proposed "The Ladies." It being a ladies night and the first function of the kind in the history of the Association, all the previous speakers had made reference to the presence of the ladies, but he was not going to complain that they had taken the ladies from him. He wondered whether the ladies had access to the list of percentages which printers were advised to add to their pre-war costs, and what the ladies thought of those rates. He advised printers to keep those rates locked up, in case their wives saw them and acted upon them.

Mrs. Pollock responded for the ladies in a neat little speech. She welcomed the references which the president and other speakers had made to the holding of social functions from time to time to which the ladies would be invited.

A really first-class programme of vocal and

instrumental music was rendered during the evening under the direction of Mr. W. J. Pollock, and the proceedings terminated with a vote of thanks to the chairman, which was proposed by His Worship the Mayor of Ealing (Mr. J. S. King).

Labour Unrest and the industrial Council.

SIR,—Having occupied a prominent position for many years in connection with one of our greatest and most complex industries, and having been associated with a notable industrial agreement which was entered into 26 years ago, and which has been been of inestimable benefit in promoting industrial concord, I submitted to the Government in 1911 a scheme, with the names of its supporters which had the approval of many of the greatest captains of industry and labour leaders in the country, the result being that an Industrial Council was appointed by the Government in October that year. To this body was deputed by the Government the holding of an inquiry into industrial agreements and their observance.

The inquiry was duly held, and occupied the attention of some of the leading experts representing both Capital and Labour for A bluebook Cd. 6,953, 1913 many weeks. (665 pages) was issued containing the results of this inquiry, but for some unexplained reason this Council and its work have been completely ignored by succeeding Governments. At the outbreak of war I urged, first in private letters to the then Prime Minister and other members of the Cabinet, including the present Prime Minister, and afterwards publicly, that this body should be at once utilised for the mobilisation of industry, which I considered strategically vital to the conduct of the war. My personal appeals were disregarded, and resolutions passed by business organisations were treated similarly. Questions in Parliament received evasive answers, and amidst the innumerable organisations appointed by the Government, and the many unofficial bodies started for harmonising Capital and Labour, the Industrial Council has been ignored.

I consider that it is my duty at this time of grave industrial unrest, to urge that the public should not only demand an explanation of thereason why the Industrial Council—a body not too large—consisting of experienced representatives of organised Capital and Labour in the staple industries should have been set aside; but also, why it is not now called upon to take up the duties for which it was appointed and for which it was so thoroughly qualified by the practical experience of its members gained in carrying on the most important industries of the country.

l am, etc., Charles W. Macara.

BRITISH & COLONIAL PRINTER & STATIONER

Trade Notes.

A NEW magazine entitled the Landmark has made its appearance. It is published by the English-Speaking Union.

THE death has taken place of Mr. Robert Anderson, who was for sixty-three years on the printing staff of the Scotsman.

THE French Government has conferred the decoration of Chevalier of the Legion of Honour upon Mr. Frank Dilnot, President of the Association of Foreign Press Correspondents in the United States.

THE committee of the Glasgow Newsagents, Booksellers', and Stationers' Association has resolved to recommend the trade that there should be no display of posters until payment is made for exhibiting them.

THE Workington Shell Factory has been acquired by Messrs. Hudson Scott and Sons, of Carlisle, for the manufacture of mechanical toys. The firm will enter immediately, and ubout 200 girls will be employed.

THE Hon. Waldorf Astor, M.P., is to preside at the forthcoming anniversary festival of the Printers' Pension, Almshouse, and Orphan Asylum Corporation on May 30th, and the American Ambassador has promised to be present.

TYPEFOUNDERS and metal refiners should be glad to hear that the Glendinning antimony mines in Dumfriesshire are being reopened by a syndicate, and that operations are started. They were last worked about thirty years ago, but the conditions now are much better. The quality of the antimony is said to be very good.

PRINTERS WAR MEMORIAL.—Donations and promises of support for this memorial have reached nearly $f_{2,000}$. To erect and furnish a wing to the Caxton Convalescent Home, Limpsfield, which is the form it is proposed the memorial shall take, a further $f_{2,000}$ is required, and a special effort is being made to raise this sum. A roll of honour is also being compiled, and trade associations and firms are invited to forward records of men who have fallen to the hon. sec., 3, Cursitor-street, E.C.4

"OYEZ NOTES," the house journal of the Solicitors' Law Stationery Society, is, in its current issue, interesting reading. It contains a number of letters from members of the staff who have been serving with the forces, and among the items we find the following:-"An interesting visitor at head office during the month has been W. W. Burge (head stationery) upon his, release from Germany. He had been a prisoner for some eighteen months and had some grim experiences of his captivity to relate, and brought home with him a piece of bread with the sawdust dropping out of it. This, he states, with some thin vegetable soup, was a day's ration, the soup being occasionally enriched by the addition of dead mice, and on one occasion by a human finger!"

THE death has occurred of Mr. Robert Watkins, aged 77. He was for over 50 years in the service of the *Times*.

A NUMBER of editors and reporters of French newspapers at Montreal have formed a union, and expect to be joined by the staffs of the English newspapers.

At the Journalists' Matinee at the Coliseum, on Sunday Mr. George Robey told the audience that the sale of seats and programmes had produced the total of $\pounds 2,354$ 15s. 9d. He then proceeded to sell war relics and other things by auction, the total realised in this way being over £350.

THAT bright little publication, the Pressman, the house organ of Messrs. Harrison, Jehring and Co., Ltd., printers, Emerald-street, W.C., has again made its appearance after a rest of over a year and a-half. The current issue contains excellent matter, and is most readable. The price to those desirous of obtaining copies is twopence.

In the February Pearson's Herbert Casson, the efficiency expert, makes some suggestions for increasing the interest of work in an article entitled "Making a Game of Your Business"; an Australian airman writes of the beauty of clouds, and his descriptions are illustrated with photographs; George Robey gives advice on how to tell stories; and £100 is offered in prizes for the "Weirdest Story of the War."

A STORY is told in the American Printer that book lovers will appreciate. A New York printer ordered several hundred dollars worth of hand-made paper, and, knowing stockcutters ways and weaknesses, and fearing they would trim off the precious rough edges, he wrote on the job instruction envelope, "Save deckle edges." Some days afterward a bundle was placed on his desk. "What's this?" he asked in surprise. "Oh, them's the deckle edges you ordered to be saved."

THE first number of the Arts Gazette has been issued. It is a weekly, edited by J. T. Grein and L. Dunton Green. Dealing with the drama, music, art and literature the editors claim freedom to express their views from their own angle of vision, and to "stimulate and help all that is young, enterprising and progressive" in the departments of art which the Gazette covers. The printing is excellently done with title in red and black. Annual subscription 12s. 6d. Offices: 6, Duke street, Adelphi, W.C.2.

"The Penrose Process Pocket Book and Diary for 1919" is issued in its usual neat style for pocket use, but, unfortunately, owing to the difficulties of printing and shortage of labour the practical tables and other useful information, for which the diary is noted, have had to be omitted. This, however, should not cause much inconvenience as users of the book in former years can look them up in their back issues. Mr. William Gamble, as usual, is the compiler of the diary, which is published by Messrs. A. W. Penrose and Co., Ltd., 109, Farringdon-road, E.C.I.

BRITISH & COLONIAL

TENDERS WANTED.—For printing and stationery for the Bermondsey Borough Council; schedules, samples and forms of tender from Mr. F. Ryall, town clerk, Town Hall, Bermondsey.

THE death is announced of Mr. Dan Scott, chief sub-editor of The Times. He received his early journalistic training in Glasgow on the defunct Echo and the Daily Record, joined the Tribune in London at its birth, and was afterwards connected with the Evening News and the Daily Graphic. He joined The Times staff in 1913.

THE Nottingham Centre of the Printers' Managers and Overseers Association held their annual concert and ladies' night at the Albert Hotel. Mr. C. E. Evans, the president, brought a concert party from Derby, and an excellent programme was greatly enjoyed by a large and appreciative audience, most of the artistes having to respond to encores.

Among the cartoons of the war period those published in the pages of London Opinion were much appreciated, and their reissue in volume form will be welcomed. The book, which is published at 2s. 6d. net; contains 100 war cartoons by Bert Thomas and Wilton Williams, in collaboration with Lincoln Springfield. The pictures are well printed, and the book, which is quarto size, should meet with a good demand from all who desire to possess a memento of the time of the Great War.

A CALENDAR of truly Brogdignagian proportions comes to us from Willson's, colour printers, New Walk Printing Works, Leicester. It consists of twelve tear-off sheets, each of which contains the dates for one month. Each sheet measures 40 by 30 inches, and the date figures, which are boldly printed in black between red lines, are three inches in height. The firm's announcement appears at the top and bottom of the sheet in bold lettering in black and red. This is a very striking production, and is certainly the largest calendar we have seen. Another calendar in similar style, but smaller (22½ by 17½ inches), is also issued by the firm.

A Machinist Steals Paper -On Monday, before the Liverpool Stipendiary, William Frederick Grierson, printers' machinist, Kensington and Crown-street (on bail), pleaded guilty to two charges of stealing paper, value in all £25, belonging to his employers, Messrs. William Jones and Co., printers, Cable street. Chief inspector Holbrook stated prisoner's employers missed a ream of paper, which the police traced, and this led to the discovery that since June last prisoner had been selling stolen paper and boards to a bookbinder and paper-ruler, to whom prisoner represented that he was a buyer of job lots in Liverpool, Manchester, Rock Ferry and New Brighton. The Stipendiary sentenced Grierson to three months' imprisonment. A summons against the receiver of the paper was dismissed as he had been deceived by Grierson all through.

ACCORDING to the usual well-informed correspondent of the Leeds Mercury, a couple of

new London "evenings," one under the direction of Lord Beaverbrook, will soon be published.

"How to Form a Company," by Herbert W. Jordan, is the twelfth edition of this useful work, which gives every information as to the registering of public and private companies, with many useful hints to those who are thinking of forming existing businesses into limited companies. The book is published by Messrs. Jordan and Sons, Ltd., 116, Chancery-lane, W.C.2, a firm that also publishes a number of other books on company and other business matters.

FOR THE PRINTERS.—An appeal has been issued by Lord Northcliffe on behalf of the Printers' Medical Aid and Sanatoria Association, who desire to retain in full benefit their soldier and sailor members and their families. The administering of such a benefit since 1914 has told heavily upon the Association, and Lord Northcliffe expresses the hope that a generous response will be made to his appeal. To supplement the appeal a matinee concert is to be held on Saturday, February 22nd, at the Kingsway Hall, W.C., when a number of well-known artistes will assist. All communications re the appeal and concert should be addressed to the secretary, Mr. Arthur O'Connor, 30, Fleet-street, E.C.4.

Mr. Ernest J. P. Benn announces the publication of a new weekly review with the title of Ways and Means. It will be published in the style and form associated with the reviews, and will not be an advertising medium in a trade sense, "its mission being to create an opinion in the mind of the public, and a general atmosphere, more kindly to the consideration of commercial and industrial ques-It is an attempt to continue in more effective form the work of Industrial Reconstruction with which Mr. Benn has been identified in recent years, and will endeavour to be an open forum for the general discussion of all industrial questions. Ways and Means will be published from 8, Bouverie-street, E.C 4. The price is sixpence.

Personal.

Mr. A. F. Blades (president of the Federation of Master Printers), Mr. Reginald J. Lake (director) and Mr. A. E. Goodwin (secretary) were due at Manchester on Tuesday in connection with the scheme of organisation.

MR. A. HERBERT will give the next lecture at the St. Bride Printing School on March 7th, his subject being photo-lithographic methods.

MR. F. GILLETT, J.P., C.C., Mayor of Bromley, Kent, has been elected chairman of the governing body of St. Bride Foundation. Mr. Gillett has been closely identified with the institution.

Current Topics.

The Paper Supplying Customer.

It has long been a source of vexation to printers in this country that a certain class of customer insists upon providing the paper for the execution of his printing orders, thereby, in many cases, causing considerable trouble and depriving the printer of a source of legitimate profit. The same practice has lately been rampant in the United States, and at last the printers of Chicago have taken action to stop the practice. At a joint meeting of paper dealers and members of the Franklin-Typothetæ of Chicago, which is the employing printers' organisation of that city, the matter was thoroughly discussed, and fifty-six printers who were present signed an

agreement, or rather a list of five rules, covering the matter, and the paper dealers of the city are taking similar action. This will close the paper market to the penny wise buyer, who is seeking to beat the printer out of what The whole he considers a part of his profit. matter has been in the air for a number of years, the printers contending that they are the true retailers of paper, but the paper dealers, some of them, contending that they have a right to sell to anybody they please. However, in recent years it has come to be generally conceded that a firm cannot justly wholesale with one hand and retail with the other, so that the paper firms of the city are well in line with the ideas expressed by the printers. The paper merchants believe that the commercial printers have a very clear conception of the responsibility devolving on them of reciprocal protection, and on that assumption and provided the plan meets with the approval and hearty support of the commercial printing fraternity of Chicago, the paper merchants propose to undertake the experiment of positively refusing to sell to ordinary customers.

Technical Education in Queensland.

OUR Australian colonies are paying attention to the technical education of the young printer, and the State education scheme in Queensland includes the establishment of printing classes. The terms of the industrial court award for the printing industry, prescribing for printing trade apprentices of higher status than the second year attendance at technical classes during day and evening, led to the establishment of technical classes to assist apprentices in the printing trades. In order that a commencement might be made, it was decided that for that year the instruction attempted be limited to theo-Regular attendance was retical teaching. secured from the inception of the classes. While instruction had perforce to be purely theoretical, compulsory attendance was limited to attendance during day hours. A liberal interpretation was placed on the award requirements, and all junior trade learners from the second year onwards were permitted to leave work one hour and a half earlier than usual one afternoon a week in order to attend for instruction. The enrolment of apprentices at printing classes, according to the latest official figures, was as follows: In composition, 20; in bookbinding, 13; in letterpress machining, 11; and in lithography, 11. A class for journeymen compositors was also established, which attracted

Digitized by GOOGLO

BRITISH & COLONIAL PRINTER & STATIONER

Il students. During the year arrangements were made for the installation of machinery and equipment for practical work. A beginning was made with the branches of composing and letter-press machining; and a small initial equipment for practical work by students in these branches has been purchased and installed. Requirements for practical classes in lithography and bookbinding have also been drawn up with a view to classes in these branches being established as soon as funds are available.

Discouraging British Enterprise.

British firms in all departments of trade are continually being urged to cultivate foreign trade and secure business for this country, but the experiences of a city firm in this connection do not form very exhilarating reading, as the following statement shows:-"Messrs. Philip Clay and Co., manufacturers and merchants, of Friday street, E.C., draw attention to a letter ieceived by them last year from the Foreign Trade Department, urging all firms to issue catalogues to foreign countries as a means of capturing and developing British trade abroad. In accordance with the letter, Messrs. Clay state, they published a catalogue printed in six languages and fully illustrated, at a cost of £3,000. The results were excellent, orders for several thousand pounds' worth of goods coming in from Holland, Denmark, Belgium, Sweden, and Switzerland. These orders were duly executed, and an export licence applied for. 'This licence,' Messrs. Clay say, 'has been refused, the War Trade Department stating that samples only may be sent abroad, and on ao account may those samples be sold. On communicating this to our foreign customers, the reply in every case has been cancellation of the orders, and an intimation that they regret, under the circumstances, to be obliged to rely on some other country, in most cases, America, to supply them with the goods." This does not appear to be the way to encourage British trade with foreign countries, and is just the way to drive British business into the hands of United States manufacturers.

Paper Position.

THERE is practically no alteration in the prices of papers from those we gave recently, on the authority of Mr. H. Bradly, Technical Adviser to the Controller of Paper, and which are repeated in "Commentarium" notes this week. Those people, therefore, who are expecting any substantial break

will have to exercise patience for some time longer. It is to be remembered that there is not a large amount of labour available in the mills, and the cost of production has altered very little, while higher wages have made up any small difference there may be in this respect. Although the prices of raw materials are giving signs of weakening, the bulk of the material now being used in the mills was purchased during November and December at the prices then prevailing. In fact, it is not anticipated that very much difference will be seen until some benefit is derived from imports of American and Canadian pulp, which may be expected to land here shortly, and which is said to be already on the way. This pulp will be coming in at a little below Scandinavian quotations, and the big reduction in freights which is announced from America and which may also apply to Canadian shipping, will still further help to reduce the cost of manufacture. The lower freights announced represent something like £5 or £6 a ton. In the meantime there seems to be some inclination on the part of sellers to bolster up prices at a higher level than is really justifiable. It may be pointed out that in the ordinary way when purchases are made on a failing market, the price is averaged when it comes to selling. Therefore, we are assured that there is no reason for maintaining the high prices which now prevail in some quarters. This is regarded as a short-sighted policy, and, if persisted in, must do considerable injury to the paper trade. Instead of trying to get prices down as low as possible, and so give an impetus to industry, sellers, it is said, are doing the reverse. There is also the fact that cheaper foreign paper has been offered at considerably lower rates than the British manufacturers can produce, and it would not help the authorities in their desire to aid British papermakers if it was found that prices of our own paper are maintained at a fictitious height. Unless sellers exercise reason and discretion in this matter, they are simply cutting the ground from under their own feet and offering an opportunity for the unrestricted importation of foreign paper. It is in the interests of papermakers and wholesale stationers themselves that prices should be on a commercial basis, because in that case there will naturally follow an increased consumption of paper. There are many uses to which paper can be put if it is obtained at a comparatively cheap price, but these uses cannot be taken up to ahy extent whilst the present-day figures exist.

WHAT use are brains to a printer if he won't use them at all?

BRITISH & COLONIAL PRINTER & STATIONER

DIVIDENDS AND REPORTS.

Weldons, Ltd.—The directors of Weldons, Ltd., have declared an interim dividend on the ordinary shares at the rate of 10 per cent. per annum for the half-year ended December 31st last, payable 10th proximo.

GUARD BRIDGE PAPER Co., LTD.—Interim dividend of ios. per share (10 per cent.), free of income-tax, on the ordinary shares.

CROPPER AND CO, LTD.—5 per cent per annum (6d. per share) on ordinary shares for half-year (interim). Last year, dividend same.

EDWARD LLOYD, LTD. — The directors of Edward Lloyd, Ltd., have declared an inrerim dividend on the ordinary shares at the rate of 1s. per share, free of income-tax, in respect of the year ended December 31st last.

NEW COMPANIES.

ACTOR, LTD.—Registered with a capital of £2,000, in 2s. 6d. shares, to acquire the business of magazine proprietors, carried on at 32. Regent-street, W., as "A. A." Vendor, Charles Vernon France. First directors, C.V. France, J. L. Pawle, N. McKinnel, H. E. Wright, A. Lugg. Minimum cash subscription, 10 per cent. of the shares offered to the public. Registered offices, 32, Regent-street, W.1.

A. F. MOLYNEUX (PORTHCAWL), LTD.—Registered with a capital of £1,000, in £1 shares, to take over the business of a stationer, bookseller and librarian, carried on by Mrs. A. F. Molyneux at Porthcawl. The subscribers are J. W. Williams and Alice F. Molyneux. Private company. First directors to be appointed by the subscribers.

BAMBOO PAPER Co., LTD.—Registered with a capital of £20,000, in £1 shares, to enter into an agreement with Thomas Nelson and Sons, Ltd., and to carry on the business of manufacturers of and dealers in paper pulp from bamboo and other materials, etc. The subscribers are N. C. P. Firmin and A. H. Miller. Private company. First directors to be appointed by the subscribers.

Surrey Weekly Press, Ltd.—Registered with a capital of £3,000, in £1 shares, to take over the business of a newspaper proprietor, etc., carried on by S. Stephens at Guildford as the Surrey Weekly Press. Private company. The first directors are L. C. Biddle and G. H. Brierley. Registered office, Biddle's Printing Works, Haydon-place, Guildford.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 10 of the Companies Act, 1900. (The registration of Satisfaction is not compulsory.)

TEARNE AND SONS, LTD. (printers, Birmingham).—Particulars of £500 debentures, created and all issued January 9th, 1919, charged on the company's undertaking and property, present and future, including uncalled capital. No trustees.

W. BOUGHTON AND SONS, LTD. (printers and publishers, Thetford, Norfolk).— Particulars of £2,200 debentures, created November 9tth, 1918, and all issued January 14th, 1919, charged on the company's undertaking and property, present and future, including uncalled capital. No trustees.

DICKENS AND COOPER, LTD.—Particulars of £1,500, created November 14th, 1918, and all issued January 13th, 1919, charged on the company's undertaking and property, present and future, including uncalled capital. No trustees. Also registered, satisfaction in full of debentures dated 1912-13, securing £1,500.

COMPANY NOTICES, etc.

CITY PAPER BAG Co., LTD. (in voluntary liquidation).—Notice is given that a meeting of the company will be held at London, on March 5th. 1919, for the purpose of having laid before them an account, showing the manner in which the winding-up has been conducted and the property of the company disposed of, and of hearing any explanations that may be given by the liquidator.

ALLIED ADVERTISEMENTS, LTD.—Notice is given that a meeting of the creditors of the company will be held at London, on February 11th.

UNITED NEWSPAPERS, LTD.—At meetings of the company, held on January 6th and 23rd, 1919, respectively, the following resolution was duly passed and confirmed:—"That the company, having disposed of its assets and

undertaking, be wound up voluntarily." And at the last-mentioned meeting Messrs. Turquand, Youngs and Co., of London, were appointed liquidators for the purposes of such winding-up. Notice is given that a meeting of the creditors of the company will be held at 41, Coleman-street, E.C., on February 12th.

Printers' Managers and Overseers association.

A Cinematograph Entertainment.

Mr. E. H. Berryman presided at the monthly meeting of the Parent Association at the "Old Bell," Holborn, on Tuesday night, when the feature of the gathering was a cinematograph exhibition. But before this was reached a short agenda was disposed of.

The minutes, presented by the general secretary (Mr. G. Phillips) having been adopted, the following new members were elected on the motion of Mr. E. C. Moyce:—Mr. A. E. Caller (Electric Press, Kensal Rise, N.W.—composing), proposed and seconded by Messis. G. Phillips and E. W. Whittle; Mr. H. J. Gallon (Messis. W. P. Griffiths and Co., Ltd.—letterpress-machine), proposed and seconded by Messis. J. A. Lowe and A. Wilson; Mr. J. T. Higley (Botolph Printing Works—composing), proposed and seconded by Messis. J. R. Beckitt and G. Phillips.

Mr. Phillips, at the request of the president, then made a statement with regard to the proposed Bohemian concert. Owing to the difficulty in obtaining a hall for the purpose, the council thought it best to reconsider the whole matter. In the same connection, a letter was read from the Yorkshire Centre which had discussed the question of a united gathering. They were forced to the view, however, that, having regard to the railway and food difficulties, etc., it would be the wiser course to suggest its postponement another year rather than hold one that was not worthy the Centre or the Association. The hon, secretary (Mr. W. H. Crowther) was accordingly requested to seek the opinion of London on the matter. Conference, he added, had decided that if there was no united gathering the delegates were to meet in London. If, therefore, the opinion of London was that a gathering should be held in London, and if that course was agreed to, they could depend on Yorkshire" putting all to deserve a successful meeting. Mr. Phillips added that the council appreciated the difficulty of the Yorkshire Centre, and they thought the wisest course would be to abandon again this year the united gathering and hold the conference in London on a Saturday in June; and on the same evening they could hold the Bohemian concert, taking advantage of having with them representatives of every centre to make the presentation to Mr. Moyce.

There being no observations on this suggestion from the members, the president took their silence to mean consent to the view put

forward by Mr. Phillips.

The president mentioned the question of candidates for the Printers Pension. He understood the Association would have an official candidate—one of their own members. In the meantime, personally he would be glad of any votes which anyone had to spare for a very deserving case—that of Mr. Robert Cluse—which he was recommending. This candidate, who was 62 years of age, had spent 47 years in continuous employment with one firm. Now, unhappily, he had become blind.

The company then settled down to the cinematograph display, which was provided by the kindness of Messrs. Pathé Frères, Ltd., and the initiative of the general secretary. A great deal of trouble had been taken by Mr. W. H. V. Elston, machinery manager to Pathé Frères, in fixing up a fire-proof operating box and necessary cables to the electric mains, while Mr. Phillips had his tasks also with the authorities. The exhibition consisted of a variety of topical and other films from the Pathé Gazette, representing the moving events of the day, and concluding with a comic boxing scena.

At the conclusion, the president expressed appreciation of the efforts made by the representatives of Messrs. Pathé Frères to entertain them; and Mr. Phillips proposed a vote of thanks to them, mentioning the pains which Mr. Elston had taken to arrange the show.

The resolution was cordially carried, and Mr. Elston briefly responded.

BRITISH & COLONIAL PRINTER & STATIONER

Some Paper Notes.

Stagnancy prevails in the paper market. Buying is practically dead, and only for the absolute necessities are orders being placed. The fact that even such inquiries are very few and, far between reveals what some already knew, that printers and paper users' stocks were by no means entirely depleted. Substitution is being practised on an even more liberal scale than prevailed during the war. The interchangeability of sizes was never quite recognised to exist as it can be made to under stress of convenience. Meantime, tremendously strong efforts are being made in paper-selling quarters to keep prices up. We refer more particularly to the quarters in which prices have always (during war time) been what might, in a conflicting sense, be termed top-hole. The lower prices, associated with mills and certain agents, represent, in our opinion, a level that will not be lowered and under conceivable circumstances might even be advanced. It is difficult to understand how business can be done by the top-hole stationers, even when buying becomes necessary, considering the disparity between their prices and those offered at the mill and certain well known houses. latter are open to book orders from legitimate customers and will presumably be able to fulfil the immediate needs of users. Possibly, when the boom comes, which may not be for the next three or four months, mere volume or demand will compel the buyer to patronise other sources of supply, but for the present and immediate future 1s. 6d. and 1s. 8d. per lb. is bardly likely to be paid for a commodity which can without effort be secured elsewhere at is, to is, 3d.

On the one hand, it is reported that the wholesale stationers and paper merchants have stiffened their price list for February. Why this should be so we are at a loss to know, but we are doubtful whether the members will be so strong at the business end of the issue as they are at the council table. Frankly, some of the prices we have seen are preposterous, and, in fact, it is quite a profitable transaction for the outsider to sell some of the lines at prices little more than half of those shown in the list. On the other hand, we have a rumour that another body of representatives concerned in paper has met and agreed that prices will be lowered at a given date. The situation is perplexing and the outcome indefinite. To our mind the only sure guide and indication for buyers is the present mill price, which comes fairly close to the figures forecasted by the Paper Control as likely to rule about this time. It will, perhaps, be remembered that these prices ran as follows:—Best quality printings and book antiques, 11d. per lb.; ordinary fine printings, 9\d. per lb.; seconds. 7\d. per lb.; "news" 5d. to 5\d. per lb.; fine E.S. writings, 1s. per lb.; common writings, 1od. per lb.; E.S. banks, is. id. per lb.; common browns, £50 per ton; better qualities up to £70 per ton; British

straw and box-boards, £35 to £40 per ton Foreign papers were forecasted thus:—Greaseproof and kraft, £90 per ton; M.G. sulphite, £80 per ton; M.G. cap, £70 to £75 per ton; foreign bank papers, 1s. per lb.; native cap, £65 to £70 per ton, and Dutch strawboards £30 per ton.

From our own experience, buying has been conducted very close to these figures. English banks are actually obtainable at 1s. 1d. to 1s. 3d. per lb., printings at 10d., E.S. writings and book-papers at 11\flactdd to 1s. 1d. per lb., T.S. writings and book papers at 1s. 2d. to 13. 3d. per lb., common browns at £45 per ton. Dutch strawboards have been sold at £33 per ton, kraft at £75, and sulphite at £80 ton. Importers are offering good terms, and even at prices rather below those named above would turn over a reasonable profit. the rate of exchange steadily in our favour, and with the elimination of war risks, etc., it would indeed be strange if no easing had been apparent in the quotations for imported paper. Fortunately, the dearth of demand has broken the vicious circle, and sales are more or less direct between importer, agent and user.

It is worthy of observance that much of the high-priced stock left on the hands of the dealer is a direct result of the circle trading, and any movement which aims at securing the dealer against loss on sales made now or in the near future against a falling market serves to bolster up those who participated in creating false standards in the paper trade. The excess profits duty may be cited in argument, but it is common enough knowledge that many of the participants in the vicious circle of war-time profiteers made their sur-plus for themselves. There are genuine cases and genuine houses which kept outside the circle, and any scheme which secures these against inevitable loss has its good points but if the scheme ignores the lesson of the war, and adds further shekels to the profiteers fund, it is unworthy of thought.

Paste Holder for Pressmen.

Mr. John Webster, a Toronto pressman, has secured a patent covering a design for a paste holder for printing pressmen, a device that fits on the back of the hand for holding the paste that has been for years daubed on the skin by the machine-minder. The papers with the patent point out that "it has been a common and very old practice amongst men in the printing business when arranging a transfer or setting guide sheets in registering a job to place a little paste on the back of the left hand so that it is convenient to wipe a little paste by a finger of the right hand while holding the sheet in the desired position by the left hand, and to apply the paste to a corner or portion of the sheet thus held in order to secure it in position. This practice if carried out from day to day causes injury to the tissue on the hand, and frequently causes skin diseases and sometimes blood poisoning through impurities in the paste. I propose to overcome the detrimental conditions of having the pores of a portion of the back of the hand constantly covered and closed by the paste, and in order to effect this result and yet not detract anything from the advantages of having the paste so convenient, I provide a small cup shaped receptacle. This cup is provided with a strong clip on the underside into which an elastic band is inserted. The band is slipped over the finger and upper knuckles so that the cup may be arranged over the back of the hand in exactly the same position as the pressmen now place the paste upon their hands. The paste is placed in the cup and is thus held conveniently so that it may be utilised as readily if not more so than when placed upon the skin, as a greater quantity can be carried, and it will not dry out as readily." The appliance is about threequerters of an inch across, and is a fairly shallow cup. It fits tightly to the hand, and has all the advantages and none of the disadvantages of the old method.

Differences.

The question of the wide diversity in the prices quoted by printers for identical pieces of work is one that very closely affects the prestige of the craft and is, in its incidence to the well-being of the industry, one which merits special attention. It is accepted that estimating is far from being an exact science but there is reason to believe that the limit of error would be considerably narrowed if more scientific methods were adopted and practised.

The policy of quoting for work for which one's factory is not fully equipped is a very prevalent one, and is responsible for much of the diversity shown in tenders given for printing. There is no doubt that if a little more judgment were exercised in this connection much unprofitable work would be eliminated and the field for profitable operations enhanced.

As the direction of all progress is from the general to the special it is therefore self-evident that it is sound policy to specialise in the things that best suit your organisation, and if you are asked to do a job for which you possess neither the special staff nor the material organisation, the most satisfactory way of dealing with it is to seek out a fellow craftsman who has. He will no doubt be pleased to give you a price for the work, which may be compared with that shown by your own cost of production.

An attempt to produce work for which your plant is not adapted, is very much like a man undertaking the task of food production on an allotment without previous capital investment in the tools that are both requisite and necessary for the work to be performed in an efficient manner. True, he may dig the ground with a pointed stick, but he will accomplish his task with much less labour and more efficiently with a spade. The spade, then is a form of capital. It is therefore obvious that if your capital is represented in the form of a plant capable of producing work of a general or particular character and you endeavour to produce that which is outside its ambit, you are in the same position in manufacture as the man with the pointed stick in the allotment.

The variations, of which I am cognisant by reason of special experience, show a range from 65 per cent. above par value to 51 per cent. below and are not incidental. The persistency with which they occur in connection with work of a generally straightforward character inhibits accidental asseveration. The old story of the printer who had merely forgotten to include the paper, or who had fallen into errors of calculation in respect of it, is not admissible, for in all the instances under revision the prices quoted refer to labour only; the hour rate of which is established by a system of costing. It is sometimes supposed that such anomalies are due to competition or to the operation of other economic forces, but in view of the wide

differences in the prices neither of these factors can be seriously considered, and 1 am forced to the conclusion that there is a deeper cause, and that it is due to either one or the other of two internal factors or a combination of both, viz.: (a) lack of knowledge of the possibilities of the material organisation and (b) of what constitutes a day's work "done by man."

If this is accepted the solution of the problem resolves itself into the simple one of supplying the deficiency, and it means that management must gain an intimate knowledge of the details of work and should determine just how long it should take to do work and the best methods of its performance; which means that the management must be scientific.

Science is the greatest labour saving device. By the adoption of and acting upon scientific principles we know in advance that certain methods will be wrong; so our science saves us from mistakes. It makes us moreover more clear as to what we are about. We gain confidence in any methods we are using as soon as we believe it has theory as well as practice at its back. In short it is the substitution of law for luck.

Most of us are conversant with certain manufacturing laws. There is one which tells us that the longer a job is in the factory, the more money it costs, and we say "Oh yes, we all know that," but the mere knowing is not sufficient, it is the association and application of such laws in practice which shows cognition. A mere reception of a truth without reaction is an impression gone to waste.

Differences in opinion upon these fundamental questions are bound to exist. In an issue of recent date I noticed in your pages the following statement "that we are all efficiency men when we are managers at all. It runs in the blood and we cannot check it," in which case I think it is only fair to assume that the cerebral circulation in some managers is not so good as in others.

I am afraid the writer of the statement quoted above is obsessed with the biological concept of an organism or individual, which is by no means identical with the psychological concept to which his subject relates. It is a false analogy to infer from the fact that as an animal has legs, whether it is walking or not, that a mind is efficient.

A manager may learn the principles of scientific management but he must first divest his mind of the idea that efficiency organisms abide in him -such is Kaiserism.

THE second festival dinner in connection with the National Advertising Society and General Benefit and Benevolent Institution will be held at the Connaught Rooms on Monday, March 31st. Lord Leverhulme has promised to preside, and will be supported by the president, Sir George Riddell, Bart., the vice-presidents and others in sympathy with the benevolent work of the society.

The Brazil Paper Market,

American concerns are alive to the importance of Brazil as a market for paper, and have taken a large part in supplying that market since the war started, but according to a report just issued by the Bureau of Foreign and Domestic Commerce, Department of Commerce, the future of this trade will depend largely upon manufacturing conditions in Europe after peace is made. Price and service will be as important in the future as in the past, and if European manufacturers can undersell their American com-petitors, and transportation facilities from those countries are as good as they were before the war, there is no doubt that they will regain much of their business, says the Board of Trade Journal. Brazil's paper imports amounted to a value of more than £1,500,000. before the war, of which the American share was about £ 100,000. Germany was the principal source of supply and furnished about £500,000 worth annually. Since then the American share has increased to more than £400,000. Within the last two years an American firm has opened a branch in Rio de Janeiro, where stocks of paper, stationery, and printing supplies are carried. This concern has an agency in Sao Paulo and covers the northern States by means of salesmen. Two other American companies, which have had a satisfactory business since the beginning of the war, are planning extensions of their operations. A large commission house has established branches in the principal cities, and is looking forward to a more active participation in the paper trade.

Paper Trade Men on 'Change in London.

Mr. W. C. Corke's idea of using the Stationers' Hall as a weekly meeting place for members of the Paper and Allied Trades receives cordial support.

Mr. W. C. Corke (Messrs. Charles Corke and Co.) is pressing forward his scheme for an Exchange Day for papermakers and their representatives in London. Although progress with the scheme is retarded by the pressure of his own personal business, he is, nevertheless, making headway, and the proposal is being received with favour in many quarters.

Mr. Corke's idea is that the Stationers' Hall should be set aside for one day in the week so that buyers and sellers of paper might be able to meet one another at definite times without the waste of time involved in making often unnecessary calls at individual offices.

We understand that the Stationers Company are favourably disposed towards the idea, and they are more inclined that way in view of the general desire there is among the livery companies of the City to revive the usefulness of the old city companies. Mr. Corke, who conceived the useful scheme under consideration for the paper trade, is himself a liveryman of the Stationers' Company, and he is receiving the support of Mr. Edward Unwin, senior, who will in all probability be the Worshipful Master of the Company next year.

Mr. Corke thinks that London should not be behind Manchester, Edinburgh or Glasgow in the matter of having an Exchange Day, and he believes if such an institution were founded it would help to give London its proper place in the forefront of the paper-

making industry.

The feeling in the trade, so far as it has been gauged, seems also favourable. Mr. Corke, indeed, goes so far as to say that papermakers are enthusiastically in favour of it. as are.

it, as are their agents and others associated with the buying and selling of papers. One of the most influential men in the trade has lold Mr. Corke that this is the very thing that has been wanted in London for years, and he will support the project as well as he can.

Sir Howard Spicer is another who is keen on the scheme, and he has intimated that Sir Albert Spicer is equally favourable. Mr. Henry Godfrey, the president of the Employers' Federation of Envelope Makers and Manufacturing Stationers, sees many advantages in the proposal.

So far, however, no definite decision has been received from the Stationers' Company as to whether the hall can be placed at the disposal of those who seek to establish an exchange day. One point they are anxious about is that sufficient money should be forth-

coming to cover them against any expenses that might be incurred, the figure of 100 guineas being mentioned. This is a little difficulty, however, which Mr. Corke can easily overcome, for he has already received the offer of a guarantee of 500 guineas, and another similar guarantee would be forthcoming if it were necessary.

Details of the scheme, of course, will have to be settled, and the course proposed is that a composite committee should be formed of about three or four members from the Stationers' Company, the wholesale stationers, the papermakers, and the papermakers agents for this purpose.

It is suggested that members of the Stationers Company should be admitted free on Exchange Day, while members of the trade who are not associated with that company should pay a fee of five guineas per annum, which would entitle them to admission. This revenue would not only meet expenses in connection with the hall, but the movement would very likely have the effect of increasing the membership of the company, and so extending its usefulness, apart from which, of course, the subscription would help to keep membership exclusive.

It is thought that if the paper trade Exchange Day is established others might follow, as, for instance, one for the printing and allied trades.

The useful purpose which such a day would serve for the trade is at once obvious, and we have pointed out in these columns already that there is a need for some hall where members of the paper trade and others might gather and exchange views. Mr. Corke is fully convinced, not only of the advantage of his scheme, but of its practicability, and he certainly is just the enthusiastic and enterprising gentleman who can carry forward a matter of this kind. He is now, we understand, approaching various organisations, such as the Papermakers' Association, the Employers' Federation of Envelope Makers and Manufacturing Stationers, and the Wholesale Stationers' Association, and there is every prospect of something definite being put before the trade at no distant dater.

Co-operative Buying for Printers.

Mr Albert Bennett Outlines his Scheme before a Meeting of His Fellow Printers at Anderton's Hotel.

Co-operative buying for printers was the subject of a discourse delivered by Mr. Albert Bennett (Messrs. Jas. Truscott and Son, Ltd.) to the members of the Central Districts Branch of the London Master Printers' Association on Wednesday evening last, at Anderton's Hotel. Mr. J. D. McAra was in the chair, and an agreeable and profitable evening ensued.

A Fitting Opportunity.

Mr. Bennett said the question of co-operative buying had been under consideration for some time by a number of their friends who were connected with the Master Printers' Association. Owing, however, to the difficulties of obtaining materials and prices of a consistent character the matter had been held up until a more favourable opportunity presented itself. They now opportunity presented itself. They now thought that the moment had arrived when something might be done to put into practice the capability of the master printers to undertake co-operative buying. They felt, especially in view of the Paper Controller's action on the previous day in sending out a letter to all wholesale stationers advising them considerably to reduce the prices of their paper, that now was a more fitting opportunity than ever to take the matter up. It might be asked, what was the need of co-operative buying? The answer was that they were going to add something more to their profits than they had done in the past. He had never yet known any printer who felt that his profits were of such an enormous size that he was satisfied with them, and he thought in the days to come when labour and other difficulties confronted them that they had to consider that there should be a greater

business and profit in the future than there had been in the past. Therefore it seemed only right that they should husband all those resources which would help them in making printing profitable and utilise them to the best of their ability. He would like to draw attention to the very absurd manner in which at the present time they conducted their operations as printers. In the London area master printers represented something like 1,000 printing offices, and out of that number there were 12 to 20 very large printers. The twelve large printers carried a stock in their warehouses of no less than £500,000 value, and the other 988, it would not be unfair to assume, carried an equal quantity of stock. So altogether they had £1,000,000 locked up in stock in the various printing offices within the London area. Furthermore, that stock occupied a vast amount of space and carried a large amount of insurance, besides involving a vast amount of labour in supervising it and dealing with it generally. Now, to begin with, there was no question that, given a central buying authority and a central depôt, at least 66 per cent. of that holding could be dispensed with. From the central depôt they could draw the goods in the ordinary way of business, and the warehouse space saved would allow for the development of other businesses as occasion arose. When once Peace was declared, and once cooperative buying was really started, that 66 per cent. of capital could be used in the furtherance of their businesses apart from buying. More than that, they would be able to reduce overhead expenses in connection with warehousing and also in regard to fire insurance and clerical staffs. More than anything this scheme would help them to get through their work very much more easily.

Paper.

The method of bringing this about would be to ask their friends to give them something like an approximate idea of what their consumption was per year of the various standard makes of paper. If they took the classes of paper and graded them he thought they would find that three or four kinds of printing paper covered the whole ground. If they found that for the quality, say, No. 2, there was a demand through the whole of their collective buying of, say, 5,000 reams, it would not be an unreasonable supposition for them to be able to claim the services of a mill to produce that, delivering to a central depôt 1,000 as required, always having ready another thousand so that no inconvenience might be felt. Once that system was established they would get the call on the paper that was requisite for the trade, but, instead of each firm taking 100 or 200 reams into their premises and paying for the warehousing of it in anticipation of a job coming along, they would be able to make a call upon a central depôt when the paper was required. It was the release of capital and the elimination of their overhead expenses and the freeing of floor space that should make the scheme appeal to the master printer.

A Central Depot.

When they had dealt with paper in the way suggested then they could deal with boards, and any other goods that were necessary, the same way. A central depôt must always contain sufficient to meet the demands made upon it by the master printers and have sufficient in reserve at the mills to prevent any inconvenience being experienced. This would only be possible by their selling branded goods not samples. What he meant was that they should endeavour to classify and standardise every article that was dealt in under the co-operative system. The speaker referred to the difficulty occasioned by difference in the metal required for the linotypes and in regard to inks, and pointed out that if they were to establish a formula for the manufacture of printers' metals, inks and so on he was convinced that with the orders the co-operative buying system would be capable of placing there would be no difficulty in maintaining the quality of the articles used. It was essential for them to get a correct standard and be able to ask that the material should be made to that standard, so that they could get the necessary interchangeability of types, for instance. With regard to paper, litely the master printers had had under consideration the question of standardisation. There were a terrific number of papers with antediluvian size names, and papers even with the same description had no relation to one another. They could go on accumulating until there were 70 different kinds. It was wonderful what a large quantity of space was taken up by these various papers, which was confusing even to their warehouse staffs.

Under the co-operative system these difficulties might be averted, because they would have the right to determine what their suppliers should send to them. The standardisation of paper, he maintained, was a question entirely for the printer, and the remedy was in his own hands.

A Stationery Office Lead.

He did not think he need elaborate the advantage of purchasing en bloc He proceeded to read an extract from the report of the Publications and Debates Committee. which showed that the Stationery Office had been smarter than most of the master printers. The report said that a very large portion of the expenditure of the Stationery Office was for paper, and that the ordinary method of obtaining supplies was for the Stationery Office to acquaint the paper mills of their requirements, and receive tenders from them. Those methods, added the report, had in the past secured an adequate supply at very favourable rates, "mills being frequently glad to take an order for a long straight run at fill-up prices which it paid them to accept. That was a specimen of co-operative buying which might give master printers a considerable advantage. But it required all of them to come together as close as they could, and concentrate all their buying in the co-opera-This buying, however, could tive channel. not be left to chance, and there must be an appointed co-operative buying committee, which would carry perfect confidence with it. Buying was a most intricate matter, and the speaker instanced great difference in prices for similar articles which had recently come to his notice, the difference in one case being 40 per cent. That emphasised the need of maintaining standard prices for goods, and they must have the feeling that the man who was paying the standard price was receiving the article he needed at a reasonable figure. They would also require a manager of great aptitude and knowledge, who would be able to assure clients that the goods he was selling them couldn't be beaten, wherever they might go. It followed also that they would require a staff for the handling of the goods. but there would be a saving in that matter because the materials to be used would go direct to the machines, or at least to the machine department.

Strawboards Example.

Mr. Bennett mentioned the notorious case of the strawboards which were offered to him at £13 or £15 a ton, but the market price of which was about £70, the only difficulty being that a licence was necessary before the boards could be imported. Mr. Bennett thought there should be no difficulty in the co-operative society bringing a shipload of strawboards over on their own account, and the price they would pay would be very different from what was demanded of them now or in normal times. Handling on the co-operative basis, he added, would not cost one-tenth of what people were paying now.

Although he had only been speaking in regard to London, there was no reason why

BRITISH & COLONIAL PRINTER & STATIONER

some distributing depots should not be established all over the country. He could not see any reasonable objection to their being extended to every printer who was a member of the master printers' organisation. went further than that, and said any printer who was not a member of the organisation should under no consideration be allowed to participate in whatever benefits co-operative buying should secure. The speaker hinted at reserve stocks in London from which they would be able to meet any normal requirements, and if depôts were established in any other parts of the country there should be kept a sufficiency of stock that would prevent any friction between master printers and their customers

Financial Aspect.

As to the financial side of the proposals, the speaker said it would not be difficult, with the release of capital that would follow, to issue a series of preference shares bearing whatever percentage was thought necessary, and he thought they as printers would be able to offer 6 per cent. That interest would be the first charge after the depreciation of stocks and rates and taxes. Having done that, and having got a considerable amount of capital which need not be called up beyond what was necessary at one time, they then had to consider what was the probable rate which would be returnable to those of their friends who placed their orders and patronage with them. He mentioned similar organisations which were in operation and which had actually returned about 10 per cent. Now the firm which was going to spend £50,000 a year in manufactured goods or paper would not regard it as a grievance if they received 5 per cent. in the way of dividend, nor would the small man who spent, say, £500. Mr. Bennett insisted that the principle of co-operative buying was not to cut, though it would be no use changing the present system if they were not at once going to make a greater percentage of profit. They had to prepare for the strenuous times ahead and for the necessity of keeping their places going, giving them a fair return for the time, abour and energy which they placed at the disposal of their businesses. If, however, it was only going to enable everyone of them to slaughter and cut and create keener competition for stock, then let them leave it alone.

The Time Ripe,

Mr. Bennett again emphasised his argument that the time was ripe for this project. The war had brought master printers closer together in a few years than had been the case in twenty or thirty years of peace. Therefore he asked master printers to take this question into serious consideration, because he thought this was the only way in which they could secure better prices for their work, allowing for those prices which labour asked and which they would demand in the future. figures as showing the annual pre war amount of paper manufactured in the British Isles. Exclusive of news:—Printing, writing

paper from wood pulp, 254,000 tons; printing papers, mostly from grass (Esparto), 148,000 tons; best writings and blottings, 20,000 tons; mill boards and leather boards and other boards amounted to the enormous figure of 62,400 tons. These figures, he thought, justified everything he had said that night. If they could do without the intervention of the middleman, it would be a much happier day for the printing trade at large. (Applause)

DISCUSSION.

The chairman expressed indebtedness to Mr. Bennett for his interesting and illuminating address, and in inviting a discussion, he pointed out that nothing had been said about the small printers, who generally bought in for the job they had in hand, nor was it stated how the small printers were going to benefit by the co-operative scheme, whether they would be allowed to subscribe to the preference issue, or how they would be treated in comparison with the larger firms. He did not think there would be any disagreement on the principle of co-operation.

Mr. Harris thought the meeting ought to come to a decision on that matter at once, stating that "to-night's the night." (Laughter.) If they stayed there 24 hours they could go on building on the foundation Mr. Bennett had laid down. He thought they might meet together again to go farther into the details. Whether Tom, Dick or Harry came into it or not, he asked why those present could not form a nucleus and go ahead on the proposition. He added that the small printer was to have his 10 per cent. back whatever he spent. It was not necessary that everyone should be a preference shareholder, though he must be a member of the Master Printers' Association. That was the lever that would increase their membership; in fact, if they went on these lines there would be a big queue. (Laughter.)

Mr. Hewitt advocated a clearing house for old and surplus machines, which should not be put out on the hire purchase system. He went on to suggest, in connection with the possible attitude of large firms, that there should be a guarantee that they were only going to purchase through the co-operative society.

A digantic Scheme.

Mr. Burchell, in expressing agreement with Mr. Bennett's suggestion, said that some time back he had proposed a printers' exchange, where they could meet half a day once a week, for the purpose of buying and meeting sellers. He alluded to the gigantic scale of the proposals, which would necessitate a large staff and big premises.

It was asked whether the scheme could be started on small lines, but arguments were advanced against this. Mr. Mould pointed out that unless this was taken up on a large scale mills would not listen to them.

Mr. Harris took up the challenge of those people who said it could not be started except in a large way. He believed that if they

RITISHE COLONIAL FABRUARY 13, 1919.

only took up four lines of paper for which there were a large number of consumers it He went on would pay them hand over fist. to say that the scheme would not restrict trade, but would develop it. This was a time of reconstruction, when they were urged to economise, and the co-operative scheme would develop gradually, and would not hurt

Mr. Bennett, replying to the discussion, stated that the first and primary trouble would be to get the necessary capital, and he did not see the least difficulty in raising sufficient money from the master printers. If they could make a turnover of a quarter of a million, 3 per cent. would give them £7,500 for managerial expenses, rents, rates and taxes, and he did not think anyone would object to that.

Mr. Whyte was informed by Mr. Bennett that if a small printer, for any reason whatever, was unable to become a shareholder, he could still buy from the co-operative society, and he would participate in the division of profits.

The suggestion was made of £5 stock, which would enable anyone to participate.

Eventually a resolution was carried, cordially supporting the principle of co-operative buying, and agreeing that preliminary steps be taken at once to see if a scheme could be carried out on the general lines indicated by Mr. Bennett.

"Other Business."

Turning to other subjects, Mr. Whyte, in reply to Mr. Burchell, explained the position in regard to the 48 hour movement, and also referred to the situation which would arise should the electricians be able to cause a stoppage of work in the printing trade.

The Late Mr. E. T. Thomlinson,

The funeral of the late Mr. E. T. Thomlinson took place in the Parish Churchyard, Horn hurch, Essex, on January 28th. The mourners were Mr. Edward C. Thomlinson and Mr. Ernest C. Thomlinson (sons), Mr. T. Thornber and Mr. Charles Drewery (brothersin-law), Mr. B. Harvey (son-in-law), Mr. A. Harvey and Mr. I. J. Legg (representing the Royal Standard Benefit Society). Mr. Royal Standard Reginald J. Lake, director of the Federation of Master Printers, was unfortunately unable to be present in consequence of illness.

The service which was held at St. Andrew's Church, and attended by many friends, was conducted by the curate in charge. Many beautiful floral tributes were received, including wreaths from the following:-Council and members of the Federation of Master Printers, "As a token of appreciation for loyal and devoted service"; Mr. Reginald J. Lake, "In affectionate memory of an old friend, and in token of sympathy with his bereaved family"; The Royal Standard Benefit Society, "With sincere regrets from the members of the Royal Standard Benefit

Society"; Mr. Robert H. H. Baird (Belfast Telegraph); Mr. A. W. Morris and Mr. H. C. Bolton (Messrs. Morris and Bolton); and Mr. and Mrs. Scotcher.

Printers' Pension Legacy.

In the Chancery Division last week the action, Charlotte Stevens (deceased) - Brown The Printers' Pension, Almshouse and Orphan Asylum Corporation came up for hearing before Mr. Justice Astbury. This was an application by trustees of the wills of the testatrix named above and her brother and sister, William Whittingham and Jane Whittingham, to have it determined whether as such trustees they were entitled to assure the residuary real estates in their unconverted state to the defendant corporation as desired by the corporation; and in the event of the Court's deciding that they were not entitled to do so that the plaintiffs, as trustees, might retain the real estates unsold until the expiration of one year after the declaration of peace. The persons who under the wills were entitled to the income of the three residuary estates were now all dead, and the corporation became entitled to real and personal estates under the wills of the value of about £60,000, having in the respective times limited by the wills duly consented to carry out the conditions on which the residuary estates were given to them by the respective wills. The real estate was situated in various parts of London and had been valued recently at £16,099, with a rack rental of £795 14s. After hearing counsel his Lordship gave leave to the trustees to retain the real estate until one year after the declaration of peace.

New 8.0. Controller

Mr. W. R. Codling, C.B.E., M.V.O., has been appointed Controller of the Stationery Office in succession to Mr. W. F. Wintour, resigned. It will be remembered that Mr. Wintour was appointed quite recently on the retirement of Sir Frederick Atterbury, who held the office of Controller for many years. The appointment of Mr. Codling will be welcomed by many master printers, for he has always shown himself very practical in his dealings with the office and sympathetic in his attitude towards the trade generally. Mr. Codling, it may be recalled, was the guest of the London Master Printers' Association at their monthly luncheon in June last, when the address was given by Sir Frederick Atterbury, and when some very straight talking took place. Mr. Codling also spoke on that occasion, and in the course of his remarks he expressed the confident hope that the relationship of the Stationery Office with the printing fraternity would, in spite of their occasional differences, be a very pleasant and happy one.

FEBRUARY 13 1919. BRITISH & COLONIAL

French Printer-Soldiers.

Demobilisation and Reorganisation.

Numbers of men of the various "classes" are now flowing back, demobilised, into civil life. The "poilu" is now beginning to knock at the door of his old workshop, and after having fought for the common good of his fellow-men he is ready to take up, on his own

account, the struggle for life.

The trade has loyally supported the Government's decision that all men formerly in itsemploy should be received back at their old jobs once they have left the colours. task seems at first sight very complicated, but it is lessened when we realise the number of gaps death has caused in our ranks, for printing, like most of the liberal professions, has not obtained many "exemptions" for its men. It may thus be computed that the number of missing-dead, lost sight of, badly wounded or incapable—will in many printing offices exceed 20 or 25 per cent. The lact remains exceed 20 or 25 per cent. The fact remains that there will be, at a minimum, half the pre-war staff to settle afresh in occupation on its return to civil life. Does the present situation allow of this? In some firms, perhaps. In the greater number it seems impossible without serious pecuniary loss; for the work much reduced through the war and hindered through stagnation of business, restrictions, shortage of paper and indeed of all raw materials, will not be extensive enough to occupy all hands from day to day. For this reason every master must hence-

forth seriously consider the situation if hewishes to avoid disappointment.

Everywhere there is so much to be done that with the will to prepare and organise a

task can be found for every man.

Most composing rooms are in great disorder, either through want of labour or owing to the stop-gap, inexperienced character of the labour available. Therefore good use must be made of the accessions to the staff by putting the place in order, distributing useless compositions, verifying the cases, examining the state of the letters, etc. Incomplete cases must be noted, and all useless material must be sorted and what is only good for melting-down put on one side.

The machines, which for the past four years have been in the hands of improvised feeders and minders, are, alas! in a scarcely better state. They must be cleaned, oiled and tested, the linotypes must be put in good condition, and old dressings, beltings and

worn belts must be replaced.

The paper warehouse, owing to the scarcity and high price of its contents, should not be in such bad order; but there is always some dead stock of the same quality but different patterns. Now is the moment to make an inventory, to sort out qualities and strengths and to unify patterns where possible. Cutings will never fetch a higher price than at the present moment.

Let everything be verified and put in order! This is the urgent need of the moment, the preparation and making ready of the great machinery of work. It will be certainly time

well used and money well spent.

Now is the time also to change, if necessary, all old methods and get out of old ruts. Especially we must be on the alert to put the right man in the right place, and utilise unreservedly individual capability and goodwill. In the machine and composing-rooms there must be method, and the new condition of affairs must be exploited to get better order, less waste and less loss of time, in order to obtain the maximum of output. The workman home from the war has a changed mentality from that of former days and has forgotten how to count, for waste was his law dnring four years. It will, therefore, be indispensable to combat strenuously this almost involuntary tendency to waste, this laisseraller which would bring about the ruin alike of capital and labour.

In addition to scrapping all old or useless stuff, the question of really necessary purchases arises. There are innovations which must be introduced at once, modifications to be applied to materials and machines in order to obtain a super-production. To sum up: a maximum of output in a minimum time, with a minimum of labour and latigue to the

worker

In brief, we must, by means of intensified production, parry the high cost of living and, in consequence, that of labour. Only a reorganisation at once energetic and intelligent can achieve this end. The soldier, who has for four years so splendidly done his duty, will soon see that this is a vital question, and that he has a great task before him: and that of assuring his own existence and future, and also the future of our industry and the whole of France. The struggle will be hard!—
Courrier du Livre.

THE British Industrial "Safety First" Association, in a circular just issued, state, that as an evidence of the necessity which exists for immediate action, the latest published returns show that in 1914 969 persons were killed, and 147,045 were injured, by accidents in workshops and factories alone, a large proportion of which would undoubtedly have been prevented had those who became casualties been educated in matters pertaining to their own safety. Millions of pounds paid in compensation, and huge sums of money lost to workers as wages, might have been saved. Many of the largest firms and trade unions in the country, the circular says, are actively supporting the "Safety First" movement, and it is hoped to proceed at once with the pre-paration of "Safety" notices and literature specially suited for individual industries.

An American master printer says that his experience is that a compositor supplied with plenty of all needed material and type will produce twenty per cent. more work than he can possibly turn out in the usual job office of to-day, where it is a case of pick for almost every job.

BRITISH & COLONIAL

Trade Notes.

THE Herald is to become a daily newspaper on March 31st next. Mr. George Lansbury will continue to be the editor.

THE late Mr. Henry Charles Stephens, founder and head of H. C. Stephens, ink manufacturers, London, has left £297,313.

THE Shrewsbury Chronicle, which was established in 1772, has been acquired by Mr. Charles W. Smallman, Newport, Salop, from Captain Sir Beville Stanier, Bart., M.P. for the Ludlow Division of Shrop shire.

FOLLOWING on the Rome newspaper publishers' refusal to grant the eight-hour day and an increase of salary, a general strike of the typographical trade took place on Friday, and the morning papers, with one exception, failed to appear.

TENDERS WANTED.—For printing and stationery for the Bermondsey Borough Council; particulars from Mr. F. Ryall, Town Hall, Bermondsey.—For the supply of forms and notices and printing of ballot papers for the Penarth north and south electoral division in connection with the Glamorgan County Council election; forms of tender from Mr. C. E. Edwards, 53, Queen-street, Cardiff.

THE Aberdeen Daily Journal, as it has been named since 1876, is the oldest Scottish newspaper, the Glasgow Herald following next in order of seniority. It was as a weekly newspaper that it made its first appearance in 1748, though tradition places an issue in 1746. The 20,000th number of the Journal was issued on Thursday of last week, and occasion has been taken to summarise in that issue the history of the paper.

Under the auspices of the Printing and Allied Trades Charity Sports' Association a successful football display was held at Leytonstone Football Ground on Saturday. There was a large attendance of spectators, about 1,500 being present to witness the playing of the Leytonstone Club v. the Scots Guards. At the finish the score was Leytonstone 9, Scots Guards 1. The gate money was in aid of the Printers' Charities Fund.

The annual general meeting of members of the Manchester district of the Institute of Journalists was held on Saturday evening, Mr. J. E. Archibald (Preston) presiding. Mr. Archibald, of the Lancashire Daily Post, Preston, was re-elected president. Mr. J. Greenhalgh (Manchester) and Mr. William Beck (Oldham) were re-elected honorary treasurer and honorary secretary respectively. Mr. W. H. Brown (Withington) was appointed vice-president, and Mr. F. Connell (Stockport) was re-appointed representative of the district on the Institute Council.

The old-established publishing house of Messrs. W. H. Allen and Co., Ltd., late of Waterloo-place, S.W., has now been transferred to Messrs. Sampson Low, Marston and

Co., Ltd., of London and Edinburgh. All publishing propositions from all clients should be addressed to Overy House, 100, Southwarkstreet, S.E.I, or to 18, Clyde-street, Edinburgh.

THE United States has 2,500 daily and Sunday newspapers, and 14,000 weeklies, with an approximate total circulation of 71,000,000 copies.

It is claimed that the Berliner Zeitung am Mittag was the first newspaper to employ an air service for newspaper distribution sending its issues to Leipzig and Weimar.

Death of Mr. Waiter Hazeli.

We regret to announce that Mr. Walter Hazell, chairman of Messrs. Hazell, Watson and Viney, died at 9 o'clock yesterday (Wednesday) morning. Mr. Hazell was the doyen of the printing trade in London, and his activities extended in many directions, beneficient as well as commercial. The funeral service will take place on Saturday at 10.30 at Christ Church, Woburn-square, W.C.1.

CAPTAIN ERIC EVAN SPICER, 1/4 Battalion London Regiment, who was previously reported missing, is now, in the absence of any further news, believed to have been killed in action in France on March 28th, 1918. was the date of the big battle of Arras. Captain's outpost was attacked in great force by the Germans, and after a most gallant de-fence it was carried. The Colonel, referring to the operations at this date, states that "in the attack we held on to our front line system for nearly five hours in spite of our flanks being turned and the enemy being in the main communicating trench behind us.' These side lights indicate the desperate character of the fighting at this point and the splendid bravery of the British officers and men who took part in it.

Captain Eric Evan Spicer, who was 25 years of age, was the youngest son of Sir Evan and Lady Spicer, Belair, Dulwich. Sir Evan was one of the original partners in the firm of Messrs. James Spicer and Sons, Ltd., but is no longer a director, a position, however, which is occupied by a brother of the fallen officer,

Mr. Charles Evan Spicer.

Captain Spicer was still pursuing his studies at Trinity College, Cambridge, when war broke out, coming up from Dulwich College. At Cambridge he took his degree with honours, taking his tripos in his second year. While at the University, he was a member of the O.T.C. This training served him in good stead when he accepted a Commission in the City of London Royal Fusiliers early in 1915, and he was adjutant of his battalion for some time. With this regiment he saw a great

RITISH & COLO PRINTER & STATIONER

deal of fighting on the Western Front covering a period of two years. He was never wounded until March 28th, though he had once been home with trench fever.

THE death occurred on Saturday of Mr. David Wood, principal partner of the firm of Messrs. Wood and Sons, booksellers and printers, Perth.

MR. JAMES DOLPHIN WATSON, a member of the original staff of the Pall Mall Gazette, died at Birmingham, last week, in his 79th year.

The Scuttish Paper Trade.

So FAR the paper trade has not been greatly involved in the prevailing unrest, but indirectly it is suffering along with other interests, and at a time when orders should be coming in freely papermakers are finding it difficult to keep their mills running. papermakers may not be altogether blameless for this unsatisfactory state of affairs, for many of them seem to imagine that buyers can buy when they cannot sell. It is a time for them to consider what can be done in the way of prices, and to reduce them as far as they possibly can without selling at unremunerative rates.

THERE is really enough demand at the moment to give all the mills a sufficiency of orders to keep their machines running, at least those machines that have been running in war time, and they cannot well furnish up any others yet; but when one mill sells white paper at 8d. and another at 11d., buyers do not know what they can afford to pay, and so risk their future business rather than land themselves in a loss. No doubt losses will have to be faced by all classes of traders before we can get back to our normal, but paper should not be made at a cost that will not cover the existing price of material, or we will soon get back to the bad old times when every man's hand was against his neighbour.

If the Whitley Committee meant anything, it surely meant that unity of action between masters and men as well as between buyers and sellers was to be the starting point for a reconstructive policy. Its weak point, as far as the workers were concerned, was that it offered no basis for a termination of the perpetual dispute between capital and labour. If we cannot arrive at this, we may say goodbye to our chances of future prosperity.

IT is to the interest of no mill to act independently in the matter of price, and those makers who are so blind as not to see this should be coerced. Surely it is in the power of the trade to do this.

We are told on good authority that 11d. per lb. is the lowest price at which Scottish

mills can at the present time afford to make ordinary printings and writings. They have practically no esparto to work upon, and to keep up their quality they have to use a more valuable material. If, then, buyers would carefully examine any samples offered them at a lower price, they would probably find that independently of giving encouragement to firms that are spoiling the trade, they would really get better value by paying a little more money.

Electricity as a Motive Power.

THE introduction of electricity as a driving power in printing offices has greatly contributed to ease and cleanliness in working, while at the same time tending to increase the In consideration of its utility output. users of electricity will be interested in the forecast for early drastic legislation affecting the electric power supply. A memorial has been sent to Sir Albert Stanley from a national conference of twelve central associations representing the electrical machinery makers and contractors, the power supply companies, and the principal industrial power consumers in the country, who were called together by the Institution of Electrical Engineers to consider the position. It is claimed that past legislation and regulation have "prevented British electrical engineers and manufacturers from realising in their own

country the highest achievements of which their technical skill and productive capacity were capable," and it is urged that immediate legislative action should be confined to the creation of a Board of Electricity Commissioners, charged with general powers for the extension and consolidation of electrical enterprise under conditions otherwise of free and natural development. The memorial urges, finally, that "legislation adverse to the views of the large proportion of industry and of the consumers which the committee represents, may not be introduced without their being accorded an opportunity of discussing the matter."

Experts on Post-War Openings.

THE Engineering Trades (New Industries) Committee of the Ministry of Reconstruction They were have submitted their report. appointed by Dr. Addison in December, 1917, to compile a list of articles (suitable for manufacture by those with engineering trade experience or plant) which were either not made in the United Kingdom before the war, but were imported, or were made in the United Kingdom in insufficient quantities, and for which there is likely to be a considerable demand after the war. The committee consisted of sixteen leading engineers and manufacturers, under the chairmanship of the Hon. H. D. McLaren, C.B.E., M.P., but with it was a labour panel of eleven leading trade unionists under Sir Claud Schuster to advise on labour questions likely to arise in the setting up of new industries. A list of imported articles having been compiled, the committee found that the best way of proceeding was to set up a number of branch committees, each of which could give detailed consideration to a particular group of articles in the list. These committees were fifteen in number, one of them dealt with printers' general machinery, and one with papermaking machinery. The report now issued consists of the findings by the main committee as a whole and reports from each branch committee, dealing with a particular group of manufactures. The main committee make certain general observations as to the conditions under which new industries should be set up if they are to develop successfully, touching upon such questions as finance for industry, export trade, foreign competition, the improved methods necessary if British engineers are to maintain a leading position, industrial and scientific research, exhibitions, education, and labour conditions. The committee strongly recommend the more

FIRUARY 13. 1919 BRITISH & COLONIAL

extensive adoption of specialisation and standardisation, particularly in the case of small manufacturers, who, in their opinion, would do better to confine themselves to the manufacture of a few types of articles which they could then bring to greater perfection and produce more cheaply. In order to stimulate production the committee consider that both employers and workpeople should be educated both generally and specially: Employers and staff, in regard to what is being done in up to-date works where quantity production under scientific management is carried on, and workpeople, to remove the impression that quantity production produces unemployment, and to make them realise the national importance of producing the maximum output in the minimum time. The committee have agreed that bona fide inquirers interested in the manufacture in Britain of any particular article may be put in touch with the chairman of the branch committee concerned to obtain such information as is available and advice as to their prospects in entering upon a new field of industry. Such inquirers will be able to obtain at the Ministry of Reconstruction all the information made available by the branch committees, except that which is of a confidential character.

Transition of Paper.

DIFFICULT as was thought to be the period of the war, the days of transition look like placing an equal strain upon the industries of the country. Something like stagnation has seized the paper trade, which is in a condition almost of suspended animation. This state of things arises from several causes no doubt. Generally the consumers of paper have been expecting a change from the condition of high prices which characterised war-time; but the cost of manufacture has not permitted of any break in this respect. Nor is there likely to be with the prices of materials at the height they are, a fact which doubtless induces papermakers, with pretty good stocks of pulp on hand, to exercise restraint in the matter of buying ahead. The dread of a falling market is the influence which is responsible to a large extent for the existing pause. Another reason, too, is the lack of man power to direct the wheels of commerce. One of the great needs at the moment is commercial travellers to cultivate business at home and agents to develop foreign markets. These men are not included in the pivotal list, and their work was not regarded as of national importance by the tribunals. That view may have been the

correct one during the critical period of the war; but the position now is altogether altered. These men are required to re-establish the trade of the country in its normal channels, and in that respect they become of national importance. Especially is this the case with those who will undertake the organisation of British commerce abroad. While Japan and America are scouring the world for orders, our manufacturers are handicapped for the want of the means of recovering and extending the foreign markets for British paper and paper products. This view, however, is being pressed on the proper authorities, and perhaps some action will be taken which will help manufacturers and exporters. In other respects we are glad to hear that the outlook for the paper trade is already showing signs of improvement. A flood of solid business must of necessity arise, though it may be some time before it arrives at full In the meantime pivotal men are being steadily released, and this accession of strength will help matters along.

Anglo-Norwegian Trade.

Paper and Box Board.

Business in the paper and box board trade continues to be very slack indeed, says the Anglo-Norwegian Journal, and instead of some improvement things seem to have been getting worse, and it is doubtful whether such a slack period has been experienced in this trade for many years. Buyers are disinclined to place making orders, as there are plenty of available stock lots on the market, and until these stocks have been consumed there will be very little activity as far as making orders are con-Scandinavian mills making kraft cerned. paper, heavy sulphite paper, as well as leather boards and white wood pulp boards have reduced their prices slightly, and are anxious to book orders, whilst mills making thin sulphite tissues and printing paper have so far been able to obtain such prices as have been current during the past few months. The rate of exchange between this country and Scandinavia has remained practically stationary during the past four weeks or so, and freight charges also have not altered, although shipping opportunities are not so frequent as could be desired, but an improvement in this direction is anticipated. Owing to the present unsettled state of the market, prices naturally vary to such an extent that the approximate figures would be impossible to estimate.

REXINE is now being used for covering the cylinders of printing machines. It is made by the Rexine Co. of Hyde, Cheshire.

DIVIDENDS AND REPORTS.

WYMAN AND Sons.—Dividend of 4½ per cent. on the 6 per cent. preference shares, payable 15th inst., leaving arrears at December 31st last of 6 per cent.

NORTH OF IRELAND PAPER MILL CO., LTD. -The report states that the profit for the year was £33,446. This makes the disposable balance £94,854. Out of this the directors have placed £60,000 to general reserve to meet the requirements of the proposed bonus shares, and they propose a final dividend of 7s. 6d. per £5 share, and 5s. per share bonus, free of tax, leaving £7.354 to carry forward. The Financial Times points out that during the early part of the war the earnings of the North of Ireland Paper Mill Co. were adversely affected chiefly by submarine activity, which interfered with its trade, but latterly abnormal receipts have more than made up for the original falling off. In 1918 profits were larger than ever, the amount, after allowing for war taxation, being £33,400, as against £14,500 in the preceding period. The dividend is increased from 15 to 20 per cent., the highest since 1899, when 312 per cent. was torthcoming. But in addition £60,0 o is transferred to general reserve, preparatory to being capitalised and distributed to the shareholders; this will be equivalent to a further return of 60 per cent. To enable this to be done the capital is to be raised from £100,000 to £200,000, and the present £5 shares will be split into £1 shares, which will be the denomination of the bonus issue. The carry over is £7,400, as against £51,900 brought in, the large reduction being explained by the financing of the bonus just mentioned.

NEW COMPANIES.

Pencils, Ltd.—Registered with a capital of £20,000, in £1 shares (10,000 pref.). Agreement with A. Pryor and H. W. Beecham. The subscribers are H. A. Pryor and J. W. Prestwich.

Private company. First directors: H. A. Pryor and J. W. Prestwich.

STEPHENS AND HYNSON, LTD.—Registered with a capital of £1,000, in £1 shares, as importers and exporters of, agents for and dealers in printing inks, marbling colours, oil, water and dry colours, varnishes, spirits, gums, etc. The subscribers are F. C. Stephens, T. Hynson and H. F. Park. Private company. First directors: F. C. Stephens and T. Hynson.

METRO BUREAU EQUIPMENT. LTD.—Registered with a capital of £4,000, in £1 shares, as manufacturers and factors of and dealers in office furniture, typewriters, office fittings and accessories, stationery, etc. The subscribers are J. S. Cox and H. J. Simes. Private company. First directors to be appointed by the subscribers.

C. D. FLINT, LTD.—Registered with a capital of £1,000, in 900 pref. shares of £1 each and 2,000 ord. shares of 1s. each, as printers, newspaper proprietors, publishers, stationers, etc. Agreement with C. D. Flint and R. K. Flint. The subscribers are C. D. Flint and R. K. Flint. Private company. Subscribers appoint the directors.

ALLEN, MAXEY AND Co., LTD.—Registered with a capital of £10,000, in £1 shares (8,000 10 per cent. cumulative preference), as makers of envelopes, paper bags, and paper goods, stationers, printers, rulers, publishers, etc. The subscribers are R. N. Allen and H. H. Maxey. Private company. Subscribers appoint the directors. Registered office, 10, Bush lane, E.C 4.

Printing, Bookbinding & Kindred

TRADES OVERSEERS' ASSOCIATION.

The annual general meeting of the above association was held at St. Bride Institute, Bride-lane, E.C.4, on Tuesday, February 4th, 1919. The president of the past two years. Mr. James Walker occupied the chair, supported by Mr. A. J. Daines, who has served an equal period in the position of vice-president. One of the largest gatherings of members attended to carry through the business. Having disposed of the opening formalities, consideration was given to the annual report and balance-sheet.

Mr. Rawlings moved, and Mr. Arnott seconded, that both the report and the balance-sheet should be accepted and approved as printed, and the motion was carried

unanimously.

Correspondence, chiefly from provincial members, was then read. While some expressed their intention of being present at the forthcoming bohemian concert, others re-

gretted their inability to do so

With the election of the new executive committee Mr. J. Walker proved his intention to follow the usual custom, and give place to the vice-president. He maintained that it was not conducive to the best interests of the association that any officer, with few exceptions, should retain his position indefinitely, and as Mr. Daines would make an ideal president, he had much pleasure in nominating him for the appointment. Mr. Daines at first demurred, stating that such an important position should be taken by older members of the association, but he eventually yielded, and was elected unanimously to the presi-dency, Mr. Walker resigning the chair in his favour. In returning thanks, Mr. Daines stated how he appreciated the special honour, but realised the difficulty of emulating such former presidents as Mr. J. E. Dixon and Mr. J. Walker. However, he would do his best, and would not, therefore, be to blame should he fail. The ensuing applause inferred that failure was unlikely.

For the vacated position of vice-president, Messrs. Hillman and Dixon were successively nominated, but each declared himself unable to give the necessary time to its fulfilment. Mr. A. W. Hunt was finally elected to the position amid general approbation, while Mr. A. W. Sandilands was duly relegated to the treasurership vacated by Mr. Hunt.

A motion to institute a general secretary as well as a financial secretary was put before the meeting, and carried. Mr. G. A. Eden was elected as general secretary, and Mr. A. G. Aves, who had so ably assisted him pending the "call to the colours," was elected to the financial secretaryship.

Mr. Aves humourously described how he was originally "pitchforked" into the position to fill a gap, and announced his willingness to accept the will of the meeting, and

FEBRUARY 13, 1010.

remain in office for the ensuing twelve months.

Messrs. S. J. Wills and J. Lee were again returned to the trusteeship, a position they had filled with honour for many years.

A ballot was held to determine the election of three committeemen, and Messrs, Harvey, Millwood and C. Peek were returned with the greatest number of votes. Messrs. W. Vernum, R. T. Apps, and J. F. Stroud continued for a second year in office, with the approbation of all concerned.

A hearty vote of thanks was accorded to the retiring committeemen, Messrs.W. H. Hillman, A. G. Aves and H. Milton, after two years' stewardship; also to the auditors, Messrs. A. H. Smith and J. F. Stroud, likewise to the ex-president, Mr. J. Walker.

A resolution to amend the rule relating to the funeral allowance was put by Mr. Daines in the unavoidable absence of the original proposer, Mr. J. Lee, who had undergone a serious operation in hospital. Some discussion ensued, and questions were raised on points of order, chiefly concerning the curtailment of the essential seven days' notice, and whether the matter was a resolution or an alteration of rule, by Mr. Dixon and Mr. Peacock respectively. Finally an amendment by Messrs. J. Walker and F. J. Ibbott was carried provisionally for the ensuing twelve months, "that after two years' membership the widow of a 'free' member was entitled to a £10 benefit, or £12 10s. after five years' 'free' membership.

The whole matter was relegated to the new executive, who were empowered to revise the rules generally during the year, and submit a draft to the next annual meeting. It was also approved that the list of members should be brought up to date, both these matters having lapsed for economical reasons during

the war.

Mr. Peacock made his annual appeal on behalf of the Vellum Binders' Pension Society, which had suffered heavily during the past four years. A grant of three guineas from the funds was accorded to this deserving

With an announcement concerning the bohemian concert for February 8th, and the annual dinner on April 5th (establishing the precedent of inviting the ladies), the meeting terminated

Bohemian Concert.

In spite of railway strikes and severe weather, there was a very good attendance at Anderton's Hotel on Saturday night on the occasion of the annual Bohemian concert organised by the Printing, Bookbinding and Kindred Trades Overseers Association. This organisation, founded in 1904, is gradually extending its usefulness, and its future operations are being prepared on a broader basis. Mr. A. J. Daines, the recently elected president, and the officers are pursuing an active policy, which promises good results. headquarters are now at the St. Bride Institute, where the meetings are held on the first Tuesday in the month. In the secretarial duties Mr. Geo. A. Eden is assisted by Mr. A. G. Aves.

The concert on Saturday was of a very attractive order, and the stewards, Mr. G. A. Eden and Mr. J. Walker, looked after the welfare of the visitors with their customary Miss Becroft opened the thoughtfulness. proceedings by playing in finished style Dachmaninoff's popular prelude. Miss Vernon gave charming renderings of "Break of Day and "The Valley of Laughter," having to respond with encores, and Miss May Windsor enlivened things generally with some good comedy numbers. Miss G. Hunt was much appreciated in her singing of "Love's Coronation," to which Mr. W. Hunt furnished a violin obligato. The humorous songs of Mr. G. Blackmore and Kennith Chisholm were warmly applauded, the latter's Scots songs being cordially received by the audience, while Mr. C. B. McGregor sang some excellent tenor songs in good style. Mr. Hunt pleased with his selection of the dainty "Salut d'Amour" for the violin, and brought the concert to a close with Raff's Cavatina. So good were the various items that encores were the order of the evening, and those present went home with recollections of a very happy time.

Stationery Office Concert.

His Majesty's Stationery Office got up enjoyable bohemian concert and social evening on Wednesday last, 5th inst., at the Pillar Hall Cafe, Victoria Station, S.W., the chair being taken by Mr. W. R. Codling, C.B.E., M.V.O., supported by the heads of branches. An excellent musical programme was presented. Mesdames R. Brookes, S. F. Macey, Merrett, L. Munden, K. Thring, M. Jones, F. K. Baker, L. Jacobs, M. E. West and K. Flynn contributed songs, sentimental or joyous. The rich notes of Mr. W. Peterkin charmed the audience in songs of Lully and Mendelssohn, and Messrs. F. W. Vessey, E. C. Briggs, William Burt, and E. Macmillan also gave some much-appreciated vocal numbers. Pianoforte solos were ably rendered by Messrs. L. C. Dashfield and S. E. Lovatt, Mr. J. Robertson recited Hood's "Eugene Aram's Dream," while welcome humour was introduced by Messrs D. Billington and W. Holland in their comic songs. The committee, Miss M. Jones, Mrs. B. Ward, Mr. E. W. Holland, and Mr. G. P. Thomson, worked well and earned their reward in the thorough success of their efforts.

"A STRAIGHT line is the shortest distance between two points," says Euclid. Efficiency is the straight line between minimum costs and maximum profit. The lack of that line means loss or minimum profit.

Digitized by GOOQ

Some Paper Topics.

Little, if any, improvement is to be recorded in the state of the paper market. Buy-ing is very desultory, and is resorted to only under compulsion. The gradual lapse of time is, however, helping to mould opinion and to correct the erroneous impressions prevalent on the cessation of hostilities. That period was not one likely to be conducive to either a talm survey or an accurate perspective. the one hand, there were many paper sellers with an emphatic belief that prices would steadily be maintained, while on the other, the paper buyers, as a body, were equally confident that prices would fall enormously and immediately. It is now becoming clear that both beliefs were wrong, and as usual the middle course is the one that is being followed. Prices have fallen, particularly of imported papers. Home-made papers are easing down slightly at the mills, and more noticeably at the wholesale end.

The past week has revealed a change of attitude with some wholesalers, whose previous stand was taken firmly on the basis of high price maintenance. Travellers for these houses are becoming apprehensive at the dearth of orders and the fruitlessness of inquiries. Letters of complaint to headquarters are becoming frequent, and the previously unbending attitude of those in control of policy is giving way perceptibly. Such a change is inevitable, for, as was stated in last week's notes, buyers will not pay more for what they can readily obtain for less. It remains to be seen whether the easing in price which is now visible in many directions is a temporary expedient compulsory through lack of inquiries. Already we have noted that in the case of one particular type of wrapping, prices, which had become reasonably low, rose to war-time height shortly after a large demand had begun to crop up in several parts of the country. A similar condition may prevail in regard to other grades when demands are created, as they must be when present troubles and anxieties are set at rest

Surviving relics of days gone by is the fittest description we can apply to a set of samples of papers offered as bargains by a noted house. The month of issue is January, 1919. We not this evidence to re-assure us, we might have excused the samples as being obsolete. However, the offers appear to be well meant enough, and they include the following: Imitation greaseproof, 1s. 9d. per lb.; common M.W.P. printing, £120 per ton; T.S. bank, 28. 6d. per lb.; common bank, is. 8d. per lb.; fine printing, is. 7d per lb.; E.S. azure, laid, 18. 6d. per lb; tinted writing; 1s. 10d. per lb.; tinted bank, is. 11d. per lb.; MG kraft, £158 per ton. All the lines are subject to 2½ or 5 per cent discount, and they are well worth comparing with the prices named in our last week's notes as actually obtaining and those forecasted by the Paper Controller's Technical Adviser.

As a result of the improvement in rate of exchange and the reduction of freights, imported papers, and particularly wrappings, have been booked at prices that allow a fair reduction to be made in quotations to users. So far, no great call is being made, even at It is just on the cards very attractive prices. that ere long users will be taking different views. One of the early debates in the new Parliament will range round anti-dumping duties, protection of home trade, and the institution of tariffs. With so many members, and the Cabinet itself, pledged to this issue, there is little doubt as to the outcome. immediate effect of such a policy will be to raise prices, not only for imported papers, but all round. With this in view it may be anticipated that the first results of tariff discussions will be to stimulate interest in buy-We are no advocate of tariffs and believe no good can come from them except for the monopolists. Having to accept the position that we have chosen to be represented by a Government pledged to tariffs, it only remains to attempt to visualise some of the immediate and ultimate effects which must follow as a natural consequence of such an institution.

The British Science Exhibition, which is now visiting several of the principal provincial cities, does not strike one as being particularly rich in paper progress. The show is no doubt excellent as a general exposition of what has been done to develop home industries during the war, but to the student of any one particular section, the shortcomings of such a show are decisive. For example, taking the paper side of the many recent developments in manufacture, very few are to be observed. There is the display of photographic paper, filter paper, waterproof paper and its products, food containers and paper bindings. There we end, and the vaster field of progressive paper manufacture is left untouched. It would immensely benefit the trade if an exhibition representative of the newer developments in papermaking and paper-using could be arranged. If such a scheme could be set afoot, a really interesting and profitable exposition would result. Better still, it is high time the paper trades took up the idea of a permanent institution, where every side of the subject would be available for inspection and study. Some of the features of present day manufacture, which rarely show themselves outside their own peculiar sphere, but would lose nothing by popularising, would include cellulose filter mass, imitation shoe leather, marbled paper effects, surgical bandaging, paper textiles, imitation bookbinding leathers, artificial silks, etc., etc.

In such an institution could be housed examples and particulars of all speciality papers and products, enabling not only the student, but also prospective users and buyers, to become acquainted with the later developments, resources and inherent possibilities in the British papermaking and paper-using trades. Another aspect, almost wholly overlooked, is the promulgation of the study of paper-testing, both physical and chemical. Specimens

of English and foreign testing machines should be displayed, as also microscopic studies and chemical reactions. Examples showing efficiency and inefficiency of specialised papers would provide useful education for those interested in research. Another phase of papermaking which is never available for inspection on a centralised or systematic basis is that affecting the use of new fibres and material. As is well enough known, valuable pioneer work and research are being performed at such institutes as the U.S.A. Bureau of Standards, the Pulp and Paper School at Maine, the Forest Products Laboratory, the Bureau of Plant industry, and in this country at the Kew and Imperial Institutes, the Manchester College of Technology. and in the most progressive engineering and papermaking establishments. So far as we know, there is no organised effort, certainly not on the trade side, to accumulate the findings or examples of work done for the direct benefit of the trade. The paper trade is wealthy enough and important enough to warrant progressive methods in this respect. In the end, such a step as the foundation of a central college, institute, museum and trade exhibition would represent a sound and profitable investment for the trade itself. It is certainly only by such methods that we shall attain the pre-eminent position as a paperproducing country.

H. A. M.

Australian Notes.

(From Our Sydney Correspondent.)

AT Melbourne, a deputation from the Country Press Association asked the Minister for Home and Territories to repeal the clauses of the Commonwealth Electoral Act compelling newspaper proprietors to furnish returns of receipts in connection with elections making it a criminal offence to publish anything likely to mislead, and enforcing the signing of articles. "Fancy the ordinary country justice being asked to decide what was likely to mislead," said Mr. Shakespeare (secretary of the New South Wales branch). "Great heavens, no one would be safe for five minutes. Yet this provision stands to day in all its hideousness. It is a blot on the statutes, a bludgeon, and should be wiped out in the interests of the public, of free discussion, and of an untrammelled Press." The Minister promised to go into the matter personally.

The death has taken place of Mr. R. G. M'Cutcheon, who passed away at his residence, St. Kilda. He had been a prominent man in Melbourne for many years, and was a native of Ireland, coming to Australia when he was a youth. He worked in Melbourne as a printer, and then went to India, working in a printing office in Calcutta, but, disliking the climate, returned to Melbourne, and afterwards brought out a local newspaper at Port Fairy.

A NEW company under the title: S. Bennett, Ltd., has been registered at Sydney, with a capital of £200,000, in £1 shares, to acquire and take over as a going concern the newspaper businesses carried on by the trustees of the will of the late S. Bennett, known as the Ecening News, the Town and Country Journal, and the Woman's Budget The signatories to the memorandum are: V. Bennett, E. Llewellyn Bennett, C. L. Bennett, E. Ashley, O. T. Bennett, G. T. Bennett, T. Hughes, and L. J. Davies. The first directors are: K. L. Bennett, L. J. Davies, and Sir Thos. Hughes. The registered office is at Sydney.

DEALING with the demand for books in Australia, the Sydney Sun says: One bookseller expressed the opinion that the taste is degenerating in a marked degree. As a result of the war, more books by unknown authors are being imported to flood the market, and 4s. is paid without demur for the veriest "piffle." Wise old Bacon said, "Some books are to be tasted, some to be swallowed, and some few to be chewed and digested," but the multitude of trifling novels does not even deserve tasting, let alone wasting precious eyesight upon useless reading. That there has not been a great change in the public taste since the beginning of the war is the opinion of the book manager of an importing firm. People have to read what is provided for them, and if it is good the word passes round, and the book is read. If the volume is bad, sooner or later it is passed out.

Personal

MR. A. E. NEWBOULD, a member of the London Master Printers' Association, who was a candidate at the recent general election, has been adopted again for West Leyton, where a bye-election has been caused by the death of Colonel Wrightson.

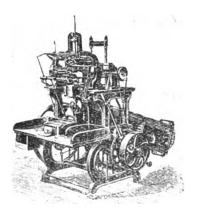

LANCE-CORPORAL SIDNEY ALDERSON, who was previously a machine-minder at the Leeds works of Messrs Petty and Sons, Ltd., has been awarded the Military Medal for gallantry on the field.

MR. T. O. JACOBSEN, ex.M.P. for Hyde (Cheshire), has been selected by the Progressives as a candidate for North Lambeth at the next London County Council election.

LORD BURNHAM has accepted an invitation to attend and give an address at the monthly lunch of the London Master Printers' Association on February 27th, at the Holborn Restaurant.

A SPECIAL general meeting of the members of the L.M P.A is called for next Wednesday, at Stationers' Hall, to consider the question of hours and holidays.

Leader Envelope Folding and Gumming Machines.

The Scarcity of Envelopes—that has been so pronounced during the war—is bound to give rise—now—to an enormous demand quite beyond the capacity of the firms at present engaged in their manufacture.

"Leader Envelope Machines"—of which we are the exclusive makers—are so simple in operation that they can be handled with ease, and their capacity is only limited by the Operator's dexterity.

Before the War the demand for these Machines was increasing, but—at the behest of the Government—we ceased their manufacture, and turned our energies towards the Production of War Materials. Now we are able once again to accept Orders for Delivery in Rotation.

Now-don't wait until some neighbouring firm has made a good start in the Envelope Trade before writing us for details of what the "Leader Machines" can do for you in the way of Profit-producing—write us to-day—now if possible—full information will reach you per return.

WATERPROOFING of drawings and tracings so that they can be used in wet places, according to the Engineer, is done by the use of a preparation composed of rubber and benzol. A convenient quantity of the solution may be made by adding a piece of rubber about 4 in. square to a half-pint of benzol in a quart jar. The rubber will soon swell to three or four times its former bulk, and will be ready for use in twenty-four hours. To prepare for use, pour about half the above quantity in another jar for thinning down. If drawings are to be coated, use a rather thin solution that will spread well under a brush. The drawing should be coated on both sides.

Paper Weights and Measurements

Some details of the "American Decimal Standard of Weights of Paper" suggested for adoption by the Paper and Pulp Section of the War Industries Board.

(Continued from our last issue).

The system known as the "American Decimal Standard of Weights for Paper" is the result of a growing conviction in the minds of the various section heads of the pulp and paper division that the present manner of figuring weights and measures in the paper industry is archaic, complicated and laborious. This system has been developed by receiving the suggestions from many different minds that have given thought to this question, and has been subjected to criticism from the leading paper manufacturers, merchants and users of paper who have, from time to time, come to Washington as members of the various war service committees of the pulp and paper There has developed no valid criticism, except that such a system would involve the expense to the merchants of new samples, and that during the transition period there might be some duplication of stocks in the paper warehouses.

The following is a description of the

system:—

The ream is entirely eliminated, everything being figured by the thousand sheets.

The standard of size is 1,000 sheets of paper I inch square, and the number of thousands of a pound such 1,000 sheets weigh, is the substance number of any particular piece of For example, a paper of No. 125 substance would mean that 1,000 sheets of that paper 1 inch square would weigh 125 pounds, and if we should desire to find the weight per 1,000 sheets of any given size, as 25 by 38, we would first multiply 25 by 38=950, to find the number of square inches to the sheet. If 1,000 sheets I square inch weighed 125 pounds, then 1,000 sheets, 950 square inches would weigh 950 times 125 pounds, or 112.75 pounds. Should we desire to find the weight of a sheet size 42 by 61, we would multiply 42 by 61= 2,562 square inches, by 125 equalling 320.25 pounds, or, eliminating decimals, 320 pounds per thousand sheets.

The same substance number would designate the equivalent weight, whether it were

AMERICAN DECIMAL STANDARD OF WEIGHTS FOR PAPER.

(The substance numbers are only tentative. What substance numbers should be stock should be settled by conference between paper manufacturers, paper merchants and paper users.)

The upper figure is weight per thousand sheets; the lower is weight per ream,

HISE ROILA

book paper, cover paper, writing, or manilla. As stock weights would most probably be even substance numbers, such as 70, 80, 90, 100, 120, 140, etc., the weight of any odd size would readily be found by the simplest multiplication and there would be no confusion in the mind of the customer because :-

First. The system is readily explained and

easily understood.

Second. There is but one substance number for the same weight of stock for all classes,

Third. There would be no confusion between the substance number and the actual weight of stock, as the substance number is a basic unit and not the weight in pounds of some stock size used as a standard.

The following table gives substance numbers in round figures, carried through the various classes of paper. The lower figure is the weight per ream of 500 sheets. All fractions have been eliminated.

To sum up, the great advantage of the American decimal standard of weights for

paper are:

1. It will eliminate the necessity of reducing reams to 1,000 and any errors that might result.

2. It makes unnecessary the acquiring of technical knowledge of the various sizes by men new in the business, and is easily understood by the layman.

3. It eliminates all chance of misunderstand ing as to weight of sheet being furnished.

4. It makes the figuring of special sizes easy and less liable to error.

It is the opinion of the heads of the paper and pulp division of the War Industries Board that this sytems should be adopted during the reconstruction period.

Organisation and Costing.

Interesting Views Expressed at a Meeting of Master Printers in North London.

Organisation, fair prices and costing were among the subjects discussed at a meeting of the North London Master Printers' Association held last week at Islington Chapel, Upper-street, N., Mr. G. B. Moore; the president, being in the chair. Mr. Moore took the opportunity of thanking the members for electing him to the chair for the coming year, saying he would do his best to follow Mr. Hill, who had been of such great assistance to them in the past.

Sympathetic reference was made to the death of Mr. Walter Hazell, and a resolution of condolence with the family was passed and directed to be sent to Mr. Howard Hazell.

Mr. Mizen, the secretary, read a lengthy letter from a member, who found it difficult to reconcile the London master printers' costs for composition. It was pointed out, however, that the writer seemed to confuse hand composition with machine composition.

The following new members were elected on a motion of Mr. Hill, seconded by Mr. Hunt:—Mr. A. W. Spaul (Messrs. Griffiths, Page and Co., Hackney), Mr. G. A. Brockman (Guardian Press, Stoke Newington), and Mr. Wilson, Tottenham.

Organisation.

Mr. Mizen then gave an address on organisation and fair prices. Introducing the first part of his subject, he mentioned the aim of the London Association to reach their thousand-membership mark this year, which he thought ought to be easily obtained. As secretary of the Association his cry had constantly been for members, more members, and still more members, and until they had

gathered the whole of the printers into the Association he should not be satisfied. To do this he appealed to each member to use his influence upon his neighbouring craftsman, feeling sure that if he will take him into his confidence, reject the idea that he is the worst fellow in the neighbourhood, go out of his way a bit to lend him a hand if necessity arises, and generally create a good feeling, by educating him to the fact that your success means his success, he should in a very short time get to understand how essential it is for him to come over and join with us.

In North London we should start a "gettogether" movement, which should combine an "all-in" policy. By this I mean that each member must realise that any work done on behalf of the Association is of mutual benefit. He should select a few neighbouring printers outside the Association, make one or more calls, and find out the cause of their withholding from membership by getting them to state frankly their objections and excuses for so remaining alone. Faith in your Association, its work, and its usefulness to yourself will readily give you a strong answer to remove the misunderstanding your friend is labouring under.

What keeps them outside is lack of information. Educate them by telling them of the many services which have been rendered to the trade (and especially to themselves) during the war by the Association. Tell them that many printers would have found it quite impossible to "carry on" if the Association had ceased to exist. Point out that we have to face the fact that in the future every master printer will be confronted with a much harder task than previously, and as an

Digitized by Google

individual will be helpless to solve many problems, whereas combined effort must succeed.

Impress upon them the mutual advantages to be gained by attending our meetings and the free discussion of matters appertaining to their own district, and the help and information which is readily given from the Association's officials upon subjects affecting the trade. Let them clearly understand that however capable printers they are, and the many years they may have spent in the trade, questions must and do arise where the advice of others is necessary, that they cannot, turn where they may, and receive any help comparable with that which the Association can and are always anxious to give them.

The old theory has been badly beaten, and has made a complete surrender as the result of war, ie.," that prices cannot be advanced when costs go up." I have failed to meet the printer who even in his wildest dreams dared to forecast to what heights the price of printing would soar. Yet, I trust there is not a printer in this room who has any compunction in charging the current rate. In fact the conditions brought about in our trade by the war have been of such a character as to practically eliminate the price cutter.

Are we in the future to contend with the anxious times we have had in the past? Are the old conditions to prevail in respect to competition? There is only one way, to my mind, that this nightmare can be met and checked. First and foremost make sure of the cost by ascertaining the value of the labour expended and the cost of materials used in production, charge a definite figure which will cover all these, not forgetting a fair margin of profit, and without fear honestly charge your customer and stand steadfastly by it. By so doing, you are working for the betterment of the craft, and what benefits the craft benefits you.

With wages practically the same for all, whether union or non-union (the cost of materials generally controlled by the wholesaler bringing them to about the same figure for all), with the output in the majority of offices some what equal, what inducement can one printer have to undersell the production of another? Should this be done it is for one of two reasons: First, ignorance of the cost, or second, greed, at the expense of some fellow craftsman, which generally results in leaving him worse off than if he had left the job alone. Now to be frank and honest with ourselves, it is quite time this insane policy was dropped, that while we should not be out to bleed our customers, yet we should, knowing our cost, charge a fair and adequate price.

On the subject of standard price lists, I might mention that in various parts of the country and in London (the West and North-West Association in particular), this has been done with most beneficial results. My own firm have for some time used one of these, and I might add without regret. Further, the Costing Committee is actively engaged at the present time in getting out a new list which I trust all will acquire and use.

In conclusion, half your output with an honest profit will return you a better margin than double the work, entailing twice the amount of wear and tear, and a problematical balance over the cost. Therefore I entreat you all to bear in mind that, standing in the gateway of new opportunities, to be honest with ourselves.

Mr. A. E. Goodwin, secretary of the Federation of Master Printers, said there was no need to emphasise the importance of organisation in trade matters at the present time, and in this connection made an allusion to the industrial unrest which was manifest throughout the whole country. He went on to mention the conference with the trade union leaders in the printing trade on the question of reduction of hours and payment for holidays. He thought they had no cause to complain of the reasonable attitude of the trade union leaders on those matters, and the result of the negotiations would be known to them very shortly. They had also had under consideration the establishment of wages on a national basis, and he thought they would find when a settlement was reached that a good deal had been done to level up any inequalities that existed, and, so far as London was concerned, there would not be that wide disparity in wages which had led to unfair competition in the past.

He went on to emphasise the necessity of having a strong and representative association among master printers in order that they might meet the compact body of leaders on the other side. They were hoping, of course, very earnestly that they were opening a new chapter in the industrial history of the country, and that before long they would see established in the printing trade a National Industrial Council on which both sides would be well represented and where matters would be reasoned out and any concessions made would be on a fair and equitable basis. They wanted to strengthen the whole of the employers' organisation to such an extent that they would feel when they were meeting the men that they were speaking for the trade as a whole.

He went on to speak of the organisation throughout the country, and mentioned the strengthening of Manchester and Liverpool in the Manchester and Cheshire Alliance which had been formed. There were to be twelve different alliances, and the idea was that all the associations in each area should be linked up together. It was hoped to appoint a whole-time secretary in each area, in order to see that fair working conditions and fair prices were maintained. Incidentally, he suggested that they could not run an Alorganisation with a C3 subscription. (Hear, hear.)

He did not know that they had any reason to be ashamed of the London Association or of the Federation during the past few years, but the work had been accomplished with a limited staff. They were now strengthening the staff, and would be able to deal with all the problems that came along a little more efficiently in the future.

This scheme of organisation had two definite objects: They wanted to establish greater security and a larger measure of prosperity in the printing trade, and he thought there was room for improvement in both directions. As the men had been able to secure the adoption of a fair wages clause, so the masters ought to be able to get a fair

prices clause recognised. Mr. Goodwin went on to inquire as to how they could obtain a fair standard of value. He began by stating that they must have, first of all, a recognised standard of cost. There was a misapprehension as to what the Costing Committee set out to do. Some printers appeared to think it was merely to find work for a few accountants to go into their offices and turn things upside down. That was not the object at all, but to establish a fair standard of value for printing. Instances of the difficulties of fixing a standard were constantly cropping up. The idea was, first, that they should get a definite hourly rate for each particular process of the printing trade, and that rate would cover all the expenses in connection with the process. He had been very much surprised recently in Middlesborough to hear one of the members of the local association assert very strongly that their organisation had nothing to do with the regulation of prices, and that all it had to concern itself with was to fix the Wages and working conditions of employees. This gentleman seemed surprised when he (Mr, Goodwin) pointed out how difficult it was to accept a certain standard of wages unless at the same time they were able in the same way to regulate the standard of prices The standard of cost and the standard of value were to be a rate for each process that covered all expenses. He thought they would soon have to turn to other departments and ix the hourly rate, because he found that some of the machine rates had not been moved up to the extent they should have been in consequence of the increase in wages and costs. He thought that binding and warehouse departments needed a good deal of attention, but so far as composition itself was concerned it formed a good basis to illustrate a method. They had been told that the hourly rate for composition in London was 45. 4d-an hour. Mr. Goodwin explained that he arrived at that in this way: They said that any charge for composition should not simply include the setting and the imposing and the correcting of type, but that the rate should cover cost of distribution and reading and all the other incidental expenses. At the present time they were paying 72s. 6d. for 50 hours, and very shortly they would out baying 72s. 6d. for 48 hours. But tak in 50 hours not more than 34, taking a fairly long period, would be chargeable hours, that was to say, the hours a man the setting, composing and correcting the mber of hours that would actually go to cost sheets. He found, in the country at Tate, that in many offices there was a that in many onness and when distribution was made it would have to

be paid for. Mr. Goodwin made it clear that mechanical composition would be at a higher ratio, but he was only dealing with the small offices where hand composition was in vogue. The actual wages of the compositor for the 34 hours at 72s. 6d. came out at 2s. 11d. per hour. If they took the overseer and the reader together, or even it the proprietor was doing his own work as an overseer and reader, they must allow 10 per cent. on wages, which was 21d. With regard to rent, most people who were paying a lower rent in outlying districts thought they were able to do the work at half the price the man in the city could do it for. But rent would only work out in most places at 11d to 11d. an hour, and even the fortunate individuals who did not pay any rent at all, perhaps because the premises might belong to their wives (laughter), were only having an advantage of 11d. an hour over those who actually had to pay rent. Lighting and heating worked out approximately at another rod, an hour, and then they had got the odds and ends. Repairs and renewals were not much in a composing-room, but they would amount to something like \(\frac{2}{4}\)d. an hour. Then they included—and he emphasised this very strongly, and he thought there was room for a campaign amongst the workers themselves in regard to it—not only the direct wages, which were a first charge upon industry, but other items which were just as much a direct charge upon industry as wages. For instance, they had to provide premises for the work to be done in, though this was overlooked by some of the workpeople. Then they had to provide a plant. It used to be taken a few years ago that for every compositor employed they had at least £200 worth of plant that was type, chases, etc.—so that if they had five compositors they would have more than £1,000 worth of plant. To-day he did not know what it would cost to stock a composing-room. For instance, he had heard lately that quads were 3s. 8d. a lb. Without coming to present-day prices, they would find that the percentage on the average plant required would work out at 21d. an hour. Then there was general agreement that they would want at least 10 per cent. to cover depreciation, to replace the type as it was worn out. Personally, he thought they wanted more That meant another 5d. an than that. Some of these figures would not hour. vary at all in any offices. They had at least 3s. an hour that would not vary in any office in the country where they paid 72s. 6d. His total came to 3s. 23d., rent, lighting, etc., and they had to allow for the general management of the place. Even a proprietor's cost of living had gone up a little, he believed (laughter), and where they were drawing before the war something like 50s. a week, if there was anything left over after paying wages, they were taking now between £3 and £4 out of the business, while the average overhead or general expenses would work out at from 25 to 40 per cent. in an average London office. If they took the mean of 33 per cent. on the 3s. 23d., that was is. id., which brought them to 4s. 34d., which was near

enough to 4s. 4d. for that night's discussion. That was about as fair a way of putting the cost of composition as he could demonstrate. Mr. Goodwin added that in Newcastle, where the wages · ere 69s., the hourly rate was also 4s. 4d., and in other places where wages were 62s. 6d. it worked out at 3s. 10d. an hour. He had recently taken out the costs in small offices in London. In one where there were only three compositors the actual cost worked out at 4s. 6d. an hour. On the other hand, in some of the larger offices it had worked out at 5s. He did not think it was possible that any office should find its costs working out at lower than 4s. Now the point was, if that was a fair way of looking at cost then it should be recognised as a fair standard of value, and it should be recognised throughout the trade. They were trying in many districts to get all the printers in the various associations who had accepted that as a standard to agree that nothing lower than that standard should be accepted for work. It might take a little time to get the whole of London to act in the same way, and they could only start in circles. He hoped before long they would at any rate get a circle started agreeing to this arrangement and adopting definitely that method of fixing a standard of value.

Referring to the progress of the imprint movement, Mr. Goodwin said they did not want to limit customers in their choice of printers, but they did want to limit them in driving starvation bargains. He went on to say that the next twelve months would be a difficult period for printers, and mentioned a disposition at the present time to keep back orders. But in time they would get the expected boom. Meantime, however, the way they could hold together was by not doing work at any price, keeping prices up to a proper and fair standard; then all would get their fair share and they would see their industry safely through this difficult transition period. Mr. Goodwin went on to point out that when wages were 39s. or 40s. it was not such a serious matter to lose half-an-hour's time, but now they were paying 728. 6d. they needed every halt-hour on the job, and they could only get that by using the daily time-

With the alteration of hours which was coming, the time was opportune to adopt the costing system. He could not tell them yet what the new conditions as to hours and holidays would mean in the way of increased expenditure. If he said it was somewhere between 8 and 10 per cent. that depended upon what value they were getting out of a man, whether with a curtailment of hours there was an increase of output. That could only be proved by an accurate cost system.

Mr. H. C. Hill, in opening the discussion, complimented Mr. Mizen on his address, and described Mr. Goodwin as the archpriest of the costing system. The constant instances of price-cutting which they heard showed that printers had not adopted the costing system, or did not understand it. They had to tackle that question at once, and he sug-

gested the adoption of a standard estimatingform in conjunction with the hourly costs in the district. It was quite obvious if every printer was using the same estimating form and the same hourly rates, the only possible variation in the rates would be the calculation as to the time the job was going to occupy. He suggested that the Association should prepare standard estimating-forms for each class of work that required it, and a different form would be needed for different work, but they could all be on the same model. If that was done as a first stage, and then the hourly rates were adopted, that would get over a great many of their price cutting troubles. They wanted some self-discipline, and they could not carry on an association unless they adopted some method of that

Mr. Whitehead, as the representative of the association on the Costing Committee, said it was the intention that a price-list should be drawn up, and that it should then be sent to each of the local associations for discussion and criticism. He did not think it would be long before they would place that before the local bodies, and they would welcome all the help that could be given in order to draw up a practical list. The speaker went on to pay a tribute to the value of the Costing System, as introduced into his own office, a small one, by Mr. Goodwin. By means of it he had been able to keep his finger on the pulse of the business, and he knew exactly what was going on - whether there was sufficient work going through, whether the business was progressing as it ought to do-instead of finding it out at the end of the year. He advised every small printer to adopt the system.

After further discussion, a resolution proposed by Mr. Hill, and seconded by Mr. W. Williams, was adopted as follows:—"That this meeting of the North London Master Printers' Association supports the suggestion of standard estimating forms and hourly costs, and would be glad to see it adopted."

THE DEPRECIATION FUND.—On the jobs already paid for have you got the money that goes to the credit of depreciation? Do you make a separate account, or just let it all go in with the rest? Suppose you treat your entire equipment as an instalment proposition and divide the payments up to cover depreciation. Then any part not fully paid for could be financed from this account and the rest be left undisturbed. Whenever money was needed for additional new equipment or for other purposes it could be borrowed from this fund interest be reckoned just the same as if obtained from a bank; but it should be treated as genuine indebtedness. It would be folly to include depreciation in your costs and then fritter the money away. Whenever equipment needs to be replaced the money ought to be on hand to pay for it or something has gone wrong with the business assuming it was paid for at the start; otherwise it shows a lack of success on the face of it.—Ben Franklin Monthly.

Mr. Waller Hazell.

Printer and Philanthropist.

A re narkable personality has passed away with the death of Mr. Walter Hazell, J.P., at the age of 77 He was not only chairman of Messrs. Hazell. Watson and Viney, Ltd., but he initiated a vast number of benevolent schemes both inside and outside the printing trade. He was no mere visionary, but laid his plans on practical lines so that many of them will continue as a memorial to his genius and energy.

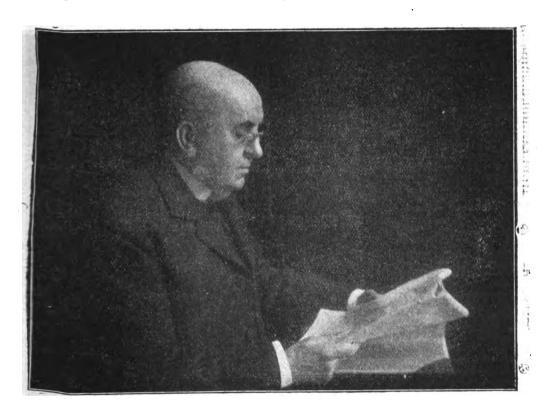

The only son of Jonathan Hazell, manufacturing goldsmith, of Clerkenwell, he joined

step in the progressive history of the firm was the incorporation of the well-known business of Ford and Tilt, of 52, Long-acre, the concern at the same time being converted into a limited company, carrying on three large works and a city branch, and giving employment now to about 1,600 people.

When Mr. Walter Hazell first became associated with the business, the principal publications were the British Workman and the Band of Hope Review. For many years the works of John Ruskin were printed by the firm, a signal proof of excellence to those who know how meticulous were Ruskin's

requirements.

To mark Mr. Hazell's jubilee as a printer and the signal success and high reputation of the firm he guided, a special celebration was held in April, 1914, when a large gathering at Prince's Restaurant testified to its apprecia-

The Late Mr. Walter Hazell.

Mr. George Watson. senr., in 1863, in the printing business which he carried on in Kirbystreet. In 1875 with the entry of Mr. J. Elliott into partnership, the firm took the title of Hazell, Watson and Viney. Mr. Hazell was one of the first printers to recognise the importance of printing in the country, and one of business was the opening of the works at Aylesbury with three employees. A further

tion of his work and worth. This date coincided with the 75th anniversary of the firm's foundation, and many noted men in the publishing and printing trades assembled to do him honour.

In the more public work of the printing trade Mr. Hazell took a prominent part until his activities ceased with his serious operation a few months ago. He was a past president both of the Federation of Master Printers and

the London Association. On the council of both bodies he was always of great assistance, and the value of his advice was fully appreciated by his colleagues. There were many schemes still in his mind for the benefit of the printing trade, and one of them, which used to be described as "Hazell's dream," is now occupying the thoughts of public men in one form or another.

Amid all his activities, Mr. Hazell never lost sight of the welfare of his staff, for whom he instituted many beneficent schemes. One of the last business matters to which he gave his personal attention, and which he impressed upon his partners, was that a new issue of workers' shares should be immediately promoted for the benefit of the workpeople. These shares are issued to the staff at their par value of £10, although they stand to-day at £15, payment being made at the rate of 1s. a week, or in some similar way. When the shares are acquired the worker is entitled to the full dividend of 10 per cent. The workers are only allowed to hold the shares while they are in the service of the company, on leaving the shares being bought back and reallotted. There is always a long waiting list for the shares issued under the existing schemes

Mr. Hazell was elected Liberal M.P. for Leicester in 1894, and remained in Parliament until his defeat in 1900. He was Mayor of Holborn in 1911-12, fulfilling his duties with dignity and hospitality.

In other directions Mr. Hazell's schemes of social reform were most extensive. He was the founder of the Children's Fresh-Air Mission and the Self-Help Emigration Society, chairman of the Homes for Little Boys at Farningham and Swanley; president of the Bloomsbury House Club; joint treasurer of the Canning Town Women's Settlement, and of other societies. He also took a life-long interest in the promotion of international arbitration.

Mr. Hazell was through his long and strenuous life a strong, consistent advocate of universal peace, being the original promoter of Peace Sunday, but when the war broke out he recognised to the fullest extent the gravity of the threat towards the freedom of the individual for which he personally had While the effects of war always striven. with all its brutalities were to him a source of constant pain, he threw himself most heartily into the struggle, feeling that unless the German aggression was defeated there would be little chance in the future for that development of individual life for which he had always striven. In this direction he did a great deal of public service. He was a member of the Appeal Tribunal for the City of London, which at that period was sitting almost continuously, and in connection with his own business he personally supervised the arrangements by which those who went to fight the country's battle were properly cared

When the Bucks Battalion (in which some hundreds of the Aylesbury staff joined up) left for the front, he arranged at their camp at Chelmsford a farewell social gathering, where he personally said good-bye to the members of his own staff.

So far as personal recreations were concerned, these consisted in largely devoting what spare time he had to supporting societies in one way or another which had for their object the betterment of his fellows. The only time he allowed himself for personal recreation was spent upon his farm in the Vale of Aylesbury, where his herd of milking cows was his great pride. When the food shortage came, he was asked by the Bucks County Agricultural Committee to take in hand two additional farms which had almost fallen out of cultivation, with the object of meeting the present need caused by the food shortage. He threw himself into this task with characteristic energy, with the result that on these two particular farms a substantial increase in food production was obtained. On a Saturday afternoon it was a familiar sight on the allotments occupied by the staff of the Aylesbury Works to see the old chief, clad in rough tweeds, wandering amongst the workers chatting about their personal matters.

Of his personal attributes, his friends speak "To have the privilege of working warmly. intimately with him," said Mr. J. Crowle-Smith, J.P., one of the directors, was to love He was a man of strict personal honour; one whose word was absolutely his bond. In addition to all his public work, he did an immense amount of private benevolence without anyone knowing anything about it." Mr. Hazell, a few months ago, underwent a severe operation from the effects of which he never fully recovered. He has left a widow, two daughters and three sons. Mr. W. Howard Hazell, Mr. Ralph C. Hazell, and Mr. Ernest Hazell.

There was a great manifestation of respect from the printing trade on the occasion of the funeral on Saturday. A service was held at Christ Church, Woburn-square, which was filled with mourners, and at the same time a similar service took place at Aylesbury Parish Church, where the firm was represented by Mr. R. J. Elliston, J.P. (the head of the Aylesbury Works), the Mayor and a large number of representative men of the district also attending. The three works were entirely closed in memory of the Chief, a term of affection by which his staff liked to address him. After the service the mourners proceeded to Golders Green for the ceremony of cremation.

The chief mourners were Mr. and Mrs. W. Howard Hazell and Mr. and Mrs. Ralph C. Hazell, with their children; Mr. Ernest Hazell (the immediate members of the family); and the two partners, Mr. J. Crowle Smith, J.P., and Capt. Oscar Viney (who also represented his brother, Major H. B. Viney, M.C., now in Palestine).

Among those who were present at Christ Church were: The Rt. Hon. Sir Albert Spicer, the Rt. Hon. Sir Thomas Whittaker, M.P., Sir Richard Stapley, Mr. Percy Alden and Mr. Arnold Pye-Smith, J.P. The London Master Printers' Association was represented by Mr.

J.J. Keliher (president), who was accompanied by Mrs. Keliher, and the following members of the council: Sir Wm. Waterlow, Sir Cecil Harrison, and Messrs. Edward Unwin, E. C. Austen-Leigh, R. A. Austen-Leigh, C. A. Bates. H. C. Hill, J. R. Burt, A. Langley, H. Carter and G. Poulton. Mr. Reginald J. Lake, director of the Federation of Master Printers, was also in attendance, together with many employing printers, representatives of various societies with which the deceased gentleman was identified, and workpeople from Long Acre and Kirby street.

The service was of an impressive character and the Rev. H. Edmonds, in the course of an address, gave a striking appreciation of Mr. Walter Hazell's work. He mentioned that when he realised that his days of activities were coming to a close Mr. Hazell expressed his thankfulness that those who would inherit his position and opportunities were sharers in

all his social and humane ideas.

Photo-Mechanical Printing surfaces.

Under an invention by Mr. A. J. Hain in the preparation of etched photo-mechanical Printing surfaces, the printing plates are prowided with isolated uniform areas of hardened gelatine which are light sensitive, or are associated with a sensitised emulsion, and are treated so as to increase their size laterally in accordance with the tones of the images to be printed. The following methods of procedure may be employed:—(1) The areas are produced by depositing a film of gelatine sensitised with potassium bi-chromate either directly on to the plate or on to a layer of eching resist thereon, exposing the film to light beneath a screen having spaced openings or transparent areas, and washing out the soft gelatine. Other methods of producis clated areas may be employed, if desired. The areas are sensitised with silver bromide or Other metallic salt and the spaces between the areas are filled with soft gelatine, the plate being then immersed in a solution comprising to grains of potassium ferricyanide and 10 grains of potassium bichromate in one ounce of water. A positive print is squeegeed into contact with the plate after it has been impressed in water, left for about 15 minutes and removed. The contact with the print causes Chemical reaction which hardens the soft Selatine in the neighbourhood of the areas so that they are increased in size in accordance with the tones of the print. The with hot water. (2) The steps up to and in and the sensitising with a metallic salt the filling in of the spaces with soft gelatine ming in or the space of the plate plate are carried out as is the same immersed in a solution comprising to each of bromide, ferricyanide, and bich each of profitting, formate of water, and as before. the soft gelatine is removed as before.

(3) The solution employed in method (2) is replaced by a solution of pyrogallic and citric acids, 3 grains each, and 15 drops of 20 grain silver nitrate solution, in 2 ounces of water, the plate after treatment with this solution being immersed in a 5 per cent. solution of potassium bichromate and afterwards treated to remove the soft gelatine. (4) The isolated areas are produced and sensitised as in (1) and the plate is exposed beneath a negative or in a camera, developed, and fixed, being then immersed in a solution of lead nitrate 100 grains, potassium ferricyanide 150 grains; and acetic acid 25 minims, in 5 ounces of This treatment deposits lead on the isolated areas in accordance with the amount of metallic silver contained therein and appropriately increases their size. (5) The gelatine film first deposited as in (1) contains in addition manganous chloride, and after treatment as in (1) to produce isolated areas. the plate is flowed with a gelatino-bromide emulsion which surrounds and covers the isolated areas. After exposure under a negative, the plate is immersed for about two minutes in a solution of 10 grains each of bromide, ferricyanide, and bichromate of potassium in 2 ounces of water and r minim of sulphuric acid, drained, allowed to lie for 15 minutes, and then washed to remove the soft gelatine. In all cases in which the areas are deposited on an etching resist, the plate is treated to a solvent for the resist after treatment by one of the above methods and then etched. When the areas are deposited directly on the plate they are burnt into the plate to form an enamel before etching.

TEEDERS WANTED.—For a supply of stationery and printing for the Guardians of Woolwich Union; particulars from Mr. Cutter, Union Workhouse, Plumstead, S.E.18. -For printing, stationery and books for the Barking Town Urban Council; tender forms from Mr. H. Hargreaves, Public Offices, Barking, Essex. - For a supply of forms notices, and printing of ballot papers for the Penarth north and south electoral division; particulars from Mr. C. E. Edwards, Queen street, Cardiff.-For the supply of printing, stationery and office requisites required by the Clerk of the Crown and Peace, the county surveyor, the secretary of the County Council, Tullamore; forms of tender from Mr. C. P. Kingston, Court House, Tullamore.

It seems to be acknowledged that Australian books are being much more read than previously. Especially a good Australian sporting story with a clean, exciting atmosphere. There is a vogue now for books that bring a breath of the open plains to the stuffy air of the dining-room, and there is a fair demand for American fiction of froth and frills nicely dressed in a pretty coloured wrapper, with a few pictures of girls and athletic men sandwiched between the pages. Chambers reads well, and O. Henry has had a wonderful popularity. War stories are done with at present, even those with a slight thread of romance being seldom sought.

THURSDAY, FEBRUARY 20, 1919.

Current Topics.

Conditions in the Printing Trade.

Some substantial progress is being made in regard to the various questions affecting wages and conditions in the printing trade, and so amicably are the two sides meeting one another that in due course something like harmony should prevail throughout the industry. Two subjects of prime importance received the practical approval of the Council of the Federation of Master Printers at their meeting on Tuesday, over which Mr. A. F. Blades presided. The first was a provisional agreement which had been reached between the employers and the union representatives as to a 48-hours week, payment for statutory holidays, and a week's holiday with pay. The president of the Federation regards the

meeting between the two sides as a very satisfactory arrangement between capital and labour. The other matter which the Federation approved was a provisional agreement for a national wage basis by which future wages are to be arranged by a joint labour committee. The scheme as at present outlined splits the country up into six grades with wages ranging from 75s. in the first grade (Liverpool and Manchester) to 60s. The spirit of betterment is introduced into provision that no scheme by the strike or lock-out shall take place pending the decision of the joint committee, while it is hoped that the arrangement will overcome the constant irritation arising from memorials for increased wages. It is a great achievement to have arrived at this stage in regard to these matters of high policy, a stage which promises great things for the future prosperity of the printing trade. Of course, with the concessions which the masters have granted under these two provisional agreements, it is hoped that the employees will respond and ensure the prosperity of the trade by increasing output. Reduced hours and higher wages of course represent a considerable increase in cost of production, so that it is absolutely essential, in order to meet this, that production should be accelerated. The masters, no doubt, will do their part, so far as improved machinery is concerned, and it rests with the rank and file to assist, so far as they are able, by efficiency of work.

Openings for Trade.

We have at various times referred to the lack of enterprise shown by British manufacturers when endeavouring to secure trade in foreign countries. It is quite common to endeavour to push the sale of entirely unsuitable articles for the markets there and to quite neglect the requirements of buyers, and so, unfortunately, other nations have stepped in and secured the trade. British manufacturers too often forget that what is suited to British requirements is often quite unacceptable to the foreigner. There is also neglect in the matter of language, and it is quite a common thing for a Home house, on receipt of an inquiry for goods, to send catalogues and partilars in English, a language which may not be understood by the recipients. Mr. Jorge A Mitre, editor of the Argentine newspaper, La Nacion, of Buenos Aires, referred to this in the course of a speech made in London, on Friday last, in which he said: - "It happens in these days that you are holding in the markets that your enterprise has created a position in-

ferior to that which is being established by later comers. This is due mainly to the fact that British trade never cared to study the taste of its customers. You all know that the South American countries are practically a virgin field for enterprising men. It must be a matter of some concern to you that Great Britain, with the control of roads, railways and waterways in Argentina, has an inferior position to other countries in the markets. The United States are ahead of you, and this is purely because the American exporter has made himself familiar with the requirements, and, if you like, with the fancies, of the buyers. The South American people during the next few years will have money to spend. We shall want to buy not only machinery but other goods. Who is going to supply us with these things? You must send out your travellers properly equipped. They must speak our language. Your competitors are fully alive to the value of the language asset. All the efforts of British manufacturers to meet the requirements of the South American markets will fail to be fruitful so long as your commercial travellers are ignorant of Spanish."

Preserving a Paper Trade Mark.

In order to preserve a trade mark, Messrs. L. S. Dixon and Co., Ltd., Liverpool and London, recently made and application before Mr. Justice Lawrence in the Chancery Division of the High Court of Justice, that the Register of Trade Marks might be rectified by the removal of the mark therein which had been registered by Mr. Samuel Webster in Class 39, and numbered 382,476.

In the evidence filed by the applicants they alleged that for many years past they had used both the word "Centaur" and the device of a Centaur in respect of the goods in which they traded in the course of their business as paper merchants and stationers, and that such goods came within Class 39, in which the respondent, Mr. Webster, had succeeded in getting the device of a Centaur registered as a trade mark. The applicants had successfully opposed the respondent from registering the word "Centaur" at the Trade Marks Office, but they had not seen the advertisement which appeared in the Trade Marks Journal, of the respondent's application to register the device of a Centaur, and consequently the latter mark had been registered as a trade mark in the name of the respondent. The applicants, although they had not got a registered trade mark in respect of either the word "Centaur" or the device of a Centaur, alleged that it would cause confusion and deception, were the respondent's mark allowed to remain on the Register.

Mr. J. Hunter Gray, for applicants, stated that the respondent had agreed to consent to an order being made for the cancellation of the registration of the mark, and the Judge accordingly made an order that the mark be removed from the Trade Marks' Register, and ordered the respondent to pay the applicants' and the Registrar of Trade Marks' costs in respect of the application.

DIVIDENDS AND REPORTS.

WATERLOW BROTHERS AND LAYTON, LTD.

—The directors announce a final dividend of 5 per cent. on the ordinary shares, making 10 per cent. for the year ended September 30th last, placing £7,500 to reserve.

OLIVE BROTHERS, LTD.—The directors report a net profit for the year of £17,743 and a disposable balance of £22,154. They recommend dividends of 10 per cent. on the preference shares (less tax) and of $12\frac{1}{4}$ per cent. on the ordinary shares (free of tax), and a bonus of 5 per cent. on the ordinary shares, place £5,000 to the reserve fund, and carry forward £7,878.

NEW COMPANIES.

C. SHARP AND Co., LTD.—Registered with a capital of £3,000, in £1 shares, as printers, stationers, rulers, cardboard manufacturers, etc. The subscribers are H. J. Ryman and C. Sharp. Private company. First directors, C. Sharp and H. J. Ryman. Registered office, 27, Poland-street, W.1.

WRAPTYN Co., LTD. — Registered with a capital of £30,000, in £1 shares, to acquire the business of, manufacturers of, and dealers in, tinfoil, metal foil. and metal paper, carried on at the Old Forge Works, Walworth. Private company. First directors, C. R. Freemantle and S. E. Boyden.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 10 of the Companies Act, 1900. (The registration of Satisfaction is not compulsory.)

Andrews Printing Co., Ltd. (London).—Satisfaction to the extent of £200 on January 1st, 1919, of debentures dated November 11th, 1916, securing £600.

Tearne and Son's, Ltd. (transfer and colour printers, Birmingham). — Second debenture, dated January 9th, 1919, charged on the general assets to secure liability of A. George, A. J. L. Menzies and F. E. Tearne, under a guarantee of company's banking account, not exceeding £800.

STANDARD CATALOGUE Co., LTD.—Satisfaction to the extent of £12,000, on or before December 31st, 1918, of first debentures dated 1916-17, securing £36,500.

COMPANY NOTICES, etc.

BRITISH WIRE STITCHING MACHINE Co. LTD.—At a meeting of the company, held at London, on January 20th, the following resolution was passed; and at a subsequent meeting on February 4th was duly confirmed, viz.:

—"That the British Wire Stitching Machine Co., Ltd., be wound up voluntarily; and that Edward F. Champion be appointed liquidator for the purpose of winding up the affairs of the company."

Gazette.

A WORD OF CAUTION.

[In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIP DISSOLVED.

Preston Bros. and Co., manufacturing stationers, 2-4, Fox street, Huddersfield. Debts by T. and H. Preston, who will continue the business under the same style in partnership with P. Preston. January 31st.

DISTRIBUTION OF ASSETS.

Bowes, J. B., late of 18, Hawthorn-street, Newcastle-on-Tyne, printer and stationer. Claims by March 14th to Richardson and Elder, 6, Grainger-street, Newcastle, solicitors for the executors.

THE BANKRUPTCY ACT, 1914. ORDER MADE ON APPLICATION TO APPROVE COMPOSITION.

Roberts, T., 81, Grange-road, Ramsgate, newsagent. Date of order, February 4th. Payment of a composition of 20s. in the pound on all debts provable against the estate. Payment in full of all proper costs, charges, fees, and expenses of and incidental to the bankruptcy proceedings and any preferential claims. Receiving order discharged. Adjudication annulled.

Trade Notes.

Mr. Edwin Guest, a London journalist, has just passed away. He was 83 years of age, and until a year ago was a frequent contributor to several newspapers.

THE death has taken place of Mr. Tighe Hopkins, a writer on French history and literature, and a frequent contributor to the columns of the Daily Chronicle. Mr. Hopkins was 62 years of age.

At a meeting of the Manchester Education Committee, on Monday, it was agreed to recommend the City Council to advance the salary of Mr. J. C. Maxwell Garnett, Principal of the Municipal College of Technology, from £1.000 to £1,400 per annum. Mr. Garnett has had no advance of salary since his appointment, seven years ago.

JOURNALISTS' SALARIES.—At a meeting of sub-editors and reporters on the staffs of news agencies in London at St. Bride Institute, a resolution was passed calling on the National Union of Journalists to wait on the managements of the agencies concerned and to demand the minimum scale of salaries which has been in operation in the newspaper offices for over a year.

A NEW revised and enlarged edition of "The Industrial Situation after the War." has been issued. It is the work of a group of men who came together at the instance of the Garton Foundation, to discuss the industrial situation in this country at the close of the great war, and the book deals with the building up of industry and the problems that affect capital and labour. It is published by Messrs. Harrison and Sons, at 2s. net.

The death took place last week, at Brighton, of Sir Frederick Atterbury, K.C.B., late controller of H.M. Stationery Office. He was Controller of Stamps and Taxes for Ireland in 1901-3, and from 1909-13 Secretary to the Boardof Inland Revenne, Controller of Stamps and Registrar of Joint Stock Companies. He was appointed Controller of H.M. Stationery Office and King's Printer of Acts of Parliament in 1913, and was promoted to K.C.B. on his retirement from the position of Controller.

EDUCATING THE PRINTER.—Mr. J. R. Riddell, principal of St. Bride Foundation Printing School, visited Manchester recently and gave two interesting addresses, one to the members of the Printing Crafts Guild, the title of which was, "Is High Production Obtained at the Expense of Craftsmanship?" and the other to the Printers, Managers and Overseers Association, on "Technical Education for the Printer." At both meetings there was a keen and interested audience, the lecturer being kept well employed in replying to various points raised by those present. Mr. Riddell has been requested to publish his addresses with the view of further consideration by the respective associations.

The death has occurred at Sidmouth, of Mr. Stephen Reynolds, the writer and novelist.

SIR WILLIAM A. WATERLOW, head of Waterlow Brothers and Layton, Ltd., has been appointed chairman of the Committee controlling the City of London and Lord Mayor's Courts.

THE Federation of Master Printers have accepted the invitation from Manchester to hold their annual meeting in that city in May. At the same time it is suggested that their headquarters should be in Blackpool.

By a fire which broke out last week in the premises in Campbell-street, Hamilton, occupied by Mr. William Taylor, stationer and printer, a large quantity of paper was destroyed, and the printing machinery damaged.

The death took place at Inverness on Thursday, of Mr. James Barron, proprietor and editor of the Inverness Courier. Mr. Barron joined the staff of the paper 53 years ago. He was 72 years of age, and is succeeded in the editorship by Mr. Evan M. Barron, his only surviving son.

SOUTH-WEST LONDON MASTER PRINTERS' ASSOCIATION.—The February meeting was held at the Battersea Public Library. Three new members were elected who were also new to the parent association and more are coming along. After passing the minutes and the election of members, the coming official price list was discussed. It will, no doubt receive a hearty welcome from the members. The great need of it by the small printer was emphasised at the meeting. The small weekly or monthly jobs for the churches were instanced as work which required a set price. The terms on which returned apprentices were to resume work was touched upon among other matters. The day for holding the next meeting was changed from Tuesday to Wednesday, and the date fixed for Wednesday, March 5th, at Chelsea Town Hall.

ARGENTINE EDITOR HONOURED.—Mr. Jorge A. Mitre, editor of La Nacion, of Buenos Aires, was entertained at luncheon on Friday, by the proprietors of the Times. In the absence of Lord Northcliffe, the chair was taken by Mr. Howard Corbett. The company present was representative of diplomacy, finance, commerce, industry, literature and art. Mr. Mitre, in response to the toast of his health, made a long speech in the course of which he sald, "I am establishing almost immediately in Regent-street, an office, which, though it will be primarily the British office of my paper, La Nacion, will also, I hope, be regarded by business men as a kind of unofficial consulate. Callers desiring any information with regard to trade prospects and other matters relating to South America will be welcomed there. If through that office I can do anything to further the cordial relations which have so long existed between my own country and yours, it will give me the greatest possible pleasure and gratification."

Bookbinding Notes and News.

The spirit of the times is reflected in the decision of the Manchester Branch of the Master Printers' Federation to form a Sectional Committee especially to concern itself with the interests and welfare of the bookbinding and ruling trades. Under the able chairmanship of Mr, Bethell, with Mr. H. A. Maddox assecretary, the committee has already held its inaugural meetings and schemed its plan of campaign. The main objects are to promote social intercourse, not only among master binders, but also with the trade and its Union. It is felt that a great deal of good will result from a better and closer comradeship of all those to whom bookbinding and ruling means livelihood. Papers are to be read by authorities from both sides the trade, and discussions are to be raised at monthly meetings. The uplifting and development of the trade is to be aimed at by all possible means. In Mr. Bethell, the Committee have made a wise choice of chairman and one who embodies the post-war spirit of progression combined with broad views on the subject of co-relationship between administration and labour. The progress of this particular sectional committee will be watched with keen interest by those who have the Betterment of the bookbinding and ruling trades at heart.

Business has not visibly improved in the bookbinding trade during the past four weeks, for although small miscellaneous work is fairly abundant, the larger users are still holding up orders in hopes of a decrease in the price of paper and boards. Since our last notes appeared there has been a considerable drop in prices, and boards which were then in the region of £35 to £40 per ton are now obtainable at £30. That is, referring to Dutch strawboards, English millboards have fallen from £50 and £52 to £45 and £48. It is felt that this figure must shortly be lowered, though mill people are inclined to prophesy a move the other way. Personally we are inclined to think that the price will fall toward at least £40 per ton. Too much must not be expected from imported boards, for it is the policy of the Government to continue restriction of imports of ready-made paper or boards.

Leathers have not shown any marked decline in price, and are not obviously likely to do so for some time ahead. Supplies of hides and skins are scarce, though there is a vast quantity waiting in India for shipment. Calfs and russias are in evidence once more, although the price is almost prohibitive. Basils are quoted at is. 2d. to is. 4d. per square foot for glazed coloured, Royal Hide Fleshes are offered at 7d., 10d, 1s., 1s. 3d. and 1s. 6d. per foot, according to quality and size. Skivers are still 10d. per foot, moroccos and calfs average 4s. A complaint reaches us that certain

tanners have adopted a new policy in regard to supplying skins dyed to shade. always been the custom that odd skins of morocco could be obtained in customers' own shade. Recent orders have been returned with the comment that not less than six skins could be supplied to own shade. With leather at 4s. and upwards per square foot, it is not to be expected that small users will make the investment. Fortunately there are still leather people willing to oblige, and it will go hard with the manufacturers who adopt such a conservative policy in regard to dyed skins.

In war time it was customary and correct to gauge the progress of the price of bookcloth from the publication of cotton price lists. So long as the cotton quotations went forward this policy appeared to be justified by results. Now, however, we wait in vain for a repetition of events in the reversal of the pro-Cotton price lists have been issued showing a reduction, but so far no corresponding move actuates the bookcloth market. Similarly, in regard to linen and cotton threads and tapes, it is obviously more simple and speedy to put prices up than to reduce them. Binders and other users of these materials will facilitate matters by withholding, orders and adopting the policy of hand-to-mouth buying.

Publishers have, in many cases, been seriously inconvenienced by the shortage of labour and materials, but the shortage of paper is not the only problem that confronts the publisher to day. The binding of books is an even more acute one, for delay in binding involves heavy losses to both authors and publishers. One publisher announced twenty books in his autumn list of last year, of which only five appeared before Christmas, and ten of the remaining books have still to make their appearance. In a case like this the market may go past, and a heavy loss be sustained. .

Among the new devices which have been introduced in the United States is one from the Christensen Machine Co., of Racine, Wisconsin, a stitcher-feeding machine, the principal claims for which are perfection in quality of work combined with quantity, and simplicity of adjustment. Mr. Christensen has withheld his announcement until he was himself fully satisfied with the perfection and commercial success of his new feeder, and he now states that it has been worked down to such a fine point that small commercial runs of saddle-stitching can be handled on it profitably, and it is a distinct time-saver on long runs.

The seventy sixth annual report of the Vellum Binders' and Machine Rulers' Pension Society shows that the years' work has been very well and carefully carried out, and, notwithstanding the adverse conditions of war time, the accounts for the year are of a satisfactory character, the amount of the funds in hand totalling up to £2,624. Owing to catering and other difficulties the annual outing for the pensioners of the society had to be abandoned, but the usual shop collections were made and the proceeds distributed among the pensioners at midsummer and Christmas. No vacancy occurred on the pension list during the year, so that there was no election, but the society trusts that, with the more hopeful outlook, it will be possible at no distant date to relieve some of the deserving candidates who are urgently needing assistance. The society, since its establishment, has paid upwards of £12,000 in pensions, and could still further extend its benefits if those employed in the bookbinding trade would give their support by becoming members. The committee meet on the third Thursday in each month at the St. Bride Institute at 7 p.m., where all information may behad as to the work of the society.

Writing in an American contemporary, a writer says that :—" In spite of all that we may feel with regard to the fundamental importance of books, it has to be acknowledged that most people consider them as luxuries, to be allowed for in the year's budget after living expenses and many more passing forms of pleasure have been covered. Prices of books must go up, but how can they go to a price that will give the full needed relief to all parties without reaching a point where sales will be diminished in marked degree to the harm of all. Everytime the list price of books is raised by 15 cents the author gets approximately 11 to 3 cents, the retailer or jobber 5 to 6 cents, the publisher 8½ down to 6 cents toward his overhead and manufacturing costs. And while that increase is being made the costs of printing and binding may have gone up double that amount leaving the publisher worse off than before." The problem facing all who earn their livelihood by making books is how to find a net profit between the restricted limits of costs and selling

Mr. Walter White, who has for many years been the manager of Messrs. Oliphants, Ltd., of Edinburgh, has now been made a director of that firm. In future he will take the position of controller of their bookbinding factory, which is carried on under the style of Anderson and Ferrier, St. Mary-street, Edinburgh.

Mr. Samuel Barling, manager of the American branch of Thomas Nelson and Sons from 1892 to 1905, has died at Pasadena, California, where he had resided for the past twelve years. Mr. Barling served his apprenticeship in the bookbinding trade. He went to the United States and became associated with Thomas Nelson and Sons in 1869, having charge of the New York City trade. He was

one of the pioneer travellers, going to the Pacific Coast via coach and around by the Isthmus of Panama, and in his time was known to the trade in all the book centres_of the country. Mr. Barling died at the age_of seventy-four.

The advance in cost of binders' materials in the United States during the past two years is shown in a list issued by the W. B. Conkey Co., who run a large bindery at Hammond, Indiana. Vellum de luxe, from 13 to 32 cents per yard; common inter., from 17 to 35 cents per yard; binders' board, from \$1.40 to \$2.25 per bundle; super, from 4 to 11 cents per yard; gold, from \$7.75 to \$11 per package; endsheets, from 41 to 9 cents per lb.; muslin, from 8 to 18 cents per yard; heavy muslin, from 15 to 35-40 cents per yard; glue, from 8 to 24 cents per lb.; thread from 85 cents to \$2 per lb.; glycerine, from 17 to 65 cents per lb.; lumber, from \$11 to \$43 per M.; binders' inks, from \$1.25 to \$2.50 per lb.; paste, dry, from 2 to 9 cents per lb.; tape for sewing, from 35 cents to \$1.40 per gr. yards; wrapping paper, from 6 to 12 cents per lb.; nails, from 22 to 6 cents per lb.; wire, from 8 to 22 cents per lb.; lining paper, from 3 to 7 cents per lb.; cotton string, from 17 to 70 cents; labour, from 33 to 100 per cent., and in some cases even more.

In facing the problem of increases in binding some houses have made economies by leaving off gilt on the cover, omitting gilt tops on many books that would in ordinary times have had them and in a few cases substituting paper sides for cloth, but such watchfulness has not prevented average increases that have been variously estimated as from 35 to 50 per cent. in the past twelve to fourteen months.

The Australian book trade is suffering from a scarcity of material and the publishers have had to raise the prices of books and magazines. Bookbinders in the Colonies had to put up with a shortage of strawboards for book covers as well as a big rise in the cost of that material which went up from the pre-war price of £4 to nearly £80 per ton. The book trade was badly hit by the war and it will be a considerable time before trade is normal again.

In a recent issue of the Publishers' Weekly (New York), Mr. Melvil Dewey, writing on the titling of book backs, says: "The life long habit is to read from top to bottom and left to right. In libraries we always read shelves from left to right. We therefore carefully impress on our pupils in library schools that in binding they should never letter from the bottom up. The statement that it has been demonstrated by tests to be easier and more natural to read from the bottom to top contradicts all the experiments and investigations I have made for forty years. The entire world, including the Chinese, read from top to bottom. I think your correspondents have been misled because of the great number of

books improperly lettered from the bottom to top, and being so used to seeing them so, they got the impression that it was easier. If they will put this to the test of the psychologic laboratories where gravity chronometers measure to the 1-1000 of a second, I am sure they will find that top to bottom is the only logical thing for the shelves as well as for the table. There ought to be a concerted movement among the publishers forbidding the awkward lettering from the bottom to the top.

An authority on bookbinding, as quoted in the Daily Chronicle, says that our bookbinding will cost us more, because, for one reason, the cost of millboard has increased enormously. But why, he asks, use millboard at all? Why does not some enterprising binder adopt Mr. Gladstone's suggestion, and use thin iron plates for the sides of books. Some volumes that he had bound according to this idea were said to be a decided success. Perhaps some enterprising firm will put this idea into practice, but metal costs money these days as well as straw and mill boards.

A writer in Book Auction Records protests against the practice of calling a "doublure" a "double," and points out that a "doublure" is a lining, and is therefore a noun. "Double" is a verb, and you therefore can't and mustn't state that a binding has a "double." What it has is a "doublure." This is a mistake often made, especially by cataloguers, who are prone to use the shorter word in describing a "doublure."

Organising the Federation.

Mr. A. F. Blades, president of the Federation of Master Printers, who presided at the Council meeting on Tuesday, was very cordially thanked for the energy and time he is now devoting to the organisation of the Federation throughout the country. He has recently spent very busy periods in Manchester and Leeds in forming the Alliances, so far with very happy results.

At the Council meeting, on Tuesday, Mr. E. G. Arnold, ex-president, said the success of the meeting which had been held in connection with the scheme of organisation had been largely due to the way Mr. Blades had thrown himself into the work. He had spent day after day on the scheme, and the cordial thanks of the Council were given to the president for his valuable exertions, one member remarking that Mr. Blades' ability to devote so much time to the Federation was due to his firm having taken full advantage of the Federation Costing System.

It is better for a printer to know everything about something than it is to know something about everything.

Proposed Paper Exchange.

Mr. W. C. Corke instances the Metal Trades as an Example.

Mr. W. C. Corke, to whose proposals to form an exchange day for the paper and allied trades in London we referred in our issue of January 24th, now calls attention to a similar step taken by the metal trades in the metropolis, who have decided to establish an exchange. "Although there are metal exchanges in several provincial towns," he says, "nothing of the kind has hitherto existed in London, and the trade has now taken steps to provide for themselves a common meeting place for those interested in the iron and steel industries where they meet to transact their business. For the present, the Exchange will be held in the great hall of the Cannon-street Hotel every Tuesday, from 1.30 to 4 p.m., and the first business meeting was held on February 11th, when the Exchange was formally opened by Sir Albert Stanley, president of the Board of Trade. Up to the present, 450 applications for membership have been received, and the success of the innovation is assured.

Mr. Corke mentions that the chairman, Mr. J. W. Whitby, at a luncheon in connection with this matter held on January 28th, summarised the objects of the Exchange as under:-

To provide, regulate, and maintain a suitable meeting place in the city of London for those engaged in the iron, steel and allied trades

If necessary, to adjust controversies between members of such Exchange.

To establish just and equitable principles in these trades.

To maintain uniformity in rules, regulations, and usages.

To adjust standards of classification.

To disseminate useful information connected with the industry throughout all

Generally to promote the interests of the

iron, steel and allied industries.
"This," remarks Mr. Corke, "appears to epitomise very aptly the common purposes of an exchange, in addition, of course, to the tremendous saving of time by buyers and sellers meeting on a common ground, and the saving of long and vain journeys in so large a city as London; and if the words 'PAPER TRADE ' were used instead of 'Iron and Steel' the general objects set out above might well form the basic principles of our own proposed Paper Exchange. It is certain that such a project as this would be an immense boon to the trade and would tend to closer and more intimate working amongst the wholesale sections of the industry."

You can't provide a family with loaves and fishes if you do nothing but loaf and fish.

Cigarelle Paper.

Export Business Lost owing to Official Supineness.

Another criticism of the methods of the War Trade Department and their effect in transferring to other countries business which might have been kept for England comes to us (says The Times) from a firm of export and import merchants in the City of London.

Soon after the war broke out the firm began to receive orders from the East for cigarette Quotations of prices previously paid were almost invariably supplied in marks or kroner, showing that the goods had previously been obtained from enemy firms. Several good orders were fulfilled, and it seemed likely that the trade might be definitely captured. In the middle of August year an order for 2,000,000 papers was cabled from Siam. manufacturers of the papers were communicated with, and promised delivery within a month, but intimated that an export licence would be required. Application was made to the War Trade Department for the licence, but this was refused, without any reason being Further correspondence produced no change in the attitude of the department. The suppliers of the papers made it known that they were not short of paper and had sufficient in stock to carry them on for months, but it was not until November 22nd that the licence was finally granted. By this time the firm had been compelled to cable to their clients in Siam that the licence was refused, and when they tried to reopen the business they were informed that the order had been given to a Japanese firm.

The firm concerned inform The Times that this is only one out of numerous cases of delay, and their experience has been that if expedition in the issue of a licence was specially asked for on the grounds of urgency—such as the sailing of a steamer on a certain datea longer period than usual passed before the matter received the attention of the Department.

ENVELOPE AND STATIONERY MANUFACTURES. The Interim Industrial Reconstruction Committee in the envelope and manufacturing stationery trade is getting to work. At the last meeting it was decided that in the event of the employer needing to displace any labour from his factory he should notify the local trade union branch secretary, who should endeavour to find other occupation for the workers in the industry; failing that, they are to be passed on to the exchanges. Another useful decision arrived at as the result of the meeting between representatives of the employers and the unions is that, in the case of a worker or demobilised soldier who does not desire to resume his occupation in the area of his employment in pre-war days, the local trade union branch secretary shall be advised, with a view of employment being found for him in the district where he wishes to reside.

Printers' Hours and Holidays.

A Meeting in London Approves the Provisional Agreement.

A general meeting of the London Master Printers' Association was held at Stationers' Hall on Wednesday last week, when there was placed before them the provisional agreement as to hours and holidays which had been arrived at between the Federation of Master Printers and the Printing and Kindred Trades Federation at a joint conference held at General Buildings, Aldwych, on January 30th. This was the last of several conferences at which all the unions in the trade were represented except the binders and rulers.

The agreement specified a 48-hours working week for all departments; re-arrangements of hours to be subject to mutual agreement; piece rates to be advanced in proportion to the reduction of working hours; the six bank holidays to be paid for; and a week's holiday with pay to be taken between March 31st and September 30th, unless otherwise agreed between employer and employee, provided that the employee has been in the employ of the firm for six consecutive months prior to June 20th

In the event of any employee having been in the employ of the firm for six months after June 30th leaving such employment before taking his holiday, such employee shall be entitled to a pro rata allowance in respect of the week's holiday, on the basis of one day for each completed two months' service. Any disputes arising as to the construction of, or in connection with the agreement, is to be referred to a joint committee, consisting of the president of each Federation and three representatives and a secretary to be nominated by each Federation. The agreement is to come into operation from March 3rd, 1919. Where the term "mutually arranged" is used in the

agreement, it means a decision arrived at by the employer and a majority of the employees concerned.

Mr. J. J. Keliher, president of the London Association, was in the chair, and, after a tribute to the work of the late Mr. Walter Hazell and Sir Frederick Atterbury, described the negotiations which had led up to the provisional agreement. The terms, he said, were the very best they were able to get, short of strife in the trade, which the representatives of the unions as well as employers were anxious to avoid. In that respect the printing trade was to be congratulated on differing in their methods from other trades in the country at the present time.

country at the present time.

Sir William Waterlow, at the request of the president, moved that the agreement be approved, and Mr. J. S. Elias (Messrs. Odhams), seconded.

Appeal for Sympathetic Treatment.

Mr. A. F. Blades, president of the Federation of Master Printers, remarked on the record size of the meeting, probably the largest in the history of the Association. He was glad to see employers taking an interest in matters which affected their pockets, but he asked them to consider at the same time whether it was not up to them at the present moment to deal sympathetically with their men. (Hear, hear.) Conditions of work, he said, must now be entirely different from what they were before the war. It was for the employers to meet their workpeople fairly on every occasion and to deal with them sympathetically and considerately, and he submitted, in putting that provisional agreement before them, they were only doing what was right. The

BRITISH & COLONIAL

meetings with the union leaders were of an amicable character, and he thought that the outcome would be satisfactory to both sides. After all, employers had to have a holiday, and therefore why should not their employees have one, and if they did then the masters should pay for it. Although the holiday should not be computed in money, he thought the employers would get the benefit of it, because he hoped the result would be a greater ontput. That question of greater output was a difficult matter, but he thought if they dealt sympathetically with their workpeople and took action through their house committees, the employers at the same time improving their machinery and the different processes, they could do a good deal towards arriving at larger production. He hoped they would pass unanimously the resolution placed before them, and show the men that they intended to do what they could for them.

Replying to Mr. J. Rissen, who raised the question of bad time-keepers, Mr. Blades said the only remedy was to discharge the defaulter.

With regard to a memorial from the binders' union, he said it was hoped to arrive at a settlement on the basis of the agreement placed before them that day.

Saturday Ciosing.

Major Low (Messrs. Vacher and Sons) suggested closing-down on a Saturday and making up the three hours during the week.

Mr. Blades thought the men would welcome this arrangement, and added they might shut down for a whole week in the summer if they liked, though in some small jobbing offices it was impossible to arrange that. These questions were matters for the mutual arrangement provided for in the agreement.

The Increased Cost.

Mr. Harry (Messrs. Merritt and Hatcher) asked what the new arrangement would involve in the way of additional costs.

Enlightenment on this point was given by Mr. Boyle (Messrs. Boyle, Son and Watchhurst)

and Sir William Waterlow.

Sir William said the matter would in due course be dealt with by the Costing Committee, which had not yet had an opportunity to consider it. His own view was that the concessions as to hours and holidays would mean about a 10 per cent. increase on their costs. They might reckon that "in the future you will be paying twelve months' wages for eleven months' work," but for a, certain proportion of the period they would have all their standing charges running on, which they would have to recover in the hours they were working.

Mr. Bailey (Press Printers, Ltd.) did not like "the mutual arrangement" regarding the Saturday closing referred to in the agreement, and thought it would be better if a general practice one way or the other was adopted.

The president referred to the varying character of work in printing offices, which rendered it difficult to provide for absolute uniformity.

Mr. G. F. Tomkin, on behalf of the East and North-Eastern Master Printers' Associa-

tion, said that Association had unanimously passed a resolution "that the qualifying period for a summer holiday should be not less than twelve months' continuous service."

Mr. Blades said they had endeavoured to get this into the agreement, but they had to give way. He sympathised with the East and North-East Association, but he hoped they would be generous enough to appreciate that the employers got the best terms they could.

Non-Union Houses.

Mr. W. H. Burchell (Caxton Press) raised the question of the non-union houses. Were those who were not Society houses going to do as they liked in future, and allow the union houses to make the running for them? He described the national wage basis as another eye-opener, and asked Mr. Blades to explain it.

Organising the Country.

Mr. Blades said the employers' organisation had not the same powers as the trade unions in imposing conditions upon their members; they could only recommend a certain course. They had done their best with the trade union representatives, who undoubtedly represented by far the largest number of workers both in London and outside London, and it followed that those workers who were not at present in the unious would demand to work under the same conditions as those who were in trade union houses. As to non-union houses, it was up to the master printers to improve their organisation, and he had been spending a good deal of his time lately in going through the country in this connection. He had been to Manchester and Leeds and other parts of the country with very good results, and they hoped in their new organisation scheme they would be able to introduce a penalty clause. Under this scheme the whole country would be divided into Alliances, and he hoped London would follow their example. It was absolutely necessary for them to have the power to enforce a penalty so that the wishes of the majority might rule. The men on the other side were thoroughly organised, and so long as they got a majority, they could say what they wanted. He thought employers should be in the same position. His answer to Mr. Burchell was that it was up to the employers to improve their organisation. Then they would be in a position to say that if a majority decided upon a certain course it should be carried out.

National Wage Basis.

With regard to the national wage basis, Mr. Blades explained that so far it only related to the members of the T.A., and he, although president of the Federation; represented London on the conference with the T.A. representatives. The whole of the towns had been classified into six classes, with a wage difference of 15s.; that was from 75s. to 60s. Every town had been classified into what was considered the proper status. That status was not absolutely fixed until the agreement was signed. When it would be signed

FEBRUARY 27, 1919. BRITISHSE COLONIA

he could not exactly say, but probably the increase would come about in the T.A. areas about the end of March. It would mean roughly a 5s. increase on the average, but the particular increase depended upon the classification of the town.

Mr. A. Harris (Romney Press) mentioned that in Australia there were three organisations, including the papermakers', and where a printing house would not come into line, the papermaker charged him up to 25 per cent. more for his materials with satisfactory results. (Laughter.)

Mr. Jay (London Colour Printing Co.) asked if women took the holidays as well, to which Mr. Blades replied that the agreement applied to all members of the federated trades unions, to which a large number of women belonged.

In answer to Captain Oscar Viney (Messrs. Hazell, Watson and Viney), Mr. Blades said that where less than 50 hours had been worked, the re-adjustment of hours could be mutually arranged. Where less than 48 hours had been in operation they could not expect the hours to be increased.

Agreement Approved.

Sir William Waterlow's resolution approving the provisional agreement was then put and carried nem. con. Mr. Blades thanked the meeting for this decision.

In answer to Mr. Bonner (Messrs. A. Bonner and Co.), Mr. Keliher pointed to the difficulty of altering the commencing hour, which was 8 o'clock, on account of workmen's trains.

A cordial vote of thanks to Mr. Keliher for presiding, and to Mr. Blades for the assistance he had given, was warmly carried.

Co-operative Buying.

SIR,—As a report of Mr. Bennett's address on "Co-operative Buying" appears in a recent issue, I take the opportunity of supporting the scheme he so ably enunciated, not only on account of its reasonableness, but because of its necessity during the strenuous times before us.

Labour in the printing world has recently strengthened its position in many ways, and quite rightly demands a fair and reasonable return for its efforts. to which we all subscri be.

Various suppliers have already consolidated their aims and circumscribed their charges, and the printer hitherto has been left to "chew the cud" of bitter reflection on his

apparent impotence to secure better prices.

The great need at the moment is "every man in his union and every printer in his lederation." so that in the one case organised labour may be able to bargain with every confidence in the loyal support of its members and no blacklegs, and on the other, that the

masters may, by united action and co-opera tive effort, secure at last an honourable competence commensurate with their activities the use of their capital, and the exercise of their brains, without the fear of unfair or cutthroat competition.

There are still jealousies to be exorcised, anomalies to be removed, confidence to be engendered, and the position of the London house and its country works to be cleared up before the smaller printer can be induced to appreciate the fact that larger houses do not desire to freeze him out. After hearing Mr. Bennett's cogent reasoning, however, as to the benefits of "Co-operative Buying" as a panacea for many of the existing evils and difficulties of a printer's life, I am convinced that such a scheme has not only infinite potentialities for raising the status of the craft, but that its adoption would be the strongest possible card for inducing every master printer to join the association. As a matter of fact, he could not afford to remain outside; and in the scheme suggested -although it was only in broad outline—the smaller printer would have the same opportunity as the large buyer to secure his goods at reasonable prices, and would, in addition, be freed from the incessant worry of wasting valuable time in looking round for suitable markets for his various requirements.

The members of the Central Districts who were privileged to hear Mr. Bennett's address were so enamoured of the idea that they passed a resolution unanimously approving of the principle adumbrated, and pressed for an early meeting to go further into the question and to study the mass of detail involved. Due notice will be given when this meeting will be held, so that all master printers in favour of the scheme may have an opportunity of being present. The whole matter will then be thoroughly threshed out prior to appointment of a representative committee to prepare a complete scheme and draft a constitution for submission to a further meeting to be convened.

To my mind there is no more pressing need in the printing industry than that of a method of "Co-operative Buying." During the war such a scheme would have been of immense assistance—especially to the smaller printer in coping with the abnormal prices he was compelled to pay, and which were not wholly due to the alleged shortage.

Apart from this aspect, however, it would enable us to tackle "Betterment" with a clearer view of the possibilities of the future, and our ultimate capacity and scope for uplifting the craft and its workers to a higher plane of thought and activity, with a guarantee of more leisure and a greater measure of prosperity.

I commend the scheme to the thoughtful consideration of all master printers.

> Yours, etc., J. D. McAra.

the Printing Crafts Guild.

"Is High Production Obtained at the Expense of Craftsmanship?" was the title of a lecture given by Mr. J. R. Riddell, principal of St. Bride Foundation Printing School, before the members of the Printing Crafts Guild, in the Municipal College of Technology, Manchester. The chair was occupied by Mr. J. H. Nuttall, president, Manchester Centre Printers' Managers and Overseers Association.

In the course of his remarks Mr. Riddell said: First let me say a few words about increased production. I question if there are any really thoughtful men who would to-day deny that if we, as a nation, are to hold our own with other nations in the race for industrial supremacy, there must be an increase of production over that obtained before the war. We cannot compete in the markets of the world unless our productions are increased, neither can we acquire further wealth without producing it, How is it to be done? By rushing? No; there is too much "rush work" in the printing business to-day; rush saps the enthusiasin and the interest of the workman; rush work—the old story of "anything will do so long as the job is got out"—is undermining the pride of the craft of which at one time we were so proud; rush is responsible for the inefficient training of our apprentices; rush is accountable for the present day position of our fine old craft. Think of the irony of it: the "art preservative of all arts" being degraded to such a level, mainly through "rush" undermining the enthusiasm of the man desirous of expressing himself in his Workers must now dfop preworkmanship. conceived and obsolete ideas, and be prepared to make renewed efforts to attempt the seeming impossible so that the best can be obtained from modern equipment. The highest possible output can only be obtained by all pulling together. The desired end must be arrived at by providing necessary material and utilising labour saving devices to the utmost extent, together with the intelligent application of scientific principles, which will assist to eliminate wasted labour and misdirected energies. The Craft Guild movement can be of great assistance. Keep it going, for it is by voluntary efforts and love of craft that our art can best be kept on a high plane.

DISCUSSION.

Mr. R. B. Fishenden, M Sc.Tech., said that whilst the American craftsmen encouraged the introduction of machinery and labour-saving devices, the position at home was not so favourable In the near future labour might awaken and find that its present methods were not reaping the benefits expected. The firms that possessed modern machinery, and good organisation, would be able to procure the most efficient craftsmen, and the craftsmen would be better remunerated according to the output. The introduction of machinery always meant better con-

ditions for everyone concerned, therefore, if labour desired to bid for betterment it should not attempt to clog the wheels of progress by limiting legitimate production. He sincerely hoped the members of the Guild would take a pride in becoming good craftsmen.

Mr. John Taylor advocated employers looking after the welfare of their employees, and as far as possible the elimination of overtime. In America the output was much greater than here, the hours were shorter, and the wages more, yet the ultimate cost was only a matter of 5 per cent. difference between the two countries, thus showing that a high production combined with scientific management was profitable to the employer, the employee, and the public.

Mr. Robt. Marshall said a high production did not mean "rushing." Any overseer who had method and system could prevent the waste of energy and time in useless hurrying. His instructions to the craftsman should be clear and concise and everything planned so that one job would come along with another without unnecessary delays.

Mr. Wilson argued that some of the great faults causing a loss of production were due to the employers who did not pay sufficient attention to the machine room. In the past the composing department had been treated like a spoilt child. Who could blame a worker who had to produce a three-colour job if he found he could not obtain accurate register at 750 per hour when the machine was supposed to run at 1,500 per hour.

Mr. Edward McVay said that pressmen in this country looked upon all stories about American output as mere bluff. It was surprising to see the large sheets of tip-top colour work that came from America. It was due to good management and good organisation.

Mr. J. R. Riddell, in replying, said encouragement was a great factor in high production. A kindly work dropped now and again encouraged the craftsman to put the best into his work. In this country the craftsman had to deal with poor paper, poor stones and second-rate materials. If we were going to do high-class work we should have high class material. We should set out for a high ideal and try as far as possible to reach it.

WEE MAC.

Messrs. A. B. Fleming and Co., Ltd., printing lifk manufacturers, Edinburgh and London, have issued a remarkably well executed example of offset printing which has been produced in twelve printings by Messrs. Geo. Stewart and Co., of Edinburgh, with the special offset lithographic inks manufactured by Messrs. Fleming and Co., at their factory, Caroline Park. The specimen is a reproduction of a painting of White Horse Close, a historic bit of Old Edinburgh, and the beauty and richness of the colouring testify to the excellent quality of the firm's offset inks, the picture being one of the finest we have seen executed by this process of lithography.

Some printers make friends and others make them tired.

BRITISH & COLONIAL PRINTER & STATIONER

The British Industries Fair.

This year's British Industries Fair was opened on Monday in the Pennington-street premises of the London Dock. The Fair is again restricted to the same four trades as last year, but the number of exhibitors has increased in each section, and there is a remarkably good show made by the paper, printing and stationery houses. As the Fair is a strictly trade event admission is confined to trade buyers only, of whom over 80.000 have received cards of admission, and it is anticipated that a considerable number of firms in overseas countries will avail themselves of the opportunity afforded them to visit the Show. Everything possible has been done for the comfort and convenience of the visitors, and a special service of motor buses is run between Mark-lane Station and the Fair buildings.

Among the firms that are showing their manufactures in the dock buildings are the following:—

The Aerograph Co., Ltd., 43, Holborn-viaduct, E.C.I, shows that useful apparatus and a selection of examples of the artistic effects that can be produced by its use in the decoration of show cards, posters, pottery, textiles, colouring photographic prints, stencil work, etc. Practical demonstrations are given to those interested.

The Debecy Wholesale and Manufacturing Co., Ltd., Oldbury, Worcestershire, at Stand K. 10, makes a display of the specialties for which the firm is noted. These include manifold books, pencarbon duplicate books, receipt books, telegraph and telephone books, writing pads and compendiums, counter check books, office files, the D.B.C. loose leaf ledgers, calendar blocks and clips, "Permink," the permanent ink carbon paper, and other lines. This firm makes a feature of supplying the trade only, and assists their customers to secure business and compete with direct selling firms.

John Dickinson and Co., Ltd, Old Bailey, E.C. The exhibit of this firm at these annual fairs is always marked by the originality of design and construction of the stall. This year an antique design in oak has been utilised and the exterior and interior of the erection is of a harmonious character, the diamond-paned windows of the front adding to the effect. The firm's specialties in papers and stationery, which extend over a very wide range, are displayed on tables and stands, and, judging from the crowded state of the stall at the time of our visit, good business was in progress.

The Drayton Paper Works, Ltd., Fulham, S.W.6, make a display of wrapping papers in rolls, carrying bags, collapsible boxes, the "Stowaway" collapsible letter files, commercial and fancy stationery, and other proprietary lines which this firm specialises in.

Hollingsworth and Co., Turkey Mill, Maidstone. The notable lines for which this mill is famous are well displayed and there is a good show of high-class drawing papers, litho papers, writings, and typewritings, and the firm's celebrated ledger and bank papers all of which are attractively shown.

Millington and Sons, Ltd., 32, Budge row, E.C.4. In this firm's display there is a large selection of attractive lines in business and private stationery, writing pads, compendiums, cabinets, etc., and a remarkably extensive range of envelopes for official, commercial and private purposes. Account books, labels and tags, files, writing cases and other manufactured stationery articles are also displayed.

The Oxford University Press exhibit is worth the notice of visitors, as there is an enticing display of early printed books, and the many varieties of bookwork for which the Press is noted. The printing of books on thin paper has been brought to perfection here, and the examples shown are most interesting, are as also the fine bindings, of which there is a good display made.

The Rembrandt Intaglio Printing Co., Ltd., exhibit specimens of the work done by their beautiful photogravure process. Some examples of colour photogravure are very fine, and the selection of prints for calendars, show cards and other commercial purposes shows excellent work. A new feature shown by this firm is photogravure on blotting paper, and some excellent lines in desk blotters, with illustrations by the process, are shown.

Smith, Stone and Knight, 190, Upper Thames-street, E.C., are showing the products of their various mills in wrappings, manillas, ticket papers, jacquard cards, strawboards, corrugated papers, and a number of special lines for special requirements of a number of trades.

Spalding and Hodge, Ltd., Russell street, W.C. Note paper, envelopes, fancy stationery, typewriting papers, and a wide selection of writing pads, compendiums blotters and other goods are shown at this firm's exhibit, which is well and attractively arranged.

James Spicer and Sons, I.td., 50. Upper Thames-street, E.C.4.—A capacious and well-arranged stand is utilised for the display of the firm's special lines, of which a fine display is made, including an extensive range of all kinds of cards, plain and fancy, commercial stationery, account books and other office requisites. A feature of the display is the wide selection of the new cardboard food containers, which are shown in many forms and for various purposes. Vulcanised fibre boards are also shown, and papers for all requirements.

Taylor, Garnett, Evans and Co., Ltd., Reddish, Stockport, are showing a selection of examples of printing in half tone, photogravure, three-colour and other processes, and some very fine work is to be seen at this stall.

Thomas and Green, Ltd., Soho Paper Mills, Bucks.—Fine esparto papers, cartridges, bonds, cover papers, laids and woves, photo mounts and other papers are shown here, as also a number of special makes for which the Bucks mill is famous. The exhibit is very complete and attractive, and the various lines are well shown on a fine corner stand.

Raphael Tuck and Sons, Moorfields, E.C.2. -Quite a fine art display is made here, and the exhibit is one that will attract attention. The firm's greeting cards for all' occasions, post cards, reproductions of coloured pictures, "oil facsims," photogravures, oilettes, and other special work being shown in profusion.

Wiggins, Teape and Co., Ltd., Aldgate, E.1. have an attractive stand, at which samples of their papers are shown, including photographic base papers and other special lines; this exhibit is notable for the fine selection of photographs that is shown on the tables, and the decorations are in keeping with the general get-up of the whole.

Trade Notes.

Owing to Lord Burnham having received a Royal Command, the lunch of the London Master Printers' Association arranged for February 27th, is postponed to Thursday, March 6th, when it will be held at the Holborn Restaurant, at 1.15.

THE Croydon Advertiser has completed fifty years of existence.

SIR BERTRAM LEWIS LIMA, K.B.E., chairman of the Daily Mirror, Sunday Pictorial, Glasgow Daily Record and Leeds Mercury, has died from

Following the example of the Times the New York Evening Post will commence the publication, in April next, of a Foreign Trade Review, which will deal with overseas markets from an American point of view.

In our report of Mr. A. E. Goodwin's address last week at the meeting of the North London Master Printers' Association on the hourly cost of hand composition, the figure for lighting and heating should have been id. per hour, not 10d.

Scottish Printers' Hours .- The Federated Trade Unions in the Scottish printing and kindred trades have made application to the employers for a 40 hours week, without any reduction in wages, to come into operation as soon as the necessary arrangements can be made. The present working week is The employers take the view that the question of hours is one to be settled by the wages board about to be formed for the trade.

THE annual election of pensioners for the benefits of the Printers' Pension, Almshouse, and Orphan Asylum Corporation will be held at the Connaught Rooms, Great Queenstreet, W.C.2, on Saturday, March 15th. The poll will commence at one and close at three o'clock, p.m. The annual close at three o'clock, p.m. The annual general meeting of subscribers to the corporation will be held at St. Bride Foundation Institute, on Saturday, March 22nd, at two o'clock.

Printers' Medical Aid Association. - A large number of printers, male and female, attended the Kingsway Hall on Saturday last, when a matinee concert was given on behalf of the Printers' Medical Aid and Sanatoria Association, who desire to retain in full benefit their soldier and sailor members. carrying out of this during the war has made a large drain upon the resources of the Association, so much so that Lord Northcliffe has

Digitized by GOGLE

BRITISH & COLONIAL PRINTER & STATIONER

issued a stirring appeal for help. The concert was much appreciated and included The Aston Banjo Orchestra, Messrs. Chas. Coborn, Maurice Cowan, Fred Howse, Bert High, Emest Newman, W. Geo. Waters and Powell O'Connor (who in conjunction with WoodgateStevensand Geo. Bennett stagemanaged). Also Misses Mollie Mercer, Susie Welsh, Winnie Denver. Elsa Joel, Nora Atlas, Gwen Lean, Adelaide Bennett and Annie Douglas. Mr. J. Batten was an accomplished accompanist. It is expected that this concert together with Lord Northcliffe's appeal will materially benefit the "P. M. A."

Personal.

MR. H. G. SPICER (president) presided at the annual dinner of the Association of Wholesale Stationers and Paper Merchants at the Trocadero Restaurant on Tuesday evening, the company present including Mr. H. A. Vernet (the Paper Controller).

Mr. W. Potts, proprietor of the Banbury Guardian, and Mr. J. Humphries, foreman printer, has been placed on the Commission of the Peace for Banbury.

MR. A. F. BLADES (President of the Federation of Master Printers) attended the gathering at the Mansion House last week when Mr. Winston Churchill delivered his address on demobilisation.

MR. BLADES carried to the subsequent meeting of master printers at Stationers' Hall the message that employers should assure their men who were not yet released from the army that their places would be kept open for them.

In this way, said Mr. Blades, they would be helping to preserve peace, because it was necessary to keep the undischarged men satisfied in their present positions.

MR. GEOFFREY DAWSON has resigned the editorship of the *Times*, and Mr. Henry Wickham Steed has been appointed to succeed him. Mr. Dawson succeeded Mr. G. E. Buckle in August, 1912.

MR. WALTER RUNCIMAN has entered into negotiations with a view to purchasing the Field, Queen, Law Times and Crockford's Clerical Directory, which are the property of the "Field and Queen," Ltd., of Breamsbuildings, Chancery-lane.

We understand that owing to circumstances beyond his control Mr. C. J. Drummond, M.B.E., J.P., has been reluctantly compelled to resign his position as secretary of the Weekly Newspaper and Periodical Proprietor' Association, Ltd., which he has held since its inception in 1913.

Social Stationers.

Happy Gathering at the Holborn Restaurant for the 31st Winter Dinner.

Now that the long and weary period imposed by the war is passing away, members of the Stationers' Social Society are resuming their activities, and they commenced with the 31st annual winter dinner on Saturday.night at the Holborn Restaurant. That the return to social amenities is appreciated was indicated by the large gathering of ladies and gentlemen which assembled under the genial presidency of Mr. W.J. Whyte. From every point of view the affair was a distinct success, and all who had the arrangements in hand are to be congratulated on their completeness. A special invitation was extended to ladies, wbo represented quite half of the 200 who sat down at the tables. The president and Mrs. Whyte received the members and visitors in the York Room, after which dinner was served in the Venetian Chamber, which presented a gay aspect with the large company attired in " evening dress or uniform."

In the place of honour on the right hand of the president sat Mr. H. G. Bradly, Technical Adviser to the Paper Controller, with Mrs. Bradly on his left. Others who occupied seats at the top table were Messrs. F. L. Cayzer, Rev. F. W. Armstrong, Mason, H. H. Hardy, P. S. Porteous, A. J. Green, W. E. Green, C. Newell, G. J. Relph; W. A. Kershaw, A. E. Brown and C. T. Corke. Presiding at the side tables were Messrs. C. D'Oyley Mears, E. Bradshaw, E. M. Fells, R. G. Craster, M. Henry, G. E. Oswick and A. E. Mist (assistant hon. secretary). Others present were Messrs. G. H. Wilkinson, Raynham, R. Cummings, M. Relph, W. H. Day, Saword, E. S. Lendrum, Surgeon-Lt. H. Whyte, R.N., T. G. Larkin, J. H. Lowe, P. Gale, Hy. Ling, A. Woollacott, E. J. King, Woodroffe, Wedgwood, H. Baldwin, J. H. Howard, J. S. Peacock, Jesby, A. Heath, Buck, T. G. Edward, Slacey, Beaumont, A. H. Edwards, Nardill, T. V. Olsen, J. N. Marsland, B. Lomax, Thomerson, F. E. Cooper, A. E. Burton, L. J. Greaves, T. C. Bailie, Ellwood, Hugh Dixon, J. W. Carroll, Weeks, W. M. Thom, Griffin, F. E. Williams, Leicester Williams, H. Spalding, F. E. Wrigley, Muir, L. Brown, H. H. Brown, Smith, M. F. Black, W. H. Collings, J. C. Lake, Booth, W. S. Bradshaw, J. N. Taylor, McGregor, A. S. Hopkins, H. J. Hobson, Whitburn, Beso, J. S. Blagden, F. Berry, C. Davidson, A. S. Bishop, H. Haslon and J. Atkins.

Something approaching a pre-war menu was provided, and the whole scheme of entertainment was excellent, thanks to the energy of the hon. assistant-secretary (Mr. A. E. Mist) and Mr. E. Bradshaw, who had arranged an admirable musical programme. After dinner, the loyal toasts were duly honoured and the company settled down to a thoroughly enjoy-

Current Topics.

The British Industries Fair.

IT is a pity that the shortage of large hall accommodation in London has caused the British Industries Fair to be held in what is practically an East End slum. Nevertheless the best has been made of the conditions, and the large storage shed in which the show is held has been adapted for the purpose in a remarkable manner, and made most comfortable by means of the extensive installation of gas stoves. The vast floor space is crowded to the full with the displays of exhibitors who this year number about 150 more than last year, and most of the firms showing their wares have erected handsome stands, some of which are of quite striking

designs. Although the war has prevented much that is new from being shown, yet the volume of business that is done at these fairs is considerable, and even on the opening day buyers were freely placing orders. The value of the actual orders taken at the Fair each year has been very considerable. According to the figures supplied by the exhibitors at the close of the last Fair, the total orders booked during the eleven days amounted to over a million and a half sterling, but that figure by no means covers the total amount of the trade done, for much of the business commenced at the Fair is not completed till long afterwards, and many of the orders placed are only sample orders. One order which amounted to several thousand pounds was placed six months after the last Fair by a buyer for a foreign market with a firm with whom he had not speken but whose goods he had seen and noted when he visited the Fair. As over 80,000 prospective buyers have received invitations from the Board of Trade to visit the Fair, this year should see a considerable volume of business done.

Time to Advertise.

Now that the war is practically over, and business is beginning to resume its normal course, there is a need for manufacturing firms who desire to regain their business, lost during the war, to bring their specialities to the notice of prospective purchasers by means of judicious advertising. Many firms formerly catering for the supply of the printing and allied trades during the war had their plants working on munitions, and dropped their advertising entirely, but now the situation has changed, the munition work has practically ceased, and these plants are now available for the usual lines of manufacture, which means entering the field of competition, with the result that a thorough campaign of advertising is essential if a renewal of business is desired. Buyers have short memories, and the firms that once held customers may now lose them if other houses in the same line of business get first in the field in bringing their machines or other specialities to the notice of the trade. In addition, American competition, especially in printing machinery, may be expected, in fact, even now, a campaign to secure British trade is being organised by our transatlantic friends. It is, therefore, up to our British firms to be first in the field in bringing to the notice of the trade whatever they may have to sell, and by means of advertising to bring British goods to the notice of British buyers. -00gle

100,000 Books.—Pirie, Appleton and Co., Ltd., London, E.C. 5,000 Making Books.—McCorquodale and Co., Ltd., Wolverton, Bucks.

Changes at St. Bride Institute.

Two important changes in the management of the Institute have recently been made at St. Bride Foundation. Mr. C. J. Drummond, M.B.E., J.P., who for a number of years was chairman of the governors, has given place to Mr. F. Gillett, J.P., C.C., Mayor of Bromley, Kent, who is well known in city circles, and has been long associated with the Institute and its activities, including the Printing School.

Mr. T. W. McAra, J.P., until recently the highly esteemed chairman of the London Society of Compositors, now secretary of the Newspaper Proprietors, Ltd., follows Mr. Geo. Eaton Hart as chairman of the Printing School Committee. Mr. McAra's wide experience of trade matters, will stand him in good stead in continuing and developing the good work done with so much distinction by Mr. Hart during his occupancy of the chair—a period which has left its mark in a remarkable degree on the progress of the School.

We trust that the changes will provide a closer link between the Institute and the printing business, still furthering the excellent work done by the Printing School during the last few years.

Departed Printers.

When he presided at the meeting of master printers at Stationers' Hall last Wednesday, Mr. J. J. Keliher, president of the London Master Printers' Association, paid a tribute to the work of two recently deceased printers. He began by referring to the loss which the Association had sustained by the death of Mr. Walter Hazell. His presence, he said, they had always been able to rely upon at such meetings as that, and the words he addressed to them from time to time had been full of wisdom and very helpful. Mr. Walter Hazell was a man who had been wonderfully active for many years, and in a multitude of directions he endeavoured to do good. They, as master printers, knew him best by his constant efforts for the uplifting of the printing trade, both in regard to masters and men. He (Mr. Keliher) was sure that at their council meetings they would miss very much his voice and his eloquence, and for a very long time to come Mr. Hazell would be conspicuous by his absence.

Mr. Keliher went on to deplore the loss of another distinguished man in their trade, and that was Sir Frederick Atterbury, until lately Controller of the Stationery Office. Sir Frederick was a man remarkable for the courtesy and consideration which he extended to them in the printing trade. He always displayed a desire to be just in the dealings they had with the Stationery Office. Mr. Keliher recalled the charming and learned address which the late Controller gave at the menthly lunch of the Association in June last, an occasion upon which Mr. Hazell proposed a vote of thanks to him.

Votes of condolence with the families were carried in silence.

Printers and Journalists

On Saturday afternoon, a service was held at St. Paul's Cathedral to commemorate the journalists and printers, to the number of over 5,000, who fought and fell in the great war. The cathedral was filled, and the Lord Mayor and Sheriffs attended in state. Before their arrival the band of the Grenadier Guards played Sullivan's In Memoriam Overture.

The service was a simple one. It opened with "O God, our help in ages past" and "Jesu, lover of my soul," and ended with "Now the labourer's task is o'er." The psalm was "Lord, thou hast been our refuge," and the Dean read the lesson from Revelation-"After this I beheld, and, lo, a great multitude, which no man could number, of all nations, and kindreds, and peoples, and tongues, stood before the throne, and before the Lamb, clothed with white robes.

A quiet and earnest address was given by the Bishop of Hereford, who spoke of the brotherhood of the Press and the printers, and the great sacrifices made by the youth of these professions in the war.

The service closed with the Dead March in Saul, followed by the "Last Post," sounded by the buglers of the Guards.

om War to Wo

At the outbreak of war the British Government quickly realised the possibilities of the accurate tools used by Linetype & Machinery Limited in the regular course of their manufactures, with the result that the war was but a few days old when the Broadheath Works had adjusted itself to the making of munitions. For four and a-half years the whole of the resources of the company-mechanical, manual and managerial-were utilised in the prosecution of our war aims on the productive side. Their output since August, 1914, included 9'2in. howitzers (crane-loading gear and sight-elevating gear), 6in. and 8in. howitzers (cradles and recuperators complete), 18-pdr. guns (cradles, firing and range gear), Vickers 303in gun (feed-boxes and gun-locks complete), aero engine parts, road track links for tanks, tank engine parts, motor lorry engine parts, fuse components, cartridge adapters, exploder containers, trench bombs, 18-pdr. shells, etc., as well as miscellaneous work in connection with the 7.5in naval gun, 4'5in. howitzer, 4in. howitzer, 60-pdr. gun, bomb throwers, rifles, etc. The reversion to normal output is now complete, and the company's works are already busier than ever on the production of high-grade machines for the trade.

Conference of Master Printers

OF THE

FOUR NORTHERN COUNTIES.

At Newcastle the other dayan important conference was held of employers in the printing trade for Northumberland, Durham, Westmoreland and Cumberland. Over seventy master printers responded to the invitation and the keen interest taken in the discussions augurs well for the success of the Northern alliance it was decided to form. There was a brief interval in the proceedings during which the visitors were entertained to tea by Mr. Bowes, president of the Newcastle Association, and he was warmly thanked by Mr. W. G. Appleyard on behalf of the guests,

Mr. Charles F. Bowes in opening the proceedings said: - I am pleased to see such a representative gathering here this afternoon, and I trust that much good will come from our deliberations. This is indeed a perilous time in the industrial world, and it is only by earnest consultation and interchange of ideas that the captains will be able to bring their ships safely into port, and, if I may say so, the Whitley Report, the problems resulting from which are a subject that we are here to consider, is, in my opinion, a sort of chart that has been drawn up for our guidance to help us to keep off the rocks. Speaking generally, lopsided system of organisation has until recently been the outstanding feature of the modern industrial world. Since the inrevolution at the end of the eighteenth century, labour has been steadily organising; whilst their employers' sole interest in industrial questions as a whole was limited to an abstract discussion of a small point raised by Adam Smith in his "Wealth of Nations," probably in reference to international trade, or to a practical discussion as to the advisability of compulsory whitewashing of factory walls, the more intelligent of their employees were finding out that "unity is strength," and endeavouring to interest the less intelligent of their fellowworkers in their schemes. Funds were raised, discussions were encouraged, and educational propaganda was started. Until a few years ago only very feeble attempts had been made by the masters to meet this movement, and even now but few of the masters' associations are organised to any degree of efficiency such as is demanded by modern conditions.

As in the case of the men, the pioneers of this new movement had to undertake a great deal of uphill work in rallying a sufficient number of supporters to make the results of their task effective; successful as the results have been, there is still much more work to be done, and to gain a maximum result even more workers must be enlisted. The biggest job that the Master Printers' Federation ever undertook was the costing campaign, and I am sure that those of you that responded to the appeal to adopt the system will readily assent to its value and agree as regards the

wonderful effect that it has had on the trade. Labour has gained a position of power and dignity by its own efforts, chiefly through the vehicle of the trade union movement, and is demanding more say in the management of its industry. If from the seemingly material device of a costing system we masters have gained such spiritual betterment as the fostering of the spirit of brotherhood amongst ourselves, and a more enlightened and scientific method of conducting our own establishments, who can ascribe the limits of the good that will accrue from the extension of the scope of our work and the number of

our members?
Finally, I ask in the best interests of our craft for more co-operation amongst ourselves, for I feel sure that this is our only salvation, and this afternoon let us discuss principles and not details of our schemes.

Mr. A. E. Goodwin then proceeded to outline the proposals for strengthening the organisation mainly by the formation of district alliances of local master printers associations, and he also explained the position of the "Betterment" scheme, the national settlement of wages, and the reduction of hours and holidays negotiations.

An interesting discussion followed, and it was ultimately resolved to approve the formation of an alliance for the northern district, to give assent to the Betterment scheme, and to support the Federation Council in its efforts to secure a settlement of wages, holidays and hours on a national basis.

Printers' Managers and Overseers

MANCHESTER & DISTRICT CENTRE.

The February meeting was held at the Crown Hotel, the chair being occupied by Mr. J. H. Nuttall, president. The minutes were read and confirmed, and correspondence read and passed on to the next meeting of the council. Later, a special general meeting was held, when the following requisition was approved, on the motion made by Messrs. Chas. N. Knowles and Thos. Kirkwood:—

"Rule 19-Annual Delegate Meeting.—A meeting of delegates, two from the parent association, the president or vice president, who shall preside at the meeting, and the general secretary ex-officio, and one from each provincial centre, shall be held, etc."

Mr. J. R. Riddell, principal of the St. Bride Institute Printing School, then lectured on "Technical Education for the Printer: Past, Present, and Future." In the course of his remarks the lecturer said: There is no need to linger over the shortcomings of the old style printing technical class, which died a natural death. It attempted too much, its curriculum was impossible, and included many subjects which were not closely identified with the craft. Altogether it was too ambitious, aim-

BRITISH & COLONIAL PRINTER & STATIONER

ing at training men for the top rather than for the ranks. The technical instructor is a much-abused individual by those who do not search deep into his responsibilities and limitations. If those critics would only attempt to verify their disparaging remarks they would be inclined to show more sympathy. Technical instructors should undergo a course of training to qualify them, and they should be drawn from the ranks of those who have had practical experience. And, further, their work as teachers should not be gauged by the results of a written examination. In the future training of the printer's apprentice there may be said to be four main points which call for consideration: (1) Selection of a better type To attract a better type of boy to our craft I would suggest that the educational authorities afford facilities for placing before the elder boys in their central and secondary schools the opportunities and scope provided by the printing business as a career. Before a boy is finally selected for apprenticeship his schooling, habits, home conditions, health and aptitude for the work of a printer should neceive careful consideration by a local independent apprenticeship board, such as the industrial councils outlined in the Whitley scheme. (2) Standard rate of wages and indenture.—The chief points of an indenture should be: (a) The introduction of an apprenticeship board; (b) the definition of the work an apprentice shall be taught year by year; (c) a recognised and standard rate of pay for apprentices; (d) compulsory attendance at a technical school for a period of whole time training, or for a number of hours in the day time during a part of the apprenticeship; (e) relief from working overtime until a certain age is reached. (3) Apprenticing the boy.—The function of an apprenticeship board should be: (a) To arrange for a careful selection of apprentices; (b) to draw up and approve of a standard indenture detailing the work a boy should be taught year by year according to the facilities provided by the office in which the boy is employed; (c) to arrange an established rate of wages for each stage of the apprenticeship; (d) in cases of dispute between the other parties to the agreement, that the facts be ascertained and a settlement arranged; (e) to deal with other matters incident to the education and training of the apprentice; (f) to be responsible for the examination of students attending the technical schools. (4) Technical education and training.—The schools must be self-contained, i.e., they must provide instruction for, and have within their walls equipment for, the training of those employed in all sections of the printing and allied They must be run on workshop lines, trades. directed and staffed by skilled and practical men possessing the qualities of teachers, men who have been accustomed to control in the works, and who have intuition in how to handle and direct the young mind.

DISCUSSION.

Mr. E. Law said that great care would have to be given to the selection of a boy as he might be intellectually fit, yet at the same time-physically unfit for the craft.

Mr. C. Knowles desired to see the craftsman remunerated for the time spent in closely studying the ramifications of the printing business. As to capturing the smart, intelligent boys from central and secondary schools, it would all depend upon the prospects of remuneration when the boy became a journeyman.

Mr. R. B. Fishenden, M.Sc.Tech., said that craftsmen who had gone through a technical school had been the ones to succeed. He agreed with the lecturer that there was immediate need for the definite training of technical instructors. The instructors of the past had no opportunities of receiving proper training, and why they had succeeded was because they had special gifts, and opportunities in the workshop. Technical education was the backbone of the country, and when commerce again got into its stride, technical training would be necessary if we were to keep abreast of foreign competitors.

Mr. Thos. Rignall believed in training the

employer as well as the craftsman.

Mr. Robt. Marshall blamed the local managers and overseers for the poor support the College of Technology received in the way of students. He found that the youths from outside districts were more keen in attending the College, and at the classes they could regularly be found in their places.

Mr. F. J. Hughes would like to see apprentices paid journeyman's wages when employed on overtime, so as to prevent employers from taking away the leisure and studying hours which belonged to the apprentice. When attending part time junior technical schools the apprentice should not be asked to attend during the morning as he probably would get into a bad habit as regards punctuality.

Mr. J. H. Nuttall, F. E. Robinson, C.

Mr. J. H. Nuttall, F. E. Robinson, C. Doughty and several others also spoke.

Mr. Riddell, in reply, stated that his experience proved the boy to be a good timekeeper when attending morning classes, and the system he had in operation immediately notified the employer when a boy was late. A scheme affecting apprentices which he had put forward, had been adopted by some half-dozen trades. He asked the managers, overseers and other craftsmen not to ridicule a boy who was attending a technical school. It was poor sport to upset the enthusiasm of a bright, in telligent lad who was striving to make a good craftsman.

NEWSPAPER PRESS FUND.—The annual meeting of this fund was held on Saturday in London. Lord Burnham, the president, in moving the adoption of the report and balance-sheet, said the report was a very satisfactory one, and the financial success of the past year most gratifying. Mr. F. J. Hillier said the council was fully alive to the desirability of increasing the scale of pensions, but not until they were able to do so without unduly trespassing on the funds.

MEN of principle are the principal men.

DITISH & COLONIAL

Printers' Wages.

The Labour Gazette notifies the following increases in wages in the printing and allied trades during January:

Bury St. Edmunds .- Compositors, machinemen and linotype operators (book, jobbing and weekly newspaper); increase of tos. per week. Minimum rate after change for job-

bing compositors, 58s.

Eastbourne. — Compositors, machinemen and linotype and monotype operators (book, jobbing and weekly newspaper); increase of 5s. per week in the minimum rate. Minimum rate after change for jobbing compositors, 58s.

Glossop and Hadfield.—Compositors, machinemen and linotype operators (book, jobbing and weekly newspaper); increase of 18.6d. per week. Minimum rate after change for jobbing compositors, 57s. 6d. plus a bonus of 6s. 6d.

Isle of Thanet (including Broadstairs, Margate and Ramsgate). - Compositors, machinemen and linotype and monotype operators (book, jobbing and weekly newspaper); increase of 3s. per week. Minimum rate after change for jobbing compositors, 56s.

Lowestoft.—Compositors, machinemen and linotype and monotype operators (book, jobbing and weekly newspaper); increase of 10s. per week. Minimum rate after change for

jobbing compositors, 55s. Plymouth.—Compositors, machinemen and linotype and monotype operators (book, jobbing and newspaper); increase of 8s. per week. Minimum rate after change for jobbing com-

positors, 60s.

Tonbridge.—Compositors, machinemen and linotype and monotype operators (book, jobbing and weekly newspaper); increase of 1s. 6d. per week in the minimum rate. Minimum rate after change for jobbing compositors, 62s

Tunbridge Wells.-Compositors, machinemen and linotype and monotype operators (book, jobbing and weekly newspaper); increase of 12s. per week. Minimum rate after

change for jobbing compositors, 60s.

Certain towns in North Wales with Aberystwith and Oswestry).—Compositors, machinemen and linotype and monotype operators (book, jobbing and weekly newspaper); increase of 5s. per week and a corresponding increase in piece rates. Minimum rates after change for jobbing compositors: Wrexham, 52s. 6d.; other towns, 50s.

Scotland.—Bookbinders and machine rulers; increase of is. 6d. per week in minimum time Minimum rates after change: Aberdeen, 64s. 6d.; Dundee, 65s. 6d.; Edinburgh

and Glasgow, 66s. 6d.

Dundalk.-Compositors, machinemen and linotype operators (book, jobbing and weekly newspaper); increase of 2s. per week in the minimum rates. Minimum rates after change: jobbing compositors, 50s.; linotype operators, 55s. 6d.

Londonderry. - Compositors, machinemen

and linotype and monotype operators (book jobbing and newspaper); increase, as war wages, of 3s. per week. Minimum rate after change for jobbing compositors, 50s.

Newry. — Compositors, machinemen and linotype operators (book, jobbing and weekly newspaper); increase of 4s per week. Minimum rate after change for jobbing compositors, 46s. 6d. (including war bonus).

Printing Trades Exchange.

With reference to the suggestion made by Mr. W. C. Corke of a paper Exchange for London, Mr. W. H. Burchell (Caxton Press) calls attention to the fact that in 1907 he produced a scheme for establishing a Printing

Trades Exchange and Market.

The exchange was to have been held at the headquarters of the Institute of Printers and Kindred Trades, St. Bride Foundation, every Wednesday from twelve till four. The idea was to provide a central meeting place, so that members of the trade might be able to come together regularly to discuss business and trade matters generally. In the prospectus, which was issued in the names of Messrs. C. J. Drummond and W. H. Burchell, it was urged that such an exchange would tend to a better understanding and appreciation of each other's ideas and requirements, and lead to more profitable business, which, it was contended, were the primary objects of such an institution. The exchange was to bring together under one roof, regularly every week throughout the year, buyers from all parts of the United Kingdom, and the commodities to be dealt in were machinery, type, inks, and paper, together with all other articles and materials required by the printing and allied trades. No industry-British, Colonial or foreign-connected in any way with the printing trades was to be excluded.

It was proposed to furnish the large hall of the St. Bride Institute with numbered stands possessing locker boxes, which were to be placed at the service of members at a fee of half-a-crown a week, or five guineas per annum, which would include the annual subscription to the institute and the privileges of

the St. Bride Foundation.

On exchange days typewriting machines and operators were to be available for the use of members, and the scheme also included a series of exhibits of the latest novelties and new inventions relating to printing, book-binding and stationery. There was also to be a classified register for the use of buyers, · together with an information bureau. In the prospectus which was issued in 1907 there was a picture of the institute as it would have appeared on exchange day-an interesting piece of imagination on the part of Mr. Burchell.

The scheme, however, was not put into operation, and it is still open to some enterprising individual or organisation to have the credit of setting one on foot.

The Institute of Printers Dissolved.

Existence of Twenty Years Brought to a Close with Reluctance.

Mr. H. C. Bolton, as chairman of the Council, presided at the twentieth annual general meeting of the Institute of Printers and Kindred Trades of the British Empire, held at the St. Bride Foundation on Wednesday last week, when it was decided to windup the Institute.

The minutes and the accounts having been approved, an honorarium of 50 guineas was voted to the hon. secretary, Mr. C. J. Drum-

The chairman then moved the following resolution: —" That the Council of the Institute of Printers and Kindred Trades of the British Empire, after careful consideration, have reluctantly come to the conclusion that the support given to the Institute by the members does not justify its continuance and therefore reluctantly recommend that it be wound up." He explained that the Council had given to this decision their very careful consideration. He referred to the appointment of a committee which had gone carefully into the question of drafting a new constitution for the Institute, but after working throughout the year they came to the conclusion that to carry on the Institute was impossible, owing to the lack of interest shown by the members. The recommendation put before the meeting had been carried unanimously a month ago at the Council meeting, and he submitted it with real regret.

Mr. A. Langley seconded the adoption of the recommendation.

Mr. Low referred to the enjoyable social functions which had been held since the Institute was founded, and thought it was a pity the Institute should cease its operations now after having passed through its recent time of trouble.

Mr. G. H. Linbrey opposed the recommendation at some length, attributing it to caprice on the part of a few. He thought that meeting was not strongly representative enough to say that the Institute should cease.

Mr. Penman, as an old member of the Council, said a lot of work had been done and he did not think it had been appreciated. He did not think there was anything else to be done but accept the recommenda-

Mr. J. R. Riddell, principal of St. Bride-Printing School, said if anything could make the Institute go it would have been the enthusiastic work of the chairman, and he recalled that two years ago he had suggested the winding-up. It was sometimes said he was before his time. (Laughter.)
The chairman: All good men are.

Mr. Riddell said an Institute like that should not exist for the mere purpose of giving dinners and childrens' parties, and declared that before the war it was effete. He added that he had not been in agreement with the resolution coming before the meeting in this way. It was his view that the committee was appointed to go into the question of reconstruction.

The chairman, in answer to points which had been raised, said that the membership was approximately 300, and last year they had increased it by 50 or 60, principally through the efforts of one or two members of the Council. Their attempts to raise the Institute from its lethargy had been in vain. It seemed to him the fault had been that the Institute had a title which it could not live up to. He repeated that it was with very great regret that the recommendation was put forward.

Mr. Barnett described the recommendation on the agenda as a mistake, because it must have a disheartening effect. It was altogether contrary to the British spirit to accept defeat, and the thing should not go through without a fight. He asked them if they could not appoint a committee that night to see if some scheme could not be brought forward.

Mr. Langley, while regretting the only alternative before the meeting, pointed out that everything had been done to see if they could carry on the Institute, but they found there was not a niche that was not already

occupied.

In answer to questions, it was intimated that there was no alternative scheme to be put forward.

Mr. Glen Steele remarked that there had been no constructive suggestions advanced by the critics.

The amendment by Mr. Limbrey that the opinion of members of the Institute be tested through the press was lost, and the recommendation to wind-up the Institute was carried, with two dissentients.

It was agreed that the council and officers should take the necessary steps consequent

upon this decision.

Mr. Limbrey mentioned the bitter pangs which the proceedings that evening must cause Mr. Drummond after twenty years of work on the Institute's behalf. They thought they should recognise the services of the founder of the Institute.

The chairman said they would not allow "Charlie" Drummond to go out without "a vote of thanks," and added that there must be a general meeting to receive the report regarding the funds, etc.

Mr. Penman moved a vote of thanks to the chairman not only for presiding that night, but for the hard work he had put in during

the year.

Mr. Drummond, in seconding, paid a very warm tribute to the labours of Mr. Bolton, who, he said, had the interests of the printing

trade at heart.

The resolution was carried unanimously, and Mr. Bolton, in reply, said besides living out of the trade they all wanted to do something else, and that was to benefit the trade in return. He had tried to do that. He mentioned the fine effort they had made on behalf of distressed French printers, which he thought was the best piece of work they had done, the sum of £1,400 having been raised.

The death has taken place of Mr. William Ord, who for many years occupied the position of publisher for all the publications issued by the proprietors of the Newcastle-Chronicle. Mr. Ord was 59 years of age.

THE law of averages shows that sooner or later the weak printer finds himself up to his neck in the slough of despair.

west and north-west London Master Printers' Association

The first of a series of meetings on "Matters of Money and Moment to Printers" was held at Westbourne-park Institute the other evening, the president (Mr. F. A. Perry) in the chair. After the transaction of the usual routine business, Mr. J. R. Burt gave an interesting address on "Co-operation and Competition."

Mr. Burt said in the course of his remarks:—
To-night we are starting a series of meetings to be devoted to subjects which we are pleased to describe as "Matters of Money and Moment to Printers." The word money might very well have been left out of the title, but there is a ring about it that is attractive and the commodity itself is so necessary to all of us, besides being what we are in business to acquire, that its inclusion may not be out of place. Especially will this be the case if some in our trade who still act as if they remained quite novices in the art of demanding proper profits are led to believe that it may be to our mutual advantage to adopt methods that are calculated to obtain them.

I have selected the subject of "Co-operation and Competition" in the desire to further, if I can, the efficient working of the former, in our practice of the latter. To achieve this we need to get a right conception of both. The necessity of co-operation to-day must be re-cognised by all. The practical impossibility of accomplishing anything for the advancement of any particular cause without cooperation is acknowledged, and one has no fear of contradiction in asserting that the unfortunate conditions of the printing trade in the past are due to the almost criminal unapproachability of members of the craft to one another. Not only has it resulted in the long hours of the employees with the consequent lack of leisure and time for recreation and social intercourse, which, in its turn has killed all inducement for insisting on adequate profit as means to enjoyment, but it has put the employer in a wrong position for sympathising with the desire of the employee for leisure for self-improvement or sport, both of which are necessary to contentment and health in the often very difficult and undesirable surroundings in which he has to work. This in its turn has been conducive to the excessive claims made during the late scarcity of labour and national pressure, and helped to strengthen the discontent and unrest that is leading to extreme demands at the present time for every conceivable concession, with-out consideration of the difficulties, and often impracticability, of complying with them, added to which the customer has been encouraged in the belief that a printer is always open to pressure and possesses a conscience as elastic as his prices are at variance.

The varying conditions under which we trade, the diverse character of work in different districts and offices, and the enor-

BRITISH & COLONIAL PRINTER & STATIONER

mous range in the size of the houses represente cl in the association present many obstacles to be overcome. On the one hand we have companies and combinations, financed largely by the surplus wealth of the fortunate, amalgamated that they may command the market and cope with the possible demands, and customers rightly or wrongly, are inclined to put their faith in bigness. At the other extreme is the man who has no capital and expense, except personal, who lives where he works and employs little labour but his own, and another section of the community fix their standard of value by the price that he is willing to charge. Between these two classes are the majority of traders, mostly practical men, whose right to live is as great as either of the others, but yet whose position is jeopardised by both. To bring these three classes into conformity is the problem that is in front of our trade. Can it be managed?

l venture to think that the claims of all are capable of arrangement, given a willingness to give and take, and by more concentration on profitable results than on quantity of output; and that many of the complaints we hear could be avoided if a stricter adherence to a specialising prevailed, and a more generous attitude were taken by the big firms to

the smaller,

We have heard it said that the facilities of some firms are such that others cannot compete with them. That may be true, and I recognise that those fortunate firms are entitled to benefit by them. In such a case with co-operation the man without such facilities should be able to transfer orders to those firms and obtain the recognition he is entitled to for introducing custom without fear of his client being approached direct, and other work which he can do himself being lost to him. Would it not be better for all that the benefit of such facilities should remain in the trade rather than, as in many cases now, be given to the customer to the increasing disadvantage of the original possessor.

Co-operation would, I believe, be accelerated by increased specialising, by the establishment in our midst of what I believe operate successfully in the U.S.A., trade houses for special work; and I should like to see co-operative ownership of such, managed by periodically-elected boards, so that there could be no chance of preference being given to any customer in priority of execution or price of work. Such would save immensely costs in individual houses, as well as reduce prices by reason of continuity of work and the full employment of permanent staffs; by the employment of trade houses debarred from dealing direct with the general public, and by the employment of qualified men only as travellers, and stricter oversight of their

transactions with clients.
It is well to aim high, but is it wise considering all things for the man of limited resources to enter into competition for that which he knows is beyond his capacity, or can only be done by trespassing on his own physical strength and by making undue demands

on his staff? He may succeed, but the price of success in the majority of cases is undeserved loss to another, with no financial return to himself, whilst the mere fact of his having ousted a bigger firm encourages someone else to try to oust him. If the work comes his way I should be the last to say turn it down, for with wise co-operation it then becomes a case in which assistance can be rendered by another without loss to anybody. Is it wise to start a number of departments with the object of doing everything on your own premises? I think only in exceptional cases can it be justified. With local associations, in the absence of co-operative binderies, foundries, etc., and trade houses available, it should be possible to get all such departmental work done by our friends without fear of advantage being taken, for let us remember that empty departments, like idle machines, will lead to the cutting of prices for filling-up purposes. We might go further and ask-Is it wise to attempt to do on the premises what you can get done better and cheaper out? That is get done better and cheaper out? open to argument and must be answered by each one for himself. Music and foreign work if they come our way should be placed with those who have laid themselves out to do

If we the smaller men of the trade expect recognition and considerate treatment from those whose position enables them to compete advantageously with us we must avoid poaching, and we must not hesitate to accept their services; and I don't think it would be resented if we referred to them as cases in which we needed protection and any others where we thought the bounds of reasonable compe

tition had been passed.

Within the last few years several means for increasing co-operation have been introduced as well as methods for regulating competition, such as the Costing System, the publication of average hour rates, the imprint movement, and the publication of recognised rates of wages; whilst the issue of lists of members and the facilities given by monthly lunches for friendly talk have brought printers into closer touch with each other. My purpose will have been attained if I have said anything that will help us to think more broadly, to consider more charitably, and to act more unitedly in all matters pertaining to our craft, in the critical period of peace and social reconstruction through which we are now advancing in our country's history.

Mr. Burt's address was followed by an interesting discussion. After which Mr. H. C. Hill, of the North London Association, gave an address on "Standard Estimating and Costing." Mr. Hill, amongst other things,

said:-

Now war conditions are over our customers are now beginning to expect lower prices and relying on the weak and easily persuaded printer for securing them. It is a matter which must be tackled now, if at all, while we are still within the period of more satisfactory prices, created for us by the high costs of paper and the shortage of labour.

The intentional price-cutter has to be con-

BRITISH & COLONIAL PRINTER & STATIONER

vinced that to undersell his product is to inflict an injustice on his trade and on all engaged in it-for an employer is after all a trustee for his men's labour and has no right to undersell it. The unintentional price-cutter is of course the man who does not know his costs or whose method of estimating is imperfect. I am not going to suggest that there are any printers to-day, or at any rate not more than a negligible few, who do not use an estimate form of some kind—the old system of reckoning up cost on your blotting pad is surely dead, but what I do suggest is that many of the estimate forms in use are inadequate, do not cover the "little things that matter," and so fail to enable a man to estimate as accurately as is necessary in these days.

The adoption of standard estimating forms, for various classes of work, calculated on the basis of the recognised hourly cost rates must, if rigidly adhered to, of necessity do much to regularise our estimates and to get rid of the ridiculous variations of prices which have been a disgrace to the intelligence of our

trade.

As to the form itself, it will no doubt be necessary to have more than one kind according to the nature of your business. In my own case we use two forms, one for lithographic and the other for jobbing letterpress work. We find these cover go per cent. of the jobs we are called upon to estimate for. Others whose businesses consist mainly of periodical printing or any other specialised class of work or who have an extensive bookbinding department may find it necessary to have a special estimate form for such work, but whatever the special nature of the work may be, the same model can be adapted, the great thing being uniformity, to cast estimates in the same mould, I think a small committee could be formed who would have no difficulty in preparing standard estimate forms to suit the requirements of all. The next and equally important point is the hourly costs. For it is obvious that the standard estimating form is of little use unless worked out of the same hourly rates.

I suppose one might divide printers into three categories—those who have a perfect costing system in operation—those who have partially adopted one and are satisfied that they are on the right side, and those who have no costing system. Comparisons would no doubt show variations in the hourly rates of all three, and what we have to arrive at are rates that all can accept. This should not be difficult. I quite believe that investigation would reveal that such variations that exist are due mainly to different methods of calculating overhead expenses, etc., rather than to any real difference in the actual costs among a number of printers in the same district, where the same

wages are paid.

Well, having got your standard estimating forms and hourly rates agreed, the next question is to get them adopted. For this I look to the signatories of the Imprint resolution—they should be the first to take this useful step—they now number—from the point of

view of capacity of output—by far the larger proportion of the London printers, large and small—they have recognised the principle of co-operation and it should be an easy step for them to pledge themselves to this further measure having for its object the protection of prices or to borrow the West and North-West motto "Proper Profits for Printers."

That is the scheme I commend to your consideration. I do not claim for it perfection and it will no doubt encounter objection, but I put it to you, that it is time we ended the state of things which makes it possible for estimates to vary as much 100 per cent. or more as they frequently do. Further than this when there is little variation to be obtained by asking for a number of estimates our customers will cease that practice and we shall be saved the expense of much useless estimating.

estimating.

Votes of thanks to Mr. Burt and Mr. Hill for their addresses were moved by the president, and carried unanimously, and it was decided to recommend the adoption of an estimating form on the lines suggested by Mr. Hill for the use of members of W. and N.-W.

Master Printers' Association.

THE LAKE DISTRICT CONFERENCE OF Printers.

There was a representative attendance of the employing printers of Westmoreland, Cumberland and the Furness District at Kendal on February 26th. Mr. W. H. Moss presided, the arrangements made by Mr. Wilson being well thought out, and the success of the conference was largely due to his efforts. Prior to the conference the annual meeting of the North-Western Group was held and an encouraging report presented and the officers elected for the current year.

The chairman with commendable brevity welcomed all visitors and explained the main

purpose of the conference.

Mr. A. E. Goodwin said: I have heard a great deal of the beauty of the Lake District and hoped to pay a visit, but the calls from less picturesque districts have been so insistent that this is the first occasion I have had the pleasure of catching even a glimpse of this wonderland.

Labour Unrest,

It is difficult here in these peaceful surroundings to realise all the turmoil and unrest in the labour world now going on, and yet it is impossible not to be conscious of the fact that it is only a question of time ere you also will feel the effect of the disturbance in industrial circles elsewhere.

I am here to-day to tell you what is now going on in the printing world and to take counsel with you as to how in the difficult time that lies ahead we may best meet the changing conditions. You are all probably aware that a determined effort is being made

é:

e'

Ċ

X.

1

BRITISH & COLONIAL

to strengthen the organisation of employers the printing trade for several reasons. The Prime Minister himself has said that when the demands of labour are just and reasonable they should be conceded, but when otherwise they should be clearly shown to be unreasonable and not granted. We are organising the employers not with the object resisting any requests for bettering conditions, but so that all questions may be discussed on equal terms, and the feeling of mutual respect strengthened. The clear idea in mind is to ensure a greater measure of security and prosperity for the entire printing industry

The Alliance which it is suggested you may form to-day is intended to link up all the associations in this N.W. area. Any that are not quite as much alive as they should be will be stimulated and helped. The idea is to provide the machinery for focussing opinions on all questions appertaining to trade much quicker and with more certainty than we are

able to do at present.

It is also of vital importance that decisions arrived at which meet with the general approval of the majority should be carried into effect without delay by the whole trade. A good deal of time and thought has been spent on working out a plan which provides for dividing the country into fourteen districts and to form an alliance of all associations in these districts, and then all employers shall be urged to join the nearest association.

The associations will send representatives to an Alliance Council. These councils will elect representatives to the Federation Council, and so we have a complete chain from the individual master printer to the national authority entrusted with making the general work in the industry. working conditions for the industry

There is another weighty reason for organ-

ising without delay along these lines.

The 'Betterment' scheme, which means the formation of a National Industrial Council, has been approved by the workers and employers, and will come into being within a month or so. Then we shall have Joint District Councils, and where practicable Works Committees formed without delay. To constitute these District Councils we need the Allia nees to be formed forthwith, so that the machinery for securing proper representation of the employers may be brought into being.

One important object of the scheme is to ensure proper remuneration for employers and

work people.

has been pointed out in connection with the mining dispute that a combination of the employers and employed in any one industry may result in the exploiting of the public and be harmful to the general community. With this view I agree. But the work of the Costing Country has provided the ing Committee of five years has provided the necessary safeguard and also laid the foundations for a fair basis of prices. The purpose for which the committee was formed has been misunderstood in some quarters—its main object was to remedy the strange discrepancies in prices which have been long current in the prices which have been long current in the Drinting trade. Differences not due to

one printer having exceptional views as to profits, but to the diversity of opinions as to the cost of a job.

The war upset all traditional prices, and with the constant changes still going on the need of a reliable cost system is now felt by

every firm.

The Federation System was designed by the best brains in the trade, and has since been tried in offices of every size and character, and proved to be simple, effective,

reliable and adaptable.

To day I should like to see the definite outcome (1) from this meeting of the Alliance for this area being formed into a provisional committee to make arrangements. (2) As many firms as possible deciding to instal the Federation System, thus making it easy to arrive at and adjust standard rates from time to time. (3) A decision as to the possibility of making the imprint arrangement applic-

able to the whole district.

The organisation along these lines has made rapid progress this month. Following the Newcastle meeting, at Manchester, Leeds, and Cardiff remarkable meetings have been held, great interest shown, and the money forthcoming for initial expenses. Mr. Goodwin proceeded to explain the position of the hours and holidays agreement and national wage settlements. I feel assured this district is ready to take its share in the scheme when it understands it, and if not quite clear should be glad to deal with any point.

An interesting discussion followed this address, and a resolution to form an alliance and appoint a provisional committee was

unanimously adopted.

Stationers & Paper Manufacturers' PROVIDENT SOCIETY.

The annual meeting of the members of this society was held at the offices of the society, 15, Dowgate-hill, Cannon-street, the other

day.
Captain Sir G. Rowland Blades, M.P., pretrade were present, amongst them being:—Mr. A. W. Dagley, Mr. A. Darvill, Mr. R. B. Hayward, Mr. B. J. Head, Mr. J. Hollier, Mr. Alfred Jones (Messrs. W. N. Jones and Son), Mr. C. LeMage, Mr. S. J. Peacock. Mr. J. Put-man, Mr. T. Harrison Savory, Mr. F. C. Smith, Mr. S. Stacey, and Mr. J. D. Watson.

The chairman, in moving the adoption of the committee and auditors' reports, strongly urged young men in the trade to take advantage of joining the society and so make provision for their declining years. He pointed out that during the past year the fund had been increased by £1,309 11s. od., making a total of £51,737 4s. 9d., which showed that the society was in a stronger position than ever.

The officers for the ensuing year were duly elected and the committee and auditors' re-

ports adopted.

BRITISH & COLONIAL PRINTER & STATIONER

Trade Notes.

MR. WILLIAM ELLIOTT has retired from the printing department of the Warwick Advertiser after 61 years' continuous service.

The Printers' Managers and Overseers Association (Parent Association) at their meeting on Tuesday night passed a resolution urging the claims of the Association for representation upon the Industrial Council of the Printing Trade. A full report of the proceedings will be given in our next issue.

MESSRS. LANGLEY AND SONS, Ltd., The Euston Press, have acquired the goodwill and a portion of the plant of the old-established book and music printing business of Messrs. Kenny and Co., 25, Camden-road, N.W.I, and will transfer it to The Euston Press, 6 and 8, Euston-buildings, N.W.I (near Euston and Gower-street Stations), where they will be able to give the clients of Messrs. Kenny and Co. a much extended service in all departments.

MR. GEO. G. JACOB (Messrs. Alexander Jacob and Co.), waste paper merchants, etc., Wapping, London, E., intimates that he is being joined in partnership by his brother. Lieut. Ellis E. Jacob. His brother, Lieut. Victor V. Jacob, was killed in action in France in September, 1915. Messrs. Alexander Jacob and Co., who import large quantities of continental rags, both woollen and cotton, have spened an office at 3, Cite d'Hauteville, Paris under the direction of Mr. David Levy.

GLASGOW. — Mr. Michael Graham, J.P., editor of the Evening Times, who has for 52 years been on the staff of Messrs. George Outram and Co., Ltd., and Mr. Hugh N. Livingstone, chief sub-editor and deputy editor, who has been 43 years a member of the staff, have retired from active journalistic work. To mark the occasion of their retirement they were last week entertained by their colleagues of the Evening Times, the Glasgow Herald the Weekly Herald, and the Bulletin, and were presented with handsome gifts. Mr. H. D. Robertson, a director of the firm, presided at the gathering, which was held at the offices, 65, Buchanan-street.

BRITISH SCIENTIFIC PRODUCTS EXHIBITION, 1919—The King has consented to act as president of the British Scientific Products Exhibition, 1919, which will be held at the Central Hall, Westminster, during the month of July. The president of the Exhibition is the Marquess of Crewe, K.G., and Professor R. A. Gregory is chairman of the organising committee. The Exhibition will include sections dealing with Paper, Illustration and Typography. Firms desirous of exhibiting are invited to communicate with the organising secretary, Mr. F. S. Spiers, 82, Victoriastreet, London, S.W.I.

The death is announced, from influenza, of Mr. W. Lotinga, age 52. Mr. Lotinga was well known as a sporting journalist under the name of "Larry Lynx" and also "Magpie."

MESSRS. HILL, SIFFKEN AND Co., printers and lithographers and specialists in posters, have issued a useful blotter-calendar. Each sheet of the pad contains the dates for the 12 months, the whole being mounted on stout boards. The pad is adorned with apt business phrases such as "Are you prepared for the big trade boom?" and "Our posters have helped to win the war."

DISSOLUTION OF JOINT STOCK COMPANIES.—A notice appeared in the London Gazette for February 25th, to the effect that at the expiration of three months from that date, the following companies, among others will be dissolved, unless cause be shown to the contrary:—

Auto-Publicity Co, Ltd.
Brighton Periodicals, Ltd.
Carl Hentschel, Ltd.
Cymograph, Ltd.
Cymograph, Ltd.
Bryoden Publishing Co., Ltd.
Eswood Advertising Co., Ltd.
Jewish National Press, Ltd.
London Book Co., Ltd.
Midland Paper Co, Ltd.
Purchasing Copyright Syndicate, Ltd.
Russian Advertising Agency, Ltd.
Town Crier Publishing Co., Ltd.

Personal

MR. A. E. GOODWIN addressed the Dundee Master Printers on Friday last, explaining the terms of the National agreement and its effect on the cost of printing, and also visited Aberdeen on Monday when the whole question of the present and future cost of printing was fully discussed.

MR. A. WILLIAMSON is taking up the duties of secretary of the Yorkshire Alliance of Master Printers until some permanent arrangement is made.

EVERY district in the United Kingdom has now been visited and the Federation organisation scheme has been approved and active work is being done to constitute the District Alliances in all centres.

MR. A. F. BLADES (president of the Federation of Master Printers) and Mr. A. E. Holmes (Federated Unions of the Printing Trade) have been appointed members of the committee of masters and men set up by the National Industrial Council to consider the problems of labour unrest.

MR. Tom Collings, head of the stereo and electro department at Messrs. Hazell, Watson

and Viney's Aylesbury Works, was, last week, presented by the directors with a handsome clock, on completion of 50 years' service, 42 years of which has been as overseer. The presentation was made by Mr. Howard Hazell, J.P., in the presence of the managers and the heads of departments.

MR. A. G. Aves, the president, was in the chair at the meeting of the Printing, Bookbinding and Kindred Trades' Overseers Association at St. Bride Foundation on Tuesday. Several new members were elected and Mr. Isaac (Artists, Ltd.) was down for an address on "Process and Line Blocks." We hope to refer to the proceedings at greater length next week.

JOSEPH PENNELL'S LIBERTY-LOAN POSTER A Text Book for Artists . . . and Printers; 4to., 9 illus. Lond.: J. B. Lippincott Co. 4s. 6d. net.

The poster of which this book treats was prepared for a competition in connection with the "Fourth Liberty Loan," set on foot by the Government of the U.S.A., and was selected and published. In itself it was not specially remarkable, just a two-colour (purple and red) poster depicting the ruin that might overtake New York if the Huns won the war. The chief interest of the book, to our mind, is that so far from being a dry text book of the ordinary kind, it is a thoroughly typical example of Mr. Pennell's well known racy literary style. To those who, like the present reviewer, have heard "J." hold forth at length, at the Society of A." of Arts rooms and elsewhere, on the many vices and few virtues of the common or garden litho printer, the pages of this work recall many Pleasant and instructive evenings when Mr. Pleasant expounded his own views on lithe litho Printing, and was by no means backward those of certain other people, particularly print of the printing as about prefatory essay on printers. There is a short prefatory essay on the poster in general, and an introduction to the history of this one in particular Then the artist Proceeds to set forth the genesis (i e., the original crude sketch), development and technical Production of the picture, from the transfer of the drawing on the plate to the final Printing, with illustrations of the work at each of the Papall as is his wont. at each stage. Mr. Pennell, as is his wont, not hesitate at relating his various struggles with, and victories over the Poster Committee and the printers. These last, Committee, and the printers. though they will probably seldom agree with "I's Femarks on their craft and its members, will ne vertheless be able to pick up some useful hints on artistic lithography. One point on which Mr. Pennell lays stress is the need in

the U.S.A. for schools of training in the graphic arts.

Current Topics.

The Hours and Holidays Agreement.

MR. WOODGATE STEVENS, secretary of the London Printing and Kindred Trades Federation, has sent out the terms of the hours and holidays agreement, which has been signed by Mr. A. F. Blades, Mr. Reginald J. Lake and Mr. A. E. Goodwin on behalf of the Master Printers' Federation, and by Mr. C. W. Bowerman, Mr. G. A. Isaacs and Mr. A. E. Holmes for the Federated Unions. As we have already stated the agreement provides for a 48-hour week and the payment for statutory holidays and a week's holiday in the summer. It is intimated that the agreement was to come into force on March 3rd, and Mr. Stevens apologises to the employers for the shortness

of the notice, which was only received on the preceding Saturday. The covering letter expresses the hope that the agreement will not have the effect of disturbing the friendly relations hitherto subsisting between employing printers and the societies in the men's federation. If both sides loyally abide by the terms there should be no fear of any disturbance. Rather should the effect be to improve relations, which we sincerely hope will be the case.

Against the Metric System.

A GREAT deal has been written, recently, on the desirability of a universal adoption of the metric system, and at the same time a considerable number of opponents have aired their objections to its adoption in this country. The latest opponent of the adoption of such a system of weights, measures and money is Mr. Samuel S. Dale, and a striking address was recently delivered by him before the American Society of Mechanical Engineers, in which he endeavoured to demonstrate that, while neither of the two systems is perfect, the English system of weights and measures is better adapted to the work of the world than is the metric. The English system, he says, has reached such a commanding position throughout the world, and its identity with other natural systems of weights and measures is so great as to make it the only feasible basis for unification of the world's weights and measures. Seventy per cent. of the world's industrial energy before the war, Mr. Dale asserts, was exerted on the basis of English weights and measures. The English system. he says, no longer belongs to England and America, but is the common property of mankind, and if the world's weights and measures are ever to reach or move towards uniformity. it will have to be on the basis of the English system. This was plain before the war ended, but the terms of the armistice make it "so evident it will glimmer through a blind man's eye." Mr. Dale advocates the simplification of the English system of weights and measures, to the exclusion of the metric system, and recommends the organisation of an Anglo-American conference for the thorough study of the question in all its bearings.

Paper Control to Cease.

The announcement that Paper Control is to be abolished at the end of April is welcome news to the proprietors of periodical and magazine literature, to say nothing of the book publishers, whose enterprise has been sadly curbed since control was instituted.

Publishers claim that they have suffered even more than newspaper owners from the shortage of paper supply, and the Liverpool Post commenting on this points out that a newspaper does not as a rule print a second edition when the first is sold out, whereas both author and publisher depend almost wholly upon subsequent editions for their profits. In most cases the sale of one edition of a thousand copies will only meet the cost of production and secure the author about £50. The small author with an unexpected success has suffered heavily, for the publisher has often chosen to make a reserve of paper for subsequent editions of well-known authors and no reserve for a new author who could not expect to sell more than one edition. For this reason poetry has had an excellent chance, since the editions are always small-two hundred and fifty copies to five hundred-and the consumption of paper proportionately less than other kinds of book.

The Fight for World Markets.

A MEMORANDUM from the provisional committee of the British Manufacturers' Corporation sent out to firms associated with the Corporation describes interesting developments in Connection with Sir Charles Mandleberg's scheme for the expansion of the British export trade. Those proposals attracted considerable interest and obtained substantial support arnong business men when they were put for ward a little over a year ago. It will be recollected that in September last a representative meeting of manufacturers held in Manchester resolved to form an organisation to carry the plan into effect, and a provisional committee was appointed, with Sir Charles Mandleberg as chairman, to bring the British Manufacturers' Corporation into being for that Purpose. Over 300 firms in England, Scotland and Ireland had agreed to be associated with the proposals, forming a substantial nucleus for the new organisation, and a couple of months' spadework in committee resulted in concrete proposals, being ready for submission to the associated firms. Matters had reached this stage when, towards the end of November, the committee were approached by the Federation of British Industries with a view to effecting a fusion with that organisa-The Federation has a membership of over 800 individual manufacturing firms and about 170 trade associations. Its overseas trade Committee, desirous of a progressive overseas trade policy, reported that after careful consideration they had come to the con-

clusion that the principles first formulated in Sir Charles Mandleberg's scheme were sound, and that they had made them the basis of their own proposals. The terms of the proposed amalgamation make it clear that the export trade development policy on which the Federation is about to embark is identical in essentials with the scheme first suggested by Sir Charles Mandleberg. It is proposed to appoint commissioners in such foreign and colonial markets as may be determined, who will act for members of the organisation in various ways, such as appointing selling agents when requested to do so, protecting members' interests when desired, and taking prompt measures in emergencies. The commissioner would necessarily be a British subject, with previous experience of the country to which he was appointed, and thoroughly acquainted with the language, the commercial needs and the trading customs of its people. At home, an important feature of the scheme will be the organisation of the Federation's branch offices throughout the country as centres at which all necessary information on export trade routine can be promptly obtained by members. An annual subscription of £100 entitles British Manufacturers' Corporation firms to this Overseas Commissioner service as well as to the other services which the Federation already renders to members. The Provisional Committee of the British Manufacturers' Corporation in their memorandum state that they have been largely influenced in their decision to recommend fusion by their belief that under the conditions arranged the commissioner service will be carried out in the spirit in which the proposals were first drafted by Sir Charles Mandleberg and afterwards adopted by the British Manufacturers' Corporation as a hopeful and practical working policy for the speedy expansion of British export trade.

Annandale and Son, Ltd.—The directors' report states that, after maintaining as far as possible the mill and machinery in thorough efficiency, and making provision for excess profits duty, the balance at the credit of profit and loss account as at December 28th, 1918, amounts to £ 20,611 12s. 6d. This the directors propose to deal with as follows: To place to the credit of depreciation and reserve account, £5,000; to provide for the preference dividend already paid to November 11th, 1918, and for amount accrued to December 28th, 1918, £1,798 16s. 6d.; and to pay a dividend on ordinary shares at the rate of 10 per cent. per anaum, free of income-tax, £6,000; leaving to be carried forward to next year, subject to directors' and auditors' fees, £7,812

DIVIDENDS AND REPORTS.

D. F. TAYLER AND Co., LTD .-- The report of the directors states that the net profits of the business during the year ending December 31st, 1918, added to the balance brought forward from last account, after deducting directors' remuneration, expenses of management, depreciation of plant and machinery, and all other expenses, amount to £18,106 7s. Id. From this amount has to be deducted interest on debentures, £855; interim dividend on the preference shares at the rate of 2s. 6d. per share, less income tax, for the first six months, paid June 30th, 1918, £801 10s. 7d.; interim dividend on the ordinary shares at the rate of 2s. 6d. per share, free of income-tax, for the first six months, paid June 30th, 1918, £1,625; leaving available for distribution a balance of £14,824 16s. 6d. The directors recommend that this sum shall be dealt with as follows: To pay a dividend for the second six months on the preference shares at the rate of 2s. 6d. per share, less income tax, £787 10s.; to pay a dividend for the second six months on the ordinary shares at the rate of 7s. 6d. per share, less income tax at is. in the £ (income-tax being 6s. in the £ for the year, and the company paying tax up to 5s in the £), £4,631 5s; to place to reserve fund (making it £33,000), £3,000; to carry forward, £6,406 is. 6d.

CULTER MILLS PAPER Co., LTD.—The report of the Culter Mills Paper Co. for the year ended December 31st last states that profit, after making provision for excess profits duty, is £29,095; £6.868 was brought forward, making £35,903. The directors recommend a dividend of 10 per cent., or 2s. per share, less income tax at 5s. 9d. in the £, payable half on March 7th and balance on September 1st next; to reserve for dividend of 1s. per share, less income-tax, on the 35,000 new shares proposed to be issued, £1.750; to place to works and property £8.620, thus reducing their book value to £65,000; to add to reserve fund

£10,000, leaving at credit of profit and loss £8,593. The directors have for some time had under consideration the advisability of increasing the capital with a view to making it more commensurate with the overturn and resources of the company, and have decided to recommend that it be increased from £87,500 to £131,250 by the creation of 35,000 new shares of 25s. each. They further recommend that £35,000 of the reserve fund be capitalised and divided among shareholders by way of capital bonus, satisfied by the allotment of the 35,000 new shares, having 20s. per share paid thereon, in the proportion of one new share to each existing two shares held. It is proposed the new shares shall carry a dividend of 1s. per share, payable on September ist next, and shall thereafter as regards dividend and in all other respects rank pari passu with the existing shares.

NEW COMPANIES.

PETERBOROUGH PRESS, LTD. — Registered with a capital of £14,000, in £1 shares (4,000 6 per cent. preference). Agreement with G. Knights, newspaper proprietors, printers and publishers and advertising agents. The subscribers are P. H. Goodwin, and T. Dawson. Private company. Directors appointed by subscribers.

CLEGG METAL ENGRAVING Co., LTD.—Registered with a capital of £4,500, in £1 shares, to acquire the business of engravers, die sinkers, metal and ivory workers, machinists, printers and stereotypers, carried on by Henry Clegg under a similar title, at Worthing. Harding and S. Gaselee.

FLEET PUBLISHING Co., LTD.—Registered with a capital of £1,000, in £1 shares, as publishers, printers, booksellers, etc. The sub-

scribers are G. A. Macdonald and Miss E. E. Martin. Private company. Subscribers appoint the directors. Registered office: 3, Wine Office-court, E.C.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 16 of the Companies Act, 1900. (The registration of Satisfaction is not computery.)

Cumberland Evening Mail Publishing Co., Ltd.—Particulars of £7,000 debentures created February 19th, 1919, of which £2,050 were issued on same date. Property charged—the company's undertaking and property, present and future, including uncalled capital.

FULTON'S, LTD. (advertising contractors, printers, etc.).—Particulars of £2,000 debentures, created June 10th, 1918, of which £1,138 was issued on October 26th, 1918. Property charged—the company's property, present and future, including un-called capital. No trustees.

COMPANY NOTICES, etc.

JOURNALS AND PUBLICATIONS, LTD.—Notice is given, that a meeting of the company will be held at London, on March 25th, for the purpose of having laid before it the accounts of the liquidator.

Famous Copyrights, Ltd. (in voluntary liquidation).—Notice is given, that a meeting of the company will be held at London, on March 26th, for the purpose of having an account laid before them showing the manner in which the winding-up has been conducted and the property of the company disposed of, and of hearing any explanation that may be given by the liquidator.

Gazette.

A WORD OF CAUTION.

[In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case satisfactory explanation which does not apperr on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIP DISSOLVED.

Pemberton, R. S. and A., trading as Robert S. Pemberton and Co., rope, twine and paper merchants. 3, Shepley-street, London-road, Manchester. Debts by R. S. Pemberton, who will continue the business at the same address, under the old style. February 28th.

Vellum Binders and Machine Rulers' Pension society.

A good attendance of members and friends assembled at the St. Bride Institute upon the occasion of the 76th annual meeting of the above society, presided over by Mr. John Rissen (Messrs. John Rissen, Ltd.). The secretary having read the notice convening the meeting, said their chairman that evening needed very little introduction to the members of the society, as his firm was one of the best known and respected in the trade, and his presence there proved the interest he took in the welfare of their less fortunate brethren.

The minutes of the last annual meeting having been duly read and confirmed, letters of apology were read from numerous friends regretting their inability to be present, in most cases owing to attacks of the prevailing

epidemic.

The secretary said he had heard with deep regret of the decease from the same cause of Mr. Percy W. Edwards, of Messrs. Edwards and Smith, one of their best friends and supporters. Most of those present would recollect his presiding at the annual meeting in 1916, and the generous support given to the society both by him personally and by the Robt. Wm. Edwards Trust.

Mr. Frank Willmott (Willmott and Sons, Ltd.), said all present felt this society and the trade generally had sustained a deep loss by the death of his friend, Mr. Percy Edwards, and he moved that the secretary send a letter of sympathy and condolence to his firm.

This was seconded by Mr. W. G. Finch, who said it was his good fortune to enter the firm of Edwards and Smith when a very young man, and when Mr. Percy Edwards, then a young man also, was making his entry into the trade, and although many years had passed and changes had occurred since then, he had never forgotten the kindness and assistance he received from Mr. Percy. The resolution was then carried in silence.

The next business upon the agenda being the adoption of the report and balance-sheet for 1918, the chairman, Mr. J. Rissen, said it afforded him very great pleasure indeed to move that the 75th annual report and balance sheet be adopted. It had come upon him somewhat as a shock to find that he had heard and knew so little about a society in the trade which had been in existence so long and had done so much good work as he found in looking up its records, and although regretting this, he felt that some of the blame must rest with the society itself in not bringing its needs and claims more prominently under his notice. He thought it was not talked about sufficiently and not known sufficiently. Here was work for the executive. The expenses of management were kept low, and were an example to many larger societies. Its reserves were well invested, and of a respectable amount, and its report and balance-

sheet concise and business-like these advantages, he felt the objects of the society should be brought more prominently under the notice of both employers and employees. Old age was one of those things that creep on us, and all present must have seen with sorrow both old men and women struggling at the bench, when they would have been so much better and happier, if able to take that rest which had in most cases been so well earned, and which this society was endeavouring to provide. He hoped all those employed in his firm would give it their generous support, and on the part of the firm he had much pleasure in handing a donation to the society, with the promise of an annual subscription to its funds. He moved with pleasure and confidence the adoption of the 76th annual report and balance-sheet.

This having been seconded by Mr. Erwood,

was carried unanimously.

A cordial vote of thanks to the hon. trustees and auditors, proposed by Mr. P. R. Aves, and seconded by Mr. R. W. Pearse, jun., was unanimously agreed to, and Mr. Frank Garret (R. T. Tanner and Co., Ltd.), the hon. treasurer, was accorded similar honours upon the proposition of Mr. W. H. Stewart and Mr. W. G. Finch.

Mr. J. Keeley, of Messrs. J. Rissen, Ltd., was unanimously elected to fill the vacancy caused upon the committee by the retirement through ill-health of Mr. C. Burton, who for thirty years had taken an active part in the society's management, and whose presence will be greatly missed by his old colleagues.

Messrs. R. W. Pearse, sen., W. H. Stewart and Thos. Hunt, retiring committeemen in accordance with rule, were re-elected.

Mr. J. J. Harward said it would be very ungrateful upon the part of the members present if they failed to place upon record their sincere thanks to, and their sense of the good work done by the committee during the past year. The success or failure of a society like this was dependent upon how they, in conjunction with their secretary, performed their duties, and the fact that those duties were entirely honorary added to the value of the work done. The financial position, notwithstanding the war, proved their foresight, and the good record of attendances, which he was pleased to see published each year, proved the interest they had taken in the good work, and he had much pleasure in proposing that they receive the best thanks of the meeting. This being put to the vote, was carried with acclamation, and responded to by Mr. W. T. Higgins, who said all the committee wanted was more work, more money, and more members. They already had the deserving applicants for the benefits of the society.

Upon the proposition of Mr. J. Hall, seconded by Mr. H. J. Mills, the secretary, Mr. F. C. Peacock, was unanimously re-elected, and in thanking the members for their renewed confidence, he gave a short resume of the aims and objects of the society, also how its members were just as deserving of support by the employers and triends as those of the larger sections of the trade, but how the fact

of their smaller numbers had always had a tendency to get them overlooked when charitable donations were about.

Mr. Frank Willmott having proposed a very hearty vote of thanks to the chairman, said it was always a pleasure to meet Mr. John Rissen, even when they were opponents for work or contracts. He was always the same genial, hearty personality, and he was sure the society would be the gainer by the interest he would take in its welfare in the future.

Mr. Rissen in a genial manner responded to the vote, and brought a very successful meet-

ing to a close.

The Paper Board Industry in Britain,

The war has brought forcibly before us the extent to which Britain has been dependent on foreign supplies, many of which might quite as well be produced in this country. The notable examples of aniline dyes, drugs and optical glass have been frequently commented on. We are here concerned with card-

board, and particularly strawboard.

For some years prior to the war a determined effort was made to establish a boardmaking industry in this country. hostilities commenced considerable progress had been made, and the total annual production of the various mills was approximately 85,000 tons. But, to quote the words of a very candid box-maker, "We did not trouble about British board while there was plenty of Dutch strawboard to be had." (The total imports of strawboards for the year 1913 were 176,526 tons). The war altered all this, and as the restriction on imports began to be felt, British board was more and more in demand. Unfortunately, the conditions that reduced foreign supplies militated also against any considerable increase of production here. Indeed, the scarcity of labour, transport difficulties, and the restrictions on machinery all tended to retard production.

One cannot help wondering what would have happened, however, had we been entirely dependent on foreign supplies throughout these last two critical years. More than half the total consumption lately has been produced by British mills, and with the increased production of munitions the Government demand for board became insistent and imperative. In spite of many difficulties these heavy demands were to a large extent met by the home sources of supply. The following list of articles of vital importance have been made from British board in large quantities, and are alone eloquent testimony to the part

played by the British board mills:—
Boxes for small arms ammunition.

Howitzer cartridge boxes. Howitzer cartridge linings. Boxes for detonators

Boxes for detonators.

Smoke boxes for high explosive shells.

Rings for high explosive shells.

Wads and washers for shells.

Fuse cylinders.

Boxes for holding fuses.
Amatol explosive tubes.
Exploder tubes.
Obturator boxes.
Components for rifle grenades.
Boxes for aeroplane components.
Military pyrotechnics.
Containers for gas masks.

Containers for holding jams and preserves (replacing tin).

Outers for carrying said containers.
Boxes for various food commodities.
Outer containers for packing small cardboard cartons (replacing wood).
Boxes for conveying provisions to prisoners

of war.

Fibre boards or wall board used for lining huts and for partitioning purposes.

To have imported all the board that was thus used would have meant a considerable additional strain on our already overburdened and much tried mercantile marine, not to take into consideration the risk of loss and delay involved in submarine attacks, and would, moreover, have still further placed us at a disadvantage in regard to rates of exchange. For the service thus rendered some measure of consideration alone is due to the board mills of this country. And it is hoped that it will not be overlooked by those who, in their anxiety to secure a cheap supply of board, are urging the immediate abolition of all restrictions on importation. Large quantities of board are said to be held up in Holland only awaiting the opportunity which will permit them to be dumped into this country at prices which cannot be expected to bear any relation to the inflated costs of production at home. If this accumulation is thus to be sprung upon the British market without any let, hindrance or regulation of any kind, the result will be a catastrophe for the board industry in this country, and in the end do no one much good. These stocks will be absorbed after a time no doubt when the countries now at a standstill begin to re-establish their industries.

The board trade, in common with many others, is passing through a crisis. The high prices from which the board user naturally desires to escape are the inevitable result of the sacrifice which this country has been compelled to make, and it is manifestly unfair to expect the British manufacturer—even before peace is signed—to meet the competition of a neutral country in which labour has remained practically at its normal supply, and which has not been shackled with all the disadvantages with which mills in this country have

had to contend for so long.

As a direct consequence of the restrictions on the importation of wood pulp, there has been an unprecedented run on waste paper—a staple raw material for the manufacture of the cheaper grades of boards—and this has reached a price, even for the lowest grades, which is higher than the cost of finished board in normal times. Coal has heavily advanced, wages have considerably increased, and every item that enters directly or indirectly into the production of board has risen abnormally—in some cases 500 or 600

per cent. Many of these factors are transient, and as things become more normal, selling prices will naturally be lowered.

But the board user naturally wants cheap board, and as he is not in business for philanthropic purposes, he is not to be blamed if he looks at the matter from his own point of view. As, however, any form of protection must come from the State, the question we have to ask is, not whether it suits any particular trade, but is it in the interests of the nation as a whole that the board industry should be saved from the effects of ruinous competition from abroad. We contend that it is, and when the case is fully considered, there is much to gain and little for anyone to lose by fostering this important branch of production.

One of the most important and most urgent problems is the ensuring of a satisfactory livelihood for the men, who having borne the brunt of four years of war, are now returning in large numbers to civil life. Great promises have been made; hopes of a better and a brighter future have been held out to them. These promises have to be redeemed. The high cost of living involves the need of maintaining at least the present rate of wages. Then there is the promise of better conditions, shorter hours, etc. It is useless to acclaim these praiseworthy ideals, and then make them impossible by allowing the foreign manufacturer to drive the home producer out of the market by means of his cheaper labour and accumulated war stocks.

The present high taxation will also be a heavy handicap to the British mills, and will tend to place them in a disadvantageous position as regards neutral manufacturers who have nothing of this sort to face, but who have, if anything, benefited by the vast expenditure of the belligerent countries.

Another and equally important matter is the restoration of our credit abroad. Before the war we were a creditor country, and could afford to import more than we exported because of the interest on capital invested abroad. Now we must curtail imports, and increase exports; produce more and consume less. Every penny spent abroad helps to increase the unfavourable balance of trade which exists against us in neutral countries. Every penny spent abroad helps to increase the price of all imported goods by raising the rate of Moreover, the world's shipping exchange. will be quite sufficiently occupied for some time to come bringing to our shores those commodities, which we are not yet able to produce at home. Why further burden it with goods which are to compete with our own manufactures?

As a great paper-using country there are vast quantities of waste paper available for which little outlet exists apart from the manufacture of board. Here we have a valuable supply of raw material, and its economic exploitation would make an important addition to the national wealth. In the past we have been satisfied to export large quantities of this waste paper, and while thus permitting the raw material to leave the country, have had

to purchase board from abroad which might well have been made at home.

Surely it is commonsense to develop an industry which is not only employing British labour, saving British gold, increasing the national wealth, but turning to account material which might otherwise be more or less lost to the community.

The full capacity of the board mills of the U.K. must now be in the neighbourhood of 150,000 tons per annum, and we may look forward confidently therefore to the time when it will be possible to supply the whole of our needs in this line from home sources, provided the foreigner is not permitted to destroy the industry by underselling, in virtue of the advantage that the war has given him.

In conclusion, we should like to deal with an argument often put forward by those who are anxious to have an unlimited supply of cheap board, viz., that a plentiful and cheap supply of foreign board enables the box-maker to export larger quantities of his own manufactures, so that what is lost by the importation of board is gained by the increased export of the manufactured article. This sounds very well in theory, but in practice the argument falls to the ground. Our export of boxes and in fact all goods made from board is very small. The total value, before the war (for the year 1913) of manufactures of cardboard, including boxes, was £110,004, so that with the imported board at its cheapest, our export trade in this line was very small indeed. Even this small figure is still further reduced in value when one takes into consideration the proportion that has been paid away abroad for the raw material, so that the net sum remaining to the credit of the country is infinitesimal compared with the large sums we pay annually for imported board. In 1913 the value of imported board was £1,644,311. It is obviously far better finance from the national standpoint to make this material at home.

FIAT JUSTICIA.

Prices have still further declined during the week, but business has not improved at all, and the position of many dealers, whose stocks of war-time papers are fairly heavy, is becoming desperate. Unfortunately, there is no immediate prospect of better business and no possible hope of selling war papers at a profit. Compensation will be found in the fact that a few months bad business does not neutralise the heavy and easy profits of three years. Excess profits may have been paid away, but that is a sure sign of excess profits that have also been made and retained. Recourse will no doubt be made to the Act which provides insurance against losses incurred in selling against a falling market. Taking everything into consideration, there The future holds good is no need for panic. promise, but will only yield its fruits as a return for high efficiency and hard work.

TESTING THE

Tearing Strength of Paper.

Adevice has been patented by Mr. Robert 0. Wood (assignor to Arthur D. Little, Inc., Boston, Mass., U.S.A.), for the purpose of determining the relative tearing strength of different classes of paper, but it is also applicto testing or measuring the tearing strength of other fibrous materials.

The apparatus comprises, briefly, an incline, amechanism travelling on the incline, and adapted to clasp a portion of the paper to be tested, a straight edge set at an angle with

respect to the incline, and means for tightly clamping the paper under it along one edge.

In the perspective view shown in the figure, the sheet of paper is shown clamped under the tearing edge 3, and clamped also at the end of the lever 61, this lever being pivoted on a fulcrum indicated at pin 7. On the side of the lever opposite to the clamping device and at a relatively short distance from the fulcrum, is a mushroom-shaped pin 9, which bears upon a rubber diaphragm 10. Behind the diaphragm is confined a liquid, such as glycerine or any suitable fluid, in the chamber This fluid communicates through a very passage with an ordinary pressure gauge the object of the fine passage being to damp the vibrations of the needle of the pressure gauge. The adjustable weights II and 12 supply inertia to even out vibrations Produced by inequalities in the paper. The gauge may be calibrated to indicate tension ounces, or in terms of classification to indicate relative tearing strength.

An average tearing strength may be determined by tearing a number sheets at one time, and dividing the reading by the number of

sheets torn.

THE Society of Women Journalists offers three Prizes of £10, £5, and £3 for the three best articles on any aspect of "Reconstruction," sent in by May 31st. No article should be more than 1,000 words. The entrance fee is 55. and the competition is open to men and Particulars from Miss Evelyn Miller, Warriculars from only Society of Women Journalists, 2, Tudor-street, E.C.4.

PATENT FOR SALE OR LICENCE.

THE Proprietor of British Patent No. 6,989/12, dated March 21st, 1912, relating to "PRO-CESS OF MAKING A CONTAINER," is desirous of entering into arrangements by way of a license or otherwise, on reasonable terms, for the purpose of exploiting the above Patent and ensuring its practical working in Great Britain. - All inquiries to be addressed to B. SINGER, 29, So. La Salle-street, Chicago, Illinois.

Replies to Box Nos. to be addressed to the Offices, "BRITISH AND COLONIAL PRINTER AND STA-TIONER," 58, SHOE LANE, LONDON, E.C.4.

Wholesale Stationers.

Active Developments Indicated at the Annual Dinner,

The annual dinner of the Association of Wholesale Stationers and Paper Merchants at Trocadero Restaurant, last week, was an extremely pleasing function, and a representative gathering assembled under the presidency of Mr. H. G. Spicer (Spicer Brothers). The number of visitors present indicated the broader policy which is now being pursued by this association in the fulfilment of its object—the enabling of members " to act as one body in matters which concern the trade generally, and to regulate trade customs so that they may effectively promote the best interests of the trade." The wider scope which the Association is aiming at was indicated by a number of visitors, among whom were Mr. H. A. Vernet (the Paper Controller), Mr. G. R. Hall Caine (Deputy Paper Controller), Mr. W. L. Tod, chairman of the Scottish section of the Papermakers' Association, Mr. Foster Robinson (E.S. and A. Robinson, Bristol), president of the Paper Bag Manufacturers' Association of the United Kingdom; Mr. F. Machin, president of the Birmingham Association; Mr. A. I. Killeen, vice-president of the Birmingham Association; and Mr. S. K. Ramsbottom, of the Manchester Association.

Excellent arrangements were made for the entertainment of the company, and the menu and programme was appropriately adorned by a picture of No. 23, Buckingham-gate, which was described as "historic Westminster." After dinner the gathering settled

down to the toasts and music.

Following the toast of "The King," Mr. W. L. Tod proposed "The Association," and spoke of the importance of a distributing medium between the papermaker and the consumer. He pointed out that the interests of the papermaker and the wholesale stationer, although not identical, in a great many respects ran on parallel lines, and they ought to try so to arrange matters that they should act with greater harmony.

The president, who was cordially received on rising to reply, thanked the members for their forbearance in the past, which was shown by the fact that they had elected him as their president for the third year. Speaking of the restrictions to which they had been subjected, he thought the stationers as a whole had accepted the situation with a good grace. He proceeded to refer to the welcome change from the late Commission to the present Paper Controller and Deputy Controller, whom they were delighted to have with them that night. Mr. Spicer mentioned that the Association was started about the year 1903, but up to the time of the commencement of the war it was not a little lifeless. It was small, unrepresentative, and, to a considerable extent, ex-But the war had brought it out, and in 1916 there arose a feeling that it should be made effective as an Association of Wholesale Stationers with a widening of membership. With their assistance he had endeavoured to organise in that direction. Much had been done, and to day they had a live association, being on the point of merging and linking up with various stationers' associations in the country, such as those at Manchester and Birmingham. They hoped in this way to form one association which could deal with the whole of the questions that were common to and which affected the trade.

Mr. Henry Godfrey submitted the toast of "The Visitors," coupled with the name of Mr. Vernet. As to the late Commission, he said that he did not know whether it committed suicide or was deservedly destroyed. In any case it was regretted by none. But from its ashes the Paper Controller arose, and they were pleased that night to offer a tribute to Mr. Vernet for the manner in which he had

coped with a complex position.

Mr. Vernet was warmly received on rising to respond. He said he had told the papermakers the other day that their case was one for sympathy rather than for condemnation, and was promptly called down by a leading newspaper proprietor, who complained that he had expressed no sympathy with the news-The fact was, that as regards the papers. newspapers, it had been possible, and had been a great pleasure for the Department, to translate its sympathy into practical acts. But the wholesale stationers were deserving of sympathy, too, and so were most of the manufacturing and distributing branches of the industry. Overseas competition, largely suspended during the war, was going to be a very important factor in the industry in the near future; consumers in this country were urging the immediate removal of all restrictions on imports; manufacturers and merchants took the opposite view. The position was exceedingly complex and difficult because, while on the one hand, consumers were unwilling to pay what they considered unduly high prices, on the other hand, when prices were reduced by the mills, they still held off until they could see how far the fall was going. That was human nature, but it did not make the situation any easier for manufacturers and merchants. (Hear, hear.)

No one could realise better than a Controller that control of an industry by a Government Department was abhorrent, not only to the industry concerned, but to every business men in the country. Thank goodness, we were still a free country, and would, he hoped, shortly recover full freedom of action in busi-

ness and industry.

Mr. A. Dykes Spicer brought the toast list to an end by proposing "The Artistes," and Mr. P. J. Machin, who had arranged the programme, Those contributing to the agreeable entertainment of the evening were—Miss Adah Rogalska (soprano), and Mr. B. M. Machin (violin).

WHEN some printers talk they don't believe a word they hear.

Co-operative Buying for Printers.

City Printers Discuss How it May be Started.

Under the presidency of Mr. J. J. Keliher, the members of the Central Districts Branch of the London Master Printers Association on Wednesday last week considered the question of co-operative buying, Mr. J. B. McAra (Messrs. McAra and Whiteman, Ltd.), initiating a discussion as to how co-operative buy-

ing may be started.
Putting before the meeting what he described as his "three acres and a cow" conception of Mr. Bennett's wide rolling prairie and full-stocked cattle ranch, Mr. McAra said: I am still enamoured of Mr. Bennett's idea; but as the stress of the high cost of labour, which is still mounting, and the rates and taxes, which we are assured have still to begin their upward tendency, it is of paramount importance that printers—especially the moderate houses-should use every means in their power to economise in their buying, and at once. It is for this reason, therefore, that I have ventured to open the ball to-night with a proposition for the incorporation of a co-operative supply association on a much smaller scale than Mr. Bennett thought desirable, and to deal with paper only as a beginning. All the arguments which Mr. Bennett brought forward so persuasively in his admirable address are germane to my pro-

Frankly, I am quite prepared at the outside to admit the purchasing ability of my scheme as well as the scope of its operations cannot be so effective as that obtained by the larger corporation; but I am strongly of opinion that it would enable us, by limiting its immediate pretensions, to tackle the scheme at once—a consideration of the first importance.

I have not had time, nor do I think it necessary at the moment, to do more than outline the suggested scheme, and in order to get down to practical politics I have set it out in the form of a prospectus, so that you may more easily criticise it, point out its weak points, and so improve it that we may be able to proceed to allotment at the earliest possible moment.

The Prospectus.

If desired, an association could be established in a manner similar to the C.W.S., with the necessary modification in the rules of membership. I have, however, followed the company idea, the genesis of which is due to Mr. Burchell in the Printers' Co-operative Wholesale Supply Co., Ltd.

Capital, £5,000, divided into 500 10 per cent. participating preference shares of £10 each, with the usual proportions payable on application and allotment. The surplus profits of the trading for each year would be divided as follows: 40 per cent. to the shareholders, 40 per cent. to the purchasers in proportion to the amount of their trading, 20 per cent. to a reserve fund to be used for further development or as may be decided upon.

Shareholders.—The shareholders would consist of printers only, and each printer, firm or corporation could only subscribe up to a limit of 10 shares, i.e., £100. Shares, of course, could be purchased from shareholders who desired to transfer, but any sale could only be made to a printer, whether an existing shareholder or not.

Capital.—The capital would be required to fit up a depôt, provide motor lorries, box carriers and other necessaries to work efficiently and to leave sufficient working capital to carry on.

All accounts in connection with the trading would be payable strictly one month.

The objects generally would be: To purchase in bulk in the best markets all the goods required by the shareholders-paper, ink, type, metal, machines and sundries of all descrip-The company would also under its articles, and if deemed expedient, be able to accept the sole selling agency for any commodity in connection with the printing or allied A depot would be established for trades. warehousing stocks purchased, thus securing the great saving in floor space in each printer's premises so ably demonstrated by Mr. Bennett. Instead of each printer wasting time worrying around he would order what he required from the depôt, and all trouble and anxiety would thus be placed on the shoulders of the expert dealing with that particular depôt, who would have all the markets and prices at his finger tips, and would deal with an inquiry at once. These are the general lines, but as paper is the main raw material of the craft, this would be the first consideration of the directors, and all the multifarious accessories of the printer would be added in due course. Shareholders would fill up a form setting out their probable requirements for the following month or for the period agreed upon. The total quantities, sizes and grades having been listed, the directors would at once make arrangements through the proper channel, for the necessary purchases to cover the gross requirements, and deliver as, and when required. Where possible deliveries would be made direct for a customer's immediate use, without passing through the depôt. In certain fixed grades and sizes which are readily marketable, the depot would maintain special stocks so as to be able to supply at once to meet urgent requirements. This holding of stocks could be extended as experience guided, and the needs of the shareholders warranted.

Exchange and Exhibition.

As complementary to this, it would be arranged that a form of exchange or exhibition would be held at the depot once a week, but instead of sellers meeting buyers - as is the custom at present—our own experts would obtain from suppliers samples of current or special lines, which would be set out on tables provided to enable shareholders to inspect regularly what was being offered as new lines or special bargains, and thus readily select what suited them. So many manufacturers and traders are adopting this form of exchange for meeting their customers and to facilitate barter, that it would be a great assistance to the printer to keep in touch personally with the markets, so that he might be able to secure lines and ideas that he might otherwise miss. This exhibition is capable of wide extension and development and special rules would be drawn up to cover the activities of the weekly fair. It might be conceded that printers who were not shareholders could also buy through the depôt, and participateout of the 40 per cenf. surplus profits referred to-to the extent of 20 per cent of the amount available in proportion to the value of their trading.

Profits.-It is impossible, of course, to ao more than suggest the amount of the distribution, but assuming that fifty printers took up their limit, the purchasing capacity of these fifty printers would be in the region of £ 100,000.

By buying in the large quantities required, special terms could be arranged with the mills which could not be obtained by private purchasers, the middleman's profit would be eliminated, and the sale price from the depot would be based on the lowest merchant terms, which would give an advantage to the smallest purchaser among the shareholders. This sale price would be settled by the directors at the beginning according to the data at their disposal, and could be revised from time to time as expediency dictated. Any extra margin available would naturally be reflected in the annual distribution. Believing that the amount that has been made out of paper to take one item only-has not been small, I think I am conservative in putting the figure at 10 per cent. as the gross profit which would result on a trading turnover of £100,000.

I estimate that the cost of running the depôt would be approximately £4,000 per annum, leaving a net balance of £6,000 to be divided.

shareholders. The preference would absorb £500; the balance of £5,500 would give, taking the allocation of 80 per cent. ...

£500 Half to preference shareholders, £2,200 2,200

Half to purchasers 20 per cent. to reserve 1,100-5,500

£6,000

So that on a shareholder's subscription of £100 he would get an annual return of a little over 50 per cent., his proportion on the basis of his purchases, and all the advantages of having his buying carried through for him by experts without personal worry. If, however, his return was considerably less than the amount stated, the benefits and the returns would be worth the investment.

I think I have indicated the general lines on which the company would run. There is a good deal of detail to limn in, but I have merely placed before you material to initiate a discussion upon the broad question: whether it is expedient to wait the fruition of the larger scheme, which offers fascinating possibilities and potentialities, or whether the time is not more propitious to start at once, but on a smaller scale. I am only anxious that either scheme should proceed to completion at the earliest possible moment, and leave the matter now for your consideration and criticism.

DISCUSSION.

The president thought if a scheme could be carried out successfully it would be of great advantage to master printers, and the chief difficulty he saw was the amount of confidence they would have to place in the experts of whom Mr. McAra spoke.

Digitized by Google

Mr. Hammond saw great possibilities in the scheme, but he thought profits ought to be divided amongst the purchasers in accord-

ance with their purchases.

Mr. Harris (Romney Press) mentioned that the war had taught printers a good deal more than they knew before about paper, and he believed the scheme was workable. trade had lacked confidence in the past, and prejudice among printers had been their undoing. Now they had to exercise confidence in one another.

Mr. Crowle-Smith (Messrs. Hazell, Watson and Viney) said this was one of the things which had to come, although he was not in agreement with Mr. McAra's scheme. first essential was that small master printers should be placed in a position in which they could buy cheaper. Larger firms who bought big quantities would get pretty low figures. To constitute an independent company would be a great mistake, because the mills and the paper merchants would be against it. He thought they ought to find enough friends to have a department open at 24, Holborn, which they did not use anything like enough. He pointed out that they must have a good buyer, and then he insisted that they must not launch any scheme which would not help the small printer. They had too many which had been almost exclusively for the benefit of the large firms. If the finance was guaranteed by one or two large firms, the small man need not find any capital.

Mr. Hammond spoke of the advantage to be gained by massing small orders together, and Mr. Harris complained of certain customers who expected master printers to warehouse paper for them.

Customers and Their Paper.

The president mentioned that catalogue printers had expressed alarm at the movement amongst customers to buy their own papers, and in several cases where this had been attempted printers had refused point-blank to quote. (Hear, hear.)

Mr. O. G. Poulson (Messrs. Warrington and Co.) recalled that the original scheme entertained the idea of holding stocks from which the printer could draw, and so save his warebouse room. That would involve a considerable amount of capital, and he did not see how it could be operated from 24, Holborn.

Mr. Pritchard asked what would happen if the Federation buyer was the only buyer, and asked if the mills would not form a ring

against him.

Mr. Hammond added that if they could buy at a lower price outside the scheme, then he thought the scheme would have to be given up, but if the scheme was properly made known the orders they could place would be so attractive that the mills would give them very favourable terms.

Mr. Harris suggested that if the scheme had been in operation before the war printers would have been able to see that they got their proper proportion of paper during recent years, instead of the newspapers getting it.

Although Mr. McAra was in favour of the wider facilities allowed under Mr. Bennett's scheme, in order to ventilate further the question of "co-operative buying" and to raise discussion to a definite issue on the broad question, he elaborated the idea of starting on a very much smaller scale so that the difficulties might be more clearly understood as compared with the larger conception.

Several speakers criticised the high prices which have been charged for paper, and the president intimated that if paper was free there were sufficient raw materials at the disposal of the mills to bring down paper imme-

diately.

Mr. Bennett's Views.

Mr. Albert Bennett (Messrs. James Truscott and Son) who described the subject under discussion as a very important one for the printing trade, traced the inception of the scheme and covered much of the ground dealt with in his address which appeared in our issue of February 13th. Some people had said that the mills would not take their orders, but he emphasised the point that they did not want to shut the door to any manufacturer: what they wanted was that the manufacturers should the do best . they could for the printers. He had asked Mr. Bolton (Messrs. Morris and Bolton, Ltd.), who was present, whether he would take an order to run off five tons of 2s. black, or whether he would prefer to take his order in dozens, and Mr. Bolton's reply was, "It wants no answer." Of course it would be to the advantage of the manufacturers to turn out a large order. And so master printers, by placing orders of sufficient magnitude, would get the same advantage as a printer gave for a large order for circulars. Referring to the sore point of a publisher's filling the printer up with stocks of paper, Mr. Bennett said he thought the scheme would enable them to supply customers more reasonably than they could supply themselves, and he thought they would be able to give a mill an order which would extend over practically twelve months. He added that neither collective buying nor any other form of buying would compel him to pay more for goods than was their value in the open market. Mr. Bennett went on to speak of the advantage of standardised papers, and the economy which would ensue.

In answer to a question, Mr. Bennett said a small committee of the master printers had been sitting on this matter, but they felt that until they could get a consensus of opinion from the trade it was not politic to go any further at present. He did not think there would be any difficulty in getting a scheme

going

Mr. Hammond suggested approaching the whole trade on the matter and getting statistics to show what amount of business such a co operative body would be likely to handle.

The Next Step.

The president mentioned that the Organisation Committee of the parent body had for some time felt that they ought to be able to offer greater inducements to master printers to join the Association. One of the steps in this direction had been to approach the

Digitized by

blockmakers, to whom it was proposed that printers should be placed on better terms than private buyers. He suggested that the views expressed at that meeting be placed before the Organisation Committee by Mr. McAra and Mr. Bennett, and this suggestion, on the motion of Mr. Poulson, seconded by Mr. Mould (Macaire, Mould and Co., Ltd.), was adopted.

The meeting proceeded to discuss informally the subject of the recent hours and holidays agreement, Mr. Hammond pointing out that customers were getting very restive at the continual increases in charges, they going so far as to suggest that there was a conspiracy between the unions and the employers.

The president explained in detail the difficulties with which the employers had had to deal, and his explanation convinced Mr. Hammond that everything had been done to make good the case of the master printers.

Mr. Hammond thought it would be useful if an explanation such as Mr. Keliher had given could be placed before the users of print, say at a meeting at Stationers' Hall.

Caxion Convalescent Home,

The annual meeting of the governing board of this institution was held on Saturday last, at St. Bride Foundation Institute, when Mr. C. J. Drummond, J.P., presided over a very representative gathering.

The annual report, presented by the chairman, showed that the Home had been well supported during the past year, on which the subscribers were to be heartily congratulated. Income had reached £2.261 38. 6d., against £1,521 6s. 9d. in 1917. Four beds had been endowed in the names of the Daily Telegraph, News of the World, London Society of Compositors, and Eyre and Spottiswoode employees, the latter being a war memorial bed. Patients had increased to 223, and included fourteen men who had been discharged from His Majesty's Forces. Women patients had more than doubled compared with the previous year.

The treasurer (the Right Hon. C. W. Bowerman, M.P.), seconded the adoption of the report and balance-sheet, which, after a short discussion, was agreed to. The committee and officers for the year were appointed, vacancies being filled from members of the board present at the meeting.

It was also reported that donations to the War Memorial Fund had reached £1,400, and that a further £500 had been promised. It is proposed to proceed with the work of the new wing at an early date. The treasurer of the Fund is Mr. C. W. Bowerman, M.P., to whom donations may be sent.

Societies and firms who have not already sent in their lists of fallen officers and men, to be incorporated in the Roll of Honour in connection with the printing trades' memorial, are invited to communicate with the hon. secretary, at 3, Cursitor-street, E.C.4.

Printers' Managers and Overseers

Mr. E. Berryman, the president, was in the chair, at the "Old Bell," Holborn, on March 4th, and in spite of the inclement weather there was a fair gathering. The following new members, having been duly proposed and seconded, were elected:—

Mr. Frank Bridges (H.M.S.O. Works, Harestreet, Bethnal - green, E. — assistant superintendent printing works).

Mr. F. C. Burton (Messrs. Love and Malcomson, Dane-street, Holborn, W.C.—composing).

Mr. ERNEST DAW (Hants Advertiser Co., Southampton, letterpress—machine).

Mr. H. LANE (Messrs. Suttley and Silverlock, Ltd.—works manager).

Mr. H. A. Perry (Messrs. McAra and Whiteman, Ltd.—works manager, letterpress).
 Mr. H. E. Ranson (Messrs. Page and Pratt,

Ltd.—composing).

The meeting then became special for the purpose of dealing with rules relating to the delegate meeting, the president remarking that the alteration of rules was necessitated by an expressed desire to cut down expenses in connection with the conferences, the idea being that instead of holding a conference every year, it should be held every two years. On behalf of the Council, Mr. Movce moved the following proposed amendment to Rule 19, and the addition of a rule governing the united gathering.

19. DELEGATE MERTING.—A meeting of delegates from the Parent Association and the Provincial centres shall be held in alternate years, each being represented by two elected delegates. The president of the Parent Association (or in his absence the vice-president), with the general secretary, shall attend as exofficion members. A special delegate meeting may be called at any other time, in case of necessity, either by the Parent Association or by a request from centres representing a majority of the Association. The meeting shall be held in the month of May or June, at the place at which the united gathering for the year is to be held.

ANNUAL UNITED GATHERING. — A united social meeting of members and friends shall be held annually, at such place as may be from time to time determined, in the month of May or June of each year.

There was also a consequential alteration

to the last paragraph of Rule 7.

Mr. Moyce, in moving the amendment, referred to the Manchester proposal to halve the delegates at the conference, which had the same object as the present amendment namely, a reduction of the expenses. In the pre-war days travelling arrangements cost between £40 and £50, but the last conference cost roughly about £70. It was a question for the members to consider, whether it was worth the expense of holding an annual conference upon those terms. He did not like the

Digitized by Google

principle of halving the delegation, and the difficulty would be overcome by having the conference each alternate year. With regard to the annual united gathering, they knew that there was a desire that those very pleasant gatherings should be held, and it was suggested that these be continued now that the war was out of the way. Mr. Moyce also proposed that the proposed amendment be sent forward to the centres for their consideration, and Mr. Bateman moved an amendment that the conference should only be held once every three years, which he thought would be sufficient. He pointed out that if there was any question to be considered they could readily call a conference.

There being no seconder to this amendment, Mr. Blackwell proposed a further amendment that the conference be called only when the necessity arose. He claimed that the points which came up at those conferences were very few, and the matters which did arise had already been discussed by the different centres. Mr. Bateman seconded this amendment.

The general secretary pointed out that if conferences were called whenever the necessily arose, it would mean, perhaps, that these would be held more frequently than at present, as a year never passes unless alterations of rules are submitted to the Parent Association, and then forwarded to the centres, and as these suggested alterations were seldom unanimous, he considered it advisable to have a definite rule.

The amendment was lost, the Council's re-

commendation being carried.

In the place of Mr. Jackson, now a member of the Council, and therefore not eligible as auditor, Mr. Freeman was elected to serve in that capacity with Mr. Blackwell.

The president called attention to Sapper A. W. Barltrop, until recently secretary of the Brisbane Printers' Overseers' Association, and extended to him a very cordial welcome.

Mr. Barltrop, in acknowledgment, mentioned that the London Association was certainly on a bigger scale than they were in Australia, and he would carry back with him reports of what they were doing. They had not yet thought of conferences between States, but he hoped they would be able to get more in touch with one another and spread a knowledge of the printer's craft. Mr. Moyce, in adding a word of welcome, mentioned that the general secretary (Mr. Phillips) would be glad to enter into correspondence with any similar body in Australia and to reciprocate literature. The president remarked that he was afraid that conferences in Australia would entail rather heavier travelling expences than they did in this country.

Mr. Vincent Pitman had a resolution on the agenda with regard to representation on the Industrial Council, and the president, in calling upon Mr. Pitman, mentioned that members considered that an association of that character was fully deserving of a place on the Council. In that connection, the general secretary had written to the Ministry of Labour, urging their claims, and Mr. Phillips

had been asked to attend at the Ministry for the purpose of an interview. Mr. Pitman then moved, "That this meeting of the P.M. and O.A. respectfully urge the claims of the Association for representation upon the Industrial Council of the printing trade.

Mr. Pitman said the resolution did not go far enough for him, but it was a compromise. He thought, generally speaking, they had not made any great effort to obtain representation on the Industrial Council, which, apparently had still to be formed, in spite of two years of talking. All that had happened was that a provisional constitution had been put forward, but he did not know how far it had been accepted, and he did not know that it pleased One vital thing in the constitution was that it did not suggest any way of appointing representatives of the trade, and to cut that Association out was the height of absurdity. The masters regarded overseers as their employees who were to carry out their instructions, and the trade unions said they did not know where they would sit at the Council. Rather than respectfully urge their claims, Mr. Pitman thought they should demand to be represented as a right. He showed that during the war the strain had been upon the shoulders of the overseers, and if there was a "row" in any establishment the employer passsed it on to the overseer to settle. But when it came to an Industrial Council they were told there was no place for them. They did not ask for representation from any hostile motive; they were out to obtain better conditions in the trade.

Referring to paper prices, Mr. Pitman said there had been gross profiteering in paper during the war, and printers were suffering from it now. He referred to the meeting of papermakers and wholesale stationers which had taken place last week, which had suggested a joint committee to go to the President of the Board of Trade and ask him to put a tariff on all foreign paper. Mr. Pitman went on to criticise the attitude adopted by the paper makers and the wholesale stationers. He said the value of stocks and the prices they were sold at were dead against the interests of the printing trade and the consumer, and that was one of the things which was causing industrial unrest. It was a reason, too, why overseers should sit on the Industrial Council, and from a position midway between the trade union and the masters they should have a voice in saying what was beneficial to the trade and what was not. He mentioned that if catalogues and circulars and so on were made very much dearer, because paper was dearer, there would be less work of that kind required, and they would have unemployment in the future. No one in the trade unions was taking a serious view of the position. He argued that the overseers were asked to keep out of the provisional constitution because they might disturb the harmony if they pressed their claims at the moment, but he maintained that there was no harmony, and he could not therefore disturb it. No one was happy to-day, and industry generally

was in a precarious position. He added that the provincial representatives were equally interested in this matter, and if the resolution was passed, he should want to nominate a London member and a provincial member for the National Council. He had been told they might sit on the District Council, the National Council being too big for them, but he had not seen any desire to set up a District Council or a Works Committee, and as to co-optive members, he did not think they had any earthly chance of coming in there. Mr. Pitman thought they ought to fortify the general secretary in soing to interview the representative at the Ministry of Labour, and he pointed out that overseers were senior members of the trade, having spent their lives in it, and having had to study it more than either the masters or the trade union representatives. As technical men they had a right to advise in the control of their trade, and he thought that if they insisted upon that they would get it. Mr. Pitman dwelt upon the aims of labour and the conditions in many printing offices, some of which he described as "filthy" and lacking materials.

Mr. Whittle suggested that if the overseers did get representation on the Industrial Council, they would have to range themselves on one side or the other, and they would be much in the same position as they were in regard to the "chapel."

Mr. Freeman failed to see how they could get on to the Council at the present moment, though they might if they were a trade union.

Mr. Moyce, who seconded the resolution, said he did so because he wanted to see this matter sent forward to a conclusion. thought that in a properly constituted Industrial Council the manager and overseer should have representation, though as the Council was at present constituted, the words, "I don't see where you can sit " were still logical. At present the two sides sat opposite one another, as if they were negotiating a strike, and that was not the way to reconstruct industry. With increases in wages and increases in cost of living, Mr. Moyce pointed out that the workman was only in a relatively worse position that he was before. If, however, they could not improve the position of the worker in that way, then the only remedy was that the employer, at some point or other, had got to relinquish some part of his profits. Mr. Moyce recalled that he took the first step towards obtaining representation on the Industrial Council, and complained that the Board of Trade, which had asked employers and employees to form the Council, had not approached that Association on the same terms as they had others. However, he thought if it was only for their own satisfaction they should press for representation on the Industrial Council, whether they got it or not. As to there being any inlet to the Council, the fact that the Ministry of Labour referred the application of that Association to the two bodies who were to constitute the "Betterment" Council showed that the Ministry thought there might be a place for them.

Mr. Acton supported the resolution, and

said they had to look on that matter from the point of view of citizenship rather than from the point of a trade organisation. He said that they had to realise that labour would not permit profiteering and go about hungry. He said he thought that Association had an honourable position to take up on the Industrial Council as a safety valve.

The president said they looked upon representation on the Industrial Council by the Association as a right. If their position in the trade was sufficient to warrant their assistance on the Council being of value, the request should have been sent to them, and the neglect to do so was a slight upon every overseer in the country. He pointed out that a qualified overseer in every properly constituted office had a supreme influence, and although they were not publicly recognised, they had great influence in the printing trade, an influence which had always been exercised for good.

The resolution was carried unanimously, and the meeting terminated.

MANCHESTER & DISTRICT CENTRE.

At the meeting of this Association, held at the Crown Hotel, on Saturday last, Mr. J. H. Nuttall, president, occupied the chair, and the secretary read the minutes of the February meeting, the same being afterwards passed

meeting, the same being afterwards passed.

Mr. R. Bates sent in a letter resigning his seat on the technical committee, owing to lack of time to thoroughly carry out his duties. The secretary was requested to write Mr. Bates, and convey the member's regret at the cause of his withdrawal from office; also, to accept their thanks for his work on the committee from September, 1916, to date. Mr. Robert Marshall was unanimously elected to the vacant post.

The secretary was instructed to thank Mr. J. R. Riddell, principal, St. Bride Foundation Printing School, for the useful literature he had supplied to the Centre.

The recommendation of the Council that Mr. H. J. Griffiths, lithographic overseer, with Messrs. Marsden and Co., Ltd., Manchester, be admitted to membership was unanimously confirmed.

It was decided, nem. con., that the April meeting be held at the new headquarters, Old Swan Restaurant, Pool-street, Market-street, on April 12th.

Mr. G. W. W. Paterson continued his paper on "Printing: Production and Payment," and afterwards an interesting discussion took place. Web MAC.

A RECIPE FOR PRINTERS.—To each pound of invested capital, add several ounces of book-keeping, a generous quantity of service, a goodly portion of advertising, and a great big dash of enthusiasm. Then stir. Don't leave any of these ingredients out, and be sure not to forget the enthusiasm or the advertising.

LONDON

Printers and Industrial Unrest.

Mr. J. J. Keliher presided on Wednesday last week at the monthly luncheon of the London Master Printers' Association at the Holborn Restaurant. He mentioned that Lord Burnham was unable to attend on that occasion as he had left on the previous evening with General Pershing for the front. They were, however, fortunate in having in his stead Mr. Harry Dubery, of the National Alliance of Employers and Employed. Mr. Dubery had recently been along the lines talking to the soldiers about industrial pro-

blems at home.

Mr. Dubery gave a very interesting address. and presented some instructive psychological studies of democracy. He pointed out that the soldier who had been at the war knew nothing about short hours, and he knew nothing about the agitations for lower wages and shorter hours. In his talks to these men, he told them that in order to pay high wages wealth must be produced, and the question of high wages was wrapped up in that of high output. Dubery referred to the argument that shorter hours would lead to a larger absorption of demobilised soldiers as an apparently logical statement, but the people who used that argument at the same time urged that a reduction of hours in this country had invariably been accompanied by an increase of out-Those who listened to those two statements apparently did not realise that if the same rate of output was maintained in a reduced number of hours it was impossible to absorb a single unemployed person. (Laugh-The speaker went on to show the effect of high prices on all purchasing. As prices steadily rose there was obviously a con-Striction of demand; for instance, if pianos were £100 each not very many would be sold, but if they were to be had for £5 there would be one in every alley. From the standpoint of the working classes and of the employers also, the question of steadily increasing business must obviously be a question of increasing demand. It should be ordinary commonsense in industry for employers to augment business with the intention of giving highest wage that the industry could stand, in the sure and certain knowledge that the working classes would spend, in ninetynine Cases out of a hundred, every cent they carned; and to the extent that they got it to demand was increased in every direction Mr. Dubery went on to speak of the effect of socialist propaganda upon the masses, and pointed out that socialists had largely at liberty to disseminate their feaching during the war, while other influences had been engaged elsewhere. The greatest need in the country to day, he said, was that the best men should put duty before Personal gain, country before class, and pull sether with a will to free the country from

its present difficulties. The energy which was evident in the present unrest, he thought, could be made to serve a useful end, if it was

only properly directed.

Mr. T. W. McAra, secretary of the Newspaper Proprietors' Association, proposed a vote of thanks to the speaker, and declared that the great majority of the working men were sound. It was the minority who were the most vocal, while the quieter men stood aside but got some of the advantages which The trouble the others were able to secure. was that decent men on both sides could not be brought together in such a way that they were able to see each other's point of view as they ought to see it; and Mr. McAra referred to the committee to which Mr. Blades belonged, which was now trying, by an exchange of views, to bring about a better atmosphere which would help to get rid of a good deal of suspicion existing between class and class, as it was called. What they wanted to feel was that the average working man realised that the welfare of the country was of just as much importance to him as it was to the wealthiest man in the land.

Mr. F. Gray, chairman of the Bookbinders' Association, seconding the resolution, said he thought that both masters and men had suffered in the past from bad economics. men had not earned sufficient money and the masters had not earned sufficient profits. One could not go on without the other. prosperity of a nation depended upon the masses, and not upon any particular class of individuals. Mr. Gray approached the question of how it was possible to expect to obtain a high endeavour from the workpeople when there were some hundreds receiving out-of. work pay at any particular time. It was all very well to try and obtain the utmost output, but the fact was that when the output increased many men were thrown out of work, and then they were up against a very great difficulty. Distress and unemployment had a great effect upon the average intelligent workman. Mr. Gray hoped that they would be able to arrange for reducing hours in order He thought the to meet the seasonal work. week's holiday which had recently been arranged would have good results.

FORTY-EIGHT HOURS' WEEK IN THE ENVELOPE TRADE.—The English districts of the Employers' Federation of Envelope-Makers and Manufacturing Stationers have issued a circular to all members, recommending them to put into immediate operation in their factories the 48-hours' week. This decision was arrived at without any urging on the part of the workpeople.

A TABLE in the Board of Trade Journal, dealing wirh enlistment percentages, shows that in July, 1914, there were 261,000 men employed in the printing and kindred trades; of these, 135,000, 01 51.8 per cent., joined the forces during the war. The estimated number employed in these trades in July, 1918, was 150,000, or 40.4 per cent. of the number in 1914.

Current Topics.

Grumbles from the Small Printer.

PRINTING, like every other trade, is passing through a period of extreme difficulty, which arises from a variety of causes. All firms have done pretty well during the war, but now that the large Government work has ceased there is nothing like the same amount of pressure on the press. One hears now a good deal of grumbling from the smaller men, who are somewhat resentful of the competition in commercial printing which is coming from the large printers, who, they consider, have done so well out of the big Government war contracts. The large firms, it is complained, are sending out travellers on to the road in competition with all and sundry. There could be no objection to this course if prices were presented on the same basis, but

this, it is said, is not the case. For certain work, no doubt, large firms are able to quote at a lower rate: on the other hand, the small printer has the advantage in the matter of rent and local charges. A case was receutly brought to our notice in which the local printer put in a tender for postal work, when he was told that similar estimates had been obtained from a large house, the price in the latter case being very little more for 2,000 posters than the local man was able to charge for 1.000. When attention was called to the matter the local man was informed that he had not allowed himself sufficient profit, and the reply to an inquiry with regard to the estimate of the large house was that it was an office mistake. However this may be, the small printers are still anxious as to how they stand in competition with the larger firms. and it is being argued that if unreasonable competition is to be resorted to the condition of the printing trade will become no better than it was before the war. It is recognised, however, that the trade has reached a very much higher level generally than it has ever occupied before, and that there is an exceptional opportunity of giving it the dignity which it ought to possess. It rests with the leading lights of the trade to adopt a broadminded policy, and for all members to abide loyally by one another.

The Forty-Eight Hour Week in America.

THE shorter working week demands are not confined to this country, for labour all over the world is restive, and determined to have a fair share of leisure for recreation or amusement. All over the United States strikes are taking place for a shorter day, and the workers demand a forty-eight hour week with the same wages as were paid for the week of fiftyfour hours. The employers seem to have no objection to shortening the hours of labour, but they do object to pay the same wages as for the longer week, and this is the cause of many of the strikes that have occurred. Unfortunately for both employers and employed trade is slack at present, and unemployment is increasing steadily, so that the prospects for the shorter week are not so rosy as might be expected.

A Shorter Week for France.

In France, too, the forty-eight hour week is desired, and a Bill for the general application of the eight-hour day principle to all industry and commerce has been sent back to the Labour Commission (Commission du Travail) for examination. By the terms of this proposition the working day of the

workers, men and women, in the factories, workshops and public or private works should not exceed eight hours of effective work, and the weekly holiday prescribed by the work code should include, in addition to the Sunday, the Saturday afternoon. The application of these rules in no case entails any loss in wages. No derogation from these rules is permitted except by decree of the Minister of Labour, after an agreement between the workmen's and masters' unions in the trade and district interested. Le Courier du Livre says that as a result of this manifesto, the heads of the masters' union of the Seine district, together with a large number of the heads of the masters' unions of the various departments, assembled, to the number of about 300, the other day, at the Paris Chamber of Commerce, to study the question. After discussion, they decided to draw up a letter and send it to the authorities, giving the reasons which, in the majority of trades, would render the institution of the eight-hour day impossible. In Italy, the principle of the 48hour week has been conceded, and will be applied before May 1st to mechanical industries, and before July 1st to continuous trades. The details are to be settled by a mixed commision.

Export Trade Difficulties.

SIR,—I am connected with two manufacturing concerns, which wish to renew their pre-war trade with merchants in neutral countries; but are practically prevented by Government restrictions. It looks as though the purpose of the War Trade Department was to hamper British manufacturers until the Germans have had time to organise and occupy these markets.

I should like to say, to begin with, that the goods in question cannot be used for food, or in the production of food; they are not of use as raw material or munitions of war: ninetenths of their value is represented by British labour.

In one case, a consignment of goods (for export to Spain) has been held up by the Government for three months because some precious detail of red tape had not been carried out. These goods had been accepted by the post office (a Government Department)—even registered—for dispatch to Spain, but are apparently now confiscated. We shall probably lose our customer, which is more important than loss of the goods. A Spanish merchant who cannot rely upon us to serve

him, will buy from the United States or Germany, or someone who can treat him decently.

Reanother line of goods which we wish to export to Norway and Denmark. We are told that we must first get from our customer, Merchant Guild Certificates. As indicating the difficulties under which we are trying to do business, allow me to explain the process. You have an order, let us say from Denmark, for calculating machines (really coin-counting machines, but I wish to avoid the suspicion of seeking publicity) you ask your shipper if he will take the goods; he tells you that you must first obtain a licence from the War Trade Department.

Your first step is to get the forms—this may take you a week (a Government Department always takes four or five times as long to reply as a business house would)—you are provided with a booklet referring to a "Royal Proclamation of May 10th, 1917, and 34 Amendations," all set out in detail. These are further modified by Orders of Council, October 1st, 1918, and further Amendations. Then follows a list of goods which may, or may not, be exported, or which may be exported to some countries and not to others. You look for your class of goods in the list. They are, of course, not there This voluminous list (with two or three appendices) has included in it such things as dari, dhol and mungo, but not calculating machines. However, you think it will save time to apply at once for a licence, but before you can do this. you must get your goods in their boxes, or at least ascertain their net and gross weight, and the measurement of the boxes. With this, you must give pages of information about yourself and your oustomer, describe your business, how long established, nature of consignees' business and other details as set out in a sheet of instructions of some 2,000 finely printed words.

After you feel that you have some insight into this tangle of red tape, you send in the application. You then wait patiently for about a fortnight and receive a printed letter (probably filled in by a junior clerk in the Government department) informing you that you must obtain from your foreign purchaser a Merchant's Guild Certificate from the country in which he resides.

So you must write to your customer, confess that England is under blockade as far as trade with neutrals is concerned; get him to go to the trouble of supplying you with the necessary documents and then begin all over again with the War Trade Department. This process will probably occupy three months—your customer may lose patience and cancel the order. In any event, he will welcome the German manufacturer of calculating machines who, you may be sure, will not be hampered by his Government officials.

We are taking back returned army men, and hoping to find places for others of our old employees who enlisted, but shall have to turn them down if these foreign markets are practically closed to us.

Yours, etc., Chas. L. Burdick.

London, March 10th. 1919.

BANKRUPTCIES, etc.

RE FREDK. A. JESSETT (tourist guides publisher).—This bankrupt, who carried on business at 5, Staple-inn, Holborn, applied on

Digitized by Google

March 7th, at the London Bankruptcy Court for an order of discharge. The official re-ceiver reported that the failure occurred in July, 1918; the provable debts amounted to £1,127, and no assets were disclosed. The bankrupt commenced business in November, 1906, as a tourists' agent and a compiler and publisher of tourists' guides and directories. He sold the business in July, 1907, to a company, receiving £2,000 in shares and £75 cash, and acted as joint managing director at a salary of £312 per annum. The bankrupt attributed his failure to the non-success of the company; to liabilities incurred as guarantor for another person, and to want of capital. grounds of (1) insufficiency of assets to equal ios in the £ on the amount of the unsecured liabilities, and (2) ommission to keep proper books of account, the discharge was suspended for two years. Order entered accord-

Gazette.

A WORD OF CAUTION.

[In giving the official Gazette information, it must be in giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIP DISSOLVED. Trott, A. J., and Fitzgerald, H., trading as the Bournemouth Graphic Publishing Co., publishers and advertising contractors, Rich-

mond - chambers, Bourne - avenue, Bournemouth. Debts by H. Fitzgerald, who will continue the business under the same style. March 6th.

DISTRIBUTION OF ASSETS.

Smith, F., formerly trading as Smith Brothers, printers, Chester Gate Mill, Macclesfield. Claims by March 31st, to H. E. Smale, King Edward-street, Macclesfield, solicitor for the executors.

THE BANKRUPTCY ACT, 1914.

NOTICE OF INTENDED DIVIDEND. Ady, C. E., 48, Whitechapel-road, London, E., journalist. Claims by March 21st, to E. L. Hough, official receiver, Bankruptcy Buildings, Carey-street, W.C.2.

ORDER MADE ON APPLICATION FOR

DISCHARGE. Brockes, E. A., trading as the Paper Pattern Co., 24, Albert-road, Southsea, Hants, dealer in paper patterns, etc. Date of order, January 16th. Discharge suspended for two years.

PUBLIC EXAMINATION.

Thornton, J., trading as Thornton Brothers, Grove Mills, Heckmondwyke, Yorks, rag merchant. Examination previously adjourned sine die, April 1st, 10 a.m., at the County Court House, Dewsbury.

Trade Notes.

THE Editorial Office of the Board of Trade Journal has been removed to 7, Whitehall-gardens, S.W.I, to which address all communications should now be sent.

"REVEILLE," the quarterly edited by Mr. John Galsworthy and devoted to the interests of the disabled soldier and sailor, stops publication with the present number.

We regret to announce the death, at Fulham, on Tuesday, of Mr. Harry Findlater Bussey, a journalist well-known in Fleet-street. Mr. Bussey was 86 years of age.

The Cologne Post is to be the name of the new daily journal for the benefit of our Army of Occupation on the Rhine. It will be printed at the offices of the Cologne Volkszeitung.

The Amalgamated Society of Engineers are considering a proposal "to establish a weekly paper in order to extend the society's propaganda among the workers engaged in the engineering trades."

The death has taken place of Corporal Albert O. Detloff, eldest son of Mr. Henry Detloff, of the Finsbury Press, Ltd.. The deceased gentleman was 29 years of age, and was at home on leave after suffering from the effects of service in France.

A HANDSOME calendar has been issued by Messrs. Perkins, Bacon and Co., engravers, printers, etc., Southwark-bridge-buildings, S.E. The calendar is a splendid example of engraving work, and is mounted on a cut-out card (17½ by 13½ inches), the dates being on monthly tear-off sheets.

The printers in the Government Bureau at Ottawa to the number of 100, have struck for higher wages. They demand 20 to 26 dollars weekly, instead of the existing rates of 18 to 24 dollars. Government printing has, therefore had to be done by mimeograph. It is reported that the bureau is "scandalously over-manned and inefficient."

The death has taken place of Mr. Leonard Upcott Gill, who was the builder of one of the most extensive printing and publishing concerns in London. Mr. Gill was born on November 7th, 1846. He was educated at the City of London School, and joined the staff of his uncle's papers, the Queen and the Field, and when the Bazaar was started in 1868 he was appointed manager and editor, and was also manager of the Country. He was a member of the Institute of Journalists, and had been chairman of the Master Printers' Association.

THE PRINTING CRAFTS GUILD—On Saturday last, at the Manchester Municipal College of Technology, Mr. F. M. Rowe, M.Sc., A.I.C., lecturer in dyestuffs at the University of Manchester, showed in experiments the manufacture of dyestuffs and their properties. About a seventy members were present, Messrs. R. B. Pishenden, M.Sc. Tech., John Taylor, C.

Doughty, T. Rignall, and several others took part in the discussion which followed the demonstration.

NOTICE is given by the Minister of Labour that he intends to make an Order applying the Trade Boards Acts to the paper bag trade.

THE funeral of Mr. William Lotinga (at one time "Larry Lynx," of the *People*), took place on Saturday morning at Putney Vale Cemetery. Over 50 floral tributes were sent.

THE Accrington Observer and Times of Saturday last contains a special article on spring fashions, including smart, well-drawn designs, flanked by neatly displayed fashion advertisements.

The death has occurred, after an illness of several months, of Mr. George H. Tanner, a well-known Darlington journalist. Mr. Tanner went to Darlington 20 years ago as chief reporter for the *Darlington and Stockton Times*, which position he held until his death.

The first number of Ways and Means, Mr. Ernest J. P. Benn's new weekly paper, makes a good show and is filled with matter of moment and interest for the times. Among the contributors are the Rt. Hon. J. H. Whitley, M.P.; the Rt. Hon. J. R. Clynes, M.P.; Sir George Paish, and Sir Daniel M. Stevenson, Bart.

BELFAST.—We regret to announce the death of Mr. William Whyte Cleland, which took place at his residence, Osborne Park House, Belfast. The deceased was in his 81st year and had only been ill for ten days. He founded the printing firm of Messrs. W. W. Cleland, Ltd., Cullingtree Factory, Belfast, of which he was the principal.

TENDERS WANTED.—The Commissioners of H.M. Works invite tenders for the privilege of selling newspapers, periodicals, novels, etc., at the kiosk outside the Royal Courts of Justice, Strand, W.C., for one year; forms of tender from the Director of Contracts, H.M. Office of Works, Storey's Gate, S.W.I.—Tenders are wanted by the Urban District Council of Waterloo-with-Seaforth for the supply of printing, books, stationery, newspapers and magazines; particulars from Mr. John L. Thompson, Town Hall, Waterloo, near Liverpool.

MR. STANLEY COULDREY, director of Messrs. Alfred Couldrey and Co., Ltd., Tooley-street, E.C., has resigned his position as chief clerk at His Majesty's Stationery Office, Manchester, and has now resumed his former duties with his firm. At a farewell dinner and concert held at the Stationery Office, the other day, Mr. E. H. Chapman, the deputy superintendent, presented Mr. Couldrey with a gold watch, on behalf of his colleagues. The Controller, Mr. W. R. Codling, M.V.O., sent a telegram from London in the following terms, "Highly appreciate your services in this department during past two years. Best wishes for your future in commercial life."

THE FORTY-EIGHT HOUR WEEK.—Messrs. Harrison, Jehring and Co., Ltd., general prin-

ters, Emerald-street, W.C.1, having asked their workers to say how they would like the new week to be apportioned, the conclusion was come to that the most advantageous way would be to cut out Saturday work altogether. By mutual agreement, therefore, the staff will not work on Saturdays, and on that day the entire works will be closed. The following are the newly-arranged working hours: Monday, Tuesday, Wednesday, and Thursday, 8 a.m. to 6.30 p.m., Friday, 8 a.m. to 7 p.m. This seems a very good arrangement, and will give the workers a good weekend for recreation and rest.

ADVERTISING IN BUSINESS.—Speaking to the Glasgow City Business Club, last week, Mr. W. S. Crawford emphasised the importance of propaganda and advertising in business. The purpose of both, he said, was to create habit. The fundamental principle of advertising was that the goods should be good and that they should be branded Satisfaction would be gained rather by understatement than overstatement of the claims of the seller. The aim should be not to show cleverness in advertising, but to make the buyer respect the goods.

The Bishop of Winchester, referring to the present state of unrest in the country, says:—
"In these days most people read a newspaper. What a good thing if we all read two, of opposite sorts. But, indeed, our newspapers ought to help us to see both sides fairly. But they do not usually do it; and I am afraid the newspapers and the papers that circulate in the ranks of Labour do it as little as any. We ought to see the traders' case, the workman's case, the employer's or capitalist's case. They have all a great deal to say for themselves. We ought all of us to be ashamed to prate in the language of our own set."

Personal.

The directors of Messrs. Hazell, Watson and Viney, Ltd., printers, of London and Aylesbury, have appointed Mr. W. Howard Hazell, J.P., as chairman of the company in succession to his father, the late Mr. Walter Hazell. Mr. W. H. Hazell has been deputy chairman of the company for some years. He was a member of the Royal Commission on Paper, and is well known as an expert in trade matters throughout Great Britain. He has recently taken an active part in the movement for the standardisation of paper.

ME. J. J. KELIHER (president of the London Master Printers' Association) on Tuesday visited the East and North-East Association at Stratford, providing the members with an interesting review of the present position of the trade in London.

MR. G. F. TOMKIN (Leytonstone) read a

paper on "Costing Paper at 100 Sheets, and How to Adopt It."

MR. ALFRED HERBERT, the originator of the Herbert Process, gave an address at the St. Bride Printing School on Friday, on "Modern Photo-Lithography," a full report of which will appear in our next issue.

A COMPLIMENTARY dinner was given on Saturday night at the Press Club to Mr. Walter J. Edwards and Mr. John Henry Iles, in recognition of their services to the club by superintending the business arrangements and placing them on a sound footing.

IT was Mr. A. J. Daines, and not Mr. A. G. Aves, who presided at the last monthly meeting of the Printing, Bookbinding and Kindred Trades Overseers' Association. Mr. Daines, who was recently elected president of the Association, is taking an active interest in the work and is full of energy and enthusiasm.

MR. ARTHUR WALTER has been re-elected president of the British International Association of Journalists.

MR. T. NORTON LONGMAN, of Messrs. Longmans, Green and Co., has retired from Paternoster-row after fifty year's connection with the business. He has now handed over his duties to his nephew, Mr. R. G. Longman. The publishing house of Longmans dates back to 1724.

MR. HAROLD Froulkes, a member of the editorial staff of the Mail and Leader, Newcastle, has severed his connection with that paper to take an important appointment in the London office of the Leeds Mercury. He was the recipient of a safety razor, a wristlet watch, an umbrella, and two pieces of silver ware, from his colleagues and members of the editorial staffs of the Newcastle Chronicle and the Newcastle Journal.

In recognition of the valuable services he has rendered to agriculture and stock breeding in Scotland during the past 40 years, Mr. Archibald Macneilage, editor of the Scottish Farmer, and secretary of the Clydesdale Horse Society, was entertained to dinner in the Grosvenor Restaurant, Glasgow. On behalf of the subscribers the chairman presented Mr. Macneilage with a silver salver and a cheque for £2,000.

MR. John Martin, who was entertained by his colleagues of the Parliamentary Press at a luncheon in the Harcourt Room of the House of Commons, is a link with Gladstone's first Administration. He is a Parliamentary journalist and entered the Press Gallery of the House of Commons in 1871.

Anglo-Norwegian Trade.

Paper and Box Board.

The paper and box board trade in the United Kingdom, says the Anglo-Norwegian Trade Journal, continues to be very quiet, and contrary to expectation no improvement to any extent has been noticeable during the last four weeks, upon the exceptionally slack month of January. Owing to the fluctuation of the market, buyers are very reluctant in placing orders, and are only buying from hand to mouth, and as there are still substantial stock lots available in this country comparatively speaking, very little foreign business has been transacted so far this year. Mills in Norway and Sweden are feeling the slackness of the trade very much, and are competing with each other to secure the few contracts which have been placed lately. F.o.b. prices have been reduced, in some instances considerably. For example, only six to eight weeks ago, Scandinavian mills making M.G. and unglazed kraft were holding out for prices from £56 to £60 per ton, net. f.o.b., whilst today Norwegian mills are willing to accept orders at £45 to £46 per ton, and we understand that Swedish mills' prices are even lower. Another instance is with reference to M.G. 50 per cent. mechanical hard-sized envelope paper; orders can easily be placed with Norwegian mills at price of £44 per ton of 2,240 lbs., whereas only five weeks ago the same mills were asking £58 per ton. Again, in this case, Swedish mills are also offering the same kind of paper to-day, we understand, at the low price of £38 per ton. The foregoing prices are of course based on the normal rate of exchange of kr.18.16 per £. Mills manufacturing friction-glazed and unglazed leather boards are also eager to accept orders, and we understand that some contracts have been placed with Norwegian mills for high grade first quality leather boards at price of £29 to £30 per ton of 1,000 kilos. net. usual conditions of payment. White wood pulp boards too have been in fairly good demand lately, and some orders have been booked in Norway at a price ranging from £27 to £30 per ton of 1,000 kilos. net, for substance 22 by 32, 30-300 sheets per cwt., according to finish and quality. Shipping opportunities between this country and Scandinavia are easier, but an improvement in this direction would be desirable.

Wood Pulp.

Since our last report mechanical pulp has hardened considerably in price, and sales have been made round about Kr.120 per ton f.o.b. Norway. For some time past the Norwegian mechanical mills have been labouring under great difficulties, and several have found the price so unremunerative that they have closed their mills and used their water-power for other purposes. At present prices, however, the mills are able to make both ends meet, in spite of the high cost of timber, and

we look forward to a time when the price of mechanical pulp will remain steady for a considerable period, and not show the fluctuations which have been a feature of this commodity in the past. A steadier market will be in the interests both of buyer and seller. The market for easy-bleaching sulphite is quiet. Prices are firm, and, if anything, tend to harden. Although from the English papermakers' point of view the price seems high, on the other hand, owing to the extremely high cost of production, the mills see very little profit in present prices, and maintain that if they are to continue, either the price of timber must come down or the price of the pulp rise. Owing to the enormous amount of timber that will be needed in the reconstruction of all the countries engaged in the late war, we see little prospect of the price of this commodity coming down, and therefore can only look to a reduction in the price of coal, and an increased output, to enable the sulphite mills to continue selling at present prices. It is rumoured that the licences to import pulp will shortly be increased, and we look forward to a much livelier demand for all classes of pulp. This applies to strong sulphite as well as to easy-bleaching

Belgian Printers.

The Typographical Federation of Belgium have just issued, for the first time since August, 1914, their journal, La Federation Typographique Belge. The activities of the Federation were dramatically closed by the war, but once the country was cleared of its despoilers the Central Committee set to work to inaugurate a special congress at Brussels, which took place on December 28th and 30th Notwithstanding the ban placed on meetings during the German occupation, the committee had somehow managed to keep in touch with members, and the secretary and treasurer gave an account of what had been done from 1914-1918. The important questions placed before the meeting were the length of the working day and the scale of wages. All sections were represented, among them many members of proved energy and go," whose powers had not been dimmed by recent privations. New members were also of a live and combative temper, so when once things are in trim the Federation expect great things. The scarcity and high price of paper and raw materials make many "out of works," but none of them will resume employment except under conditions of sensible superiority to those of pre-war times. On this members were agreed. The congress fixed the provisional subscription for membership of the Federation at 60 centimes a month, and proceeded to discuss the length of the working day.

All the speakers declared it would be disastrous alike for the workers and the industry itself to press for long compulsory spells of labour, and would speedily lessen their productive powers, and the inauguration of an eight-hour day and a 48-hour week was unani-

mously voted by the assembly.

With regard to wages, it was recognised that it was not possible to put them on a level with the actual cost of living, for this has increased practically fivefold. It was therefore decided to demand a general minimum increase of 100 per cent. over the salaries of 1914, with a minimum of one franc an hour. As a corollary, it was decided that all sections should demand a fixed week, with payment for public holidays. It was thus settled that the minimum wage for the smallest country places should be 48 francs a week. The resolution embodying these demands was passed unanimously, the company pledging itself to work for their recognition by every legal means.

Further, the committee declared their strong opposition to overtime, on which they would place a heavy wage-value, for they contended that the worker, tired with his ordinary daily quota of toil, needed rest, fresh air and a recreative home life.

All these recommendations were heartily endorsed, and at the present moment many sections have already elaborated their scale of wages, whilst some have got so far as its acceptance and adoption by the masters. Many masters, indeed, recognise the moderation of the committee's demands, and cordially support them.

Norwich.—At St. Andrews' Hall, Norwich an excellent concert organised by Mrs. A. E. Soman for the object of raising funds for the Carshalton (Surrey) Convalescent Home and Institution for the reception of convalescent members of the Printing and Paper Workers' Union took place. Mrs. Soman, with the help of the leading printers in the city of Norwich, endeavoured to raise £100, and was supported by the Lord Mayor (Mr. G. M. Chamberlin), the Sheriff (Mr. H. P. Gowen), the Rt. Hon. G. H. Roberts, M.P., J. J. Colman and Co., Mr. A. Cozens Hardy, the East Anglian group of N.U.P.W.U. and Norwich and District Federation of Printing and Kindred Trades. The hall was crowded and a lengthy programme, arranged by the committee, was given. During the interval Mr. Jarrold announced that the receipts totalled just over £90. It is gratifying to know that the £100 has now been

A VERY clever and humorous publication entitled the Mixture (concocted by "Mickque") has been issued, the proceeds of the sale of which are for the benefit of the Printers' Medical Aid and Sanatoria Association. The sheet is an 8-page one, neatly got-up, and the contents appeal especially to printers who will have many hearty laughs over "Mickque's" funny stories. The whole of the composition has been done gratuitously at the Daily Express office, and the paper for the issue has been given by Mr. A. W. Tyler, of the Co-Operative Printing Society. We recommend a dose of "the mixture" to our

readers who can procure it for twopence at the Newspaper Workers' Club, Gunpowderalley, Shoe-lane, E.C.

MANY a man in business can wait patiently while a factory is going up brick by brick—knowing that the bricks must be bought and laid first. But he cannot wait patiently while his reputation is being built up brick by brick through advertising. He wants to get returns on the first load of brick thrown on the vacant lot.

East London Master Printers.

Visit of Mr. J. J. Keliher.

Mr. J. J. Keliher, president of the London Master Printers' Association, attended the monthly meeting of the East and North-East Master Printers' Association, at the Swan Hotel, Stratford, on Tuesday last week, Mr. E. R. Alexander, president of the local Association, being in the chair. The meeting was preceded by a tea, following upon which the president invited Mr. Keliher to address the meeting—of course, after the secretary (Mr. J. W. Phelp) had read the minutes in his inimitable style.

Mr. Keliher, after acknowledging the hospitality extended to him by the president of the Association, said he was glad of the opportunity to come and explain to members in the outlying districts the meaning of the recent changes in regard to hours and wages in the

printing trade.

Those who were connected with the Central Association had claims coming before them much earlier than the districts knew anything about them. It was due to the members of the branch associations that they should know how these recent changes had

come about.

The first intimation the parent Association had with regard to the question of hours was in February, 1918, London being the first to move in the matter. The Association Council insisted that the forty-eight hours was a national question, and should be dealt with by the Federation, and that it was too large a subject for London to take up alone. Accordingly, at a later date it came before the Federation, who were then dealing with the question of an Industrial Council, and the Federation maintained that this was a matter which would concern such a Council as soon

as it was established. At that time the Government were pressing forward "Betterment," and they in the printing trade were anxious not to be behindhand in a movement which they felt would be a benefit in the troublous times which were ahead. Following the armistice, London was again approached some three weeks before Christmas. with a demand for a forty-eight hours' week and holidays, but it wa, pointed out that the Federation at that time were dealing with the subject. About ten days before Christmas, they received a threat from the London unions that unless master printers agreed to pay for holidays, overtime might be stopped. Well, they knew that that was tantamount to stopping the trade, because all the London houses printed publications, and if overtime was stopped the trade was disorganised at once. A conference resulted, and it was recommended that they should pay, as a thankoffering for peace, for Christmas-Day and Boxing-Day, without prejudice to the future consideration of the question. Subsequently the Federation Council met in February and agreed to a conference with the Federated Unions, two or three meetings followed before the terms were hammered out. Members of the trade, however, must not think that the agreement as finally arranged comprised the terms which the unions asked for. They were, in fact, much modified from the original demands. Six months as a qualifying period for a holiday was agreed to as a compromise. The employers, it is true, wanted a twelvemonths' period, which was thought to be a proper time a man should be in their employ before he should be considered to have earned a week's holiday. The date of the coming

into force of the agreement was also a compromise, the unions asking for February 1st and the masters suggesting April or May. Eventually March 3rd was agreed to.

Mr. Keliher said he wanted to assure the meeting that in the interests of the general trade everything was done to modify these extreme demands. His own opinion was that the leaders of the men themselves were convinced now that any further forward movement that might take place would be a serious handicap to the business. Mr. Keliher pointed out that the printing trade had had

to go forward with other trades.

With regard to obtaining increased costs from the customer. Mr. Keliher said he knew how one shrank from the task of suggesting an increased charge, but whereas one used to go "with bated breath and whispered humbleness" to a customer, now all a member of the Association need do was to dictate a letter on the typewriter, stating that "on and from a certain date, prices would be so and so." With greater harmony among workers and master printers one had more confidence in taking such a course. He added that the smaller printer needed a backing to demand higher prices, and that backing the Association gave him. Unless they got a higher price they could not recover their costs. Mr. Keliher quoted figures to show how wages of engineers, builders, railwaymen and dock labourers had increased, and drew a favourable comparison for the printing trade. If they could not appeal to fellow printers for admiration as to the way in which they had succeeded in keeping wages down or hours up, they could appeal to them on the ground of the assistance they had rendered to their members in getting the present high costs of printing on to the shoulders of those who used print, and that was as it should be. He could assure their friends that the poor printer had not suffered to the extent he might have done had he not been a member of the Association.

Costing Paper at 100 Sheets.

Mr. Alexander having thanked the president of the L.M.P.A. for his address, Mr. G. F. Tomkin (Leytonstone) gave an address on cost of paper at a hundred sheets and how to adopt it. He said: Towards the end of last year, a notice appeared in a trade journal about Mr. Curwen's system of costing paper at per 100 sheets. It was a new idea to me, and I felt considerable interest in it to see how it would work out, and in working it out, the subject has led me considerably further than I intended going. Now the reams as supplied by the wholesale trade vary in the number of sheets they contain, but as 480, 504 and 516 are the most usual quantities, the unit of 12 readily suggests itself, this unit being at the same time a convenient factor for royal boards. But for other classes of stock such as cut cards, billheads and envelopes the unit of 12 is useless.

Let us see if we are any better off if we work on the 100 unit basis. Paper for jobbing work is issued almost invariably in awkward fractions of reams. Take any usual quantity, say

5,000 or 10,000 octavos, and we get a fraction of a ream issued in which neither the unit of 12 nor the unit of 100 can be utilised for direct and simple calculation, on account of allowance for spoils, and on account, too, probably, of the number of sheets in the ream.

Now you will be thinking that as you know all about this, and as you use a ready reckoner for the calculation of paper, what's the use of the too unit? It makes a very convenient unit if we take the average number of sheets to the ream as 500, a number that the wholesale trade could well fall in with. No better unit could be devised for the less important lines of cut cards, envelopes and biliheads; and, given a table of comparative costs per 100 and per 144, the 100 unit could be applied just as well to royal boards.

One objection to the ream unit is the tendency to cause miscalculation when one's mind is dealing with thousands. Another objection is its indefinite quantity. It would appear, therefore, that if a simple, accurate and quick method could be found of arriving at the cost per 100, the 100 unit is going to

offer the best all-round advantages. If this method is adopted, it is clear that it should coincide with the principles laid down in the costing system of the Federation of Master Printers. And it is here that the word "cost" needs to be emphasised once more. If a ream of paper is invoiced at £1, that is not the "cost" of the paper. If discount be allowed, this should be deducted; then the expenses of storage, handling, etc., added-15 per cent. being the mimum recommended for this purpose.

Take a ream of 480 sheets, invoiced at 0 Add 15 per cent. for handling, 3 0 etc. Cost of 480 sheets ... Add cost of 20 sheets ... 1 0 Cost of 500 sheets ... £ı ...

O

Cost of 100 sheets ... Now, you will be saying to yourself, "No thank you. None of these complicated calculations for me. I'm going to get on with the job in my own way." Quite so. Yet, if the 100 unit is carried to its logical conclusion, it will give you a simpler and more accurate method of getting the cost of stock—a method by which you will be able to get right away the real cost as against the invoice price. The link that is required to make it practicable is a series of calculations in the form of a ready reckoner.

I will ask you to look at a specimen of such a calculator, which is intended to contain

1. A few pages indexed and sub-divided into sizes of stock, with blanks for the individual to fill in the description, number of shelf where warehoused, price per lb., invoice price per ream, discount, and cost price per 100 sheets.

2. A table of calculations showing number of sheets required and cost thereof for jobbing work, ranging from 25 copies of an 8vo. job at 28. per 100 sheets to 50,000 copies of a job taking a sheet at 20s. per 100 sheets (including

3. A table giving the comparative values of invoice prices per 480, 516 and 144 with cost

4. A table showing number of sheets required for booklets, ranging from 100 copies, four to thirty-two pages &vo., and four to forty-eight pages 12mo.

5. Table showing cost of almost any number of sheets at prices ranging from 2s. to 20s.

per 100.

The advantage of costing per 100 sheets lies in the fact that it can be applied as easily to reams as it can be to grosses, with the further important benefit of getting at once the full cost of the material; but for convenience in its adoption it largely depends on the aid of a suitable ready reckoner. Should one be issued?

In the course of the discussion which ensued, Mr. Tomkin said his idea was to ascertain the prices per 100 sheets for the different His invoice price, for instance, was so much, and from the table that he had prepared they found out the value of 100 sheets, including the 15 per cent. profit, and if 20 per cent. was required, then it was an easy matter to add 5 per cent. to the 100, the system being

Mr. Keliher thought the method described by Mr. Tomkin would be helpful in dealing with paper, the same as the costing system was in giving the value of the composing

Mr. Whyte mentioned a case where a customer disputed a charge for corrections, and a copy of the British and Colonial Printer and Stationer was sent containing Mr. Goodwin's details of the cost, and the customer was asked if he could dispute any of the items in detail, to do so, and to give his

Mr. Alexander, junr., stated that the Stationery Office had challenged the price he had put in; but he had offered to submit his figures, and the Stationery Office had been unable to dispute any one of them, and the work was charged accordingly. He added that any scientific method of looking at business was an advance on anything they had been used to, and he congratulated Mr. Tomkin upon his paper. He quite agreed with standardisation, and thought it simplified business. The speaker urged ever printer to be careful as to the profit he put on jobs which consumed different amounts of paper. With regard to a discount received, that should be regarded as belonging to the printer himself, and should be left out of such calculations as they were considering, and he suggested that Mr. Tomkin might revise his figures in that way.

Mr. Tomkin said he had only expressed his own opinion, and agreed that a uniform practice should be adopted. As it was the the general feeling of the meeting that the discount should be treated as Mr. Alexander suggested, he was quite willing to fall in with it, and this course has been adopted on the calculation in his paper as printed above.

Modern Photo-Lithography.

An Interesting Lecture at St. Bride School.

Mr. Alfred Herbert, the originator of the Herbert Process, gave an instructive lecture on modern photo-lithography at the St. Bride Institute, the other night, to a large and interested gathering. The chair was taken by Mr. W. Stevens, secretary of the London Branch of the Amalgamated Society of Lithographic Printers.

In introducing the lecturer, the chairman expressed satisfaction at the size of the audience and remarked that the application of photo-fithography would grow in the

future.

Mr. Herbert, who described photo-lithography as one of the most interesting branches of the printing trade, said by its aid many litho, jobs, especially where colour work is concerned, can be reproduced in a fewer number of printings than would be the case if we depended solely on the artist's work. At one time it depended on transfer paper methods only, and in some cases this method is even used to this day, in certain classes of work, in. preference to the direct method. If we coat a hard-sized sheet of writing paper with a film of gelatine and sensitise it with a 15 per cent. solution of bichromate of potassium, to which a few drops of ammonia are added for preserving purposes, and dry it in a dark cupboard, we have a medium that is sensitive to light action, and when exposed under a suitable negative, the parts exposed to the light are hardened and will be found to take and hold the transfer ink that is spread on it, whilst the unexposed parts will wash away and leave the design or image only, ready for transferring. Besides the bichromated gelatine paper, there is also a method with salts of iron as the sensitiser, upon which the "Shawcross" process is largely based. Then, again, we have a very handy and quick paper method in the "Bromide" process, which consists of making an exposure on smooth bromide paper, developing with a suitable developer, and after washing out the free silver bromide, the paper is steeped in a fairly strong bichromate bath for about a couple of minutes, which hardens the exposed parts in the same manner as the bichromated gelatine paper and so enables us to ink the job in and transfer in the usual way. The bromidebichromate method is very handy and useful for direct enlargements from small negatives, and there is a place for it even to-day in the photo-litho studios.

Modern Methods.

We will now touch upon the more important modern methods of direct photo-litho. work to stone and plate. One of the earliest methods in this direction consists of coating a plate or stone with a solution of egg albumen coniaining about fifteen to twenty

per cent. of bicbromate of ammonia, to which a few drops of ammonia are added to assist clean development and for preserving pur-When this solution has been dried in a non-actinic light, it is ready for exposure under a suitable negative, after which it is inked in and developed out, much in the same way as the bichromated gelatine paper, but with this difference: that we now have an image that is direct on the plate instead of on paper, the job being done in a much quicker time and does not require to be transferred, which is more satisfactory in every Although the bichromated albumen method for direct work is very old-in fact the very oldest-the formulæ have from time to time been improved so that some firms have now made it absolutely reliable. Then, again, we have the "Frey" process, which depends on the bitumen as the sensitising medium, and the claim made for bitumen is that the image is even more attracted and held to the stone or plate, and a sharper and clearer result obtained.

Importance of Negatives.

Whatever method one adopts the results would all fall short of the mark if we did not obtain suitable negatives, so I think a few suggestions on negative-making at this juncture would not be out of place. If we are speaking of line negatives, the pathway is very clear for us, as all required is a sharp, clear black-and-white negative, made by the "wet plate" process, and all is plain sailing; but when it comes to half-tone we have then quite another proposition, so for your guidance, I will briefly tabulate what, in my opinion—an opinion based on practical experience—is essential to good work. If we are intending to do half-tone black work only, one of the best ways is to make a continuous tone negative in the first place; one full of detail on the soft side, somewhat similar to a negative one would make for the "collotype" process; then from this make a transparency half-tone positive, and from that again a negative by contact. This last negative is termed a "high-light" negative, and should contain all the detail of the subject without losing tone—going from pure white high-lights down to the deepest shadowsbut whilst we can do with the highest lights pure white, we must not have the deepest shadows or black parts entirely solid as these should be slightly "open." That is to say, the little white dot of the screen should be running through the solid parts, which is essential to preserve tone, as otherwise, our picture would look chalky and harsh; also, the half-tone operator must be very careful when making a high-light negative that he does not "jump" or lose a tone: this would also tend to make the picture look harsh and empty.

A Matter of Opinion.

In making these high-light screen negatives there has been a deal of controversy as to which are the best stops to use, square or round. I am of opinion—as a practical man, after a great deal of experimenting-that round stops are the best for the particular purpose of the lithographer. Now for black and white work, these methods are fairly reliable and can be worked without great difficulty; but when we come to colour work, by this means we find we are beset with all sorts of difficulties cropping up in nearly every To begin with:—By the orthodox method of making, say, a four-colour set of continuous tone negatives through the usual colour filters, our first difficulty is getting a set of four that are exactly alike in tone and density, and when we have obtained these to our satisfaction, our next difficulty is to make the four-screen positive transparencies of equal weight and dot balance, as it would not do to have any one of the transparencies out of balance with the others. With the negatives made, the work of printing on tometal and proofing-up is done in the usual way, and if the proofs are not quite right to the original, it may be necessary to modify the existing colour plates by taking certain parts out or proofing-up in lighter colours and getting the artist to supplement them by drawing one or two stronger colours, until the reproduction is up to the original.

Register Work.

In printing down to metal plates for register work there are several methods. if we are going to do a job in, say, more than one printing, with more than one subject on a plate, it would be as well if, when making the negative, we placed several register marks where possible around our subject, so that we may use these for our guidance and position. Besides, the register marks give us a more direct means of finding the exact positions, as it is in most cases practically impossible to lay the negative down by trusting to the subject only, and the fitting up to register marks is a much more practical and easier method. The method generally adopted is to draw register marks—a circle bisected with a crossis the better method, placing them at the four corners of the subject to be reproduced, and make the first negative. In making the following negatives it is much more helpful and practical if we blot out the centre by placing small circles of black paper over the register marks: this will enable us to find the exact position of the subsequent printings more correctly. This is the method for a composite plate, but when a job has to be repeated a number of times upon a plate it is much better to begin by stepping and repeating our negatives in the apparatus made for this work. Such a machine for this purposehas been on the market for some time, and is termed a "step and repeat " machine, its chief object being to ensure a repeat of a given number of the same negatives exactly to register.

Composite Plates.

Once we have obtained a step and repeat negative, it is quite an easy matter to lay it down to metal in the ordinary way, but with our composite plate it is another matter, and requires a considerable amount of care, asany little movement after laying the nega-

tives on the plate would be disastrous. The mode of procedure for a composite plate is to first place the negatives in exact position for the first colour, to which each subject or set of subjects has its own register marks, and when printed on the metal, several impressions are obtained and dusted over with offset powder in the same way as one would make offsets for general litho colour work; and in making the subsequent colour plates the offsets are run down on the sensitive albumenised surface of the metal plates or stones, and the negatives fitted up to the register marks, great care being taken to see that each negative is carefully fitted on the register marks, and none of them move in tightening up the printing frame.

Need of Technical Education.

There is need for closer application to technical education on this interesting work than we are getting to day, and it is up to our technical institutes to see that they are fully equipped and have thoroughly qualified teachers to help the students along the path of photo-lithography, as its possibilities are innumerable, and are only waiting development and working out of new ideas which are bound to come if student and instructor, coupled with the help and use of modern appliances, pull together and work for the good of the craft; and we shall find by so doing a much greater advancement in photolithography in the near future than has been the case in the past. I purposely have not referred to the Vandyke process of printing down. The method is generally well known, and requires no explanation. In my opinion, it is not reliable in its results.

This, gentlemen, briefly describes the modern methods of photo-lithography, and any student who perseveres in it will soon surmount its many idiosyncrasies, and become a successful photo-lithographic printer.

Mr. Herbert finally called attention to a number of specimens of photo-lithography which he had arranged and which were entirely his own work.

Question of a Patent.

Mr. Goodwin asked whether the high-light process, showing the continuous tone negaof A. Was not a process patented by Mr. Sears, of Australia, and whether it was not licensed

to firms such as Messrs. Bemrose, of Derby. Mr. Herbert believed Mr. Sears invented a high-light process some years ago, but he point at processes. pointed out that there were other processes, and ed out that there were doing it Mr. and in fact, everyone was doing it. Martin fact, everyone was using ...

offset direct from a negative on to zinc.

The direct from a negative on the affirmative,

The lecturer replied in the affirmative, although he did not do that himself.

Great Future for Lithography.

Mr. J. R. Riddell, principal of the St. Bride Printing School expressed his pleasure at seeing School expressed his pleasure he had ing so large a gathering, because he had lound large a gathering of litho printers found it very difficult to get litho printers that ested in their own business. He believed that there was a great future for the litho-

graphic side of the printing business, if the lithographer would only bestir himself to take advantage of the facilities which were At the Institute they had litho at hand. printers for instructors and they had a good plant which was not used to its fullest advantage. He was pleased to see, however, that this year they had a full litho class. consisting of men of the Litho Society who held responsible positions and who found it worth while attending there to receive instruction. He hoped that was the forerunner of a keener interest in technical education in the litho business. Mr. Riddell had a sly hit at the man who thought he had a particular secret up his sleeve, a secret which very often was something which had been forgotten by others years and years before. (Laughter). He went on to say that he regarded the transferrer as the man in the litho business. Of course, it was true that some jobs could not be printed even by the Angel Gabriel, because they had not been transferred properly, but if they allowed the transferrer to pass on to the machine they would get better work. He complained of splitting up the business into compartments. He added that high-lights were made before Mr. Sears came on the scene, and there was no patent in that whatsoever.

Beautiful Work.

Mr. Fleming congratulated the lecturer upon his work, which was really very beautiful. As a letterpress printer the advantage of a plate had been impressed upon him. He suggested that good work by the blockmaker was often spoilt by the methods of the printer.

Mr. Hammond, as a machine-minder, said it was all very well to show a beautiful plate, but how many runs would they get from it.

The lecturer replied that his plates would stand a very long run indeed. The great point was the quality of the dot, which in this case was firm and sound, and well-defined. The plate, therefore, would stand a very long run.

Replying to Mr. Oldfield, the lecturer said larger work was quite as easy as the smaller, but he had confined the exhibits to specimens of his own handiwork.

As to whether he was prepared to let his process out on licence, Mr. Herbert said he was not quite at liberty to do that for the moment.

The chairman took the opportunity of explaining that the London Branch of his Society was suggesting a new rule, by which members of the Society should make it part of their duty to interest the boys in technical education. He said he made that statement to remove any impression that they were in any way opposed to technical education.

An advertisement with too much copy falls flat and grey and lifeless on the printed page. It spoils good white paper and attracts but little attention. It talks itself out of the sale because it is nothing but "words, words,

Trade Notes.

THE Barcelona, Spain, printers have gone on strike.

It is announced by the Ministry of Munitions that the Waste Paper (Dealings) Order has been revoked.

PRIVATE CECIL CHESTERTON, H.L.I., founder of the New Witness, and brother of Mr. G. K. Chesterton, has left £80.

It is reported from Canada that the Farmers' Publishing Co., Ltd., has purchased the Weekly Sun, and intend making it the united farmers' official organ.

MR. JOHN SEVER, of the firm of Messrs. Charles Sever, has succeeded Mr. FitzGerald Falkner as president of the Manchester and Salford Association of Master Printers, Lithographers, and Bookbinders.

MR. EDWARD HUDSON, a director of Messrs. Hudson and Kearns, the well-known London printers, is engaged to the famous lady 'cellist, Mlle. Guilhermina Suggia. Mr. Hudson is a keen music lover and is a familiar figure at concerts.

The death of Mr. J. R. Flynn Anderson has occurred at the General Hospital in Singapore. It was a hopeless case of heart trouble aggravated by the extra hard work which devolved on him through work entailed by his latest venture—a Sunday paper for Singapore. The late Mr. Anderson at one time was the owner of two papers in the Philippines. He was a native of Glasgow.

MR. A. D. PHELP, the secretary of the East and North-East London Master Printers' Association, is a whimsical fellow. Humour flashes out of him on all occasions, even those which would make other men think of graveyards. Recently Mr. Phelp spent some odd moments in writing down a few thoughts which he has since printed and published under the title of Reflected Radiance or Thinking in "..." The production is an excellent effort both from the point of view of the printer and the author, while it also represents a happy souvenir of "A.D.P."

MESSRS. CROWTHER AND Co., wholesale and export stationers, printers, etc., Middlesex Works, Middlesex-street, E., have established a mess and rest room for the comfort of their staff, the official opening of which took place the other day when a supper was given to the employees. The mess room has been provided as a memorial to Mr. Eustace Crowther and other men of the firm, who fell in the war, and is a step towards the betterment of The firm is also giving enthe workers. couragement to its employees to take an interest in pushing business by paying a commission on all business introduced, and also by payments to any worker who by suggesting new methods helps to increase the output or to eliminate waste.

According to Ayres Newspaper Annual there are 1,178 fewer publications in the United States than there were a year ago. This decrease amounts to five per cent.

THE death is announced of Mr. Samuel Maude, printer and Stationer, of Kingston. Mr. Maude passed away peacefully in his sleep, he was sixty-one years of age.

A NEW MONTHLY is to appear shortly under the title of the New World. It will be issued in two editions—French and English—on the 15th of each month, in Paris, London, and the United States.

AT Devon Valley Paper Mill, Hele, Mr George Bonner, who began work at the mill at the age of 10, relinquished his position after 65 years' service. He was presented with an easy chair as a token of esteem for his long record.

For printing the rate demand notes, final notices and receipts required in connection with the general rate for half-year for the Hammersmith Borough Council the tender of W. Skelton, 1, Western Broadway, W.6, has been recommended for acceptance (£66 175-6d.).

TENDERS are wanted for a supply of stationery and printed forms for the various departments, for the Dundee Town Council; particulars from the City Chamberlain and Gas Treasurer, 89, Commercial-street, and the Police and Water Treasurers, 95, Commercial-street, Dundee.

MRI WILLIAM BENTLEY, journalist, of Lancaster, died at the Royal Lancaster Infirmary last week. He received his early journalistic training at Accrington, and in 1891 proceeded to Lancaster as the representative of the Lancashire Daily Past, a position he held at the time of his death.

An American contemporary says that the celebrated DeVinne Press has gradually withdrawn from the book-printing field, and under, the able Bothwell management has become almost exclusively a commercial printing house of the highest type. They still print for business houses for whom they printed forty or more years ago. They have printed in almost every language, and for distribution over the whole world, and have served clients on every continent.

LONDON MASTER PRINTERS' BENEVOLENT Fund.-Mr. J. J. Keliher, president of the L.M.P.A., is making an appeal on behalf of this fund, which was inaugurated in 1917, and has already fulfilled a beneficent purpose, inasmuch as it has enabled a master printer and a master printer's widow to be relieved from the necessity of breaking up their homes and associations in their old age. The task of organising this desirable fund was largely due to the self-sacrificing labours of the late Mr. Walter Hazell, who was keenly desirous of it being put on a permanent basis. To this end, Mr. Keliher is issuing his appeal for donations, which it is hoped will meet with a good response.

American Exports of Paper.

The increasing interest being manifested in the opportunity for the sales abroad of various lines of paper makes especially interesting just at this time export figures regarding these commodities, points out the Paper Trade Journal, N.Y. The figures presented here are from the monthly summary of the Bureau of Commerce for the month of November, and are the latest available. They tell an inte-The exports of paper and of paper for November resting story. manufactures amounted to \$5,705,729, showing a considerable increase over October, when the over-seas sales amounted to but \$4,555,749. ports of paper and manufactures of paper for November a year ago amounted to only \$4,349,403. The exports for the eleven months ending with November amounted 47,939,195, as compared with \$39,966,242 for the same period in 1917, and \$35,630,759 for the same period in 1916.

The export of news print for November showed a considerable gain as compared with October, the figures for the former month being \$617.522 as compared with \$467,556 for the latter. The exports of news-print a year ago, however, were considerably greater, the figures being \$1,031,861. The exports of news-print for the eleven months ending with November amounted to \$7,451,417 as compared with \$6,612,380 for the same period in

1917, and \$3,746,747 in 1916.
The exports of wrapping paper also showed a good gain, the figures for November being \$477,634 as compared with \$392,318. The ex-Ports of this commodity a year ago amounted to \$419,626. The exports of wrapping paper for the eleven months ending with November amounted to \$4,252,392 as compared with \$3.377,425 for the same period in 1917 and

3.693,459 for the same period in 1916.

The exports of writing paper and envelopes showed a good gain both as compared with October and with November a year ago. The figures were \$753,660 for November as against 539,947 for October and \$494,478 for November a year ago. The over-seas sales of writing paper and envelopes for the eleven months ending with November amounted to \$5,381,574 Deriod in 1917 and \$2,197,076 in 1916.

The exports of paper board and straw board November increased decidedly both as pared with October and with November are year ago. The figures for November Year ago. The figures for November Octunted to \$351,293 as against \$271,319 for October and \$195,556 for November a year The exports of this commodity for the eleven months ending with November \$10 Unted to \$2,610,042 as compared with

\$1,910,079 for 1917 and \$1,788,374 for 1916. Coilet and tissue are among the varieties of Dapers which have been showing surprisin Papers which have been sales recently. The Ancreases in loreign amounted to \$213,956 as Compared with \$131,141 for October, and

with only \$85.595 for November a year ago. The exports of toilet and tissue papers for the eleven months ending with November amounted to \$1,242,981.

Overtime Rates for Machine Minders :

The following agreement between the London Master Printers' Association and the London Machine Managers' Trade Society regarding revised rates of overtime has been

signed:—
The extra for overtime under clause 14 of the agreement of October, 1915, shall be increased from 5d. to 7d., and the rate for working later than 12 o'clock under clause 15 shall be time and a half from the commencement of

overtime.

The rate for Saturday under clause 20 of the above agreement shall be increased from 6d. to 8d. per hour extra, and in houses where the working week is of five days of ten hours overtime up to 12 (noon) shall be increased to 7d. per hour, and after 12 (noon) to 8d. per hour up to midnight.

These increased rates to be payable as from

March 3rd, 1919.

There still remains to be settled the rate for men called in at 6 a.m. The rate for night shifts has not been dealt with, and is not affected by the agreement.

Current Topics.

Union in the Paper Trade.

PAPERMAKERS and wholesale stationers are getting together in order to face their common difficulties. At a meeting at the Cannon-street Hotel something like a hundred firms were represented, and there was a unanimous feeling that papermakers and wholesale stationers should work in closer cooperation. The meeting passed a resolution in favour of closer co-operation, which was moved by Mr. H. G. Spicer (Spicer Bros.) on behalf of the wholesale stationers, and seconded by Mr. E. H. Joynson on behalf of the papermakers. While the resolution was of a general character, we believe the eperations of the committee which is being appointed will be of a much more definite nature. There

course, many directions in which the committee will be able to work to advantage. To begin with, there is the most important problem of all, that of the import of foreign paper. It is true that the Government have given some indication as to what policy they are likely to pursue, but there will doubtless be some difference of opinion as to what are "raw materials" and what are "semi-manufactured" or "manufactured" goods. It is proposed to restrict the import of manufactured goods, especially if they compete with our "key" industries. It rests with the committee of papermakers and wholesale stationers to make the authorities realise to what extent paper is a manufactured article. and the fact that the Board of Trade have already given way with regard to news-print may make their task rather more difficult. Furthermore, certain users of paper regard it as their raw material, and it would be rather difficult to argue that it is not. Then, again, these same people are declaring very strongly that the action of the papermakers and wholesale stationers is definitely intended to maintain high prices.

Keep up Your Prices.

A WRITER in the Inland Printer gives some good advice that will be just as useful to printers on this side of the Atlantic as the American readers whom he addresses. He points out that when a printer discards slow machines for fast, logically he should advance' prices; at least he should hold his prices. To reduce prices is asinine. In general it will be wise to say little or nothing about "laboursaving "machinery to customers. They will logically expect a cut in price—a share of a reduced labour cost which is not actually reduced. Talk time-saving and quick delivery and better quality and superior service. and get pay for these advantages, so that after vou have collected for the paper men and type men and composing machine men and other machinery men and the ink men, you will have in hand a profit on the collections as well as payment and profit for the actual The advice is good, but how wofully it is neglected printers themselves know.

A Shining Example.

The career that opens out before the capable youth who enters the printing trade has no limit as to the heights to which a clever and aspiring individuality may eventually rise, and this statement is verified by the experience of Mr. G. H. Roberts, M.P., a printer who

has attained to the position of one of his Majesty's Ministers. Mr. Roberts was in his early years apprenticed as a compositor to a printer in Norwich, in due course becoming a journeyman. He took a keen interest in the local affairs of his trade union, and became the Norwich branch secretary of the Typographical Association, and later one of the organisers of that body. He entered public affairs by joining the Norwich School Board, and in 1906 was elected to Parliament for that city. His advance was then rapid. In 1915 he was appointed a Junior Lord of the Treasury, and in 1916 Parliamentary Secretary to the Board of Trade. Two years ago he was given the important post of Minister of Labour, and his success in that office has led to his present post as head of the Ministry of Food. Mr. Roberts is known as the "Printers M.P.," and his career is a shining example of what perseverance and industry, combined with native talent, may do for an individual, and should encourage youthful printers to emulate the career of one of themselves and strive to attain to the highest positions open to men with brains. Even if they do not go so far as Mr. Roberts, they will reach heights that will place them above their less enterprising fellows.

A Presentation.

A pleasing ceremony took place at the works of Messrs. Chas. Thurnam and Sons, English street, Carlisle, the other day, when T. R. Singleton, formerly of the R.A.M.C., and winner of the Military Medal and Bar, was Presented by his fellow workers and the with an illuminated address. Mr. Singleton, who is a lithographer in the employ of the firm, has just returned to civil life, and his workers deemed it a fitting opportunity to show their esteem for their colleague and their satisfaction at the recognition of his valour in the field.

behalf of the workers, said they were all pleased to see Mr. Singleton once more among the second by would long be amon est them, and hoped he would long be spared as one of their fellow workers.

Rowland Smart, on behalf of the firm, Rowland Smart, on bonner.

Sings ted the address, and complimented Mr. Singleton on his good fortune in being able to the singleton on his good fortune with the firm, to on the good location in the firm, with the more take up his duties with the firm, with whom he hoped he would continue for whom he noped he would be time to come. They were glad to know his his would were now healed, and that they would be convenience. would not cause him any inconvenience.

Singleton, in reply, said he only did what Singleton, in reply, said in cur-any Britisher would do under the circum stances, and that was his duty.

DIVIDENDS AND REPORTS.

Financial News.—Accounts for the year ended December 31st last show a profit of £2,342, from which must be deducted £1,165 for salaries in suspense, leaving a debit balance of £37,497 to be carried forward. Last year, loss of £4,865, which, with £4,970 salaries in suspense, made a debit balance of £38,674.

CASSELL AND Co.—The report for the year ended December 31st last shows a profit of £50,149 and a net balance of £52,149. The directors recommend a dividend of 6 per cent. (less income tax). It is proposed to allot £10,000 to an after-the-war contingencies account, £5,000 to the copyright equalisation account, £3,000 to writing down investments in allied trading companies, and £3,000 to the reserve account, leaving £7,284 to be carried forward.

WINTERBOTTOM BOOK CLOTH.—A dividend of 12s. per share on the ordinary £10 shares, with £20,000 to the depreciation fund and £95,000 carried forward.

Hartlepools Pulp and Paper Co., Ltd.—For the year ending January 31st the directors report that, after deducting £4,032 for depreciation, the profit for the year is £12,224, which, with £4,125 brought forward, and after deducting £6,875 for dividends paid in March and August last, leaves £16,349 available. The directors recommend the payment of a further dividend at the rate of 10 per cent. per annum, tax free, for six months (making 10 per cent. for the year), and the carrying forward of £13,224.

NEW COMPANIES.

ACME SHOW CARD Co., LTD.—Registered with a capital of £1,000, in £1 shares, as show card manufacturers, gold blockers, manufacturers of advertising novelties, paper mer-

chants, etc. The subscribers are F. B. Heywood and H. Sparks. Private company. First directors to be appointed by the subscribers.

C. W. SMALLMAN, LTD.—Registered with a capital of £10,000, in £1 shares (5,000 6 per cent. cum. pref.), to acquire from C. W. Smallman the Shrewsbury Chronicle, and the Newport and Market Drayton Advertiser, etc. The subscribers are C. W. Smallman and Mrs. E. T. Smallman. Private company. Managing director: C. W. Smallman.

MANCHESTER PRINTING, BINDING AND BOX-MAKING CO., LTD.—Registered with a capital of £25,000, in £1 shares (500 deferred), as title. Power is also taken to publish newspapers, etc. First directors: Lieut. F. George, J. B. Watson, J. H. Harvey and J. Tantum. Private company. £500 is to be paid to the Lancashire and Yorkshire Industrial Development Trust, Ltd., as re-imbursement for formation expenses. The company may pay to the said trust commission of 10 per cent. for subscribing or procuring subscriptions for shares. The said trust is to provide all secretarial services and office accommodation for £200 per annum. Manager: J. H. Harvey. Registered office: 26, Brown-street, Manchester.

WILKES BROS. AND GREENWOOD, LTD.—Registered with a capital of £500, in £1 shares, as advertising agents and contractors, advertisement designers, printers, publishers, etc. The subscribers are C. Wilkes and W. R. Wilkes. Private company. First directors: W. R. Wilkes, C. Wilkes, H. Wilkes and J. T. Greenwood. Registered office: 28, Rushworth-street, S.E.

HIGHLAND NEWS, LTD.—Registered in Edinburgh with a capital of £15,000, in £1 shares, to acquire and work-the business carried on at Inverness and elsewhere as the "Highland News Co.," newspaper proprietors, publishers, and printers, etc. The subscribers are C. J. Munro and F. J. Crawford. Private company. First director: C. J. Munro. Registered office: 8, Hamilton-street, Inverness.

JOHN BARTHOLOMEW AND SON, LTD.—Registered in Edinburgh with a capital of £50,000, in £10 shares (2,000 pref.), to acquire the business of John Bartholomew and Co., geographical engravers, printers and publishers, carried on by J. G. Bartholomew, LL.D., cartographer to the King, and G. Scott, W.S., both of Edinburgh, at the Geographical Institute, 12, Duncan-street, Edinburgh. The subscribers are J. G. Bartholomew and A. G. Scott. Private company. First directors: J. G. Bartholomew, A. G. Scott, Capt. J. Bartholomew, G. St. Robinson and T. Barker. Registered office: 12, Duncan-street, Edinburgh.

WIGGINS, TEAPE AND Co. (1919), LTD.—Registered with a capital of £1,500,000, in £1 shares (750,000 7 per cent. cum. pref.), to take over the business of papermakers carried on by Wiggins, Teape and Co., Ltd., at Withnell Fold and Hercules Mills, near Chorley; at Buckland, Conqueror and Crabb Mills, Buckland, near Dover; at Glory Mills, Wooburn

Green, Bucks; and at Millholm Mill, Cathcart, near Glasgow; and the business of wholesale and export stationers and paper merchants carried on by the said company at 10-11, Aldgate, E.C., and elsewhere; also to carry on the business of photographic, scientific and technical paper, etc. First directors, P. W. Holden, A. E. Parke, F. L. T. Barlow, K. Barlow, T. L. Parke, L. W. Farrow, and W. G. Hav.

WEST BROOKS AND Co., LTD.—Registered with a capital of £2,000, in £1 shares (1,000 cum. pref.), to acquire the business of wholesale stationers, manufacturers of pencils and office sundries, etc., carried on at 50, Friarlane, Leicester, as "West Brooks and Co." Private company. Permanent directors, Chas. H. Bolton and Walter Brooks.

DOBEL, MYER, AND MCRAE, LTD.—Registered with a capital of £1,000, in £1 shares, as printer, publisher, bookseller, newspaper proprietor, advertising agent, sheet music sellers, etc. The subscribers are D. L. Myer and C. J. McRae. Private company. Table "A" mainly applies. Registered office, 46, Wilsonstreet, E.C.2.

ALPHA PRESS, LTD.—Registered with a capital of £2,000, in £1 shares, as printers, advertising agents, stationers, paper merchants, etc. The subscribers are E. Brooks and P. Reid Pitts. Private company. First directors to be appointed by the subscribers.

COMPANY MORTGAGES AND CHARGES.

Presh Obligations registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 16 of the Companies Act, 1900. (The registration of Satisfaction is not compulsory.)

BRITTAINS, LTD. (paper manufacturers, Hanley).—Issue on February 11th, 1919, of £10,000 debentures, part of a series already registered.

COMPANY NOTICES, etc.

ALNWICK AND DISTRICT LIBERAL NEWS-PAPER Co., LTD.—At a meeting of the company, held at South Shields, on February 4th, the following resolution was passed; and at a subsequent meeting on February 20th, was confirmed:—"That the company be wound up voluntarily; and that Mr. Henry Abey be appointed liquidator of the company."

POWELL, LANE AND CO., LTD, OPEN LONDON PFICES.—The enterprising firm of Messrs. owell, Lane and Co., Ltd., paper merchants, etc., of Gloucester, have established London EC. 4. At this address the firm's paper deflor ment will be conducted, and all inquiries or paper, boards, etc., should be addressed there on and from March 17th. The manufacturing department will be continued at the Docks, Gloucester. Mr. H. Elsworth, who has had so years' experience of the London paper trade, will be in charge at 62-63, Queen-street, Cannon-street, E.C.4.

Gazette.

A WORD OF CAUTION.

[In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIPS DISSOLVED.

Cairney, H., stationer, 1,288, Dumbartonroad, Glasgow. Sequestrated March 14th. Meeting to elect trustee and commissioners to be held March 27th, noon, at the Faculty Hall, Glasgow. Claims by July 14th.

THE BANKRUPTCY ACT, 1914. APPLICATION FOR DEBTOR'S DISCHARGE.

Suttons and Co., 14, Asylum-street, Leicester, stationers and picture post card dealers. To be heard April 16th, 10 a.m., at the Castle, Leicester.

NOTICE OF INTENDED DIVIDEND.

Appleby, J. A., formerly trading as Appleby and Co., I, Oak Bank Works, Hooley-hill, Audenshaw, Lancs, manufacturer of stationers' sundries. Claims by March 29th to J. G. Gibson, official receiver, Byrom-street, Manchester.

£5.824 FROM WASTE PAPER.—The Preston Waste Paper Committee, founded in 1916, has concluded its operations. The weight of paper-making materials collected has been 1,620 tons, and £5.824 has been distributed between local war charities. The Committee have been helped considerably by the Town Council permitting dustmen to collect the paper and rags thrown into the ashbins. Over 300 tons of material have been obtained in this way.

Bookbinding Notes and News.

The portion of Lord Ailesbury's library, recently sold at Sotheby's contained a copy of "The Booke Callyd Caton," printed by William Caxton at Westminster in 1483. Some fine examples of bindings were also a feature of the sale, among them being a copy of Caelius, "Antiquarum, libri XVI.," Basle, 1517, in Lyonese brown calf, with the name and motto of Jean Grolier; a Roman Missal, 1676, from Bishop Burnett's library, richly bound in red morocco and decorated in the "Mearne" style; and a fine copy of the first English translation of Boccaccio's "Decameron," 1620.

A writer in the Inland Printer describes a method of producing black panels on red leather as follows:—A black title panel, or space, is often desired on books bound in red leather. Especially is this true of bibles or old family heirlooms. To insure a binding that will last, these old books are often bound in cowhide, and to make the binding harmonise to a degree with the contents, the upper and lower title spaces should be black. A good way to accomplish this, and without resorting to black title skiver, will be found in the fol-lowing plan. When the book is ready for finishing, carefully wash the title panels with undiluted muriatic acid, using a piece of cotton. The action of the acid will turn the red leather black. Care must be taken, however, that the acid touches only that portion of the book which is desired black, otherwise a botch job will result. When the dyed portion has reached the proper degree of blackness, this part should now be given a good polishing with the hot iron. Next, panels should be washed and filled with a combination of oxalic acid, paste and water. When dry, size with egg albumen. Roll and letter in the usual way, following up with another burnishing, after which the titles should be varnished. A very pleasing effect is thus gained.

The same writer thus describes a method of stamping on keratol:—Of all articles to be stamped it is extremely doubtful if any produces one half the annoyance that keratol does. In many instances the average workman has found the stamping of keratol a baffling proposition, and he has become discouraged and been compelled to give up the job in digust and admit defeat. One peculiarity of keratol is evident the instant it is unrolled. In nearly every case the material is damp. The cause is not for the workman to determine, but a remedy consists of spreading the material out to dry, either after making cases, the whole roll, or after being cut to size wanted. Either way will do so long as the desired result is obtained. Where possible, the material should be allowed to dry for at least ten hours. It should then be thoroughly washed and cleaned. For this purpose several agencies may be employed. Alcohol, benzine, ether, diluted muriatic acid, aqua ammonia or turpentine are good washes; but alcohol will probably give better results than any. When thoroughly dry, apply size. Requires a slow impression with moderate heat, but the matter of heat rests entirely with the workman, as a little experimenting will probably be necessary to determine the exact temperature.

At the recent British Industries Fair there was a display of leathers suitable for the manufacture of fancy goods and for bookbinding purposes. Some remarkably good dressed skivers and skins in grains and colours were displayed, the moroccos, pig skin and calf, specially prepared for binders' use being of a high excellence. Paste grains, roans and basils, also, were of good quality and remarkably well dressed. In this section the leathers of the Bridge of Weir Leather Co. were of a specially fine character, as were also those shown by Messrs. E. and J. Richardson, Elswick Leather Works.

The importance of the leather industry is exemplified by the Council of the University of Leeds appointing Mr. Douglas McCandlish, M.Sc., to the Chair of Applied Chemistry (chemistry of leather manufacture). Professor McCandlish is a native of Leeds. After leaving school he became assistant to the Leeds city analyst, with whom he remained for four years, after which he entered the University of Leeds and graduated with honours in chemistry, remaining to specialise in the chemistry of leather manufacture. For two years he served as a demonstrator in the Leather Industries' Department of the University, and then took an appointment as chemist to Messrs. William Paul, Ltd., of the Oak Tannery, Leeds. After a year's service with this firm he was offered and accepted an appointment as chemist with Messrs. A. F. Gallum and Sons, Milwaukee, U.S.A., and this post he has now relinquished in order to take up the Leeds professorship.

The scarcity of pigskin leather and its high price are thus accounted for by a contemporary:—The person who buys a pigskin bound book and pays a very high price for the same, can hardly see how this price is justified when he considers the immense number of pigs slaughtered every day to keep the world in pork, ham and bacon. The truth of the matter is that very little pigskin is ever tanned into leather. The pig leather industry is chiefly confined to Scotland and Germany, the reason being that the skins are left on the carcasses in almost all the other parts

of the world. Although in normal times a pigskin is worth about six shillings, yet it is seldom removed from the carcass. One reason is the great difficulty of flaying the animal. It appears to be almost impossible by present methods to remove the skin without cutting away a large quantity of fat, and the value of the skin compared to the loss of weight of the meat offers very little inducement to remove the skin, in addition to which, the custom of leaving the rind on bacon and pork effectually prevents any attempt at present to increase the supply of pigskin.

The annual report of the South Australian Public Library, Adelaide, has been issued. The reference to the bookbinding section states that the bindery was thoroughly cleaned, and the stocks of material and of work to be attended to, were methodically arranged. As the staff was unable to cope with all the work, to prevent accumulation ot arrears, it was decided to discontinue binding little-used newspapers and Government Gazettes. It has also been decided that in future these are to be preserved in brown Paper parcels. It was also deemed expedient to employ outside binders so that the arrears of work might be overtaken without delay. The material now in stock is in a satisfactory condition, and it is estimated that it will suffice for all requirements for the ensuing

A Correspondent of the Publishers' Circular, writing on the cost of bookbinding, says:-As an eminent publisher has recently an nounced to his clients, it is preposterous to expect that an 'after the war' public will pay 15s. for a book which used to cost 4s. or 5s. Now with the special department of leather binding the case seems particularly bad, the delusion on the part of the specialist operative more serious. The wages of the bookbinder of the serious another craftsman) binder (like those of many another craftsman) have risen on a scale quite out of proportion to the reserving of life to the rise in price of the necessities of life from which we are all suffering. These men are asking a fancy price because they find they Can Set it, and they get it, so far, because apparently their employers are tapping a new opulent consumers, to whom such prices are no object. These are, I understand in dealers are no object. they can only be—those who have made (and are making) money out of the war. which ask, sir, if this is a sound basis on which which to ask, sir, it this is a soull of prices which to attempt to establish a scale of prices which has already driven away a considerable. The man ass of orders from the shops. manager of a well-known long-established other hand business observed to me the day that he was simply 'not taking If a decent half-morocco covering which to be ve years ago cost 5s. or 6s. is not now to be ve years ago cost 55. or cost can be ad under 18s. or 20s., he declares he can be ad under 18s. or 20s., he declares he cannot recommend his customers to bind at was the pleasure of the thing. A rise in the pleasure of the thing.

Thay well have been natural and proper, but Dresent demands (to say nothing of future)

savour of an impossible tyranny. If Britons, in truth, never will be slaves one may surely hope for the early establishment of a non-union bookbindery."

We of the present day cannot boast that in bookbinding we have improved on the work of our ancestors, but here, as in other industries, we have improved the means of production, and brought within the reach of the many what was formerly the luxury of a It wants no very great stretch of memory to recall the time when there was nothing between leather binding, more or less costly, and the ugly brown "boards" in which the books of the last generation were arrayed. Now we can get a neat, strong and durable binding, for a cost which adds little to the price of the book, while it greatly increases its attractiveness. Doubtless many of our cheaper cloth bindings are in bad taste and tawdry, bnt the great majority are by no means so. The simple cloth binding in which books of the higher class are generally issued, with little or no ornament, except the title, is as well adapted for its purpose as needs be. It is inexpensive, it lasts a long time—with good usage it will almost last as long as the book itself—and it preserves its contents as well as the most elaborate binding.

There is no question that, where the cost can be afforded, leather is the proper dress for books. But it is only in comparatively rare cases that such cost can be incurred. Many a useful library would be sadly curtailed, if the cost of half the books in it had to be doubled to provide their bindings. One of our greatest luxuries is the cheapness of our books, and it is not often remembered how much of that cheapness is due to the binder-not to the skilful artist who labours for days over the adornment of each volume, but to the rapid manufacturer of useful covers for our books; the binder who will receive an edition of the book from the printers one day, and send back a thousand volumes the next day ready for

Wire Stitching.

From a Costing Point of View.

In continuation of his series of articles on Bindery Operations, in the Chicago Inland Printer, Mr. R. T. Porte recently had something to say in that periodical on the above subject, and from his remarks we take the following extracts:—

There are three classes of machines in common use for doing this work, the machine used depending upon the size of the plant and the amount of work of this kind handled. The cheapest machine, from point of investment, is the wire "stapler." The work on these machines is not rapid, but for small

work and small editions the work is done satisfactorily; and where there are no trade binders near, they are almost a necessity to the smaller printing office. The next better machine is the foot-power stitcher. It is much superior to the "stapling" machine, and if any quantity of work is done it is worth considerably more to the plant. The standard machine is one run by power, and making its own staples. Of this class there are several sizes, and books up to considerable threkness can be stitched by the heavier machines of this grade. There are also machines built for

special work in this class.

The power machine most satisfactorily used in the average printing-office is one stitching from two sheets to books three-quarters of an This machine is rapid, will inch thick. handle the majority of work, and is the best all-round machine for a shop that has a large amount of work to do. Binderies doing commercial work usually have three classes of machines-small machines to handle booklets, large machines to handle side-stitched work, and heavy machines to take care of This is not practical unless thick books. there is a wide range of work, as well as a large quantity. There is but little difference in the cost of operating the three classes of machines up to 5,000. Over that amount the faster and larger machines will cost less to operate. Saddle-back work cannot be used where there are a large number of pages, about ninety-six being the limit, although books of more pages are sometimes saddlebacked. Some papers cannot be stitched in this manner, because the texture of the paper is too weak. Heavy enamelled papers are apt to break apart at the fold unless a binder of "super" or "holland" is pasted at the fold on the inside and the book is stitched through the cloth. This, of course, will add considerably to the cost of producing the book, but better results will be secured.

In small quantities but one operator is required to do the work, but in quantities of over 1,000 an operator and helper are usually employed on the work. One operates the stitcher, while the other feeds the books on to the table of the machine in a manner that makes for rapid work. In this way at least twice the speed can be obtained as when only

one operator is employed.

Books with covers cost more to stitch than those without covers because of the more careful handling required. Again many books have extended covers; sometimes the stitch is sent through both cover and booklet at one operation, and many times the books have to be stitched first and the cover then stitched on to the book. Stitching a book by this method is very slow work, and much care must be exercised to do it properly. There are many booklets to be saddle-backed which may be run two-up, using four stitches instead of two. These books are a trifle longer than the ordinary, and the work is but little slower. On big runs I always estimate the books single, and have found that my figures run very close to cost, as the operators run on all classes of saddle-back work to the full capacity of the machine, with but little variation. My experience is that it costs about the same to do double-up or two-on work as regular work. In other words, 50,000 booklets, two on, cost as much to wire-stitch as 50,000 single. There may be some slight saving, but very little. There is no argument for running them single, especially small books to be saddle-stitched, as there is less cost for folding, trimming, and other operations; but so far as stitching is concerned, it costs very nearly the same, whether single or two on, for equal quantities. It is therefore unwise to take the number of books to stitch, and figure in that manner. in saddle-back work.

In figuring for side-stitched work several things must be taken into consideration. The first is that a side-guide must be put on the machine in order that the operator may jog the signatures up evenly. This cuts down the speed somewhat. The girl who feeds the books to the operator on the machine will do her work just as quickly as when feeding books to be saddle-backed, but the extra jogging will delay the work. If there are but a few signatures in the book the side-guide is not always necessary, but in books with a number of signatures this is necessary if good work and close register are to result.

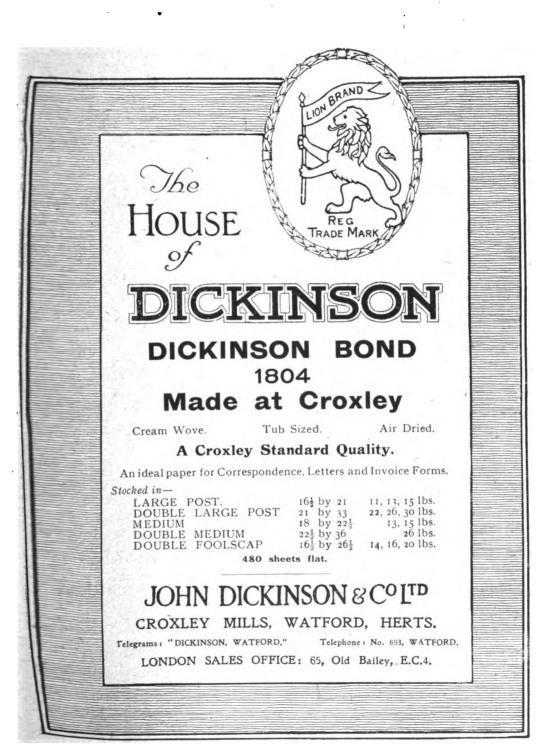

Book papers can be handled and stitched very easily, but enamelled book and bulky soft papers are hard to stitch, and make a larger book in proportion to the number of

pages.

Books under 64 pages cost as much to stitch as those of that number of pages. There are few books of less than that number of pages which are not saddle backed. The majority of books require only two stitches, but there are some which require three. Careful records show but slight variation in the cost of producing these in side-stitch work, and the amount of wire used is small, except in the larger quantities. In the smaller amounts, 5,000 or less, there is so slight a difference as to make it hardly worth calculating. For all practical purposes, the same cost may be figured for both two and three stitches to the book.

A good operator on a machine can usually stitch books as fast as the machine will run, and will rarely take her foot off the trip, sending the books through without a stop. Extra good work and slow operators will increase the cost, in some instances doubling it.

Wood Engraving.—Auguste Lepère, one of the greatest of modern French painter-etchers, an officer of the Legion of Honour, and an honorary member of the Royal Society of Painter-Etchers, died on November 20th, 1918. His death, occurring at this period, passed almost unnoticed by the French and British Press. In memory of this distinguished woodengraver and etcher, a small but representative, collection of his work—including 17 proofs lent by Miss K. Kimball, A.R.E.—has been placed on exhibition in the Department of Engraving, Illustration and Design, Victoria and Albert Museum (Room 132).

BRITISH & COLONIAL PRINTER & STATIONER

In the course of an article embodying advice to master printers Mr. Robert F. Salade thus refers to colour printing: -" The highest ambition of some master printers is to have a battery of cylinder presses running constantly on fine colour work for catalogues, booklets, and other advertising printing. I would advise the average printer to keep away from fine colour work unless his plant is especially adapted to the purpose, and unless his pressmen are masters of colour printing. Even in plants where the pressmen have had long experience on colour work an elaborate job of colours is often produced at a loss to the printer. Nothing is more uncertain than intricate process colour printing when it comes to estimating the costs of such work. It is said that 'figures do not lie,' but they are frequently all wrong when the printer compares the time consumed on a long run of colour printing with the figures of his original estimate. Mind, I am not speaking against colour printing with the idea of discontinuing it. What I desire to make clear is that colour printing is the most difficult of all work that comes to the printing office; the most easy thing to spoil is a fine colour job, and, in many instances, colour printing does not bring the printer a profit.

PATENT FOR SALE OR LICENCE.

THE Proprietor of British Patent No. 6,989/12, dated March 21st, 1912, relating to "PROCESS OF MAKING A CONTAINER," is desirous of entering into arrangements by way of a license or otherwise, on reasonable terms, for the purpose of exploiting the above Patent and ensuring its practical working in Great Britain.—All inquiries to be addressed to B. SINGER, 29, So. La Salle-street, Chicago, Illinois.

Some Bookbinding Patents.

A loose-leaf binder of the kind in which the leaves are held between clamping-plates connected by cables each having one end attached to a nut working on a screw in one of the clamping-plates, is provided with means whereby a considerable expansion may be obtained while retaining the ability to clamp the leaves tightly. In Figs. 1 and 2 the cables 5, 6 are shown, provided with hooks 10 which

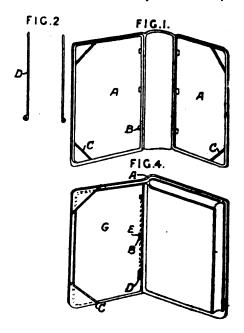

may engage any of the slots 8 in the bar 7, or headed pins may be provided on the bar 7 to be engaged by slotted eyes on the ends of the cables. In a further modification, cables of indefinite length are used and their ends may be simply tied together or may engage a plate, as shown in Fig. 8. The patentee is Mr. F. James.

An expansible loose-leaf binder, the invention of Mr. E. H. Hill, comprises two completely separable book portions 10, 10¹, each having completely separable telescopic postparts 12¹, 13, in combination with connecting arches 15, each engageable with two of the

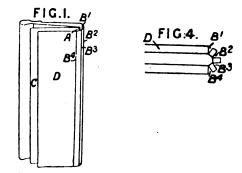

post-parts to re-unite the separated book portions into book form. The arches are preferably formed with plug and socket ends 17, 16, either or both of which may be slit as at 17¹, 16¹. When the device is in the open position, the end plates 21, 22 may be held in alingment by the pivoted members 23.

In an invention by Messrs. King, Readings and King, an outside cover A is provided with metal or other loops B which pass

through slots E in the boards G of the book the parts being secured by inserting the pins D. Straps C secure the corners of the boards.

An invention by Mr. W. Hunt relates to the stiff cover of a bound book, or of a temporary binder in which the sheets are held by laces, as described in Specification 9674/12, or by posts, rings, etc., is jointed so as to enable the book to be folded. The cover C, which folds inwards has one or more joints A near the centre, while the other cover D has two or more

joints B¹, B², B², B³. The joints are made by strips of rigid material joined by cloth, etc., and the strips are placed near together, as shown in Fig. 4, so that the joint can yield in one direction only.

Paper and Print in South Africa.

PAST AND PRESENT.

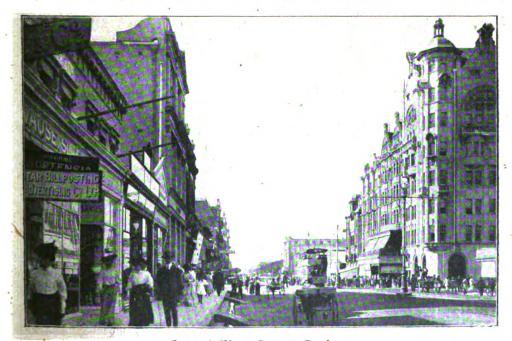

Second Article.

HE industries associated with paper and print, in South Africa, although not so extensive as, for instance, those of Canada, Victoria or New South Wales, and, considered merely in a numerical sense, falling far behind those of India, yet constitute a by no means

insignificant factor in the commercial life of the Union.

Some Statistics.

The largest group is of course composed of firms engaged in the printing, paper, book and engraving trades, and of these, according to

Central West Street, Durban.

BRITISH & COLONIAL PRINTER & STATIONER

the last industrial census of the Union—which may be considered as dealing with twelve months ending early in 1916-there were then 241, including about a dozen litho printers, viz, 120 in the Cape Province, 65 in the Transvaal, 44 in Natal, and 12 in the Orange River Colony. Of these, 222 were in the printing and bookbinding business,* seven in photo-engraving or lithography, and nine in the manufacture of paper bags and cardboard boxes. More than a fourth of the 241 concerns were carried on by registered The total capital invested was companies. £1,614,433, of which £696,010 represented businesses established in the Cape Province, £204,098 those in the Transvaal, and £132,458 in Natal. The value of the land and buildings occupied was about £150,000, two-thirds of this being due to the Cape Province, and only one-sixth to the Transvaal. Machinery, plant and tools stood at £556,953, just half of which was in use in the Cape Province, and £160,000 in the Transvaal.

The number of employees in these trades was 5,158—4,918 in printing and binding alone—representing only 5 per cent. of the factory workers in the Union. This included 2,975 male and 663 female European or white workers, 252 male Indians, 446 male African natives, and 514 male and 307 female coloured persons of other races. Just over half the total number, i.e., 2,650 worked in the Cape Province, including 576 females; 1,456 in the Transvaal (283 women), and 825 (68 women) in Natal.

The Human Factor.

. The grading of the printing industries in the Union may be gathered from the following table:—

Emp	loying	No. of Establishments.	No. of Hands.	
under	4 hands	18	41	
	4 ,,	20	8o	
5-	10 ,,	96	667	
1 I -	20 ,,	51	732	
21-	50 ,,	. 35	1,056	
51-		11	825	
101 8	and over	10	1.757	

It will be noticed from this that out of the 241 South African printing, etc., establishments no less than 134 employed only six hands apiece on an average. Of the 21 offices with fifty or more hands, the Cape Province had nine, the Transvaal eight, and Natal three. The total amount paid in salaries during the year under review was £160,347, in The average earnings wages £499,752. per employee amounted to £161 for a white worker, £52 for an Indian, £53 for other coloured workers, and £41 for a native. The value of the materials used in the trades dealt with was £438,241, practically all imported, and that of the output in manufactured articles £1,364,723, of which £541,430 was due to the Cape Province, £529,367 to the Transvaal, £212,416 to Natal, and £81,510 to the

Orange River Colony. Only £47,000 worth of goods was produced in factories other than those engaged in printing and bookbinding. Two-thirds of the total number of establishments in the allied trades used electricity for power or lighting purposes.

As there are probably nearly 250 newspapers and other periodicals published in South Africa, the establishments that print these, and have jobbing departments in addition, are in many places among the largest in that line. The Union Government are themselves publishers in a fairly large way of business, and the list of issues, in book form and otherwise, from the Government Printing Office at Pretoria, is a long one.

The Government Printery.

Compared with the official printeries some other self-governing Colonies, the South African one is on a rather modest scale at present, the value of the plant and machinery employed being about £25,000. The staff in normal times numbers about 360, including 30 clerks. The artisan staff includes some 40 native workers. Down to the end of 1916, about 60 of the employees were on war service, including nine compositors, a round dozen of machinemen, and several bookbinders. The Government Printer is Mr. F. W. Knightly, Mr. T. Green-wood the Father of the Chapel, and Mr. P. T. Callard overseer of the machine room. Stationery depôts are maintained at Maritzburg and Cape Town. During 1916. no less than 11,000 orders were executed in the Office, of which 8,300 were for various Government Departments and the rest for the South African Railways and Harbours. The value of the completed work was £87,754. A good deal of the Government printing and binding is placed with outside firms by contract, Messrs. Whitehead, Morris and Co., Ltd., and the Cape Times, Ltd., doing a share of it. In 1916, 2,877 such contracts were placed in the Cape Province, to the value of £44,958, and 467, amounting to £3,806, in Natal. In the course of that year, the Government Printing Office used 34,593 reams of paper, and 3,663 gross of boards, representing in all a weight of 907 tons. About a thousand tons of paper, etc., were received, and two-fifths of it worked up into stationery for despatch to Cape Town. Among the jobs done at Pretoria may be mentioned the printing of 80 millions of Excise Duty Stamps, five millions of post cards, and nearly as many native passes, as well as large quantities of postage, revenue, and railway parcel stamps. For some time past, economy in stationery has been the order of the day in all South African Government Departments. A stock of paper to the value of £11,000 was in hand at Pretoria at the end of 1916, £12,000 worth of stationery there and elsewhere, and £28,000 worth of Government publications. These figures were however much below the normal totals, owing to the irregularity in the arrivals of paper, etc., from England, on which the work not only of the Government printing estab-

^{*}Seeing that in the same year (1916) a trade list of South African printing firms included 262 names, it is quita likely that the official figures rather understate the actual total of firms in this line.

lishment, but of practically all the others, largely depends.

The Customs Tariff.

The tendency of the Union import tariff is of course to protect, so far as is possible and reasonable, local manufacturing enterprise and industry. Thus goods which are being turned out locally can only be imported on payment of a stiff Customs Duty. The following are the principal items in the Tariff, so far as paper and print are concerned:—

	General.	United Kingdon and Colonies
		Free.

The Free List includes atlases, charts, maps, printed books and music, foreign catalogues or Price lists addressed to local firms, plans, engravings, etchings, lithos, potos, newspapers, and picture books.

Directories or guide books to South Africa, or special numbers of South African periodicals printed abroad, are excluded, and must pay goods, the general duty. For "unenumerated" sules, the general duty is 20 per cent. ad or com, with a rebate of 3 per cent. on British lonial produce.

The import Trade.

for the five years 1911-15, the average annual value of the imports of paper was 1912-15, the average value of the imports of paper was 1915-000, but in 1916 it was £745,000. Stamorery, on the other hand, fluctuated £770-000 a year; in 1914 it fell to £680,000, in \$\frac{1}{2}\$ \$\frac{1}{2}\$\$ \$\frac{1}{2}

Origin of the Imports.

The bulk of the imports connected with paper and print comes from the United Kingdom. For instance, in 1917, just over a third of the imports of printing paper and paper bags, and a third of the wrappings, was British. Nearly all the rest of the paper bags, about one eighth of the printing paper, and six per cent of the wrappings came from the U.S.A. Canada and Sweden each supplied about one-fifth of the printing paper, Norway 6 per cent., and Holland 3 per cent. As regards wrappings other than British, Canada sent about 20 per cent., Sweden 30 per cent., Norway 6 per cent. Half of the printers' and bookbinders' materials came from the United Kingdom and Canada, and one-sixth from the U.S.A. Nearly all the stationery and books imported came from the United Kingdom, though a little over 5 per cent. came from Holland for the use of the Dutch-speaking population, and less than half that percentage from the U.S.A. Cardboard boxes, printed matter generally, ink, maps, etc., were mostly of British origin, the U.S.A. being the only competior worth mentioning. The printing and binding machinery came as to two-thirds from the United Kingdom, and the rest from the U.S.A. The pre-war German share in the import business in these lines was only about 5 per cent., against Britain's 80 per cent. The Government itself ranks amongst the largest importers. At the date when the Union was constituted (May, 1910), the Government expenditure on printing and stationery was £220,000 a year. In the following financial year it rose to £250,000, dropped to £200,000 for the twelvemonth ended March 31st, 1915, and to £173,000 the year after, of which £70,000 went for wages and salaries; £48,000 for paper and other materials, and for printing and binding, and £37,000 for stationery. The South African Railways has its own ticket printing establishment, which turns out about £5,000 worth of tickets per annum. The chief importing centres of the Union are Cape Town, Durban (founded by a

Digitized by GOOGL

BRITISH & COLONIAL PRINTER & STATIONER

former Governor, Sir Benjamin D'Urban, in 1835), Port Elizabeth, and East London, in order of importance as named.

The necessity of substituting something else for those German and Austrian goods that were wont to be used before the war has led to the U.S.A. doing new or increased business in printing and wrapping paper, printing ink, cardboard boxes, printing and bookbinding material, and Sweden has also improved her South African trade in the same lines. The import of printing machinery has fallen off lately, but will no doubt revive again when business activities are resumed. Coincident with this, it is interesting to find that the printing trades, though short of labour, have shown much activity in the manufacture of

operatives in South Africa are well organised. The most important association is the South African Typographical Union, which, from a membership of 437 in 1910, rose to 1,131 in 1916. Its headquarters are in the principal centre of South African printerdom, Johannesberg, and there are about a dozen branches in the large towns of the Union. In Johannesberg, also, are the Transvaal Printers' Sick Benefit Society (membership of which is open to all printing trade workers under 50) and the Transvaal Printers' Assistants Union, which takes in those printing trade opera-tives who are not eligible for membership in the S.A.T.U. At the outbreak of the war this There are two had about 200 members. printers' organisations in Cape Town, viz.,

A Busy Corner in Durban.

useful articles which were all more or less imported in years prior to the war, but the cost of which has encouraged the South African maker to take up the industry, with satisfactory results.

Labour Organisation.

Mention of this point naturally leads us to say something about labour conditions in South Africa, so far as the printing and allied trades are concerned. Judging from the initiation of certain legislative steps in the Union Parliament, the adoption of Trade Boards, and the setting up of factory laws, will soon be accomplished. This will be but the natural corollary of the fact that the printing trades

the Printers' Benefit Association, founded in 1912, which is rather a Friendly Society than a trade union of the ordinary character, and the South African Printing and Kindred Trades' Association of Overseers, which is somewhat on the lines of our British P. M. and O. A. The Cape Society of Journalists must also be mentioned, as well as the Transvaal Stationers' Association, of Johannesberg, an employers' organisation of comparatively recent formation.

Rate of Wages.

Speaking generally, printing trade workers wages are lowest in Cape Town, and highest in Johannesberg. For instance, before the

Digitized by GOGIG

war, comps were getting 66s. to 8os. a week in the former place, and 110s, to 135s, in the latter. By 1916, these rates had risen to a minimum of 70s. for hand work, 90s. for machine work on evening papers, and 120s. on morning ditto in Cape Town, against a minimum of 110s. for hand work, and 140s. and 160s. respectively for machine composing on news in Johannesberg. In the same year, lino piece rates per 1,000 ens ranged from 1s. 3d. at East London to 15. 7d. or 15. Ad. in other places, and for handsetting from 4d. at Durban and East London, to 51d in Johannesberg and Pretoria on daily newspaper work. Machineminders' wages varied from 70s at Cape Town to 120s. at Buluwayo and Salisbury, in Rhodesia. Binders and rulers were getting the same at those two

about 360 printers stayed away from their work in sympathy. Two years later, as a result of the increase in the cost of living, the printers asked for more pay, and a rise of about 10 per cent. was granted at Johannesberg and an extra shilling a day (2s. was asked for) at Durban and Maritzburg. The war, of course, made considerable inroads into labour. For instance, at Cape Town, in 1916, the Government Labour Bureaus were notified of 132 vacant situations in the printing and allied trades, but there were only 57 applicants for work, and not more than 11 of these were found to be suitable.

The Trade Centres.

As already mentioned, Johannesberg is the chief centre of the South African graphic arts

A Street View in Johannesburg,

places, 110s. at Johannesberg, and as low as 60s. at Cape Town; whilst stereotypers' wages 1 an ged from 80s to 11; s., according to locality. The 48 hours' week was the one generally in tion. eg., 42 hours at Durban and East London for hand-setting on morning papers, and 39 at Durban for machine work on the same.

During the past few years the printing trade
in South Africa has been tolerably free from
disputes. In 1911 about 500 workers went on
strike at Johannesberg, but as a result of the
pointment of a Conciliation Board, the
state quo ante was reverted to. In 1914 there
was a great railway strike, and for three days

industries, there being about sixty firms in that line, against fifty in Cape Town, twenty-five in Durban, and fifteen at the Union capital, Pretoria. There is no sort of restriction on printing, except that in Natal. in conformity with an Ordinance dating from 1858, daily newspaper publishers have to take out a licence. costing £10 per annum; those of all other newspapers, issued at intervals not exceeding seven days, pay £5. Stationers booksellers, etc., pay £3. The produce of the newspaper licences is handed over to the Union Government. Printing and bookbinding are among the trades taught in the Technical School at Cape Town.

The Press.

Turning now to the newspaper press, it may be worth while to point out that South Africa resembles Eastern Canada in that the language of the first settlers-in this case Dutch -survives, and is spoken by a large proportion of the population. Hence much of the printing done is of a bilingual character, and this is naturally reflected in the Press, there being a number of periodicals printed wholly in Dutch, and many more in Dutch and English. The oldest of the Dutch journals is Ons Land, at Cape Town, the pedigree of which goes back to 1830 In each of the large Dutch speaking centres, Pretoria and Bloemfontein, there are two or three Dutch periodicals, but we do not think that Johannesberg boasts of any. In the Orange River Colony there is only one daily paper, the Bloemfontein Friend, which dates back to 1850, and has a weekly Dutch edition. Some other newspapers of old standing are the Natal Witness, Pietermaritzburg, and the Eastern Province Herald, Port Elizabeth, both of which were started in 1845; the Natal Mercury, Durban, 1852; the Cape Argus, 1857; and the Queenstown Daily Representative and Free Press, 1859. Cape Town takes the leading place as regards the number of periodical publications issued, about fifty being dated from there, as compared with thirty in Johannesberg, ten in Bloemfontein, eight in Pretoria, and half-adozen at Durban and Port Elizabeth. Missionary enterprise being an "industry" of some importance in that part of the world, religious literature makes a strong show, as does also agriculture. The war does not does also agriculture. seem to have interfered greatly with the new paper publishing business. In 1914, there were 280 papers issued in the Union, in 1915, 255, and in 1916, 256, the latter total including 31 new ones started up during the year, replacing nearly the same number of deceased periodicals. Cape Colony possessed the largest number, 129, next coming the Transvaal with 85, Natal with 25, and the Orange River Colony with 17. There were fourteen native newspapers, including some for the numerous Hindu immigrants. In 1915, the number of newspapers posted in the Union for delivery therein was 21,285,279, an increase of about 50 per cent. in 3 years. The local rate of postage is a halfpenny for every four ounces.

The dissemination of literature and general knowledge is largely helped by the Public Libraries, which contained 1,003,672 volumes at the end of 1916, with 20,908 subscribers. The average monthly circulation was 115,812, of which nearly eighty per cent. was fiction. The Government grants to the Libraries amount to upwards of £14,000 a year, a sum which about covers the outlay on books and

periodicals.
South Africa has been unfortunate ever since the commencement of the present century, which found her immersed in the Boer war. The individual and economic depression which followed this had not entirely passed away when the European war began

with its train of troubles for dwellers in every part of the world. Still, there can be but little doubt that, with the early resumption of normal trading conditions, a brighter era will begin to dawn upon South Africa, and bring not alone peace and security, but prosperity also, and the blessings which that entails, whether viewed from a purely domestic or from an industrial standpoint. This, at any rate, is what we all wish for, and confidently look forward to.

IMPORIS AND EXPORTS OF PAPER, CIC.

AUSTRALIA.

Organisations connected with the printing trades were strongly represented at a deputation which waited on the Minister of Public Health at Melbourne relative to the action of the Footscray council in ordering persons engaged in the manufacture of varnish for printers' ink in that municipality to cease operations, on the ground that the trade was of a noxious character. It was pointed out by Mr. W. Colby, for the printing ink manufacturers; Mr. T. E. Varley, for the master printers, and Mr. Durham, for the employees, that the factories had been in existence for many years, and the manufacturers were anxious to meet the wishes of the council to the extent of providing means of get-ting rid of the noxious fumes. Many interests were dependent on the manufacture of printing ink locally, as shown by the fact that the wages sheet was £793,000 last year, or between £15,000 and £16,000 a week. All they desired was time to complete their arrangements. In a sympathetic reply Mr. Bowser said all he thought he could do at that stage was to place himself in communication with the Footscray council, and see if it could not take the reasonable view that the manufacturers should be allowed time to complete the experiments which appeared to have a prospect of proving successful. Mr. Colby said that six months would be a reasonable time, and Mr. Bowser said he would give the matter immediate attention.

The death has occurred of Mr. George Adams, senior member of the firm of Adams, Cooper and Adams, proprietors of the Albury Banner newspaper. He was aged 83 years, and his connection with the paper dated from 1862.

Budding "war authors" were somewhat perturbed by an unusual War Precautions Regulation which was issued late last year. It provides that no person may print or publish any book, pamphlet or document purporting to be a "record of war services" without the permission in writing of the Attorney-General, and on such terms and conditions as he may specify. The phrase "record of war services" is interpreted to mean any publication being, or purporting to be, a record of the service rendered by any expeditionary force raised in the Commonwealth during the present war, or of service rendered by any member of such force. The main object of this far-reaching regulation is to prevent the exploitation of the sentiments of those who have lost relatives at the front.

Mr. John Close, who died lately from heart failure, was the oldest printers' engineer in New South Wales. During the past 35 years

he erected most of the plants in that State, and was the inventor of the "Victor" folding machine, well known in printeries throughout the Commonwealth and New Zealand.

Mr. W. E. Cole, the king of Australian booksellers, has passed away. His bookshop in Melbourne was his work and also his hobby, and from the time of its foundation in 1883 to within a few weeks of his death he studied it with the interest of a father watching a dearly-loved child. His master-stroke was the introduction of the monkey house, which drew all the youngsters of Melbourne to its odoriferous portals. When it was first opened it was no unusual thing to see Mr, Cole, in all the glory of a bell-topper and a frock coat, jostling his way through the crowd with a large bucket full of steaming vegetables which he had prepared for the monkeys. He was a genius in his advertising, and kept his business well in the public eye by means of the publicity he gave it. His finest piece of advertising, however, was his advertisement for a wife. The thing was done with his accustomed thoroughness, and Mr. Cole came out into the open with a two-column advertisement in the daily papers, in which he set out the true qualities of a wife and the kind of girl for whom he was seeking. The pennya-liners of the day shrieked with delight, and plunged into columns of verse and comment, but Mr. Cole went his way, and married a Miss Jordan, of Newtown, Tasmania, who proved to be the fulfilment of his wishes, and who made him very happy for many years until her death.

Messrs. Raphael Tuck and Sons, Ltd., art publishers, London, had a decree for an injunction granted by the Supreme Court in Sydney against the Triad Magazine, Ltd., for having reproduced in the October issue of the Triad their well-known picture, entitled "The Awakening of Galatea," the copyright of which belongs to Messrs. Tuck.

Christmas, 1918, will probably be remembered as the most Australian Christmas. Shops offered more, and still more, Australian goods, and these were often so uncommon and attractive that they were purchased against quite an array of imported stuff. Books by Australians, illustrated by Australian artists, are coming more and more on to the Christmas market. Last season's list made a big appeal to children. Many of the kiddies' books written by Australian authors were read by the adult population as eagerly as by the children. This is not because they are works of too subtle a nature, but because they have something of the quality of Louis Carrol's books, and can appeal to the child in the man.

Replying to a question by Mr. Cain in the Victorian Legislative Assembly the Premier said the Ministry was giving to the Australian paper mills all the orders they could meet. Mr. Mullet, Government Printer, had cabled that he had been able while in America to effect a saving of £15,000 in the charges to the Government for paper supplies. Mr. M'Pherson gave the assurance that the Ministry would still be able to give all possible encouragement to any new industry starting in Mr. Cain's district. Mr. Prendergast urged the necessity for the Ministry's encouragement of manufacture of paper in Victoria.

An organisation, to be known as the Periodical Newspapers Association, was formed at a meeting of representatives of weekly and monthly newspapers held at Sydney recently. The object of the Association is the protection of the interests of these newspapers in connection with the control of paper supplies, and the amendments in postage rates, which are as follows:—Newspapers posted by registered newspaper proprietors or newsvendors, or returned by agents or newsvendors to publishing offices, 3d. per 20 02s., posted at any one time; other newspapers, id. per newspaper.

At the last annual meeting of the N.S.W. Country Press Co-Operative Co. the report and balance-sheet, which were adopted unaninously, showed the developments of the country newspapers during the year, and that a Considerable portion of the paper imported bad been distributed in other States. The cash turnover for the twelve months amounted £98,529, resulting in a net trading profit of £1,636, out of which a dividend of 10 per cent. as declared, and £3,812 carried forward. It was decided to erect a fitting memorial to the late T. Temperley, as a mark of his fellow-Pressmen's esteem. It was further agreed to alter the articles of association to enable the company to cope with the increasing requireents of the country business.

The half-yearly report of W. E. Smith, Ltd., Sydney, shows a further increase in net Profit, and notifies a dividend of 9d. pershare, equal to 12½ per cent. per annum, while adding £1.100 to reserve, and writing off £560 for depreciation. The business, it is reported, has been well maintained.

NEW ZEALAND.

The fact that the cost of paper has advanced ver pre-war days from 300 to 400 per cent. is emphasised in the annual report of the overnment printing and stationery department. It states that apart from the fact that smaller quantities are being sent out from the mills, it is difficult to get paper at all owing to the shortage of shipping, and that even in connection with American purchasers, it is not certain that orders will come to hand. In view of these circumstances heads of departments are urged to keep a careful check on their printing and stationery orders.

INDIA.

The New Year's Honours List contained the names of three members of our profession, namely, Mr. J. J. Meikle, superintendent, Government Printing Office, Calcutta; Mr. F. J. Hall, deputy superintendent, Government Printing Office, Delhi: and Mr. C. T. Letton, superintendent, Government Central Branch Press, Simla. The former has been awarded the O.B.E., and the other two the M.B.E.

On January 1st a new daily journal made its appearance at Allahabad — the Muslim Herald. The paper is printed in English, and the proprietor is a Mahomedan lady who is also the proprietress of the City Press, Allahabad. The journal, which claims to be the first English daily paper in the Moslem interest, has as its object the promotion of the interests of the community as a whole.

Allahabad is also to be the home of another English daily, for it is announced that a Nationalist organ called the Independent will be published for the first time. The journal is being started by a private registered company under the name of the Nationalist Journals, Ltd., the editor being Mr. Syed Hossain, of the Bombay Chronicle. The paper will support the Indian National Congress, and advocate self-determination and Home Rule for India.

Messrs. Thacker, Spink and Co., of Calcutta, have recently completed the centenary of their existence as printers, stationers and pubtishers. During the hundred years the firm has passed through many stages of development, and has experienced no set-back since its inauguration in 1819. The founder of the business was Dr. William Thacker, a surgeon in the employ of the East India Co., and in its early days the firm were purely stationers and booksellers. printing being added to the business some years later.

To the Englishman of Calcutta belongs the credit of being the first newspaper in India to be delivered by aeroplane, and it is quite in keeping with the revised vigour visible in this old established and well-edited journal. The issues in question were conveyed in General Borton's aeroplane to Allahabad, each copy thus immortalised bearing the legend: - "This copy of the Englishman was published in Calcutta this morning and brought to Allahabad by Handley-Page to-day. The Englishman is thus the first newspaper in India to be delivered by aeroplane." The Handley-Page did not reach Allahabad to time, as owing to engine trouble a halt of two days was made a little over one hundred miles from Calcutta, and copies sent by rail reached Allahadad before those conveyed by the aeroplane.

The restrictions regarding the publication of figures relating to imports and exports have been removed, and the returns of the Department of Statistics relating to the im-

BRITISH & COLONIAL PRINTER & STATIONER

ports and exports of paper, stationary and millboard show that during the nine months ending December 31st, 1918, the imports were: Printing, £389,719; writings, £240,892; other papers and paper manufactures, £1,77,931; stationery £322,475; millboard, etc., £1289,986. The imports of papermaking materials were valued at £30,172; and books and other printed matter at £235,500. The exports, including re-exports were: Paper and millboard, etc., £55,916; stationery, £27,411; papermaking materials, £335; and books and other printed matter, £16,153. The value of the imports of printing machinery and materials, excluding paper, were of the value of £32,155 during the nine months under review.

The general scarcity of paper continues to invest the discovery of new sources of supply with great interest for manufacturers and traders, which interest will not be lessened now that the war is over, for the steady growth of the demand for paper makes it essential that new sources of supply should be discovered. But among the materials examined in the course of investigation, in which the Imperial Institute has been engaged during the past summer, no mention is made of Indian grasses, although among the grasses that have been found suitable for the manufacture in their countries of origin of either pulp or paper, are those from South Africa, the Federated Malay States, Australia, and St. Helena,

S. AFRICA.

Booksellers in South Africa are somewhat troubled at the increasing prices of books, particularly of fiction. It is, indeed, suggested that some of the new novels are hardly worth the increased price, and that in view of the scarcity of paper publishers might well consider attentively whether some diminution of output in this direction is not advisable. Book buyers, when they have to pay higher prices, are much more discriminating than they used to be, and consequently the risks taken by the Colonial bookseller are proportionally more serious.

The Scotlish Paper Trade.

During the past week there has been slightly more inquiry for the commoner qualities of white papers which the Scottish mills do not usually make. Orders have, however, come in sparingly. Brown papers, in spite of a further drop of £7 per ton, are hardly selling at all, and dealers apparently have good stocks.

THERE still seems to be a feeling that it is impossible to tell what the bottom price will be till the end of April, and unless orders are really urgent there is a hesitancy in doing business. Moreover, the prospect of higher

prices for coal and the uncertainty of adequate supplies of this article impose a barrier to any further reduction in the price of white papers particularly, which even at the moment can hardly be said to be a profitable trade to manufacturers.

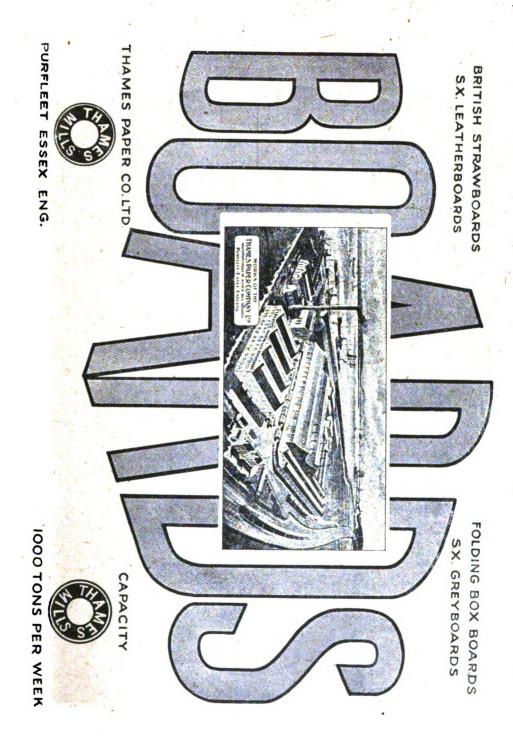

THE mere fact that good profits have been made in war time will not reconcile papermakers to run their mills at a loss now that war is over, and prospective buyers have to deal with this aspect of the case. The demand for paper is bound to increase, and if the mills continue the "shut-down" policy which many seem to have adopted, there will be a scarcity of supplies in spite of imports, which can only arrive to a very limited extent owing to the demand in other countries. prices will again rise, and as foreign makers have always managed to get the highest available price in this market, we will be faced with the fact that we have to pay dearer prices for paper than any other country, while our export trade is being taken away by our erstwhile competitors. During the war we had to run the risk of losing our export trade, but there is no reason why we should have been placed in an invidious position when peace came.

It is true that at current prices an export trade is impossible, and while reduced rates are urgently necessary, manufacturers cannot afford the smallest reduction without a temporary loss. It seems fair that this temporary loss should be shared between papermakers. the dealers and the public. There is still too much of the feeling that it is needful to fleece your neighbour if you are to make a profit. So buyers try to save an agent's commission by doing direct business with his mills, thinking they thereby save 21 per cent. But two can play at the same game, and some papermakers imagine they are making a similar saving on the same transaction. The fact is, such methods only tend to reduce the level of profits without benefiting permanently any individual. A little more honest trading and allowing scope to all who work for their money to get it, would enable us to survive our present difficulties. And as a nation there is no reason why we should not be able to procure our raw material on as favourable terms as we did before the war, and so be able to retain at least our share of the trade of the world.

There is some demand for tinted papers from stock, which is not very readily being supplied, as several Scottish makers have discontinued keeping stocks. We are not surprised at this, as the pre-war trade in tints could hardly pay the mills engaged in it. Still, by improved methods in working, this trade might be done if the margin of profit between white and tints was sufficient to encourage the business.

French daily papers are now to consist of four sheets.

Composing-Room Efficiency.

The two greatest drawbacks to efficiency in most composing-rooms are distance and deficiency, and coupled with these are usually found surplus and slackness. This is quite a paradox, and yet every word is absolutely true of many of the older plants and some of more recent origin. Taking up the first pair, distance and deficiency, let us study each of them a little in their true relation to efficiency as represented by the maximum production

at a reasonable cost.

Distance is a great enemy to efficient production in the composing-room. The compositor who has to weary himself by long walks about the room, gathering together the material needed for his work, naturally has that much less energy, as well as less time, to expend on the work itself. He finishes his day more tired and with less production to his credit than he would have in a properly "Can't be helped. arranged plant. have room to place the stands and cabinets and stones, even if the comps have to walk a few feet further." You are wrong; it can be helped in one of two ways. A rearrangement can be made so that classes of work calling for one class of faces are done in one part of the room, and certain other work in another part, and the material needed by each placed so as to be not more than twenty feet away from the workman. Or, the founts most used can be duplicated or divided and placed in easy reach of the workmen so that the amount of travel is cut down to the minimum. In one plant the compositors were walking an average of forty feet to the most-used racks and cabinets and the proof press and stones, and as much as sixty feet to some, but when rearranged the average travel was less than twenty feet. That means that each man had his daily marathon reduced from about a mile to less than half-a-mile, and the fact that everything was in close reach kept him in his place and at work so that the actual saving was nearly an hour a day per man.

Next, we have deficiency, one of the worst enemies to rapid and economical production that it is possible to allow in any business—deficiency of material that causes changes and piecing out by the handling of two pieces in place of one—that causes unbelievable loss of time because of hunting for sorts and unwarranted risk of trouble and spoilage because of failure to restore the picked sorts and

errors in replacing them.

These two items are large enough in any printing office that has not been remodelled with the last few years to make the rearrangement a profitable proceeding, especially as this efficiency problem is one that does not call for a big expenditure of either time or money, only the use of that common-sense that every business man, even a printer, should possess. A few hours' study of the route tracks of the compositors around the room will soon suggest the importance of the change of route

and its shortening, also the best method of doing it. Of course, there is a great possibility than an efficiency engineer can do it a little better and that his suggestions of special furniture and layout will make a sufficiently greater saving to repay his fee in a reasonable time, but he is not absolutely necessary in all cases.

If you did employ an expert he would most likely find the paradox named above—"a deficiency with a surplus"—and this would be more likely to prove true the older the plant. Many of the old plants have large amounts of body type, held, ostensibly, to take care of So and So's price list or a big catalogue that comes up every other year, and has so many alterations that it would be just as cheap to set it over again on the machine and throw out that two tons of metal and regain the use of that twenty-five feet of floor space that is taken up by the cases. Or, perhaps, it is those old-time faces in the cabinet in the corner that are held for Smith's work that is changed once in three years, and could be drawn and engraved for less than the depreciation reserve on the type, to say nothing of interest, insurance and rent. Nearly every printing plant of ten years' standing under usual conditions will find itself with some surplus of this kind, and in some older plants it has amounted to the surprising total of almost fifty per cent. of the material in the composing-room. Think what that means in the annual statement of costs. So, you see, deficiency of the needed material and sorts can exist in a plant that is carrying a large surplus of composing-room equipment.

It seems hardly necessary to call attention to the second item of the last pair, as the thought is already suggested that any plant in which such conditions exist must be run on very slack lines; but the facts are that in every case in which such conditions have been brought to the attention of the superintendent or manager, he has been highly incensed at the idea that any slackness could exist. As one said: "Why, I buy lots of the latest faces of type, and there is a big typefounder's bill every month. How can there be any such condition as to picked and pied jobs such as you tell me of? The room looks clean and well kept to me, and while my costs for composition do seem high, I do not believe the lack of sorts and the time of picking has anything whatever to do with it." After the usual argument, he was solid on the idea that his composing-room could be rearranged so that the men would be nearer the material they were expected to work with, and agreed to have it done, provided he did not have to buy more than a few dollars' worth of new furniture. In less than six months the savings were so great that he ordered the whole room equipped with the latest and most complete outfit possible, and to-day he is perfectly satisfied, and has a large notice posted, stating: "Anyone picking any job, live or dead, will be immediately discharged, without any chance of reinstatement." And he is living up to it by buying all the type needed to make it possible, and

cutting down the number of faces to those in regular use. The last time we saw him he had an artist as part of the composing-room force, and claimed that he earned his pay by drawing the lines for which they did not have type and the ornaments that made the work of the house distinctive.

Here are four words that every master printer should at once put to the test in his own plant: Distance, Deficiency, Surplus, and Slackness. And each of them suggests a

question:

Is the composing-room contained within the smallest possible distance from one point to another? Could it not profitably be condensed?

Is there a deficiency of sorts in the most used founts for which I am paying many times over in wages for the compositors, who are decreasing their brain force in the weary hunt for sorts?

Is there a surplus of old unused founts that should be in the melting pot, and the money they bring invested in real working material instead of eating up profits in interest and

If any of these conditions exist, even in a degree, how can I defend myself against the assertion that my plant is not under the

Plague of slackness?
Think it over, and answer these questions honestly, and then get b sy with the remedy the use of plain, ordinary common sense as ^aPplied to every-day business, and when you **Set** over the pain of making the change you will feel like the fellow who had an aching tooth pulled, and said: "It hurt like blazes, but if I'd a know'd that it was over so soon a done it long ago." You will say: "If I had known there was so much profit in it I would have done it long ago."—The Inland Printer.

BRITISH & COLONIAL PRINTER & STATIONER

Trade Notes.

THE death has taken place of Mr. Walter Keely, a well-known Maidstone bookbinder

It is reported that Canada has about 90 mills for the making of pulp and paper products from wood.

MR. EDWARD BALLANTYNE FLEMING, editor of the Oban Times, died suddenly on Saturday in his forty-eight year.

THE assets and liabilities of the Toronto Daily News have been purchased by a new company, and the name will be changed to the Toronto Times.

It is announced that the Press Association has purchased the business of the London News Agency, and these two news services will now be amalgamated.

ADMIRAL SIR ROSSLYN WEMYSS is to be the principal guest at a house dinner of the Press Club on April 12th. Commodore Hugh Sinclair, C.B., and Major-General Feilding have also accepted invitations.

A NEW illustrated weekly for the children appeared last week, under the editorship of Mr. Arthur Mee, whose work in connection with the "Children's Encyclopædia" is well known. The title is the Children's Newspaper

ARRANGEMENTS are well advanced for the Cost Congress which is to be held in Lancashire, and an attractive programme has been outlined by the Costing Committee. In view of the many difficulties to be faced in the present transition period, special interest will be taken in the proceedings.

ANZAC-ON-SEA.—On Friday last a verdict for the defendants, with costs, was returned in the King's Bench Division in the action by Mr. C. W. Neville against the London Express Newspaper, Ltd., to recover damages for alleged libel concerning his competition to provide a name for a new South Coast seaside resort.

MR. GEORGE ROBEY is giving a concert at the Coliseum on Sunday, April 13th, in aid of the branch of the Printers' Pension Corporation which is supporting the children of printers killed in the war. Of these only about 350 families can now be aided by the Printers' Corporation. Tickets are selling rapidly, boxes, we are informed, realising 100 guineas each.

The following announcement is made in the Yorkshire Observer: —"Sir James Hill has disposed of a large part of his interest in the Yorkshire Observer, Bradford Daily Telegraph, and associated newspapers, to Mr. Robert Donald, formerly editor of the Daily Chronicle, and managing director of United Newspapers, Ltd.; Sir James Hill remains chairman of the company which owns the properties, and Mr. Donald will be managing director.

"No RETURNS" ORDER.—The Controller of Paper gives notice that arrangements have

been made by the Board of Trade for the withdrawal of the Paper Restriction (Prohibition of Returns) Order, 1918, dated May 24th, 1918, to take effect as from the 31st inst.

The American "Printing Trades Blue Book, 1918," is a bulky volume of over 400 pp. which forms a complete directory of the Chicago and district printing and allied firms. It is well arranged and has a cut index for easy reference. The price is three dollars.

THE Federation of Master Printers states that the scheme for an Industrial Council for the Printing Trade, prepared by a joint committee of employers and trade union representatives, having been approved with almost complete unanimity by the Employers' Federation and the trade unions concerned, final arrangements have been made at a meeting of the joint committee for the first meeting of the council. This will be held shortly at the Ministry of Labour.

A LECTURE will be given at St. Bride Foundation Printing School on Friday, April 4th, at 7 p.m., on "The Production of Books in Touch-Type for the Blind," by Mr. F. A. J. Burns, secretary English and Foreign Braille Literature Society. Examples of books in various systems of embossed types will be on exhibition, and a demonstration of Braille embossing will be given at 6.30 p.m. The lecture is open to all interested, and will not exceed one hour, time being allowed for questions and discussion.

LAST Thursday, an appeal by Mr. L. J. Maxse from a judgment of Mr. Justice Sankey, holding him liable to pay £1,000 for excess profits duty on "profits" arising from the National Review from June 1st, 1914, to May 31st, 1915, was heard in the Court of Appeal. The question in dispute was whether Mr. Maxse carried on a trade or whether he followed a profession. His contention was that the profits were professional earnings, whereas the Solicitor-General contended they were business profits. Judgment was reserved

Scientific Management.—The Industrial Reconstruction Council have arranged for the following series of lectures to be given at the Hall of the Institute of Journalists, 2-4, Tudorstreet, E.C.4. There will be a different speaker at each lecture, which begins at 5.30 p.m., and is followed by a discussion. No tickets are necessary: - April 1st, 1. The Determination of Standards in Scientific Management. April 15th, 2. The Planning 1 Department in Scientific Management. April 29th, 3. Incentives to Efficiency in Scientific Management. May 13th, 4. Costing in Relation to Scientific Management. May 27th, 5. The Relation of Welfare Work to Scientific Management. June 10th, 6. The Benefit to the Workman of Scientific Management.

TENDERS WANTED.—For the supply of printing and stationery to the Paddington Board of Guardians; particulars from Mr. S. J. Langford, 319, Harrow-road, W.9.—For general printing and the supply of stationery

for the Wandsworth Borough Council; forms of tender from the Council House, East Hill, Wandsworth, S.W.—For supply of printing and stationery for the Keighley Education Committee; form of tender from Mr. H. Midgley, Education Offices, Town Hallsquare, Keighley.

THE Guardians of St. Leonards, Shoreditch, have accepted the tender of Messrs. J. Truscott and Son, Suffolk Lane, E.C., for the

supply of stationery.

THE Accrington Observer has published a 32 pp. booklet containing the names of 1,575 townsmen who fell in the war. The booklet is well got up and printed, each page being enclosed in red rules, with a title cover in colours. Copies are given gratis to the nearest relative of the fallen heroes whose names are registered in its pages, and others may purchase it for 6d. per copy.

The funeral of Mr. J. M. Longley took place at Sideup on Wednesday, last week. The deceased was formerly a well known figure in London printing trade circles, being for many years manager of the late Sir Charles Reed and Son's Fann-street Letter Foundry. Subsequently he was general manager of the Austin Letter Foundry, of Islington. After a short retirement he superintended, on behalf of the widow of the late Mr. T. W. Wildish, the printing and stationery business associated with the Rochester and Chatham Journal. Mr. Longley was a prominent freemason.

LLOYD MEMORIAL HOME.—The annual meeting of the Lloyd Memorial (Caxton) Seaside Home, Deal, was held on Saturday, Lord Hambleden, in the chair. The report showed that the income and expenditure for the year had been the highest hitherto recorded. Over 1,000 patients have been dealt with, and the popularity of the Deal Home was so great that a small waiting list was unavoidable. Lord Hambleden, in congratulating the subscribers, emphasized the necessity for proceeding at once with the building scheme, so as to meet at the earliest possible moment the great and growing demand of those needing treatment.

PRINTERS' PENSION CORPORATION.—At the annual meeting of the Printers' Pension, Almshouse and Orphan Asylum Corporation held at the St. Bride Institute, Sir Vesey Strong, who presided, said the institution had had the courage and toresight not to suspend its annual festival dinners during the war, and the financial results from that source had increased from year to year. Benefits had been given to more than 1,000 people, including 300 children of members killed in the war; and £8,000 had been added to the permanent fund, which now amounted to £108,000. Still greater things would be possible when an estate of nearly £60,000, left in trust for pensions, came into the possession of the institution. Major Astor, M.P., had consented to preside at the next festival.

STATIONERY OFFICE'S LACK OF CO-ORDINA-TION.—The final report of the committee appointed to inquire into organisation and staffing of Government offices mentions among the reasons for over-staffing the widely-scattered office accommodation of various departments, defects in distribution of work between different departments, and defects in the internal organisation of the several departments themselves. "From this fault some of the permanent departments, among them the Stationery Office, were not exempt, a lack of co-ordination being manifested between its different branches." However, the committee state, "The permanent departments which we have reviewed are, on the whole, managed with efficiency and economy."

PRINTED IN GERMANY.—In the House of Commons, on Tuesday, Mr. Churchill informed Mr. Bottomley that his attention had been called to the fact that Army Form Z 30 M (Soldier) which was distributed among men about to be demobilised, bears the imprint "Printed in Germany by Fr. Massing, Zulpich, 12/18." He had had full inquiries made, and found that, owing to transport difficulties, etc., a sufficient supply of forms could not at first be sent out to the bases in France. As certain forms were urgently required to facilitate the work of demobilisation, a small number of these forms were printed in Germany.

EMPLOYMENT in the printing and allied trades in February was fairly good on the whole. There was a considerable increase in the number of workpeople employed, but men who have been demobilised from the Army could not in all cases be re-absorbed into the industry at once, and there was some little unemployment due to this cause. On the other hand, continued scarcity of labour was referred to in many of the employers' returns. At paper mills there was still a shortage of wood pulp and other materials; there was also continued scarcity of coal, especially at mills in the northern counties. In Scotland employment at paper mills was reported as moderate. A good deal of overtime was still worked by compositors in London, but bookbinders reported a considerable amount of short time. With lithographic printers in the provinces employment was only moderate, some short time being reported.

Referring to current low quotations, we have received during the last few days a parcel of offers including the following: Common printing at 6\d. per lb.; fine printing, 81d. per lb.; antique book printing, 81d. per lb.; cartridges, 9d. per lb.; E.S. writings at 82d. per lb., all less 5 per cent from mill. Scotch mills are quoting 9d. per lb. for fine E.S. writings, and we have heard that certain mills are open to make in good quantities at 7d. and 8d. per lb. A prominent Scottish maker has been disposing of stock lots of good quality T.S. writing and account book paper at between 71d. and 9d. per lb. Many houses. are asking offers for stocks to clear, and any reasonable offer is accepted. In one case 9d. per lb. was accepted for paper which is issued to-day from the mill at 11d. per lb. In another case 500 reams of copying paper, which cost toward 15s. per ream, was cleared at about 7s. 6d. per ream.

FORTY-FIRST YEAR.

THURSDAY, MARCH 27, 1919.

Current Topics.

Progress of the federation.

THE organisation of the printing trade of the country is receiving the closest attention of the president and officers of the Federation of Master Printers. Mr. A. F. Blades has been second to none in his efforts to make the organisation as complete as possible in as short a time as practicable. It is no small matter to bring all the threads of a composite organisation together in an effective form, but those who have taken up the work on behalf of the Federation are achieving excellent results. The difficulties of the present time, of course, make it essential that the master printers of the country shall be banded together in one strong body which can speak for the whole trade. Great as have

been the difficulties of war times, those of the period of transition are already harder to reresolve. Wages have been piled up, hours reduced, and the whole machinery thrown out of gear, so to speak, and just when there ought to be plenty of work and large output, to meet the heavier demands, there are signs of a serious slump in business, and many firms have to face the future with large staffs and extensive commitments. This is a grave prospect for the responsible heads of businesses, and it will take the united efforts of the whole trade to overcome the obstacles which have still to be met. It is encouraging, therefore, to hear that the movement for the formation of Alliances or district organisations connected with the Master Printers' Federation is making good progress. The matter is being taken up with such earnestness, in fact, that in certain districts wholetime secretaries are being appointed, which is an indication of the spirit in which the work is being undertaken. It is hoped that before the end of April the whole scheme will be in working order.

Master Printers and Production.

RECOGNISING the need of increased output, both from the point of view of industry as a whole and as a means of meeting the high costs which have now to be faced, master printers are on the look-out for labour-saving and efficiency methods. Eyes naturally turn to the United States, where developments in this direction have been ahead of us and where the war has clogged the wheels of progress to a less extent than in this country. It will take the united effort of all concerned in the printing trade, as in others, to meet the problems ahead. For the masters, of course, it means the adoption of the newest machinery and the latest methods of efficiency. From the employees it will require a wholehearted interest in their work. Each must have regard for the welfare of the other, and the common dependence of both on the success of a business will require to be recognised. These conditions already obtain in the more enlightened establishments, and that spirit of mutual co-operation must be extended. To this end the new Industrial Council will serve a useful purpose. There are signs, too, that master printers are alive to what is required from them, and several members of important printing firms in this country are either already in the United States or contemplating visits thither. The object, no doubt, is to see what new machinery is available to meet the present con-

ditions of the trade and to secure any hints that may lead to speedier and greater output. It is a pity, of course, that our own engineers are not prepared with the mechanical devices necessary; but their attention, naturally, has been centered on war work for over four years, and time is required before works can be turned back to their ordinary occupations. Men's minds, too, need time to readjust themselves. In the meantime, master printers must make use of the means at hand. and there is hope in the fact that they are setting out at once to face the problems created by the war and the higher cost of production. There may be good grounds for the fear that the cost of printing may become prohibitive and that other methods may be adopted to replace it for certain classes of work. While no one wishes to see a return to the old system of cut prices, it is to the advantage of a business that they should be reasonable. By taking up the challenge at once, master printers are exhibiting a healthy British spirit which bodes well for the future of the craft in this country.

Health for the Workers.

THE value of the work that is being done by the Lloyd Memorial (Caxton) Seaside Home, at Deal, in providing treatment for convalescents and invalids who are engaged in the printing and allied trades should be better appreciated by those who study a circular that has recently been issued by the committee of management of that institution. The Home at Deal enjoys a high and increasing reputation for its comfort and efficiency, and that efficiency is now increased by arrangements that have been made to send convalescents to a number of other health resorts in districts situated in various parts of the kingdom, and by means of which the benefits of the Home are brought within reach of members of the trade, both male and female, in all parts of the country. Under this arrangement convalescents may now be sent to places in the Eastern counties, the Midlands, the West coast and even as far away as Scotland. A wide field has thus been opened up by which provincial subscribers, their wives and dependants, can receive treatment in their own districts, and the activities of the Home, by its various ramifications, made of national value to the workers in the allied trades. Workers of both sexes in the trade who subscribe one penny per week are entitled to the many benefits offered by this grand institution, and many privileges are offered such as reduced railway fare, etc., to those who require to take advantage of the benefits of the Home. Mr. F. H. Parker, the genial secretary, at 26, Blackfriars-road, S.E.1, is at all times ready to give full information to those who desire to secure the benefits of the Deal Home and its auxiliaries, and subscriptions from those who desire to aid in supporting a very worthy institution may be sent to that gentleman.

Paper Imports.

A FEATURE of last month's imports was the arrival of 67,120 cwts. of reel paper from -Newfoundland, which comprised over 69 per cent, of our total imports of this class of paper (96,166 cwts.) A small quantity also came to hand from the United States, viz., 1,296 cwts., whilst reel paper received from Norway amounted to 22,650 cwts., and from Sweden 5,100 cwts. Printings and writings not on reels were a poor import, viz., 18,051 cwts., Norway being responsible for 14,190 cwts., Sweden for 2,063 cwts., and the United States for 1,660 cwts. Belgium supplied 680 cwts. out of 959 cwts. of printed or coated paper. Norway and Sweden hold a monopoly in the British market in regard to the supply of packings and wrappings, the former country shipping 33,792 cwts. and the latter 21,270 cwts. out of a total importation of 58,572 cwts. Imports of strawboard amounted to 45,134 cwts. and mill and wood pulp board to 22,780 cwts. The total imports last month were 244,978 cwts. of the c.i.f. value of £596,816, an increase in quantity of 4'2 per cent. and in value of 17'3 per cent. compared with February of last year.

Paper Exports.

WITH more relaxation of the restrictions upon our foreign trade it is to be hoped that the exports of paper will improve, as at present shipments are at a low ebb, and opportunity thus allowed competitors to strengthen their hold in neutral markets. The shipments last month amounted to only 37,628 cwts., of the f.o.b. value of £273,359, a decrease in quantity of 30 per cent. and in value an increase of 13'4 per cent. compared with February last year. The demand for printings last month reached 15,713 cwts., and it is noteworthy that our colonies are obtaining very limited supplies, viz., 6,785 cwts., whilst foreign countries took 8,928 cwts. The shipments of writings to foreign countries last month were 4,349 ewts., and to British Possessions 3,979 cwts.

MANY a printer who looks wise can't make a living at it.

DIVIDENDS AND REPORTS.

NEILL AND Co. (printers, Edinburgh).—The credit balance for 1918, including £772 brought forward, is £3,845, which the directors propose to dispose of by paying arrears of dividend on the cumulative preference shares for 1916, and carrying forward £2,095.

Lanston Monotype Corporation.—The report for the year ended September 30th, 1918, states that, after providing for depreciation and other charges, the net profit was £148,768; final dividend of 5 per cent., making 8 per cent. for the year; to general reserve, £20,000.

"Country Life."—The profit for 1918 was £13,239, as compared with £4,715. Two years' dividends on the preference shares have been paid during the year, which leaves six months in arrear. The directors have transferred £800 to the reserve fund, leaving a balance to be carried forward of £6,834.

EDWARD LLOYD LTD.—The directors of Edward Lloyd, Ltd., have declared a dividend in respect of the half-year ended 31st December last on the five-and-a-half per cent, cumulative preference shares, payable on 1st. April, less income-tax at the rate of 6s. in £.

ALEX. PIRIE AND SONS, LTD.—The report of Alex. Pirie and Sons for the year ended 31st December last states that the profit amounts to £102,501. Adding £24,215 brought forward, less interim dividends paid 5th October last, there is left £107,966. The directors recommend a further dividend of 2 per cent. on the Ordinary shares, making 6 per cent. for the year, less income-tax, also a dividend of 8 per cent. on the Deferred shares, less income-tax, both payable 5th proximo, to place to credit of works and property £15,000, thus reducing their book value to £649,842, to general reserve fund £15,000 (making £125,000), and to carry forward £41,216. For some years the directors have applied their efforts to capture the photographic paper trade, which has prac-

tically always been in enemy hands, and the result of this policy is satisfactorily reflected in the balance-sheet. The conservative policy proposed by the directors is due to the large expenditure required for renewals which have been impossible during the war, and also to the necessity for financing the current year, which, with a falling market, promises to be a difficult one. A company called Pirie, Appleton and Co. has been formed to combine the businesses of Fenner Appleton and Co., envelope makers, London, with that of the envelope department of Alex. Pirie and Sons. The controlling interest is held by the latter company.

NEW COMPANIES.

Associated Colour Printers, Ltd.—Registered with a capital of £100, in £1 shares, as art printers and publishers, manufacturers of Christmas and other cards, etc. Private company. The first directors are Florence M. Durban and H. Willis.

RAMSON AND Co., LTD.—Registered with a capital of £2,000, in £1 shares (1,000 pref.), as printers, stationers, advertising agents, etc. Private company. First directors: A. W. Ramson and Mrs. M. Stanton. Registered office: 7, Laurence Pountney-hill, E.C.4.

JAMES WOOD AND SON, LTD. -Registered with a capital of £15,000, in £1 shares, as printers, newspaper proprietors, publishers of books, magazines, music and pamphlets, advertising agents and contractors, stationers, etc. Private company. First directors: D. R. Llewellyn and H. H. Merrett. Registered office: Printing Offices, Pearson-place, Cardiff

CARTER-DAVIS, LTD.—Registered with a capital of £1,000, in £1 shares, as manufacturers of and dealers in calculating, type-writing, manifolding, copying and stamping machines, ribbons, carbons, accessories, steel and wood filing cabinets, shelving, books, forms, clips, desks and office equipment and furniture generally, etc. Private company. First directors: W. C. Davis and A. W. Harries. Registered office: 26, Budge-row, E.C.4.

A. H. SAXTON (PRINTERS), LTD — Registered with a capital of £6,000, in £1 shares, to acquire the business carried on by A. H. Saxton at the Erdington Printing Works, Summertoad, Erdington, Birmingham. The subscribers are A. H. Saxton and J. Hingeley. Private company. First directors: J. Hingeley (chairman), E. G. Matthews and A. H. Saxton (managing director). Registered office: Erdington Printing Works, Summer-road, Erdington, Birmingham.

Bosworth and Co., Ltd.—Registered with a capital of £50,000, in £1 shares, to take over the business carried on at 8, Heddon-street, W., as "Bosworth and Co.," and to carry on the business of music publishers, newspaper-proprietors, printers, stationers. etc. Agreement with A. E. Bosworth. Private company. First directors: A. E. Bosworth (permanent

governing director) and Miss C. E. Bosworth. Registered office: 8, Heddon-street, W 1.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 16 of the Companies Act, 1900. (The registration of Satisfaction is not compulsory.)

PEBBLES' AUXILIARY, LTD. (paper manufacturers, etc., London).—Satisfaction (a) to the extent of £12,625, between July 17th, 1907, and April 13th, 1916, of mortgages dated April 28th, 1905, and March 20th, 1906, securing £10,000 and £12,000 respectively, and (b) to the extent of £3,000 (balance) on February 27th, 1919, of mortgage dated March 20th, 1906, securing £12,000.

COMPANY NOTICES, etc.

ALLIED ADVERTISEMENTS, LTD.—At a meeting of the company, held at London, on january 21st, the following resolution was passed:—"That the company cannot, by reason of its liabilities, continue its business, and that it is advisable to wind up the same, and accordingly that the company be wound up voluntarily, and that Mr. Harold Wood, of Newport, Mon., be appointed liquidator for the purpose of such winding up."

ITALIAN PRESS AND GENERAL AGENCY, LTD. Notice is given, that a petition for the winding-up of the company was, on March 17th, presented to the Court by William Skelton, printer and stationer, London, a creditor of the company, and that the said petition is directed to be heard before the Court on April 1st.

Gazette.

A WORD OF CAUTION.

[la giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case attisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIPS DISSOLVED.

Alabaster, Gatehouse and Kempe, newspaper proprietors and publishers, 4, Ludgatehill, E.C.4. March 5th.

Sharp, H. B., and Deyes, J. E. and W., trading as the Paperdrome, paper stock dealers, I, Wavertree-road, Liverpool. Dissolved March 1st as regards H. B. Sharp. Debts by the remaining partners, who continue the business.

THE BANKRUPTCY ACT, 1914. RECEIVING ORDER.

King, D., 134 and 166, Northam-road, Southampton, newsagent and stationer. Date of order and of adjudication order, March 20th, made on debtor's own petition. First meeting of creditors, April 3rd, 11.30 a.m., at the official receiver's office, Midland Bank Chambers, High-street, Southampton. Public examination of debtor, April 23rd, at the Court House, Castle-square, Southampton.

APPLICATION FOR DEBTOR'S DISCHARGE.

Press, M., 44, Roundhay-road, Leeds, printer. To be heard May 12th, 10.30 a.m., at the County Court House, Albion-place, Leeds.

Personal.

MR. HARRY COOKE (Messrs. Alf. Cooke, Ltd. Leeds) is at present on a visit to the United States.

MR. A. F. BLADES, president of the Federation of Master Printers of the United Kingdom, is to attend an important meeting at Bristol on April 9th, for the purpose of launching the Alliance of the South-Western area. Mr. Foster Robinson is taking an active interest in the proceedings, and there is a prospect of a good attendance from all quarters of the district, besides several prominent members of the Federation, who will support Mr. Blades.

ALDERMAN WINKLEY, president of the South-East London Master Printers' Association, has been ill for some time. In his absence, Mr. C. A. Bates (Johnson, Riddle and Co.) presided at a meeting of the Association at the Bridge House Hotel, London Bridge, on Tuesday night. Addresses were given by Mr. R. A. Austen-Leigh and Mr. H. C. Hill. A report of the proceedings will appear in our next issue.

Women Workers' Wages - Mr. G. Wardle, M.P., Parliamentary Secretary to the Ministry of Labour, received, last week, in conference at Montagu House, representatives of unions connected with the bookbinding and printing trades, with whom he discussed proposals for establishing a trade board to fix a minimum rate of wage for the 50,000 women employed in the industry throughout the country. The scheme was opposed by the trade union officials on the ground that it was unnecessary, inasmuch as the existing trade organisations were effective for the purpose. With regard to wages it was stated that the women were well protected in this respect, their rates of pay ranging from 355. to 60s. a week. In view of the circumstances the conference was adjourned.

Organising Master Printers.

Formation of the Home Countles Alliances.

In the absence of Mr. A. F. Blades, president of the Federation, Mr. Albert Bennett (Messrs. James Truscott and Son) presided on Monday afternoon, at the Stationers' Hall, over a meeting of master printers from the home counties. The object of the meeting was to form an Alliance for the home counties, as is being done throughout the rest of the country.

The chairman mentioned that a number of. these Alliances had already been formed all all over the country. He remarked that there never was a time when all who were concerned for the future welfare of their business required more to recognise their personal responsibility and play their part. He said that the present state of things was not entirely due to the war, but had given evidence of its existence even before then. The responsibility upon both employers and employed at the present time was enormous. They required to organise their industry so that they could speak with no uncertain voice upon the various problems that came up for consideration. He added that every man connected with the printing industry ought to become a member of the Master Printers' Association. Those of them who had been fortunate enough to secure a portion of the voters' list already knew how by organising they had got a fair and reasonable profit on the work they did. (Hear, hear.) Previously the work had been produced at a price which was disgraceful to any business house, not a farthing being received for the large amount of material which was locked up in it. They had all looked after their own business, and it had been no one's business to look after the industry as a whole. They could not go on in the old voluntary and loosely-connected methods, and now it was necessary to place their interests in the hands of a properly While the emorganised and paid staff. ployers showed good will towards those in their employ, it was absolutely necessary, in the interests of the workpeople themselves, that they should realise that they had a part to perform, and it was up to the Federation to place those facts clearly before them. For all the advantages which had been conceded to the employees in the matter of shorter hours and higher wages they must have a greater output. That depended upon the workers, but the masters, on the other side, could assist in this direction by providing better machinery, and, perhaps, double shifts. The severe competition they would have to face might bring them near to collapse, unless they all did what was necessary in the way of increased output.

Mr. R. A. Austen Leigh said the organisation of the Federation had not been perfect because the method of consulting the numerous associations (something like one hundred) had been slow and cumbrous. scheme which was being put before them had been worked out with a great amount of energy and acumen by General Bemrose. It provided for breaking up the whole country into about eleven districts that were going to be called Alliances. He mentioned that Scotland had had an Alliance for the past five or six years, while the Northern Alliance had been split up into two. The idea of the scheme was that they were to have a perfect chain of responsibility. First, they would have the individual master printer in his own local Association; the local Association would send up their representatives to the Alliance Council, the Alliance being the collection of Associations within the area; and the eleven or twelve Alliances would then send up representatives to the Federation Council. It was proposed—and this was a very important part of the scheme-that each Alliance should have a paid and whole-time One of the advantages of this secretary. would be that there would be a certain amount of decentralisation, which would leave 24, Holborn free to deal with the larger issues. The speaker added that the Alliance scheme had been adopted in practically every other district, with the exception of the South-Western, and that London was to be one Alliance by itself. He mentioned a suggestion of changing the name of the London Association to avoid confusion, which had hitherto arisen, the name suggested being The London Master Printers' Alliance.

Stating that the price of paper was coming down very quickly, Mr. Austen Leigh said they need not be afraid that printing would be killed by its present high cost, although it might be checked. For instance, it was impossible for the smaller jobs to be done outside our country, and, in his opinion, if they only organised themselves properly on the basis which was put before them, printing was going to be more profitable in the future than it had been in the past.

Mr. Reginald J. Lake, director of the Federation, spoke of the advantages of a complete organisation, saying that we wanted all the powers of the individual to be brought to bear upon the problems which they had to face.

Mr. A. É. Goodwin, secretary to the Federation, said what they were trying to do was to strengthen the weak links of the Federation, so that they would be able to influence more fairly and definitely all master printers throughout the country, and render the Federation Council a more representative institution than it was at present. The matter was all the more urgent because of the formation of a National Industrial Council for the printing trade and the District Associations and Works Committees.

After some discussion, during which MI. Edgar Waterlow criticised the tendency towards decentralisation, and suggested an Alliance to cover both London and the home counties, the formation of an Alliance for the home counties was approved, and that a provisional committee, consisting of the presi-

dents and secretaries of all the local Master Printers' Associations within the area, be appointed to carry the scheme into operation, with power to appoint a secretary.

WEST AND NORTH-WEST London Master Printers' Association

The second of the series of bi-monthly local meetings with "Chats of interest to Local Printers" was held at the Mortimer Café, Mortimer-street, W., for the districts of Soho and Marylebone on Monday evening, March 17th, the president (Mr. F. A. Perry) in the chair. There was a gratifying attendance of the printers of the locality, both members and non-members, and an interesting meeting was

the result.

The proceedings commenced with light refreshments, after which the president, before proceeding with the business of the meeting, referred to the death of the late Mr. Walter Hazell, who had, he said, taken a very keen interest in all that made for the welfare of their craft, and particularly in the local associations. Mr. Hazell had intended being present at their annual meeting last October, but was prevented from attending by an attack of illness on the morning of the day on which their meeting was held. The president thought they would like to register their high appreciation and deep respect for the late Mr. Hazell, and he therefore moved:

"That this meeting of the Association of Master Printers of West and North-West London desires to place on record its sense of the loss the printing trade has sustained in the death of Mr. Walter Hazell, and further wishes to express to the family its sincere sympathy in their bereavement."

This was seconded in feeling terms by Mr. J. R. Burt, and endorsed by the meeting

standing in silence.

After some discussion on a Standard Estimating Form, a Minimum Price List, and the suggested Imprint Stewards, each of which it was stated was receiving consideration at 24, Holborn, Mr. C. A. Bates addressed the Commencing with a reference to the importance of printing to the community, and stating that the printer had to assist at birth with the provision of a certificate and had to provide another at death. Mr. Bates showed how necessary the printer was in all the functions and avocations of life. In recreation as well as in business, in their social and political activities the printer's help was needed. And yet printers had not come into their own, although they had to provide brains and intelligence, taste and skill in helping their customers to arrive at a proper idea of what they required. They catered well for their customers on the productive side and it really was time they gave some attention to the selling side of their business. He urged those present to come into the Association, which was neither, a ring nor a combine but an effort in the direction of co-operation and efficiency. By utilising the facilities at their disposal they could be sure of knowing their costs, and getting them, and in these days of rapid changes they had a staff of experts at their service to keep them abreast of events.

Mr. J. R. Burt spoke of the added expenses which recent and projected social legislation was placing upon production and pointed out the necessity for recovering these extra

Mr. J. Emlyn Jones, Mr. H. W. Searle, Mr. W. J. Pollock, Mr. E. W. Wormald and Mr. A. Langley took part in the discussion, taking up various points in Mr. Bates' address, while Mr. W. A. Whyte in congratulating the West and North-West Association on their meeting said they regarded that Association at Hol-born as the "ginger" group on account of the real live group of printers they had conduct-

ing their activities.

The president's request for criticism of the work of the Association and reasons why any printer remained outside was responded to by one gentleman, and led to a further interesting discussion, the critic being assured that his doubts would disappear if he came into the Association and learned more of its activities and the spirit animating its mem-

bers.

Midland Alliance Formed.

The first of the district organisations to be formed in accordance with the scheme recently adopted by the Master Printers' Federation was formally launched at Birmingham last week. Unfortunately General Bemrose who has taken such a keen interest in this plan was not able to attend as he was suffering from influenza. His son, Captain W. Bemrose, submitted a few notes emphasizing the main purpose of the scheme. Mr. W. Wykes (Leicester) was an able exponent of the Alliance programme, and Mr. J. Bailey (West Bromwich), Mr. Lawrence, Mr. Feltham and Mr. Clarke cordially supported it, Mr. A. E. Goodwin gave some illuminating figures as to the present cost of printing, showing that including the concession recently made in the reduction of hours, and payment for holidays it meant an increase of at least 150 per cent. on 1914 cost rates. Mr. Reginald Hudson (Birmingham) made an ideal chair-The secretary to the Midland Alliance, Mr. F. Shardlow, was introduced.

The American chemists, Messrs. Arthur D. Little, Inc., have perfected a cotton cloth reenforced waterproof paper. Heavy grades are said to be as strong as burlap.

An expert is one who tells others how to do things that he'd make an awful mess out of if he'd tackle it himself.

Metropolitan Borough of Wandsworth.

To PRINTERS and STATIONERS.

THE Wandsworth Borough Council is prepared to receive Tenders for General Printing and the supply of Stationery from 31st. March.

Forms of tender and specification may be obtained and form of contract seen, at these offices between the hours of 10 a.m., and 4. p.m. (Saturday to till 1).

Tenders, each enclosed in a separate envelope sealed and endorsed "Tender for " are to be delivered at the Council House, East Hill, Wandsworth, S.W., not later than TEN O'CLOCK in the forenoon of WEDNESDAY, the 2ND. APRIL next. No tender will be received unless it is made upon one of the printed forms issued from these offices. The Council does not bind itself to accept the lowest or any tender.

D. A. NICHOLL,

Town Clerk,

Council House, Wandsworth, S.W. 19th, March, 1919.

THE THEORY AND PRACTICE OF COLOUR."

By Bonnie E Snow and Hugo B. Froehlich.
The Prang Co., New York and Chicago.
Cloth 4to., \$3.

This volume is one that should be welcomed by every printer interested in the production of coloured work, as it deals with the theory and practice of colour in a way that is easily understood and free from the fogging technicalities of most works of a similar character. The authors take the red, yellow, and blue theory as a basis in preference to the red, green and blue-purple elements that are advocated by some theorists as being the most practical in actual colour blending to produce all shades of colour. In their opinion the red, yellow, and blue theory seems the simplest and most widely used and understood, and the most practical for educational and general purposes that has yet been devised in dealing with pigments in contradistinction to physical elements. The various chapters deal with 'a world of colour," "the source of colour," "the primary colours and their uses in design." "the binary colours and how to use them," "colour values, tints. and shades," "complementary colours and how to use them," "neighbouring or analogous colours," "the colour triad and the split complement," "colour in various degrees of intensity," "the psychology of colours," "colour harmonies in costume," "colour harmonies in interior decoration," and "colour in commercial design." The book is illustrated by diagrams showing various colour combinations, blending of tints, and colour harmonies, and these are a great aid in elucidating the text. To the student of colour printing the volume should be of great help. and it is a valuable contribution to the literature of colour. • .

Elficiency in the Press-Room,

In an article on this subject our contemporary, the American Pressman, says:-Efficiency in the press-room depends on production by the presses and other equipment. This production depends on the performance of duty by the press-room workers. duction and performance so dovetail that either is inefficient without the other. The best machinery without the right press-room organisation is inefficient. On the other hand the best of organisations is not fully efficient without proper equipment to oper-

Let us first consider the inanimate requirements of press-room efficiency. Light, heat and power are items not to be overlooked. Is the press-room well lighted? It should be because of the exacting requirements of the work. The truth is the majority of pressrooms'have inadequate light.

How many press-rooms are heated at uniform temperature of 70 degs. Fahr. in cold The minority, we are sure, yet weather? nothing is more important in cold weather in order to avoid static electricity, offset, picking and the expensive makeshift of slip-

sheeting.

There has been great improvement in the form of drive of presses in recent years. Individual motor drive is rapidly becoming universal and systems of control of merit are being introduced. If lighting and heating were as good as arrangements for power there would be more efficiency.

Do employing printers select the presses best adapted to the economical production of their particular sort and volume of work? A few do, it is true, the majority do not.

Why? No one can tell.

The fact confronts us that printers who should be using drum cylinders are using platens or even two-revolution flat-bed presses, others are using two-revolutions who should be using platens. Some are using drums who should be using two-revolutions and many are using various sorts of presses who should be using rotaries. This is a problem for each employer to figure out for himself. Why tackle efficiency before the problem of proper press equipment has been solved?

It is necessary to season certain sorts of paper, especially in cold weather. How few concerns have provided space for paper to be seasoned? How many take the cold paper from the wagon and shoot it into presses:

Many printers refuse to carry a considerable stock of paper, preferring to let the paper dealer pay rent for room to carry an enormous stock? Does the paper dealer pay for this out of his pocket? Hardly.

There are innumerable accessories to the press equipment from which number every printer should select those he needs. There are gas burners, type-high planers, paper curing machines, roller racks, delivery racks, mechanical overlays, ink mills, trucks, makeready tables, cans for oils and detergents, counting machines, patent bases, lock-up devices, make-ready or marking out boards. seats for the pressfeeders, suitable slip-sheets, pressman's tools, such as micrometer, gauges, roulettes, vignette hammers, punch and set. pinchers, calipers, screw drivers, straight-edge. square, waste paper and waste rag cans, etc. How many press-rooms have all necessary accessories

How many press-rooms are properly ventilated? No counting machine is required to enumerate them. And yet how important to vim and energy is good air? How many days lost through illness would be saved if the ventilation were good? To say nothing of shortened lives due to tuberculosis induced

by poor ventilation.

How many press-rooms have certain hours each week to go over the machinery? Here again no counting machine is needed. And yet everyone ought to know that all machinery should be given the "once over" at regular intervals to note that all parts are in good shape and provide against the progress of wear and tear.

We have lightly touched on the requirements of press room efficiency on the equipment side. Surely reasonable care can provide all things necessary in the way of

equipment and working conditions.

Coming to the human element, perhaps the most important item is the selection of the right man as superintendent or foreman. He should be a man of insight to whom human nature in all its kaleidoscopic variations is an open book. He should preferably be a graduate from the ranks of the workers. fellow feeling makes us wondrous kind." In order to get the best out of men you must let them know that you are one of them and sympathise with them. To be a great executive one must first be a man. Some pseudo leaders and executives manage to "get by," but the great ones have come up from the ranks and know the game from every angle by experience.

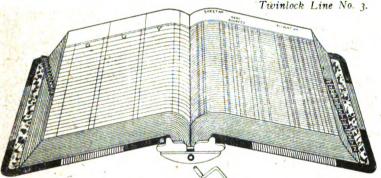

The greatest problem of the executive is to select the right men for lieutenants. This selection business starts when a youngster comes in off the street and asks for a job. How many boys are starting in at the trade who belong in some other lines? To avoid starting round pegs in square holes and square pegs in round holes is one of the problems of the foreman. The best pressmen are of the artisan type, part mechanic, part artist, and owing to the exigencies of the modern pressroom they must be men swift to think and act in their sphere of work. If the wrong boys are taken in to learn the trade, they should not be kept on if they show no taste for the work. If a young man or boy has no liking for his work he would better drop it and start at the beginning in some other line and charge the wasted time to the experience account in his life. He will be better off in the long run.

Doing one decent act a day will help twopersons—you and him.

News-Print in Australia.

According to the Canadian Government, the consumption of news-print in Australia is very large, probably running into 4,000 tons monthly. The imports of printing paper into the Commonwealth in 1914-15 were of the value of £886,497; in 1915-16,

£904,304; 1916-17, £1,810,941.

The first essentials for the working-up of trade in this commodity, states the Canadian Trade Commissioner in Australia, are complete sets of samples of paper suitable for Australian requirements, strictly competitive prices, and suitable resident representatives for building up business, without whom there would be little prospect of carrying on a remunerative trade.

Ordinarily, competition is keen from the United Kingdom, Norway, Sweden, and the United States, and Canada could, by keeping abreast of the needs of her Australian customers, obtain a much larger share of the trade to the mutual advantage of the two

Dominions.

While the war has continued, much dislocation of paper supplies has occurred. Shipments from England have not been obtainable for some time, those from Norway and Sweden have been spasmodic, and latterly almost non-existent, while those from the United States have been the mainstay of users. For a time Japan catered to Australian business, but in September, 1917, the Japanese Government prohibited the export of supercalendered printing paper. Japan's prices for news, writing, and wrapping papers, which are allowed to be exported as before, it is stated, have been much too high lately to permit anything to be done with them in the Australian market.

U.S.A. News-Print Supplies.

The Grip of Canada Feared.

Will Canada in the course of time obtain control of the news print market in the United States? In view of the action of American newspaper publishers and the developments in Canada, for instance, the completion of plans for the construction of a pulp and paper mill at Port Arthur, at an estimated cost of \$7,500,000, the Paper Mill utters a cry of alarm. According to our New York contemporary "the publishers persist in their policy of persecuting the news-print manufacturers through Governmental channels, and the result is that capital that is at all interested in paper industry developments chooses Canada and Government protection as against the United States and Government persecution. Slowly but surely Canada is getting a grip on the news-print of the United States that will one day place American publishers completely at the mercy of paper manufacturers of a foreign country. The growth of consumption of newsprint paper in the States is by far outstripping the increase in production, and as this margin widens, the grip of Canada tightens proportionately. The short-sighted, narrow-minded policy of the American publishers is due to reap a whirlwind of high prices that will make present-day quotations rock bottom by comparison."

American & Canadian News-Print,

Production, Shipments, and Stocks.

According to the February bulletin of the News-Print Service Bureau (N.Y.), the 38 reporting companies in the United States and Canada produced 157,752 tons, and shipped 156,760 tons during January. Production exceeded shipments by 992 tons. Production figures include 2,497 tons of hanging, of which 409 tons were made in the United States.

Total production of news-print paper by the mills in the United States and Canada during January amounted to 100 per cent. of the average monthly output during the three months of greatest production in 1918.

Both production and shipments were 11 per cent. greater in January, 1919, than in January, 1918, due to better running and traffic con-

ditions.

The production of news-print paper in the United States and Canada in 1918 was, in round number, 2,000,000 tons, of which 1,880,000 ton was standard news. This was 2 per cent. less than in 1917. Production in Canada in 1918 was 738,000 tons, and in the United States 1,264.000 tons. This was an increase of 48,000 tons in Canada and a decrease of 86,000 tons in the United States over The output of news-print paper in Canada has steadily risen from 150,000 tons in 1909 to nearly five times that amount nine years later, while the output in the United States in 1918 was less than in any year since 1909 with the exception of 1915.

Shipments during 1918 were 18,000 tons greater than production, and manufacturers' stocks at the end of the year amounted to only 40,000 tons, or the equivalent of six days' production. There were a few thousand tons in the hands of jobbers on January 1st, 1919, and as nearly as can be estimated in the neighbourhood of 275,000 tons in the hands of or in transit to publishers, an average of over fifty days' supply based upon the quan-

tity used by them during December.

Exports of paper should be in good volume in response to a heavy foreign demand with lowered freight rates.

When a job gets too big for you, don't be backward about calling in help. There is no merit in sticking to it alone until it is too late to be helped.

Wrappering Newspapers.

An invention by Mr. A. Kindborg and F. Wagner Aktiebolaget, relates to machines for wrapping up newspapers, etc., of the kind in which the length of wrapping paper is automatically regulated in accordance with the thickness of the bundle of newspapers, etc., fed into the machine. The machine etc., fed into the machine. described regulates automatically the length of wrapping paper, cuts it off, prints an address, applies paste, and rolls up the bundle of newspapers in the cut-off wrapper. bundle of newspapers to be wrapped is placed on the table under a roller 32 mounted on levers 33 carrying, at their rear ends, a roller 35 engaging a cam 36 on the driven shaft 37. At the proper moment this cam permits the roller 32 to drop on to the bundle, the thick-

ness of which defines the amount of the drop. The link 38 carried by the levers 33 is correspondingly lowered and, by means of the mechanism 40, 39, 43, moves laterally a springpressed roller 45 to work in a recess on a cam 49. While the roller is working in the recess, it presses the roller 56 against the driven roller 55, and the wrapping paper 51 is thereby fed into the machine until the roller 45 passes out of the recess. The roller 45 may be temporarily locked against lateral movement by a ratchet 61 operated from the cam 66. The

required length of wrapping paper is cut off, as it is led into the machine, by a knife 58 and the cut-off wrapper then passes between belts 11, 12 until it passes under the roller 9. The bundle of newspapers, etc., having previously passed under the roller 32 and between the roller 9 and discs 10, is rolled up in the bight or loop 30 temporarily formed in the belts 22, and as the cut-off wrapper is fed in it is wrapped round the bundle, having been The bight 30 pasted by the pasting belt 90. is formed in the belts 22 by the rollers 23, 28, 29, when the levers 27, 25 have been moved, by suitable mechanism from the positions shown by dotted lines in Fig. 1 to the fullline positions when the levers are to the positions shown in full lines, the bight disappears, and the wrapped up bundle is expelled. While the cut-off wrapper 51 is being carried between the belts 11, 12, an address is printed on it by the rachet-operated mechanism 69, The prismatic part 60 is moved forwards twice for each movement of the printing chair 70, and its adjacent faces are respectively smooth and covered with felt soaked with The part 81 is pressed against the roller 18 to bring the wrapper and the adjacent parts of the belts 11, 12 to rest during the The roller mechprinting of the address. anism 82, 87, 83 being arranged to permit the other parts of the belts 11, 12 to continue simultaneously their forward movement. An indicator 104, having addresses printed in the same order as on the printing chain and connected to the mechanism 71 shows which address is about to be printed. The handle 108 permits an address to be moved past the printing position, and the handle 113 permits disconnection of the ratchet mechanism, and so allows the same address to be printed a number of times in succession.

New De-Inking Process.

A British patent has been granted to Jacob Arie Van den Knapp, of Sellingen, Holland, and Bernardus J. Bartelds, engineer, Apeldoorn. Holland, for an improved method of utilising old paper with the object of producing new paper. The specification describes the special operation for producing de-inked fibrous pulp from old paper by washing, after the paper has been beiled in a soap solution in the boiling vessel in such a manner that the hot wash water is intermittently laid in at the bottom of the boiling vessel, and the wash water flows off at the top. By this method, it is claimed, the fibres are continuously agitated during the boiling operation, the dissolved printing ink separating itself from the layer of paper and flowing off inwardly, while, when the wash water is admitted, the fibre settles to the bottom. If subsequently hot water is admitted, the fibres are stirred up again and will remain floating in the water, so that the printing ink left over will be dissolved, and when the hot water is turned off will rise again, whilst the fibre floating in the water settles once more at the bottom.

Waste Paper.

Effect of the Withdrawal of the Order.

The withdrawal of the Waste Paper Order is causing a good deal of unsettlement in the market for this material. It is a little early, perhaps, to say how things will shape themselves, as they have not yet had time to settle down. Demand from the mills has slackened in some respects, but we are assured that for really good quality waste paper, which is well sorted, a fair price will be maintained.

sorted, a fair price will be maintained.

"In some cases," says Mr. P. N. Riskey, director of the London Waste Paper Co., Ltd., "mills having over bought, are declining supplies. But regular users of waste papers, if they can rely upon the packing, are only too glad to take it, even now, because they have such a lot of mixed stuff in store that it is not so easy to handle as the properly sorted material. If they can get the right thing, and they can use it straight away for the beater, they are only too pleased to take it.

"All mills, however, are suffering from the conditions of labour, as we are ourselves. We have stocks, but it is a question of labour in getting them sorted. Otherwise, we could

sell every ounce."

In answer to a question, Mr. Riskey remarked that he was aware that some merchants were badly complaining, adding that small men would naturally feel the changed conditions, because mills will favour those who get large, well-sorted supplies "Some people will drop out of the business, no doubt," he observed, "and the position will quickly right itself. We cannot expect to get schedule B prices. Those have been practically wiped out, and we are now working on about the old pre-war grading."

Mr. Riskey regards it as unfair to compare wood pulp with waste paper, and points out that waste papers contain chemicals which contribute to the manufacture of new paper. Asked if he thought waste papers would compete with wood pulp, he said, "If you take the whole thing into comparison, chemicals and wood pulp together, waste papers are still worth something near the prices which have been ruling under the schedule; but certain grades, mixed and dark brown, for instance, have naturally fallen because there are such large supplies."

Mr. Riskey regards the present position of wood pulp, of which there are large stocks, as abnormal, and not likely to continue for many months. Prices for waste paper, he points

out, must be governed by wood pulp.

Waste paper merchants are now looking to demand from the Continental market, which will create a very keen competition for waste papers. They are now permitted to export, subject to orders from the other side, where, however, buyers are not in a position to receive for the moment, but dealers in this country may be flooded with orders at any moment.

Messis. I. and J. Hyman, Caledonian-road, regard the market for waste papers as quite nominal. No prices are fixed, people taking what they can get offered for them. "The better qualities won't go lower in price," our representative was informed, "in fact, they will go up to keep pace with rags."

It is pointed out that waste paper can never go down to its 1914 figure, if only for the reason that costs of cartage and labour are so much higher. Before the war cartage could be done in London at about 1s. 9d. to 2s., whereas now it costs 8s. to 10s.; while women who were in 1914 paid anything from 8s. to 10s. now earn as much as 30s. to 40s. In fact, the whole basis of business is entirely altered, and costs are at a higher level altogether.

As to how waste paper will stand in regard to wood pulp, we were told that it all depends upon freights, which, it is stated on advices from New York, have been advanced. Shipping will be the deciding factor. There are large stocks of wood pulp in Scandinavia, we are told, and supplies are plentiful if ships

can be got to carry them.

Mr. E. S. Lendrum states that the market for waste paper is still in a very uncertain condition. In some localities there is a steady demand, while in others mills are paying no attention to this class of raw material on account of slackness of business. The Railway Committee's Order restricting the transport of waste paper to a hundred-mile limit is a great disadvantage to users, as some of these can only obtain the special qualities of waste which they require from a distance. It is almost impossible to give correct prices, and such is the state of uncertainty that quotations may vary even to the extent of 50 per cent., according to circumstances.

In other directions it is stated that the mills have refused supplies of waste paper, and at the moment will not buy at any price. Dealers thus affected state that in a few days prices may be down to a little over pre-war

value.

Metallic Corrugated Cardboard.

A French patent has been granted to the Société Belge de l'Ondulium relating to a process for the manufacture of corrugated cardboard with a metal surface. The invention consists of corrugated carboard, one side of which is formed of a layer of metal. This metallic layer may replace one of the sheets of paper usually covering one side of a sheet of corrugated cardboard. In this way a material is produced suitable for most of the uses of corrugated cardboard, especially for being worked-up, cut, folded and sewn in the making of boxes, wrappings, etc. It is especially useful in the case of boxes made to hold goods which have to be protected from damp.

DURING the month of December last the value of American typewriters imported into Great Britain was \$127,254.

South=East London Master Printers.

More Propaganda Work.

A useful meeting of the South-East London Master Printers' Association was held on Tuesday last week at the Bridge House Hotel, London-bridge, and evidence was forthcoming of more propaganda work in order to bring those who are not yet members into the Association. The president of the Association, Mr. F. J. Winkley, was unfortunately still too ill to attend, and Mr. C. A. Bates

kindly took his place.

Mr. R. A. Austen-Leigh made a special visit to explain the progress of the organisation scheme. He outlined the scheme for grouping the country into alliances, of which Lendon would be a component part. They were revising the rules on more democratic lines, and the prospects for the success of the scheme were very favourable. In connection with the appointment of an organiser (Mr. Johnson), who was present that night, Mr. Austen-Leigh mentioned that 30 new members were elected at the last meeting of the London Council. He went on to say that a minimum price list was being prepared, and when it was quite ready it would be sent round to the district associations for their consideration. He asked members, however, not to be frightened by the effect upon the smaller jobs, which hitherto had been done more or less at a loss. If the prices in these cases looked rather terrible, the larger jobs were all right, and the smaller work had to be dealt with on a similarly logical basis. It was inadvisable to adopt different methods. and he hoped the list would have the good results they anticipated.

The chairman thanked Mr. Austen Leigh for enlightening the meeting on the very good spade work performed at headquarters.

With regard to the minimum price list, he urged master printers to get out of the habit of adopting a certain method because it had always been so, and he hoped they would be able to work upon a sensible schedule for the future.

In asking Mr. H. C. Hill to speak, the chairman referred to the work upon which Mr. Hill had been engaged in regard to printing by He recalled how coloured enemy aliens. post cards used to be imported in sheets, the space on one side of the cards being occupied by the words "Printed in Germany," which was sufficient to cover the law. Afterwards, however, "Printed in Germany" disappeared and the cards were sold without any indica-Through Mr. Hill's tion of their origin. efforts they were going to miss some of those disadvantages from which the trade suffered before the war.

Mr. H. C. Hill referred particularly to the competition from Germany in the matter of coloured printing. Prior to the war it was the custom for certain firms who posed as printers to gather up a number of fine sketches by British artists, take them round the country, get orders for them and then send the printing of them to Germany. He was at a committee of the Board of Trade at the beginning of the war when he was asked what they wanted in the way of protectionif they might call it so-and one thing he suggested was that the sketches of British artists being, so to speak, raw material for lithographic printing, should be reserved for printing in this country, and that if anyone in the future wanted his printing done in Germany there should be a threefold duty if the originals were British sketches. He did not know whether that would operate, but now they were at the stage when the Govern ment was considering its policy with regard to the import duties. It had already said it

would not admit manufactured articles unless they were commodities necessary to the community from the point of view of consumption; it would not admit manufactured articles. He wanted printers to realise that a great deal of printing, which was a manufactured article, could come into this country unless they made it quite clear as an association that they strongly objected to it and that they wanted that printing to be reserved to this country.

Referring to the anxiety of America to send us posters, Mr. Hill said we could print all the posters that were needed in this country. Then, of course, there would be Holland and Belgium, and, as soon as possible, Germany, trying to send us work again. If they could get it established that the British printing trade needed that kind of protection in order that it might absorb its unemployed and afterwards keep that protection in vogue, then he thought they would not be troubled so much with the importation of printed matter which was of no advantage to the community as far as he could see. Proceeding, Mr. Hill thought printers had considerable reason to congratulate themselves on the smooth way in which the inevitable changes in connection with their trade had taken place, especially in view of the recurring crises in other trades. He thought that was very largely due to the president of the Federation (Mr. A. F. Blades) and those who worked with him in handling the labour matters. Mr. Hill had hopes that the relations between employers and employed in the printing trade will continue to improve, assistance being derived from the Joint Industrial Council. He pointed to the danger, however, of overloading a business and urged the need of education in this matter. Mr. Hill went on to advocate the adoption of standard estimating forms and hourly rates, the idea being to get rid of the ridiculous variations in estimates which had been a disgrace to the printing trade for years and years. It seemed to him that if they could decide upon standard estimating forms and hourly rates for a district, and if everyone used those forms, then there could be no great variation. The only variation, in fact, would be in the time allowed for the operations. Those to whom he had made this suggestion had approved of it and the organisation committee was preparing the estimate forms which in due course would be circulated

among the members.

Mr. W. R. Dingle, joint secretary, drew attention to the need of propaganda work in the south east area, and suggested a meeting for that purpose in Woolwich.

Mr. Davis agreed that they ought to concentrate on Woolwich.

Mr. E. B. Smith, joint secretary, said he would undertake to get a meeting together wherever a member would try to work his district. He pointed out that there was no difficulty in getting prominent speakers from headquarters, because gentlemen like Mr. Keliher, Mr. Austen-Leigh, and Mr. Hill were

ever ready to come to their assistance in outlying areas.

Mr. F. A. Perry (W. and N.W.) spoke of the advantage derived from holding alternate meetings in various parts of a district. In former days, he said, things were so bad in the north-west that it came to be regarded as a matter for congratulation when they lost a job to another printer, but since their organisation came into being they had all stuck together and matters had very much improved. They were all working now in perfect harmony and good fellowship. He insisted that they must have confidence in one another.

A vote of thanks to the chairman closed the proceedings.

MOSIER Printers' Association.

Present-day Problems.

On March 25th at Gloucester Mr. F. Steel presided over a good attendance of the employers from all parts of the county and expressed his appreciation of the honour of being elected president, and after alluding to the good work already done, outlined a programme of work still to be carried out. It was, he said, essential to enrol every master printer in the country.

Mr. A. E. Goodwin was then asked to speak on present-day problems of printers, and said the object of my visit to-day is two-fold-to explain some of the decisions recently arrived at by the Federation and to tell you of the position of other matters which vitally affect the whole printing industry. It must be obvious to every thinking man—and all printers are thinkers—that when the old method of settling wages and working conditions by individual employers and workpeople was gradually superseded by methods of collective bargaining that the only way in which the employers could properly meet the new conditions was by so organising themselves that questions would be settled in a manner that commended itself to the reason of all concerned.

Right not Might.

One of the men's leaders last week wisely remarked that whichever side won in a strike it did not necessarily prove that that side was right; it simply showed which side possessed the greatest strength.

So far as the printing industry is concerned, labour has improved its position greatly during the war. We have no reason to complain of this, providing the employers also strengthen their position, and bring into their organisations all printers. There has been a great influx of recent years, and the time cannot be far distant when every employer will see that it is as much his duty to belong

to his trade organisation and take an interest in its proceedings as it is to be in business at all. At the headquarters of the Federation we are fully conscious of the weak links in our scheme of organisation but we are doing all we can to strengthen them.

Strength.

You realised some time ago the need for linking up more closely the various Associations in the county. Now it is proposed to link up all in the South Western area into an Alliance. These Alliances will each have a whole-time secretary; the local Associations will elect representatives to the Alliances, and the Alliances will elect their representatives to the Federation Council, and so we have a complete chain of responsibility from the employer to the executive body of the trade.

On April 9th a meeting is to be held at Bristol to bring into being such an Alliance for this area.

A Great Event.

Last week the final steps were taken to set up a National Joint Industrial Council for the printing industry, and this body will probably come into existence next menth. That will consist of 25 representatives of the employers and 25 of the trade unions, and national questions affecting the whole industry will be dealt with by this council. One of its first duties, however, will be to set up Joint District Councils, and the Alliances will constitute the employers' side of these Joint Councils.

So much for the future meantime. Now a word as to the past. Some of you in this district, I understand, were startled when you got the terms of the agreement regarding the reduction of hours and payment for holidays, and yet it is a year ago since the first request was put forward, and if our organisation had been as perfect as we nope it will be, you would all have known it was coming.

But it is surely impossible for anyone to fail to realise that the trend of the times rendered an agreement of this kind necessary.

General Unrest.

At the time our conference was sitting the printers in Rome where on strike for a 48-hour week. The electric railways in London were stopped and the engineers on the Clyde and Tyne on strike about the adjustment of the 47 hours week. A demand had been tabled for 40 hours and 44 hours from certain sections of the trade.

You may say that there was no need for you to concede it in agricultural districts because of these disturbing conditions in the big industrial centres.

But you know full well that it is only a question of time before conditions granted in one centre apply to others, and the world is getting smaller every day. But surely the way to look at this question is whether the demand for 48 hours and payment for holidays was reasonable.

The Real Point.

I have only heard one opinion on this, that

it was quite reasonable, provided the industry could afford it, and that all concerned would do their best to keep up production in the shorter time worked.

The Cost.

Now can the industry afford it? What does it mean? It is an increase in cost of from 8½ to 10 per cent. But it will need concerted action to recover this increase in cost. That is why we are here to-day. Before, however, we come to any conclusion, let me tell you the position of negotiations regarding the national wage settlement.

The Old Method.

You know what has happened hitherto. Memorials were presented in Manchester and Liverpool and concessions obtained there. Then what was termed the "vicious circle" travelled round the country, eventually reaching Gloucester. A better plan was seen to be a settlement on a national basis and months have been spent on working this out, and it is hoped to arrive at an agreement this What is likely to be gained by such a settlement? Freedom from perpetual requests and constant agitations and inequalities and anomalies redressed. These rates will be the fair wage of the districts. No firm can take on contracts for the voters' lists or public authorities who do not comply with them. Then surely it will mean that the printing industry will then attract for apprentices the best and most intelligent youths in the community.

Profitable Work.

But it all comes back to the question, can you get work to profitably employ men at these higher rates? Provided we can get a general agreement as to what is a fair standard of value and all maintain it, there will be no difficulty. So we come to the need for more individual installation of the Federation Cost System to establish this. The adjustment of the standard hourly rates will follow.

New Rates Adopted.

I have gone through your rates carefully and consider that these should be revised as scheduled from April 1st, but a good deal dedends on the volume of business keeping up, as I have allowed for the burden of overhead expenses coming down somewhat. Until a few more firm's figures are taken out 1 do not think lower rates can be taken than those suggested.

I shall be glad to answer any questions and give you any further information I can. The one object of this meeting is that you may know what is going on and that I may hear your views.

Many questions were asked, and subsequently the new rates were adopted unanimously.

TEACH typography only to lads of more than average mentality, good character and the ability to express themselves lucidly in writing.

The Scottish Alliance.

The annual general meeting of the Scottish Alliance of Masters in the Printing and Kindred Trades was held in the Caledonian Station Hotel, Edinburgh, last week, Mr. James Sime Waterston presiding. There was a large and representative attendance. It was reported that during the past year there had been a record accession to the membership of the Alliance with every prospect that within a very short time the trade in Scotland will be organised almost 100 percent. The following office bearers were appointed:—President, Mr. James Paterson (of Messrs, Wm. Collins, Sons, and Co., Ltd., Glasgow); vice-president, Mr. Robert Wilson (of Messrs. H. and J. Pillans and Wilson, Edinburgh); hon. treasurer, Mr. George D. Stewart (of Messrs. George Stewart and Co., Edinburgh). Mr. R. T. Wishart, M.A., B.L., was appointed secretary in room of Mr. F. H. Bisset resigned. In the evening the board entertained Mr. James S. Waterston to a complimentary dinner in the Caledonian Station Hotel, in recognition of the notable services rendered by him to the trade as president during the past three years.

The report by the executive stated that the many difficulties arising out of the heavy drain on labour and management, the treatment of disabled men and the return of enlisted apprentices, the constant anxiety with regard to the dwindling of raw materials and their extraordinary increases in price, the many Government restrictions, the negotiations with workers in an endeavour to meet fairly and justly the rapidly growing cost of living, had been dealt with as thoroughly as possible by the board. The economic problems caused by price fluctuations and by the shorter working hours and payment for holidays recently instituted were before the board at the present moment, and the future of the industry, in view of the recently agreedupon National Industrial Council, with its Scottish branch, afforded food for anxious thought. The task of the board had been no light one, and, if the previous year was in many ways an exceptional one, there was no doubt that last year had shown even a heavier record of work done.

Oxford Master Printers' Conterence.

On Friday last, Mr. Vincent presided over the largest attendance of master printers that had ever assembled in Oxford, thanks largely to the efforts of the energetic secretary, Mr. A. J. Alder. The meeting was called to consider questions relating to the organisation of the Alliances and problems as to costs arising through the recent agreements.

Mr. Goodwin dealt very fully and clearly with the whole position, and set forth the

programme of the Federation to establish a standard of fair prices for printing and the method of maintaining this standard.

He outlined the new national scheme for dealing with returned apprentices which had been approved by a joint committee appointed by both Federations that week. He urged Oxford as a centre of light and leading to show an example to the Home Counties by taking up forthwith a plan for ascertaining the hourly rates for the district.

SOMERSET COUNTY

Master Printers' Association Formed

Yet another master printers' association was successfully launched on Saturday last at Taunton, to comprise all the printing employers in Somerset. Mr. Pearce, who has been for many years an enthusiastic supporter of the Federation presided, and Mr.

Munster acted as secretary. Mr. A. E. Goodwin had no difficulty in con-vincing the audience of the value of trade organisations, and the still more important part they were certain to play in the future. He instanced the fact of Mr. Blades (Federation president) being in attendance nearly every day this month at the committee dealing with the problems of Industrial Unrest, and that the Prime Minister was expected to return from Paris to take part in the meeting called to consider its report. He dealt fully with the many current topics of interest in printing circles, and outlined a practical programme of work for the new association, which met with cordial approval. All present undertook to join the association and to support the movement for forming an Alliance for the south-west area.

Officers were elected, and an executive com-

mittee appointed.

Considerable interest was shown in the general work of the Federation, and hearty thanks accorded to the secretary for attending

Machine Minders' Overtime Rates.

Further conferences have taken place with the machine minders, and the following supplementary agreement has been arrived at:—
"The London Master Printers' Association and the London Machine Managers' Trade Society—Further memorandum as to the revised rates of overtime: The rate for machine managers called upon to work before the ordinary hour for commencing work to receive 9d. per hour extra. Such work not to exceed two hours, and no machine manager to start before 6 a m. Half an hour to be allowed for breakfast before starting the day's work. The extra for the dinner hour under clause 19 of the agreement of October, 1915, is to be 7d.

and the Saturday extra under clause 20 to be 8d. As regards the limitation of overtime, agreement is expected shortly. No settlement has yet been arrived at with regard to night-shift conditions, but it is hoped agreement will ultimately be reached.

Christmas Gard Publishers.

Our readers may be interested in the formation of the above Association, which has its offices at the London Chamber of Commerce, Oxford court, Cannon-street, E.C. Preliminary meetings have been held at which Mr. Andrew Lyon, of Messrs. Lyon, Ltd., Glasgow, was elected president, Adolph Tuck, Bart., of Messrs. Raphael Tuck and Sons, Ltd., London, vice-president, and Mr. W. McKenzie, London, treasurer. strong Council representative of various branches of the trade was also appointed. The objects of the Association are to further the interests of the trade in Christmas and other cards and calenders of British manulacture; to promote and protect the interests of the trade generally; to promote, watch over, or take action in regard to any legislative measures affecting or tending to affect the trade; to act jointly and to co-operate with other associations or organisations having mutual interests, and to consider the hours of labour and rates of wages, and other matters relating thereto. The Association has appointed a Legislative Committee and a Trade Rules Committee. Membership of the Association is open to all individuals, firms or companies of British nationality trading in the United Kingdom as publishers of Christmas and other cards or calendars. Practically all the leading publishers have joined the Association.

In connection with the inauguration of the Association, its members, some 25 in number, were entertained to dinner by the president (Mr. Andrew Lyon) and the vice-president (Sir Adolph Tuck, Bart.), at Gatti's Restaurant, Strand, W.C., the other evening. On that occasion the president, vice-president, the treasurer (Mr. W. McKenzie), Mr. A. S. Ritchie, Mr. Delgado, and and Mr. Percy Barringer (president of the Stationers' Association) briefly referred to the objects of the Association, particular reference being made to the necessity for combined action on the part of British manufacturers of Christmas cards and kindred publications, in view of the difficulties connected with the labour question, material, etc., and the possibility of the importation of such publications from Continental countries, the United States, and even from Japan. It was generally felt that the time had arrived when only by the combination of interests could results be obtained which would prove satisfactory not only to the Christmas card publishers but to

the whole of the trade.

The gathering proved a success and augurs well for the future of the Association.

A Printing Ink Amalgamation.

The printing ink business of Messrs. Morris and Bolton has been amalgamated with that of Messrs. Ch. Lorilleu'x and Co. (England). The principal object of this amalgamation is to gain additional strength to meet the future foreign competition, particularly German, which is inevitable, and to endeavour to secure a leading position in the world market. The house of Ch. Lorilleux and Co. has been established in France for over a century, and has achieved a world-wide reputation. It has always been foremost in scientific researches, which has enabled it to produce the finest qualities of every description of printing inks.

As to Messrs. Morris and Bolton, the success which they have attained in nineteen years speaks for itself. The management of the new business will be in the hands of Mr. Herbert C. Bolton and Mr. Charles E. Marsden (Lorilleux). Mr. A. W. Morris, for entirely domestic reasons, is taking the opportunity of withdrawing from active participation.

H.M. Stationery Office Dinner.

On Saturday evening the employees in all departments of H.M. Stationery Office Printing Works held their first annual dinner at the Holborn Restaurant. Mr. W. R. Codling, the Controller of H.M. Stationery Office, occupied the chair, and amongst those present were Mr. G. H. Roberts, M.P., Minister of Food, Dr. T. J. Macnamara, M.P., and Mr. Samuel Gompers. In responding to the toast of "His Majesty's Printing Office," Mr. A. J. Biggs, superintendent of the works, said the question of a State printing works had been the subject of discussion for many years. In November, 1917, at the urgent request of the Admiralty, a printing office was taken over in order to execute confidential work. The Ministry of Food also made great demands on the printing staff. The work during the past two years had been one great rush to get out the millions of forms required. Was the Stationery Office giving up its printing works now the war was over? Over 900 persons were employed and were anxious to know if all that was before them was a fortnight's notice. He had no hesitation in saying that there ought to be a permanent State printing works.

Mr. G. H. Roberts said he had graduated through the printing trade, and he was hopeful that a permanent State printing office would be established.

Some printers are born with black eyes other acquire them.

Trade Notes.

THE first issue of the Herald as a London daily appeared on Monday.

A SPECIAL issue of the Architect commemorated the 50th year of its existence last week.

The late Mr. George Harvey Willmer, of Willmer Bros. and Co, Ltd., publishers of the Birkenhead News, has left £8,367.

The death has taken place of Mr. John George Bishop, who was for over half-a-century closely associated with the *Brighton Herald*. He was 94 years of age.

For erection of printing works at Exeter, for Messrs. William Pollard and Co., Ltd., the offer of Messrs. Stephens and Son, Ltd., Forestreet, Exeter (£7,698) has been accepted.

TENDERS are wanted for printing and supplying books and forms for the Strabane Board of Guardians and Rural District Councils; form of tender from Mr. W. Ingram, clerk, Strabane.

MR. GEORGE ROBEY has postponed the concert in aid of the Printers' Pension Corporation Fund for the Support of the Children of Printers who have fallen in the war, which he had arranged for Sunday, April 13th, at the Coliseum, till Sunday, April 27th.

The libel action in which Mr. Frederic Lamond, the pianist, sued the proprietor of the Daily Sketch for damages in respect of a paragraph under the heading "Obliged to Become a German," resulted in the jury awarding the plaintiff 20 guineas damages.

FEDERATION LABOUR SECRETARY.—Mr. D. G. Little, an official of the Liverpool branch of the T.A., has taken up his duties as Labour Secretary to the Federation of Master Printers and Secretary of the Linotype Users' Association in succession to Mr. F. S. Roberts. He has held office in his branch for over 20 years, for 10 years acting as president, and for a long time has been the branch representative on the Executive Council of the Association. At the last quarterly meeting of the Liverpool branch he was presented with a gold watch in appreciation of his services.

WE understand that the Lanston Monotype Corporation, Ltd., will shortly demonstrate at their show-rooms in Fetter-lane the new Miller Automatic Press Feeder, which is fitted to a Chandler and Price Gordon platen press. a combination which is meeting with great favour in America. Printers should investigate the merits of this labour saving machine, which doubles the output of the most expert hand feeder, is automatic in action, easy to adjust and operate with perfect register, and will feed any stock up to heavy cardboard. Another profit-producer which the Lanston Monotype Corporation are showing is the Miller Saw Trimmer, with special attachments for routing, drilling, type-high planing and other functions.

The J. L. Morrison Co., manufacturers of "Perfection" wire stitching machines and wire, have removed to more convenient and commodious premises, at 44, Gray's-inn-road, W.C.1, where all communications should now be addressed.

"FLYING," which deals with every aspect of the new science of the air, is now enlarged and improved, and will continue to give a current picture of the flying spirit in commerce, sport, exploration and adventure. Flying is published at 5, Chancery-lane, W.C.2.

The Appeal Court last week allowed the appeal of Mr. L. J. Maxse, the editor of the National Review, from the decision of Mr. Justice Sankey holding him liable to excess profits duty in respect of money received from that paper. The Master of the Rolls said the truth was that Mr. Maxe was a journalist, and was also carrying on the business of publisher of the magazine. Under these circumstances the appeal should be allowed and declaration made that the profits of the publishing business, ought to be separately assessed after debiting a proper sum for Mr. Maxse's personal contributions and for his work as editor. The Lords Justices concurred.

The March issue of the Industrial League Journal includes a 12-page supplement of an address by the Rt. Hon. G. F. Barnes, M.P., to managers and foremen on "Industrial Matters." Mr. H. E. Blain, of the London Underground Railways, contributes a very interesting article on "Industrial Honour." There are special contributions from Sir Woodman Burbridge, Sir Eric Geddes, R. Young, M.P., the Rt. Hon. G. H. Roberts, M.P. (Food Controller), Prof. Kirkaldy, W. C. Bridgeman, M.P. (Parliamentary Secretary, Board of Trade), Sir William Bull, M.P., G. J. Wardle, M.P. (Parliamentary Secretary, Ministry of Labour) and Tom Shaw, M.P. Altogether the Journal maintains its interesting character.

From War to Peace. - The war-time activities of Messrs. Fry's Metal Foundry, as all our readers know, have been fairly considerable, and they have been most energetic in clearing out from printing houses all old metal not required, printers' dross, etc. This was transformed into shrapnel metal, and in all, Fry's have supplied the Government with the huge total of 20,000 tons of metal. As shrapnel bullets weigh 41 to the pound, the total number cast reaches the astounding figure of over eighteen hundred millions, or 300 for every soldier in the German army. every one of these bullets had "found its billet," Fry's, as well as the printers who assisted them, would have more than "done their bit "towards the Great Victory. In contrast to this, and as an earnest of the change to peace time activities, one of the first orders which Messrs. Fry's Metal Foundry received after the armistice had been declared was to supply the metal for the special printing office opened in Paris to print reports, etc., for the British Peace Delegates.

BRITISH & COLONIAL PRINTER & STATIONER

Mr. Robert M. Burch.

It is with the deepest regret that we record the death of Mr. Robert M. Burch, who for the past thirty-four years managed the commercial and advertising sections of the British and Colonial Printer and Stationer and the World's Paper Trade Review. Mr. Burch was at the office in his usual health on Thursday last, but died suddenly during the night. In addition to his commercial duties he wrote a considerable number of articles on various technical subjects, and until quite recently he was responsible for the conducting of the monthly "Bookbinding Section" of the British and Colonial Printer. An expert in old bookbindings, of which he possessed a large number, his articles on the subject were much appreciated by readers, and the interesting illustrations that accompanied them were unearthed by him from all sorts of outof the way places. A considerable portion of his spare time was devoted to the study of colour printing, many contributions from his pen appearing in these pages, while some of his knowledge was embodied in a volume entitled "Colour Printing and Colour Printers," published in 1910, by Sir Isaac Pitman and Sons, Ltd., which is now in considerable demand. Mr. Burch's demise is much regretted by his fellow-workers, and he will be missed by all who knew him. Full of energy, his useful life has been closed at the early age of fifty-four years. He leaves a widow and one daughter to mourn his loss. The funeral took place on Tuesday, at Kingston Cemetery.

The death is announced of Mr. Reginald R. Buckley, who was for many years on the staff of T.P.'s Weekly. Being rejected from the army, Mr. Buckley took up national work with the War Savings Department, where he was in control of the Press Department and editor of the Silver Bullet. He had recently completed an opera, and other works were a novel and a book on the art of reading for the "Home University Library."

The death has taken place of Mr. Harold Ashton, a well-known London journalist, who had been on the Star and later on the Daily Mail staffs, representing the latter paper on the Western front.

The death is announced of Sir James Reading Fairfax, senior proprietor of the Sydney Morning Herald and the Sydney Mail.

MR. W. CLARKE, the editor of the Clonmel Chronicle for more than half-a-century and one of the oldest journalists in Ireland, has just died, aged 90 years.

WHEN you trust to "Pluck" you're more than just a letter better off than the fellow who counts on "Luck."

A Victory for the Wood Engravers.

The wood engravers of Brussels have a young union affiliated to the Central Union of Lithographers. But the employees of one important house remained outside the organisation, and for this reason their wages were considerably decreased at the beginning of the war. They endeavoured to obtain concessions from their employer, but without success, and the upshot was a strike on the part of the forty workpeople concerned. After holding out for a fortnight Monsieur Rissel, the employer, accepted the terms of the following agreement from the Central Union of Male and Female Lithographic Workers of Belgium, acting on behalf of the Union of Wood Engravers:

1. Monsieur Rissel recognises the abovenamed workers' organisation and agrees to discuss all questions relating to conditions of

work.

2. Work at home is abolished, whether given directly to the worker who is to undertake it or to some intermediary acting for Monsieur Rissel. Home work may be provisionally continued at Louvain until the rebuilding of the destroyed works.

3. The normal working day will consist of eight hours, that is, 40 hours a week. Where supplementary hours afe to be worked the conditions will be agreed upon by mutual

arrangement.

4. The minimum wage for unskilled labour will be 48 francs a week. Working engravers will be paid a minimum wage of 60 francs a week. These minima are not to admit of any wages less than those of 1914 plus 100 per cent. Skilled workers comprise engravers and draughtsmen. Felters are considered as unskilled workers. It is, however, permissible to such men as have acquired special skill in this line to solicit wages higher than the minimum.

5. Not more than one apprentice may be employed out of a total of five workmen and five half-workers (by half-workers is meant young men who have accomplished their first three years of apprenticeship). The wages of apprentices shall be fixed as follows:—For the first six months, no remuneration; for the six following, a wage of 15 centimes an hour; the second year, 25 centimes an hour; the third year, 25 francs a week; the fourth year, 39 francs; the fifth year, 48 francs a week. After the sixth year the wages to be fixed at 60 francs, the minimum. In the case of the number of apprentices not being sufficient for the needs of the industry, their number to be increased by arrangement with the official organisation of the workmen.

8. The years of apprenticeship accomplished in the trade during the period of the war to enter into account when fixing wages.

7. This agreement is concluded for the period embracing April 1st, 1919, to August 31st, 1920. It may be prolonged each time for the period of one year, if neither party denounce it three months at least before its expiry.—La Federation Typographique Belge.

THURSDAY, APRIL 3, 1919.

Current Topics.

Public Library Finance.

THE financial position of public libraries was the subject of a paper read at the conference of the Scottish Library Association, last week, at Glasgow by Mr. S. A. Pitt, the Glasgow City librarian, who drew attention to the present extremely straitened circumstances in which libraries found themselves. due largely to war conditions, but due also, he said, to the rapid development of education and the increasing calls made on the resources of libraries. Notwithstanding the great increase in educational facilities and the growing use of public libraries, no addition had been made to their resources beyond the annual increase of income arising from higher assessable value. What was now required was that local authorities should have the same freedom for the development of their libraries as they had for other departments of public service. This could be obtained by a general Act of Parliament which would provide for an extension or abolition of the rate limit. Sir Dohald MacAlister, who took part in the discussion which followed, claimed that if any community wished to spend more than 1d. per £1 on books it should be free to do so. He did not understand, he said, what interest was served in preventing a community from freedom of action in this respect. The more books published the better for the printing trade.

Why Delay Orders?

THERE seems to be a tendency among printers to delay making purchases of new machines and appliances in the belief that if they hang on a little longer prices will fall. Under existing conditions there is little likelihood of a fall in prices, at least for a number of years, and it will be of little use to wait till then and meantime lose the profits that the installation of new machinery would bring, that is if these profits were not foolishly given away to the customer as has been too often the case in the past. Neither wages or materials will return to pre-war standards and it will be a long time before there is any great reduction from the inflation caused by war Nearly all our principal enconditions. gineers had their plants entirely employed on war work for the past four years, but now that has ceased they are resuming their regular lines again, and those printers desirous of adding new machines to their plant should not delay in a false hope that by waiting prices will become lower.

Sweden as a Book Market.

THE more books that are exported from this country the greater the benefit to the printer, as well as to the publisher, and advantage should be taken by the latter of the advice given by the Swedish Chamber of Commerce for the United Kingdom, which points out that with the coming of peace there has arisen a good opportunity for a widely ex-The Chamber tended market in Sweden. suggests that the British publishing trade should seize the present opportunity to secure for itself this potential business, and at the same time to recapture a trade which before the war was almost exclusively in the hands of the Germans. It would be a misfortune indeed if, after all the lessons of the war, a

BRITISH & COLONIAL PRINTER & STATIONER

knowledge of all that is best in English literature should be procurable in neutral countries only through the medium of Tauchnitz editions. We might point out to the British publishers that in the less populous neutral countries the number of those who freely read in a foreign language is very much larger than in the greater countries of Europe, and that the home production is altogether insufficient to satisfy normal demands. Hence in such neutral countries there is always a large demand for foreign books, and even among those who are not able to read a foreign tongue there is still an effective demand for translations. A generous distribution of English books would therefore bring in further indirect profits by the sale of translation rights, especially of works of fiction. Now that peace has come determined efforts are being made to improve upon the pre-war position. French publishers have already to a large extent fallen into line with the new demands, and it is to be expected that the Americans, never lacking in initiative, will soon follow suit. It remains for the British publisher to move also. The machinery of distribution is already in existence in Sweden, and is anxiously awaiting a response from the English publisher.

Unrestricted Paper Imports,

THE right impression appears to have been made upon the President of the Board of Trade by the deputation which waited upon him the other day from representative organisations of the paper trade. The object, of course, was to protest against the undue importation of foreign paper to the detriment of the home-made article. It was evidently with the character of the deputation in mind that Mr. Bonar Law, speaking on Major Newman's motion on the protection of key industries in the House of Commons the same evening, intimated that the labour side of the deputation spoke very frankly and said that if the Government did not deal with the question they would deal with it themselves. There. were three salient features of the deputation, which apparently emphasised its importance. The first was its composition, for it embraced the manufacturer, the worker, rhe distributor and the manufacturing consumer, who all joined together with the object of urging the Government to adopt one policy in relation to imported paper. Another fact which seems to have impressed itself upon the President of the Board of Trade was the suggestion, mentioned by Mr. Bonar Law, that the workers, if

the Government did not deal with the position, would take matters into their own hands. A fact which also carried weight was that so many mills have already shut down or are on short time. When the whole of a trade joins together with one mission, as on the present occasion, it clearly indicates that something is wrong, for it is not usual to get the varying elements of any trade, from the. manufacturer down to the employee, to see eye to eye on a question of fiscal policy unless the evil effects of unrestricted importation are glaringly obvious. The fact that workers and employers alike interviewed the President of the Board of Trade recently to insist that the paper trade of this country should receive some measure of protection during the period of transition ought to have been enough to convince the authorities that there was very good reason for the demand which they made-

An Example from France.

✓ In the meantime France sets an example of how to deal with the case of foreign paper. According to a French decree of March 6th, no one may import paper into France except the Government: anyone who wants to import paper must submit an offer to the Government, with full specification, and the Government then circulates this among all the French papermakers. If any French papermaker can make the paper at the price, he gets the order. If, on the other hand, he can only execute the requirements at a higher price, then he receives part of the order, and that part which goes to the foreigner is taxed, out of which the French papermaker receives his price. Newspapers and illustrated papers, by the way, are not affected by this decree. If nothing better can be offered by the British Government there is a disposition in the paper trade to accept something on the lines of the plan adopted in France.

A process has been patented by Mr. R. C. Annand for making a stereotype matrix of the kind comprising a facing layer and a backing-layer, the facing-layer being impressed upon the form when damp and the backing-layer being afterwards secured to the facing layer by an adhesive, consisting in applying to the damp facing layer a dry backing-layer previously faced with a dry adhesive film and moistening the film by pressure against the damp layer to cause the layers to adhere together, the matrix being then dried under pressure upon the form. provisional specification states also that the adhesive may consist of powdered gum or starch brushed on to the backing or facing layers.

CURRENT SHARE PRICES.

Amalgamated Press, Pref., 17s. 6d.; Cassell and Co., £7 is.; Country Life, Pref., 15s.; J. Dickinson and Co., 29s., 29s. 9d.; Ilford, 19s 9d., 18s. 3d.; Illustrated London News, 3s. 9d., Pref., 13s. 6d.; International Linotype, 6o; Lady's Pictorial, Pref., 55; Lanston Monotype, 16s., 16s. 6d.; Edward Lloyd, 18s. 3d.; George Newnes, Pref., 14s. 3d., 14s. 7½d.; C. A. Pearson, Pref., 71s. 3d.; Roneo, 36s. 4½d., 37s.; Raphael Tuck and Sons, 19s. 6d., 19s. 9d.; Wall-paper Manufacturers, Pref., 16s. 3d., 16s. 7½d.; Waterlow and Sons, Def., 25½, 25½, Pref., 9½; Weldon's, Pref., 16s.

DIVIDENDS AND REPORTS.

INTERNATIONAL LINOTYPE.—The directors of International Linotype, Ltd., recommend a final dividend of 3 per cent. for the year ending 31st inst., making 5½ per cent. for the year. Warrants will be posted on 30th inst. to holders registered 1st inst.

RONBO.—15 per cent. per annum (1s. 6d. per share), less income-tax, on ordinary shares (interim), payable 14th inst. Last year, 10 per cent. per annum.

JOHN DICKINSON AND Co., LTD.—In consesequence of unavoidable delay in the final settlement of the Indian and Colonial branch accounts the directors find it will not be possible to submit the balance sheet to the ordinary general meeting of the shareholders until the latter part of next month. The directors are, however, satisfied, without waiting for the completion of the accounts that the profits available for dividend justify the payment of a further interim dividend of 5 per cent. plus a bonus of 2½ per cent., making 12½ per cent. (less tax) for the year ended December 31st, 1918, and warrants were posted on the 31st ult. The directors do not contemplate recommending any further distribution in respect of the year ended December 31st, 1918.

NEW COMPANIES.

G. HEATH ROBINSON AND J. BIRCH, LTD.—Registered with a capital of £1,000, in £1 shares, as printers, engravers, publishers, newspaper and magazine proprietors, etc. The subscribers are G. Heath Robinson, and J. Birch. Private company. Table "A" mainly applies. Registered office, 27, Chancery-lane, W.C.

ALPHA TYPEWRITER Co., LTD.—Registered with a capital of £2,500, in £1 shares, as manufacturers of and dealers in typewriters, etc. The subscribers are H. F. Wareham, and P. Emanuel. Private company. First di-

rector, H. F. Wareham. Registered office 124, Holborn, E.C.1.

PARKER-CHARLES MUSIC PUBLISHING CO. LTD.—Registered with a capital of £5,000, in £1 shares. Objects as title. Agreement with F. E. Brown. The subscribers are F. E. Brown, and C. T. Pezare. Private company. First directors to be appointed by the subscribers. Registered office, 64, Newmanstreet, Oxford-street, W.

MOTOR COMMERCE, LTD.—Registered with a capital of £600, in £1 shares, as newspaper proprietors, publishers, advertising agents and contractors, etc., producers of motor trade publications, etc. The subscribers are P. J. Peters, and T. Warwick. First directors to be appointed by the subscribers.

"BLIGHTY" PUBLISHING Co., LTD.—Registered with a capital of £10,000, in £1 shares, to take over publications referred to in an agreement with J. L. Mackenzie and J. E. Macmanus, and to carry on the business of newspaper owners, printers, publishers, etc. Private company. First directors, D. Mackenzie, G. W. Macey, and J. E. Macmanus. Registered office, 40, Fleet street, E.C.

UNITED SERVICES PARTY GAZETTE, LTD.—Registered with a capital of £500, in £1 shares, to take over the *United Services Party Gazette*, and to carry on the business of newspaper proprietors, publishers, etc. Private company. First directors, H. F. Stevens and Mrs. E. Stevens. Registered office, 15-16, Gough-square, E.C.4.

EXCHANGE PRESS, LTD.—Registered with a capital of £1,000, in 3.800 "A" shares of 5s. each and 1,000 "B" shares of 1s. each, as newspaper proprietors, advertising agents, stationers, etc. The subscribers are Elena K. Howard and Evelyn Hancock. Private company. The directors are to be appointed by the subscribers.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 16 of the Companies Act, 1900. (The registration of Satisfaction is not compulsory.)

A WORD OF CAUTION.

[In giving the official Gazette information, it must be distinctly understood that we take official records as we ind them, and accept no responsibility for inaccuracies, while, as an aimost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case astisactory explanation which does not appear on the records.—Ed.]

ERGLAND AND WALES.

THE BANKRUPTCY ACT, 1914.
RECEIVING ORDER.

Heel, James Horatio, carrying on business as the Spa Printing Co., Tremont-road, Llandridod Wells. Date of order and of adjudication order, March 24th, made on debtor's own petition. First meeting of creditors, April 15th at 2.30 p.m., at the official receiver's offices, 22, Swan Hill, Shrewsbury. Public examination of debtor, April 16th, at the County Court, Severn-place, Newtown.

APPLICATION FOR DEBTOR'S DISCHARGE.

Buckland, Chas. Henry, bookseller, lately carrying on business at 139, Knightsbridge. To be heard April 16th, at 11 a.m., at Bankruptcy Buildings, Carey-street, W.C.

Continuous Web Feed for Rolaries.

An invention that obviates stopping newspaper presses to insert fresh reels while runming is manufactured by the Cutter-Hammer Co., an American firm that specialises in automatic appliances for rotary newspaper presses. It is called the "Stone" reel, and provides an endless supply of paper. Instead of having a roll of paper on the outside of the press, taking up valuable space, the "Stone" reel is located beneath the floor. Thus the press can be pushed back against the wall, and the space used for other purposes. The magazine reel is a three-roll de-There is a reel for each deck of the press, but it is out of sight. The paper is threaded into each deck as in the old way. The three-roll arrangement furnishes a paper magazine for all the time the press is in operation.

When a roll is empty, the press operator simply presses a button, and the beneath-the-floor mechanism does the rest. Motors swing a full reel into the place of the empty one. The fresh reel has a gummed fly-sheet, which tacks on to the end of the empty web, and contacks on to the end of the empty web, and con-

tinues up into the press, furnishing an endless web. The empty roll goes to the bottom of the reel, a little car comes along on tracks arranged underneath and takes it away. Another car comes along with a new roll. It goes into its place, and the reel is full again. The operation is continuous. Not a second is wasted. Eliminating the time taken to change the empty rolls, the Stone magazine reel is saving ten minutes per hour on a quadruple press, fitteen minutes on a sextuple, and thirty-two minutes on an octuple. The saving increases with the multiplicity of rolls.

Personal

A/S JACOBSENS FARVEUDSALG, Christiania, oils, colours, drugs, chemicals, printing ink works, wholesale, retail, have been elected ordinary members of the Norwegian Chamber of Commerce, London.

THE RT. Hon. C. W. Bannerman, M.P., is a member of the new Royal Commission on the Income-Tax.

MR. FRANK BENHAM, who for nearly 40 years has been a familiar figure in the service of Messrs. John Menzies and Co., Ltd., Glasgow, wholesale booksellers, has been presented with a gold albert and pendant on the occasion of his retirement.

MR J. Walsh, a foreman at the Dowgate Printing Works, Tonbridge, was presented the other day with a gold-mounted umbrella, a silver-mounted pipe and a tobacco pouch, by his fellow employees.

MR. G. A. CHAMBERS, editor of the Middlesex Connty Times, has been presented with a gift of silver, a cheque, and an album containing the names of between 200 and 300 subscribers in recognition of his services to the borough of Ealing during the war.

MR. FREDERIC L. COLLINS, the owner of Maclure's Magazine arrived in Liverpool on Monday.

THE Minister of Labour has appointed Mr. C. J. Drummond, M.B.E., J.P., deputy chairman of the Paper-Box Trade Board (Great Britain).

A PARTY of senior scholars from an elementary school at Trowbridge, Wilts, were recently conducted over a newspaper office, and afterwards wrote essays on the subject. A boy of 12, discussing his choice of a post on a newspaper, wrote:—"I should not decide upon the foundry, for it is much too hot. Neither should I be keen on the printer's job, which must be a strain on the eyesight. I expect 1 should have to choose the place of office boy, and endeavour to rise to the top of the ladder and become the editor, whose salary is sure to be a 'fat' one."

Paper at the Lyons Fair.

An interesting description of the paper and board exhibits at the Lyons Fair is given in The Times Trade Supplement. There has The Times Trade Supplement. been considerable need for "hustling" on the part of British manufacturers catering for the paper and cardboard trade, says the writer. Germany has for long been ahead of us in foreign paper and cardboard exports, their returns for 1912 having been £5,272,300, against our £3,758,700. On the other hand, there had been a vigorous trade in these goods carried on between the two countries. The Colonial markets took additional manufactures from Germany to the value of £3,602,850, compared with similar goods worth £2,488,357 from the United Kingdom. Judging from the exceptionally large number of Continental and United States paper manufacturers showing at the Fair there is a desire to secure at least part of Germany's pre-war connections abroad.

Messrs. G. Baker and Co., of Manchester, who were also exhibitors at the last Fair, are again prominent with bookbinders' cloths, packing threads, twine, etc., while John Dickinson and Co. (Ltd.), of Old Bailey, E.C., the Drayton Paper Works (Ltd.), of Fulham, S.W., the Forester Paper Co. (1917) (Ltd.), of Forester's Hall-place, London, show a fine line of their fancy paper goods. The Eburite Paper Co. (Ltd.), of Paddington, William Sinclair and Sons, of Otley, Yorks, manufacturing stationers, John Walker and Co. (Ltd.), of Warwick lane, London (seen at last year's Fair), and James Spicer and Sons (Ltd.), of Upper Thames street, London, are giving noteworthy displays.

Some surprise has been expressed that in view of the many paper factories established Lancashire-the largest papermaking centre in this country-there should not have been more manufacturers from Lancashire

showing at the Fair. A very considerable trade is carried on in the paper and cardboard industry, while in regard to printing competition with Germany has always been particularly keen. During the past few weeks the French book trade has received a fresh impetus owing to the withdrawal by the Government of a number of restrictions imposed during the war, while the trade in foreign printed books, etc., has also benefited by the cancellation of other restrictions by the Comité des Derogations aux Prohibitions d'Entrée, it now being possible for books in languages other than French to be imported into France. randum books (agendas), almanacs, notices (blocs), nautical (avis), block calendars almanacs (éphemerides), etc., are included in this concession. So far as concerns goods of this class which come within the category of articles de bureaux, there should be a revival of trade, since licences can now be issued by the French Customs Office in London; but, on the other hand, for those which

constitute articles de publicité applications for icences have still to be submitted to the Office National des Papiers. This lastmentioned rule applies to trade catalogues and price lists as being articles de publicité.

An interesting exhibit is that of La Société Française de l'Ondulium, consisting of a new kind of corrugated paper so strong that it is intended to replace wood, and recommended for its durability and protection of the contents of any parcels with which it is covered. For wine bottles it is also used instead of the usual straw, and seems to answer very well. The mills of the Papeteries Berges, at Lancy (Isère), profess to turn out daily 150,000 kilos of their papers—writing, printing, packing, and for printing of books; every colour and shade is represented at their stand.

Envelope Makers & Manufacturing stationers.

Important Subjects Dealt with in the Annual Report.

The report presented at the annual meeting of the Employers' Federation of Envelope Manufacturing Stationers and last week contained some interesting items. During the eight months to March 14th, it is stated, the machinery of organisation has been erected, and the Federation, now representative of all the most important elements in the industry, is in a position to deal efficiently with subjects of common interest to its members as they arise. Concurrently with spade work upon the detail of organisation, there has been proceeding continuous work upon the establishment of the principle that the Federation represents an industry, not hitherto organised, with interests, processes and methods peculiar to itself.

Dealing with the interim industrial reconstruction committee, it is mentioned that several meetings have been held, at which a considerable amount of useful discussion has taken place upon various subjects affecting the interests of both sides of the table. The stagnation of trade which has followed upon the armistice, and the feeling of uncertainty as to the future fiscal policy of the country, has tended to delay progress. At the same time, the atmosphere created and the obvious desire to approach matters under discussion from the point of view of the larger interests of the industry, justifies the hope that the new body will, as soon as business returns to its normal channels, be willing and able to be of service to all those engaged in the in-

dustry.

Shorter Working Hours.

The Council having investigated the conditions of the industry in regard to hours of labour, the practice was found to be very diverse, and having regard to the action taken in kindred industries, a recommendation was made to every member of the Federation that a 48-hour week should be adopted in their factories. The recommendation has been generally adopted, and a working week of 48-hours may now be regarded as the standard throughout the industry.

The useful efforts made to assist demobilisation and resettlement have already been re-

corded in our columns.

Paper for Export Orders.

Under this heading the report states: Representations were made to the Paper Controller as to the need of special facilities being granted to manufacturers in this industry in the matter of the supply of their raw material. Special regulations were issued by the Controller under which extra supplies could be procured by members requiring assistance in this matter to maintain or extend their export trade.

After mentioning a working arrangement with the Scottish Alliance of Master Printers, it is put on record that the Federation was represented at the historic meeting at Westminster Central Hall, frequently referred to as the Parliament of Labour, by the president (Mr. Henry Godfrey), and the Scottish District Chairman (Mr. James Gallie). A statement in regard to the position of the industry has been furnished to Mr. McKie Bryce, of the Engineering Employers' Federation, who is acting as secretary of the employers' side of the committee appointed by the meeting, which is at present investigating the industrial position of the country.

Restrictions upon Imports.

The attention of the council was drawn to the statement that the President of the Board of Trade intended to continue restrictions upon imports and to appoint an advisory committee to assist him in the matter. Representations have been made to the President that it would be desirable that the Federation should be consulted in the appointment of this advisory committee, in order that the industry might be represented by persons having knowledge of the particular conditions which affect its interests. The matter is still under consideration, and it is hoped to take measures to ensure that the needs of the industry receive consideration.

The report concludes with the satisfactory statement that there have been, fortunately, no disputes culminating in cessation of work in the factories of members during the period under review, and that in a few instances of minor difficulty the officials of the Federation have been able to render some slight assistance to members in dealing with trouble

which had arisen.

Paper Bag-Makers' Resolution.

The following resolution has been passed by the United Kingdom Paper Bag Manufac-turers' Association: — "That this meeting views with concern the announcement of the unexpected removal of the import restriction on paper without any simultaneous intima-tion that imports of foreign paper are to be subject to an import tax, and accordingly this Association, representing large users, calls upon the Government to impose a scientifically arranged import tax on paper to come into operation on May 1st next, in order to coincide with the removal of the restrictions, so that there shall be no interim period of free imports; and further, that this Association, being of opinion that the removal of the restrictions is due to the influence of the newspaper interests, strongly protests against the Association's interests being identified with the newspaper trade with which it has little or nothing in common."

To-day is the to-morrow you worried about yesterday—and it never happened. Keep the ball rolling.

Some Paper Topics.

One more week has passed by, and conditions are no less chaotic than they have been for four months. The rumblings of industrial strife do not help matters, and the total lack of understanding as to official decisions on the subject of free or fettered import and export is paralysing trade. Inside the paper market absolute chaos prevails, neither makers, sellers nor buyers knowing exactly where they are. On the one hand we hear of prices dropping at an alarming rate; on the other we hear of one of the steadiest houses in the trade preparing a list of advanced prices. Buyers resolutely refuse to place orders, despite the frantic offers which some dealers are making in order to cut losses and clear stock. We have seen within the last few days paper offered at 63d. per lb. which cost 8d. per lb., and the quantity was extremely large. We have also seen named paper bought at 2d. per lb. less than the actual maker is able to sell at. How long this state of affairs can last we do not know, but it is certain that another month of it will place the whole trade in serious jeopardy.

Another serious aspect is the delay in receiving imports from abroad. Paper is now arriving which was bought at a fair price two or more months ago. Meantime market figures have dropped, and the buyers are down to face the difficulty of accepting goods for which customers have cancelled or attempted to cancel their orders. What was held to be a low price at the time of placing the order is regarded as extortionate to-day. Take the case of strawboards. Deliveries of old orders are taking place at round about £25, while at the same time present orders are booked at £16 per ton. Or wrappings: placed two months ago at £80 per ton, to which figure the buyer may be held, while present orders would be executed at f60. No wonder that friction is rife between maker, middleman and customer, for each is concerned in attempting to avoid his own loss.

The burning topic of the day in papermaking circles is the question of a restrictive or protective tariff on imported manufactured paper. In this matter the two sections of the paper trade have opposing interests. Mills, and agents for English made papers, strongly desire a tariff on foreign paper, while many wholesale houses and agents for foreign mills foresee in Protection tho doom of their own business. It is claimed that many English mills have had to shut down on account of the relaxation of the restriction on foreignmade paper. Personally we do not know of any that have closed actually on this account, but there are many small mills that will shortly have to shut down if trade does not waken up. It is somewhat singular to learn from two different authoritative statements that on the one hand the world's supply of pulp and paper will be below the demand for some years to come, and on the other that the imports of foreign paper will stifle the English

industry. The truth appears to be that we have too much paper and material still in stock in this country, bought or made at a time when every exchange was against us, and when freights and insurances were at their maximum. Neutral countries have the advantage of us there, and so long as our condition remains abnormal while their's remains normal, they will be in a position to undersell against us. It is very much to be doubted whether they have or will have any great advantage in economy of labour, except what they have secured by scientific equipment and organisation.

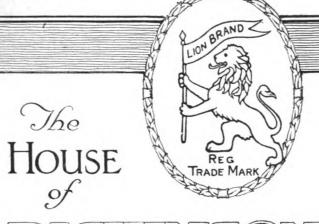

The great problem is how best to protect the English trade in the interim of re-settlement, of the market, and, on the other hand. how best to speed the return of stable conditions. To our mind, the solution lies in the second direction. No matter what steps are taken to safeguard or promote trade interests, no business will be done until the plain man has acquired the conviction that stability has become an assured proposition. At the present time, no matter what sacrifice may be made by the maker or wholesaler in the effort to promote business, the user cannot be persuaded to place his demands. The total prohibition of foreign papers would not help matters, for it would not in the least produce the necessary state of equilibrium in our own market. On the contrary, some of our own people would then endeavour to stiffen prices. while others would adopt a competitive attitude. To our mind, the difficulty of the present phase has been created, and is being accentuated, by the lack of an organised policy. Conditions are simply being left to drift toward their own settlement. Is it beyond the bounds of possibility for papermakers and the Government to force the issue? The future stable price of paper can be assessed to a sufficient degree of accuracy to be accepted as the sound average by the paperusing community. The total loss incurred by an immediate acceptance of such prices would conceivably be less than the loss which will ultimately accrue to the trade through lack of business and present loss on sales. Losses might be pooled and recovered from excess profits previously paid in by the trade. Some mills and houses would probably benefit more than others in this process, but the gain all round would assuredly be greater than any which will be conferred by the prevailing process of drift.

Valuable time is being lost while committees and conferences are debating the value of tariffs and the injurious nature of the removal of restrictions. Every argument is put forward for the continuance of control, restriction, and one thing or another, all on the assumption that the stability of our own markets will thereby be hastened. Yet it is the most palpable fact in the world that until every factor that interferes with trade 18 removed there can be no sound and stable market condition. The great essential is the immediate establishment of relative values. and this can only be accomplished by direct action accompanied by direct but temporary H. A. M. sacrifice as outlined above.

Australian Notes

Paper Imports - Supplies Coming from America and Scandinavia - 8,000 Tons on the Way - Commonwealth Board Mills' Improved Position - First Home-Made Papermaking Machine - Australian Paper Mills Co.'s New Shares - A £50,000 Fire.

(From Our Sydney Correspondent.)

IMPORTS of paper and stationery into the Commonwealth during the three months, July-September, 1918, are valued at £1,176,366, which compares with £434,519 in the corresponding period of the previous year.

The landing of considerable supplies of paper is now expected, and several vessels are on the way from America and Scandinavian ports. Some 8,000 tons are on the way, and one of the steamers at least is looked for daily.

Considerable improvement in the financial position of the Commonwealth Board Mills, Ltd., is shown by the balance-sheet for the year ended August 31st, when the figures are compared with those for the last preceding year. Net earnings amounted to £8,050, as against £4,577, and after wiping out a debit of £5,150 and writing off £1,140 representing preliminary expenses there remains at credit of profit and loss £1,760. Gross profit amounted to £15,060, as against £10,134. Liabilities total £55,863, inclusive of capital, £30,000; sundry creditors, £4,525, and bank overdraft, £14,350, the principal assets being plant and machinery, £37,325; stocks, £11,972; sundry debtors, £4,040, and bills receivable £2,469.

Presiding at the annual meeting of share-holders of the company on December 16th, the chairman of directors (Mr. J. H. Tait) said the company had suffered severe losses in the early stages of the war, but it had got over its difficulties, and was now making satisfactory profits. There was no reason why it should not continue to progress. The board had decided to increase the capacity of the plant, and a satisfactory arrangement for financing the installation of an extra mill had been made with certain members, the Government having "fiddled" about with a proposal which the company had submitted until the board had "got tired."

THE managing director, Mr. T. R. Morris, referring to the problems that had confronted the company, mentioned *inter alia* the dear-

ness of paper. News paper, he said, would throughout the next twelve months cost much more than that purchased at any time previously during the war, and he added, "there is no indication of any reduction in the price of the news paper which is manufactured on the other side of the world."

REFERRING to the new plant which is being obtained by the company, Mr. Morris said it would include the first papermaking machine ever made in Australia. It was being turned out by a Port Melbourne firm, and was on the American pattern. Its dimensions would be so feet by so feet by 180 feet, and its weight would run to about 300 tons.

It has been decided by the board of the Australian Paper Mill Co., Ltd., that new shares fully paid up will rank pari passu with the old shares in respect to dividend payments.

An unfortunate fire has effected damage estimated at £50,000 at the Cumberland Paper Mills, Longueville, Sydney. The buildings attacked, which were of two storeys, each 120-ft. by 100-ft., contained paper pulp, compressed paper, and other materials used in the manufacture of paper. A few hours after the fire had started the buildings gradually began to collapse. About 150 barrels of resin and three bundles of felt, which had been stacked close to the sheds, were consumed by the flames. The mills themselves and another shed were not reached by the flames, and remained intact.

THE difference between repartee and impudence among printers is the size of the printer who says it.

WASTE PAPER.

Its Recovery and Re-Manufacture

Do you Collect, Grade, Re-Manufacture or Handle Waste Paper in any way? If so you will find a fund of information in Mr. James Strachan's book on "The Recovery and Re-Manufacture of Waste Paper."

LONDON: APRIL 10, 1919.

EVERY THURSDAY. PRICE TWOPENCE

City Moster Printers.

Subject of Co-operation Discussed.

Members of the Central Districts Branch of the London Master Printers' Association spent an interesting evening on Tuesday week at Anderton's Hotel in a discussion of the subject of "Co-operation." Mr. J. J. Keliher was in the chair, and in introducing Mr. Foster Robinson, mentioned the important position in the printing and paper trade which the firm of E. S. and A. Robinson, of Bristol, had attained. He laid stress on the importance of the subject they were to discuss that evening, and referred to the unrest which was abroad.

Mr. Foster Robinson, in the course of his address, said the firm of Messrs. E. S. and A. Robinson, Ltd., was founded in 1845 by E. S. Robinson. They made anything to do with paper or cardboard and employed about 2,500 workpeople. They were a union shop throughout, the joining of a union being a condition of service. The welfare department consisted of three lady supervisors, assisted by a lady doctor, and one supervisor for the boys. The duties of the welfare department, inter alia, were the engagement of and dismissal of juniors; no senior is dismissed without the consent of a managing director. The welfare department also managed canteens, cloak-rooms, and to some extent, the athletic club.

Profit Sharing

Mr. F. G. Robinson stated that the profitsharing scheme of his firm had its inception in 1912, and up to 1918 £71,850, in connection therewith had been distributed to their workpeople. He could assure his audience that not one single penny of the amount had been regretted by the ordinary shareholders. They felt that a considerable part of the distribution was the actual result

of the workers' own efforts. The scheme itself was quite simple. After paying 5 per cent. by way of interest on the ordinary shares, his firm disbursed one-third of the profit to their workpeople. Service of two years with the firm was a condition of eligibility. The Commissioners of Inland Revenue had, in assessing the liability of his firm to the excess profits tax, made allowance for the fact that the profit-sharing scheme was a first charge on the business. Referring to the principles on which the scheme was worked, the speaker said that his firm's workpeople had not the right of examining the firm's books and accounts, or the interpretation of the meaning of the details and clauses of the scheme, which lay with the directors. The profit-sharing scheme did not affect wages in any shape or form. Wages were based on trade union rates as a minimum, with additions for special proficiency.

One of his employees, whose opinion he had asked in regard to the scheme, had replied that anyone conversant with, and sympathetic to, the position of the industry in relation to the ordinary worker could have but one view, viz., that once the worker had an interest in the industry his sympathies became identical with those of his employer, and his whole outlook widened.

Identity of Interests.

There had been one or two hot-headed people who had seemed to say to themselves in respect of the profit-sharing scheme:—"What are they at? We won't touch it." But when it came to their turn they never refused participation. His firm, the speaker proceeded, felt very pleased with the results of profit-sharing. It bound workers and employers together, and gave them an identity of interests. No strike had been experienced by them, and they had gained a feeling of comradeship which, to judge by the newspapers, did not exist in all shops. His workpeople realised that their employers were not in business solely to make money, but wanted to do their very best for them; to hold the scale equally

between employee and shareholder; to do justice to both.

In answer to a number of questions from the audience, Mr. Robinson replied that his family were the largest shareholders in the firm, so there had really been no need to canvass them in respect of the institution of a profit-sharing scheme. They deprecated the working of overtime, but overtime was reckoned in computing the amount due under the scheme to each worker. Regarding the accumulation of the workers' dividends in savings banks, he would say that during the last two years his firm had given their workpeople every possible facility for investing in war savings certificates. Up to the time they had closed down their savings bank about £20,000 had been invested therein. On the whole, he had been disappointed with the amount deposited in the savings bank, as he had expected more.

Welfare Work.

His firm had no workers' council, but possessed a welfare committee elected by the trade unions, with a certain number of representatives from each factory. On it were also representatives of the management. The welfare committee possessed no statutory powers, and the directors agreed or not, as they thought fit, regarding recommendations, though in the majority of cases, agreement had followed, the suggestions being helpful. The official clerical staffs were eligible, every one in receipt of less than £6 per week being entitled to the benefits of the profit-sharing scheme, and those earning more than that sum per week receiving a bonus on the divi-The lecturer went on to say that his firm subsidised an educational scheme, under the control of the local educational authority at Bristol. The education was general, and not technical in nature, and his firm paid their girls' wages whilst at school, as, under the new Education Act, he presumed all employers would presently have to do in regard to their own juvenile workers. Finally, he added that the firm possessed a special trust fund for pensioning workpeople who had been with them a long time.

The discussion was inaugurated by Mr. Crowle Smith, who described the scheme as in operation with Messrs. Hazell, Watson and Viney, whereby shares are issued to the staff at their par value of £10 although they stand to day at £15, payment being made at the rate of 1s. a week or in some similar way. When the shares are acquired the writer is entitled to the full dividend of 10 per cent.

The Co-operative Method.

Mr. A. W. Tyler, J.P., manager of the Cooperative Printing Society, Ltd., addressed the members on the question of profit-sharing as carried out at their Manchester, Newcastle and London houses for the past fifty years. The first principle is trade union conditions to all male and female employees; in fact the hours worked and wages paid were better than the trade union demands. Capital receives 5 per cent. and after such payment is

made the remaining profit is divided between employees, capital and customer. Further to encourage the employees to save their portion of the profit, the directors have set up a fund whereby for every worker who saves £1 the board add 10s. This money then bears 5 per cent. compound interest and must not be withdrawn (unless very special circumstances should, arise) until the worker leaves the service of the Society. Employees and customers are alike shareholders, private outside shareholders are not being received. Mr. Tyler added that the Society's trade now exceeds £250,000 perannum, and this year the Society celebrates its jubilee. The speaker explained that the Society has never regretted giving the workers a direct interest in the business and added that the time has arrived when the employees are not going to be contented with the ordinary humdrum existence with no objective in life.

Mr. H. B. Cahusac mentioned the scheme in operation at the Solicitors' Law Stationery Society, Ltd. The articles of association of the Society provided that everyone exclusively employed by the Society during the whole of any year in respect of which a dividend exceeding the rate of 6 per cent. per annum was paid to the shareholders, should receive in respect of such year for each additional 1 per cent. of dividend so paid, a bonus of 1 per cent. on the total amount (exclusive of expenses) paid to him or her ouring such year as wages, salary, or commission. As an example, if the dividend paid in respect of any year was at the rate of 10 per cent., as in the year 1912, the bonus to the staff would be at

the rate of 4 per cent.

Mr. A. E. Goodwin having spoken of the various schemes which had been brought to his notice up and down the country, Sir Cecil Harrison proposed a vote of thanks to Mr. Robinson and congratulated that gentleman on the happy position of his firm compared with the general trade in having profits to share out.

Mr. Oscar Griffiths in seconding the resolution, drew attention to the difficulties which would arise were any such scheme introduced in the London area, where 3,000 printers carry on business under varying conditions.

The resolution was cordially carried.

MR. W. S. EATON has patented a method in which steel or other plates, particularly for use as pattern plates in engraving machines, are etched electrolytically by using them as the anode in an electrolytic etching-bath consisting of a solution of a chloride so weak as to have in itself little or no corrosive action on the plate and using a current of a voltage below the decomposition voltage of the water of the electrolyte but sufficiently high to dissociate the chlorine from the chloride so that the plate is etched by the liberated chlorine while in a nascent state. The bath employed is preferably a solution of perchloride of iron of a density of 22 degs. Baumé and the current at approximately two volts.

Printers' Managers and Overseers

PARENT CENTRE.

Industrial Council Representation.

Mr. E. H. Berryman presided at the monthly meeting of the Parent Association, on Tuesday, last week, at the "Old Bell," Holborn, and there was a large gathering of members. After the minutes of the previous meeting had been adopted, the president mentioned the visit of the general secretary to the Ministry of Labour in connection with the desire of the Association to be directly represented upon the Joint Industrial Council for the printing trade, Mr. Phillips having been received at the Ministry by Mr. P. Ryan, to whom the Ministry of Labour had referred the matter. Since that interview a further resolution had been forwarded to the Minister of Labour and a reply had been received.

Mr. Phillips now read the letter from the Ministry of Labour, which simply referred the general secretary to the letter from the Ministry, dated March 19th, which was as

follows :-

Sir,—I am directed by the Minister of Labour to refer to your letter of February 25th on the question of representation of your Association on the proposed Joint Industrial Council for the Printing Trade. The Minister understands that it was explained to you in your interview on March 13th with Mr. Ryan of this Department that the question of representation of any particular Association on a Joint Industrial Council is primarily a matter for arrangement with the other bodies of employers or workers as the case may be. It is also understood that you claim representation on the workers' side of the Council and that the reply of the Printing and Kindred Trades Federation to your request was in effect to point out that some of your members are employers and others are already represented through the Printing and Kindred Trades Federation owing to their retention of their membership in the various federated Trade Unions. The Minister understands that some 60 per cent. of your members are in this position, and it would appear, therefore, that the attitude of the Printing and Kindred Trades Federation is to that extent justified. At the present time no arrangements have been adopted by any of the Joint Industrial Councils to provide for separate representation of the technical and higher administrative staffs of the various industries.

(Signed) BERTRAM WILSON."

The following new members having been ally proposed were elected on the motion of

duly proposed were elected on the motion of Mr. Jack, seconded by Mr. Dyer:—Mr. E. H. Sawyer (Messrs. Balding and Mansell, Park Works, Wisbech—composing overseer), Mr. S.

H. Walton (Hampshire Advertiser Printing and Publishing Co., Ltd., Southampton—general overseer), Mr. Frederick Dewar (Messrs. Alex. Cowan and Sons, Ltd.—machine), Mr. J. D. Diver (Putney Press, Ltd.—letterpress machine), Mr. C. W. Goodwin (Messrs. Hazell, Watson and Viney, Ltd.—litho machine), Mr. J. H. Hunter (Messrs. Burrup, Mathieson and Sprague—overseer, letterpress machine), Mr. H. H. Leach (Messrs. Balding and Mansell, Park Works, Wisbech—litho overseer), Mr. C. J. Pannifer (Messrs. Balding and Mansell, Park Works, Wisbech—overseer, letterpress machine).

The president extended a cordial welcome to the new members who were present.

Mr. Berryman expressed pleasure at the presence of Mr. W. J. Beck, of the Government Press, Travancore, India, a member of the Association, at present on a visit to this country. He was sure the members would be pleased to offer him a warm greeting. (Applause).

Mr. Beck acknowledged the hearty welcome, saying it was a real pleasure to get back to one of the old meetings again and to see a European printer once more. He mentioned that in India they were apt to come up against little difficulties, but they had not always the advantage of skilled men to help to overcome them. He was sure that after that meeting he would go back to India a little more up-to-date.

The president mentioned that the council had co-opted Mr. W. Jack (Messrs. Cassell and Co., Ltd.), to fill the vacancy on the Council caused by the resignation of Mr. W.

J. Ramsey through illness.

Mr. Berryman went on to say that some months ago he made an appeal in that room for votes for a candidate for the printers' pension, and he was pleased to say that his appeal had been answered so splendidly that the candidate was duly elected. Mr. Berryman expressed surprise at the number of votes he had received, some of them coming from comparative strangers. He had not been able to acknowledge in writing all the assistance he had received, and he would like through the Press to thank those who had sent him votes.

Mr. Blackwell thanked the Council for the votes granted to the candidate in whom he

was interested.

The president then introduced Mr. W. H. Steer, who was announced to deliver a lecture entitled, "Bolts from the blue—some experiences, personal and gleaned, in the unexpected." He recalled a previous lecture by Mr. Steer which had interested the members very much.

Mr. Steer then entertained the members for an hour and a quarter with a string of amusing stories which held their close attention. He did not pretend that they were all new. His discourse was of a very interesting character, embracing anecdotes of various types and many personal experiences of a humorous nature. Occasionally he broke into an impressive vein, as when he paid a tribute to the printers and journalists

who had given their lives in the war. He had begun his chat by saying that it was good to get a laugh now and again, and it must have done members a great deal of good that evening, judging by the amount of hilarity he provoked.

The relation of anecdotes was evidently infectious, because Mr. Bateman, in proposing a vote of thanks to Mr. Steer, also entertained the company with a number of good

stories, mostly relating to editors.

Mr. Moyce also, in seconding the resolution, made one or two contributions which the lecturer might well add to his store, while the president, in putting the resolution, had some diverting personal experiences to relate.

The vote of thanks was cordially carried.

st. Bride Foundation Printing School.

Printing for the Blind.

The last of the series of St. Bride monthly trade lectures was given at the Institute on Friday, April 4th, by Mr. F. A. J. Burns (secretary of the British and Foreign Braille Literature Society) on the interesting and little known subject of "The Production of Books in Touch-Type for the Blind." Mr. Burns who is a practical printer was described by the chairman, the Rev. A. Taylor, M.A., as an "expert of experts." Mr. Burns fully demonstrated that he had a thorough grip of his subject which he made highly illuminating as he traced the history of printing for the blind through its various stages of development up to the present time.

The following were the main points touched upon:—Definition of Touch-type; Early History of Printing for the Blind; Description of the Various Systems; Preparation of the Printing Surfaces for Embossed Books; the Braille System and Description of the Braille Stereotyper; Printing, Paper and Binding of Embossed Books; English Braille Literature; Adaptation of Braille to Foreign Languages.

The lecture was followed by an interesting and informal talk amongst those present, who were keenly interested in the specimens of books for the blind and the method by which Braille characters are written and printed. The usual votes of thanks were heartily accorded to the lecturer and the chairman.

The evening session at St. Bride closes at the end of April. It is arranged that the "winding up" night on May 2nd will be a "students' night" taking the form of a concert, the items of which will be wholly contributed by the students themselves. Examples of some of the work done during the session will be on exhibition from six o'clock on that evening. Past and present students are asked to make a note of this date and arrange to be present on Friday, May 2nd.

lliffe & Sons, Ltd. Staff Reunion.

A pleasant reunion of the staff of Iliffe and Sons, Ltd. (printers and publishers of the Autocar, the Motor Cycle, etc.), took place on Friday last, when a dinner was held at the Hotel Jules, Jermyn-street, London. gathering was for the purpose of welcoming back the members of the staff who had joined the services during the European war, and hearty greetings were extended to them upon the resumption of their duties with the firm after, in many cases, an absence of more than four years. The company, which numbered 82, were the guests of Mr. W. Coker lliffe and Mr. Edward M. lliffe, and consisted of members of the London, Coventry and Manchester staffs.

Mr. Edward M. Iliffe, C.B.E., who presided, referred to the firm's record in the war, and stated that over 240 employees had joined the various branches of the services, and of that number 34 had laid down their lives. Much useful work had been done by the various papers produced by the firm in helping recruiting, particularly the Motor Cycle, through which over 10,000 recruits with technical qualifications were secured for the Royal Engineers, the Machine Gun Corps, and the

Tanks

He also mentioned that the firm had acquired no less than five new journals during the war, including the Agricultural Gazette and the Amateur Photographer (which had been amalgamated with their own photographic paper Photography and Focus). These, together with their existing papers, and another new journal now in preparation would bring the total list of the firm's publications to fourteen, so that they were entering upon the period of peace with a very full programme and with added strength.

The toast of "The Service Men" was proposed by Mr. J. S. Bold (secretary), and responded to by Captain C. E. Wallis, who was wounded in the early months of the war, and after being for two years in the hands of the Germans was interned in Switzerland, where he started a school of motor mechanics for British prisoners of war. This was afterwards taken over by the proprietors of the Autocar, under the auspices of the British Red Cross Society, and a similar school was started in Holland. The other toast was that of "The Men who Remained," and tributes were paid to the manner in which the work of the firm was carried on during the war by a greatly depleted staff. This was submitted by Lieut. R. C. de Morgan, who had just returned from active service abroad, and responded to by Mr J. Griffiths (works mana-

The toast of "The Hosts" was proposed by Mr. George Gatehouse, who referred to the cordial relations existing between Messrs. Iliffe and their employees. In responding on behalf of himself and his brother, Mr. W. Coker Iliffe referred to the growth and de-

velopment of the firm and its many-sided activities. In regard to the number of papers produced and their great increase in circulation since the armistice, he spoke of the value of the large rotary printing machines that have been installed at the Coventry works in recent years, without which it would not be possible to cope with the demands now made upon the printing department.

An enjoyable musical programme was ren-

dered during the evening.

Some Paper Topics.

There are signs of a slight revival in the paper market, due, no doubt, to two principal causes. In the first place, stocks held by paper users of all classes are at last running out, and, in the second place, there is a feeling that prices are in many cases approaching the minimum. This feeling is backed up by a conviction that ere long a change in our usual policy will have to be faced, bringing in its train a rise in prices. The strength of the several deputations appointed by the Various interests to place before the Government the case for protecting our mills and paper workers is sufficiently profound to warrant a successful issue. Paper users are carefully watching events, and already there are distinct signs of direct action, particularly in regard to the placing of orders for imported stuff. Agents and dealers in foreign paper will require to take precautions in booking orders for forward delivery. Several quotations which we have seen show that the need for a safeguarding clause has already been grasped by some houses. The words, "Subject to alteration in our fiscal arrangements, are appended to the conditions.

Nothing is to be gained by delaying, if, indeed, it is the intention of the Board of Trade to place either a restriction or a tariff, or both, on incoming paper. The very fact of definite knowledge will help to stimulate trading by settling the minds of all parties concerned in the making, selling, or using of paper. Alone, however, the decision on fiscal policy cannot be expected to create normal conditions or increase the demand for paper, except as a speculative measure. What is wanted, and wanted very badly, is the removal of the restrictions which still prevent or retard the consumption of paper. are still restrictions in force which prevent manufacturers from using paper for the wrapping of goods. Granted that the rule applies more directly to the manufacturer than to the paper which might be used, the effect is still to minimise the demand for paper. blockade is immediately responsible for a great deal of the stagnancy which has prevailed in the paper world since November last. If manufacturers cannot export their goods, they do not require paper either for stationery or wrapping and packing. Granted comparative freedom to sell and ship to any market, there will immediately arise a good

demand for all grades of paper, and if business becomes brisk, paper prices will not be subject to the same close scrutiny as happens when the need for paper is small and business bad.

In Lancashire the cotton trade is being killed by the blockade, and the effect of stagnancy and unemployment in the textile factories of Lancashire affects the paper trade throughout the whole country. If cotton goods are not selling, shipping is at a stand-still. The lithographic trade of Lancashire is built up on shippers tickets, i.e., the labels printed in many colours on gummed coated paper. It is, perhaps, correct to say that there is more chromo paper consumed in Lancashire than in all other counties put together. of 19 manufacturers of coated papers seven are situate within a few miles of Manchester. At the present time the whole lithographic printing trade of Lancashire is virtually at a standstill, and the direct cause is traceable to the blockade. The demand for the paper used in colour printing is practically negligible, and it must be observed that every order placed for colour tickets corresponds to good orders for several other classes of paper used in wrapping and baling goods. Add to this the high-class paper that is used on administrative work connected with making and shipping the consignments and the disastrous influence of the blockade on paper consumption assumes obvious proportions.

On the subject of market prices during the week we have not a great deal to record. No particular drop in price below the figures previously named has come to our notice: English mills are offering to make common bank at 8d. per lb., which, under existing conditions, must be considered a low offer. Common printings are selling at 5d. per lb., and common writings at 6d. Fairly good printing is to be obtained at 63d. per lb., but esparto printings are offered at 8d. and 9d. per lb. Scotch mills are making a particularly good E.S. writing paper at od. per lb. Azure book papers are being made at 111d. to 18.3d. per lb., some well-known grades that were listed at 1s. 6d. per 1b. last November now being sold at is. id. per lb. The future of high-class papers is uncertain, however, for while one well-known maker promises a further reduction in April, another equally prominent mill advises an advance. Generally speaking, the higher grade papers have all reached a comparative level and no drastic reduction can now be expected under any It must be observed that mill circumstance costs are certain to increase in the next few months as a result of dearer transport and power, higher labour cost and the effect of shorter hours and higher administrative expense. Any advantage that accrues as the result of slightly cheaper material, improved rate of exchange on export, and the economy of full staff and running machinery is morally sure of being counteracted by the higher cost of production. These facts need to be borne in mind by those consumers or users of paper whose minds still revert to the comparative pre-war costs of paper.

Trade Notes.

NEWSPAPER PRESS FUND.— The Lord Mayor of London will preside at the 56th annual dinner of the Newspaper Press Fund, at the Mansion House, on May 27th.

THE death is announced of Mr. John Edward Patterson, poet and novelist, after an attack of paralysis, at Harrogate. Mr. Patterson had been in failing health for some time past.

MESSRS. REID BROS., printers and wholesale stationers, have removed their office from 9, Howard-street, Glasgow, to their works at 128, Avenue-street, Bridgeton, Glasgow.

THE Démocrat, with which is incorporated the Federationist, described as the official organ of the General Federation of Trade Unions, will make its first appearance to day (April 10th).

The only daily newspaper in the United States run exclusively by women has proved a failure under feminine management which is attributed to a lack of "news sense" in the reporters and editors.

Proposals are to be made for starting next session, within the University of London, a special two years course for intending journalists and instituting a University diploma in journalism for such students. Leading members of the University have been formed into a committee for the purpose in conference with the Institute of Journalists, the Appointments Department of the Ministry of Labour, and of the Board of Education.

Messrs. J. W. Arrowsmith, Ltd., of Bristol, have just welcomed back their chairman and managing director in the person of Lieut.-Col. J. A. Arrowsmith-Brown, D.S.O., after four years service in the field, in France and Italy. Lieut.-Col. Arrowsmith-Brown came home for a month on special leave in November last, in consequence of the sudden death of Mr. T. R. Davies who managed the business in his absence, and has now returned to resume the active management himself.

The Press Censorship.—Unless an emergency arises, the Press Bureau announces, it is proposed to close the Official Press Bureau on April 30th, after which date there will be no censorship of Press telegrams or of Press articles, books or pictures. This will not mean that there will be any change in the provisions of the Defence of the Realm Acts or in the regulations made thereunder. They will remain binding as heretofore, but the responsibility of seeing that they are complied with will rest upon the publisher.

THE following have been elected members of the Printing, Bookbinding and Kindred Trades' Overseers' Association:—Messrs. A. Orchard, warehouse binding (Putney Press); W. Wellington, composing (Harrison's, St. Martin's-lane); H. E. Seton, warehouse and binding (Merritt and Hatcher); R. E. Latimer,

foundry (Hazell, Watson and Viney); and W. E. Tyler, bookbinding (Brentford Printing and Publishing Co.).

THE Walkiakoski Paper Mills have passed a resolution to increase their capital from 9 to 15 million marks. The new shares are issued at 125 per cent.

THE death is a mounced of Mr. Henry W. Thompson, head storeman at Sittingbourne Paper Mills, Kent (Edward Lloyd, Ltd.), where he had been employed for 35 years.

TENDERS WANTED.—For printing for the year 1919-20, for the Carmarthenshire County Council, particulars from Mr. J. W. Nicholas, County Offices, Carmarthen.—For printing for one year, for the Cambridgeshire Insurance Committee; forms of tender from Mr. A. Wright, 24, St. Andrew's street, Cambridge.

PAPER SUITS.—Germans are paying £7 for suits of clothes made from straw, paper, wood-fibre, and peat. The cloth wears fairly well. Underlinen, bed sheets, and upholstery materials are now made from paper. Sweden is altering a number of cotton-spinning machines to be able to spin paper by German methods

COLOURS IN BOOK PAPERS.—At the recent paper and pulp convention in New York, it was decided that no colour restrictions are to be placed on book papers. Colours are to be established by the individual mills, and molimit is placed upon their number. It was determined, however not to manufacture special colours in lots of less than five tons.

EDINBURGH.—The printing trade, one of the staple industries of the city, is suffering severely at present from want of work. Government orders fell rapidly off after the armistice, and private orders are few and far between. To some extent the shortage of material is responsible, but few books are being brought out. As the unemployed in this branch of industry already number about 1,000 and demobilisation is adding to the total, the trade unions affected are having an anxious time.

Norwegian Industries Fair.—On the initiative of Norges Oplysningskontor, the Norwegian Trade Intelligence Bureau, arrangements are being made for a Norwegian Industries Fair to be held in Christiania during the week September 8th to 16th this year. The fair is planned for the participation of 200 exhibitors, and the object is that only bona fide buyers shall have admission to the exhibition. The exhibits will include wood products, wood pulp, paper, printing and stationery, chemical products, dyes, etc.

THE "KENTISH MERCURY" STAFF AT DIN-NER.—The directors of Messrs. Merritt and Hatcher, Ltd., proprietors of the Kentish Mercury, 6-14, Blackheath-road, Greenwich, entertained some fifty members of their Greenwich staff to dinner the other evening at "Ye Olde Dr. Butler's Head" Tavern, Basinghallstreet, E.C. Mr. H. E. Harry, M.B.E. (managing director), presided, the vice-chairs being filled by Messrs Stanley K. Bawden (editor) and Ll. Hodges (jobbing department). Following the loyal toast, the company, at the instance of the chairman, drank in solemn silence to those of the staff who made the supreme sacrifice in the war. A capital musical programme, with Mr. L. F. Adderley as pianist, was sustained by Messrs. A. Ll. Cameron, F. Bristow, W. Taylor, J. Glibbery, W. H. Hine, R. Parkinson and T. Rowland.

Quebec's Paper and Pulp Industry.

Only in its infancy.

An interesting review of the remarkable growth of the pulp and paper industry in Quebec and its prospects of further advancement is given by Mr. J. C. Ross in the Canadian University Magazine. He mentions that the value of pulp and paper exported from Canada exceeds that of any other of her manufactured goods with the exception of munitions, which is now a thing of the past. From the pitifully small \$122 worth of paper exported 27 years ago the exports of pulp and paper now exceed \$96,000,000, and the end is not yet.

Mr Ross proceeds: The success which has been attained by the pulp and paper industry 18 not a matter of chance or haphazard effort. For the success of the industry three essentials are required, namely, abundant water power, large available forest resources, and a plentiful supply of labour. The province of Quebec possesses these to a remarkable degree. Out of the Dominion's total water power, amounting to 18,000,000 h.p., Quebec has 6,000,000, or one-third, but only a seventh of this power has been tapped by engineers. In addition to that, the rivers and streams of the province nearly all flow to the south, which carry the products of forest and factory towards the great markets of the United States. In regard to forest wealth, over onehalf of the total pulp resources of Eastern Canada, or 300,000,000 cords, are located in this province, while in the matter of labour the French lumberjack is without an equal in the world. Altogether its water power, raw material, labour, shipping facilities, and nearness to a great market, combine to make this province one of the world's great pulp and paper manufacturing centres.

The remarkable growth and expansion of the pulp and paper industry in this province is directly traceable to the far-sighted policy put into force some years ago by the Gouin Government. Legislation was passed a decade ago prohibiting the export of pulp wood cut from Crown Lands, and as a result of this policy American paper manufacturers, who formerly depended on this province for their supply of raw material, were forced to move their plants to Quenec, and manufacture the pulp wood into paper on this side of the border. At the same time the Government adopted most progressive measures in regard to conserving the water power of the province

and safe-guarding the forests by instituting thorough fire-protective measures. In addition, every possible assistance and encouragement is given to those who desire to go in for re-forestation and the scientific cutting of their timber resources, while the Forest Products Laboratories at McGill continue to do a most useful work of an experimental nature.

To-day, as a result of wise legislation and favourable natural resources, Quebec province has over forty pulp and paper mills located within her borders, or almost half of all those operating throughout the Dominion. While the growth of the industry has been most rapid in the last few years, it is by no means of a mushroom nature. It has developed throughout the years until to-day it is almost the most important manufacturing industry.

The United States is becoming more dependent on Canada for her pulp and paper. Quebec has the largest available supply of pulp wood on the continent, the greatest power resources, and as the nearest province to the large consuming centres of the Eastern States, it must continue as the great source of The provincial authorities and the heads of the great paper mills in the province are fully alive to the situation, and are pre-pared to "carry on" to a still greater extent. It is not only to the United States that paper men are looking for markets; they find that there is a great demand for Canadian paper products in South America, South Africa, Australia and other parts of the world. In order to take care of the export business, the paper manufacturers have formed an Export Association, which has for its object the closest possible relations between the manufacturers, thereby securing a standardised product and also greater efficiency in marketing and selling the output.

The pulp and paper industry of the Dominion is one of our great basic industries, and is not dependent upon artificial aids for its maintenance. Within the last few years it has got upon a stable basis largely through the employment of technically trained men in its mills, through the adoption of conservation policies in regard to the care and cutting of its forests, as well as by the use of reforestation, the standardisation of its products, and the adoption of progressive measures of manufacturing and marketing, until to-day it is not only the most important exporting industry, but is destined to be the most important of all Quebec's manufacturing industries. The development of the pulp and paper industry in this province is only in its infancy.

EXPLOSIVE PAPER.—It is now recognised that the hope of crippling Germany during the war by blocading her cotton supplies was illusory. From very early days in the war she relied on wood cellulose as a basis for her explosives. From wood pulp the German factories made the finest possible tissue paper, and by nitrating this converted it into explosive.

Don't embalm your business and then expect advertising to resurrect it.

Current Topics.

The Press Bureau.

At last the Press censorship is to come to an end and newspapers are to be relieved from submitting their articles to the Censor's Bureau under pain of fine and imprisonment. The Bureau has passed through many phases since it was instituted by Lord Buckmaster, then Solicitor-General, and under the charge of Sir Edward Cook and his colleagues it improved in its working, although newspaper men were much hampered and worried by the Bureau's vagaries, and many inconsistencies and absurdities were perpetrated, perhaps the best remembered of these was the deleting of the quotation, "the captains and the kings depart," which caused a roar of laughter all

over the country. Still the Bureau did some useful work in its way and prevented the publishing of several incidents that might have caused public panic. A curious feature of its working was that even if matter was submitted and passed by the Bureau it did not relieve the newspapers from responsibility if the said matter was held afterwards to transgress certain acts. In fact the Press Bureau autocrats were purely advisory functionaries. What thankful hearts there will be in all newspaper offices when the doors of the Bureau are finally closed.

The British Paper Trade.

THE Board of Trade have this week appointed a Committee to consider and report on the conditions prevailing in the paper industry, with particular reference to the restriction of manufacture in British mills owing to competition of imported paper, and the resulting unemployment of labour. committee have power to make recommendations, and the following are appointed members: -Mr. H. A. Vernet (chairman), Mr. A. F. Blades, Mr. H. G. Bradly, H. Brownsey, Sir Andrew Caird, K.B.E., George Clapperton, Mr. William Culross, Mr. J. Dixon, Mr. W. Dyson, Mr. H. Godfrey, Mr. G. R. Hall Caine, Mr. W. M. Meredith, Mr. T. G. Newland, Captain W. F. Nuttall, Mr. Foster G. Robinson, Mr. C. R. Seddon, Mr. H. G. Spicer, Mr. W. L. Tod and Mr. Thomas Young. Mrs. E. S. Francis, of the Paper Control Department, 23, Buckingham Gate, S.W.1, is to be secretary to the committee.

Labour Unrest.

In an excellent article in the Contemporary Review on the industrial future some good advice is given to both employer and employed, and the causes of the present discontent amongst the workers are investigated and advised upon. Dealing with the shorter working hours, the writer says that "ui less reduced working hours are made good by maintained productivity, as against competing nations which work longer hours at less wages, the export trade of Britain, which is a main source of national wealth, will inevitably dwindle as regards manufactures; and the entire financial and industrial situation must accordingly worsen." Further on it points out that "labour has as much to learn as capital if it is to fare nearly as well as its champions hope. If its leaders assume for it that in virtue of simply being Labour it is sure to take the right course, they will only

BRITISH & COLONIAL PRINTER & STATIONER

be repeating the failures of the governing classes of the societies of the past. What they need above all things to keep before them is the lesson taught by their and our political experience for a century and more. The predominant philosophy of practical life in Britain has been neither an optimism nor a pessimism, but a Meliorism. And Meliorism means guarded experiment." Something, too, "is to be hoped for from the initiative of the private employer. That class includes a number of men who during the war have fought and suffered in comradeship with their workers in the field of industry. Captains of industry are still potential for much good; and if they take up the new plans for industrial control in some such spirit of devotion to the commonweal as inspired them through the years of war, they surely cannot fail to attain to some results not wholly incommensurate with the Great Victory."

Printing in New York.

A survey of the printing trade in New York has recently been issued which gives much information about the trade in that city. The survey was made for the better guidance of the Board of Education in the extension of technical education. The interesting statement is made that one-fourth of all the printing of the United States is done by the New York printing plants, and in point of output they are said to exceed even that of the London plants, thus making New York the world's greatest printing centre. According to the figures given there are 2,650 printing establishments ranging from the oneman shop to the establishment having seventy-five presses and over 300 compositors: the total number of employees engaged being 68,540. One surprising feature of the New York printing trade is that there are thirtysix daily newspapers published in foreign languages, and representing fourteen different tongues, while the daily newspapers issued in English only number twenty. Among the number of printing establishments in the city fifty shops specialise in machine typesetting for the trade.

A CONFERENCE on "The Planning Department in Scientific Management" will be held under the auspices of the Industrial Reconstruction Council on Tuesday, April 15th, at 5.30 p.m., in the Hall of the Institute of Journalists, 2 and 4, Tudor-street, E.C.4. The opening address will be given by Mr. James F. Whiteford, after which will follow questions and discussion. No tickets are necessary.

Paper Control Staff Dinner.

Presentation to Mr. H. A. Vernet.

There was a happy assembly of the staff of the Department of the Controller of Paper at the Connaught Rooms, the other day. With the approaching dissolution of the department, it was thought that a social gathering should be held. At first it was to have been quite a small affair among the subordinates, but it was readily taken up by the whole of the Department. Mr. H. A. Vernet, who was accompanied by Miss Vernet, presided, and others present included Mr. and Mrs. G. R. Hall Caine, Mr. and Mrs. H. Bradly, Mr. and Mrs. W. Lindley-Jones, Mrs. Francis, and Mr. Smith. Practically everyone in the Department attended, including several organisers.

The programme of the evening included dinner, a short concert, and a few dances. The toast list included "The King," proposed by the Controller; "The Controller," submitted by Mr. Hall Caine, and acknowledged by Mr. Vernet; and "The Department," given by Mr. Lindley-Jones, and responded to by Mr. Bradly.

During the evening Mr. Hall Caine, on behalf of the Department, presented to Mr. Vernet a cigar box, which will be inscribed as follows: "H. A. Vernet, Esq., Controller of Paper, 1918-1919. A slight token of esteem from the officers and staff. 23, Buckingham Gate." In asking Mr. Vernet to accept the gift, Mr. Hall Caine said they all hoped it would serve as a small memento in years to come, after the cares and worries of official life and when the war was a thing of the past, of the happy family over which Mr. Vernet had presided. They all desired to place on record their sense of the generosity towards them which Mr. Vernet had displayed both as Controller and a man. (Applause.)

Guaranteeing the Price.

A rather novel device for imparting a little moral courage to customers has been adopted by the Crocker-McElwain Co., of Holyoke, Mass., U.S.A. They offer, from March 1st, the following guarantee with regard to any of their regular mill lines which are purchased from them; "On any paper carrying the Certificate Bond (or other) watermark you may have on hand purchased of us subsequent to this date and which has not been on hand to exceed 90 days from date of invoice, we will guarantee you against a decline in price. That is to say, if by reason of changed conditions we reduce our price you are protected as above." The offer is good until withdrawn, and the company add this advice: "Keep your stock in shape to do business. With this guaranty you cannot lose, and we do not need to tell you that you cannot make any money on business which you do not do."

WINDING-UP ORDER.

The Italian Press and General Agency, Ltd., 29a, Charing Cross-road, W.C. Date of order, April 1st, 1919.

A GOOD MIXTURE.—Take printer's ink and brains, and mix them well; then let the finished job its story tell. For ink and type alone are not enough! Mix in the brains, and then turn out the stuff!

Lots of people have made money, but not success; the two may be as far apart as the

Mr. Anthony Keogh.

Quite a remarkable papermaking record was created by Mr. Anthony Keogh, who has died at Bury, in his 80th year. Mr. Keogh was born near Dublin, his father (also named Anthony) being a machine-man in a paper mill. The family migrated to Richmond, in Yorkshire, in 1847, on the father obtaining a position at Messrs. Cookes' paper mill there. Mr. Anthony Keogh, the younger, started work in a paper mill at the age of twelve years. When seventeen years of age he emigrated to America, and was in the papermaking trade in New Jersey until the outbreak of civil war. Then he returned to the old country and obtained a foreman's place with Messrs. Cooke. Next he held a post of similar responsibility with Messrs. Annandale. From there he went as manager to Messrs. Robert Craig and Sons, Ltd., owners of the Caldercruix and Moffat Mills, Lanarkshire. Here he remained for ten years, afterwards going to Larne as manager for two years. A big coal strike was the dominating cause of hisrelinquishing this post, and he went to Bury to take up a responsible position with Messrs.

J. Wrigley and Son, Ltd., whose mill was then, if it is not still, the largest in the world. Early in the nineties Mr. Keogh went out to New Zealand to superintend the erection of machinery and take over the management of Messrs. Ferguson and Mitchell's paper mill. near Dunedin. After working there for two years he took over the management of the Mataura Falls Paper Mill Co., a large papermaking concern in Otago. A man of keen observation, Mr. Keogh had many good stories to tell of his experiences in New Zealandabout the Maories, the gold mines, the sheepruns, and last but not least of the industry to which his life's energies were devoted. Before he returned to England, he was presented with a purse of gold "as a token of the very high esteem in which he was held not only in Mataura but in the neighbour-hoods surrounding." The Mayor-elect prehoods surrounding." The Mayor-elect presided over the function, and all the speakers bore testimony to Mr. Keogh's qualities "as a papermaker and a gentleman," and referred in highly eulogistic terms to his services in developing the papermaking industry of New Zealand. On his return to this country Mr. Keogh was manager for the Bury Papermaking Co., Ltd., Gigg Mills, for some six years, and afterwards for several years was manager of a mill in his native country. He had for several years before his death been living in retirement in Bury. He is survived by a widow, three daughters, and five sons. Three of his sons have been or are serving in His Majesty's forces. Two have been on active service, one in France, and one in Mesopotamia.

Overseers at Dinner.

Pleasant Gathering at Anderton's Hotel,

It was a happy sign of the return of peace to find members of the Printing, Bookbinding and Kindred Trades Overseers' Association resuming their annual dinner at Anderton's Hotel, on Saturday evening. During the war, of course, it was not possible to continue this function, and now that the battle clouds have passed, members return to the annual fixture with special enthusiasm. A new feature of the programme was the presence of ladies for the first time, and they turned up in very good numbers, representing a very fair proportion of the hundred persons present. Mr. A. J. Daines, the president, was in the chair, and the stewards, who made excellent arrangements for the entertainment of the company, were Messrs. J. Walker, G. Eden and A. G. Aves.

Following the dinner, an agreeable musical programme was submitted, humour being a conspicuous and happy feature. The artistes were Misses Bleaney and Anderson and Messrs. D. Ball, L. Harris, Carr McGregor, A. Verne

and F. Frampton.

Interspersed with the songs were a few toasts. Following that of "The King," the president proposed the toast of "The Association," and expressed the gratification which all felt at their being able to resume their annual dinner. Although they would have liked to have carried on while the war was in progress, it seemed hardly right to be feasting and enjoying themselves while the boys were fighting for the greatest cause that ever was submitted to the arbitrament of arms—the cause of freedom. Now they had not only resumed that very agreeable function but had done something else, they had brought the ladies amongst them. (Applause.) Ladies now were taking a more prominent place in public life, and the Association thought they could no longer exclude them from the annual dinner. He was pleased, therefore, to be the first president to welcome the ladies. (Applause.) Referring to the work of the past year, he mentioned the progress which had been made by the Association and to the interesting features of the monthly gatherings, at which lectures, though not always dealing with print, provided instruction of a useful character in regard to allotments, poultry-keeping, and so on. Then they had Mr. Arnot, who gave a very interesting lecture on "Costing, and how to make print pay." The Association had been growing and developing, and they were determined to go still further ahead. They were building upon a solid basis carefully laid by the founders of the Association. He acknowledged the splendid work of Mr. Walker, who was president for two years, and Mr. Dixon, a former president, to both of whom credit was due for the progress which the Association had made. Although they might need a little reconstruction, he felt as the years went on, each president would be able to report that the Association was presperous and flourishing, and that it was performing a very useful service to the printing trade. (Applause.)

Mr. J. Walker submitted the toast of "The President," and remarked that the members of the Association must have been inspired when they appointed such a man as Mr. Daines as their president, He was a man young in years, but old in knowledge, and his appointment was about the best bit of work the Association had done for years. From the businesslike manner in which the meetings of the committee were now conducted, he felt that reconstruction had already begun, and if they proceeded on those lines, he thought there was a successful future for the Associa-With regard to the vice-president, Mr. Hunt, he was one of the founders of the Association, had been treasurer for some years, and when he assumed the position of president, he would bring dignity and experience to the office. He was respected by every member of the Association, and had for too long stood aloof. The toast was accorded musical honours, with a special ovation for Mrs. Daines.

The president, in response, said he had only been a short time in office, and he felt that an Association like their's was worthy of the best man doing his best for it. As time went on he believed they would grow in knowledge and power. Every member of the Association was doing his best to help it along, and it was not for the president to take all the credit. He felt he had a long way to go to beat the

past presidents of the Association.

Mr. Hunt, who also responded, mentioned that he was one of the original members, being No. 9 on the list. He had done all he could for the benefit of the Association without occupying any prominent position until he was elected treasurer. As he had done his best in the past, in the future his efforts would

not be lacking.

Mr. J. Dixon gave the toast of "The Visitors, especially the Ladies." This was naturally a very popular toast, and the speaker presented it with appropriate eloquence. He congratulated the ladies on the part they had played during the past four years of war. They had rendered the country noble service, not only with regard to rationing and the manipulation of the coupons— (laughter) - but in wider fields as well. As the ladies had done their bit, the members of the Association felt that they could do no less than invite them to that dinner, so that they might see the sort of men their husbands and sweethearts mixed with. (Laughter.) hoped sincerely that the precedent of asking ladies to the annual dinner would grow with the expansion of the Association, and that their presence at that gathering would help to increase the membership. Mr. Dixon also had a welcome for the "mere man" visitors, mentioning particularly Mr. Jackson and Mr. Read, representatives of the Printers' Managers and Overseers Association.

Mr. Jackson, who was the first to respond,

said both he and Mr. Read had thoroughly enjoyed the entertainment, the character of which he eulogised. The Association was perhaps an infant in years compared with some others. For instance, he had been a member of his own Association for twentyone years, and they numbered somewhere about 1,200 members. He hoped, however, that in time that Association would become as large. There was no reason why it should There were sufficient branches of the printing trade to permit of such a develop-ment. If that gathering was comparatively small, it had, however, the advantage of being a very genial family assembly. The Printers' Managers Association had not yet launched out with ladies, but he hoped that when the next dinner came along, they would follow the excellent example set them that night.

Mr. Read endorsed the remarks of Mr. Jackson, and said that they would take back to their Association a report of the cordial manner in which they had been received that night. He would like to congratulate the promoters on the high character of the enter-

tainment provided.

Mr. George A. Eden, who was described by the president as one of their oldest members and hardest workers, had the privilege of responding on behalf of the ladies. He observed that they had endeavoured to get a ladly to undertake that duty, but there had been "no offers," and the stewards, searching for a fatherly member to do so, had selected (Laughter.) For the moment, therefore, he was a lady, but his wife would tell him that he was no lady. (Laughter.) With regard to the question of inviting ladies to that function, Mr. Eden mentioned that it was actually suggested eleven years ago, when one small voice got another small voice to support him, but he got terribly squashed. As their membership had broadened, however, their minds had broadened also, with the result that the ladies were with them that night. In that respect they were glad to set an example to their friends of the Printers'
Managers Association. "We ladies," concluded Mr. Eden, "thank you for a jolly good time, and we hope to be here again. (Laughter and applause.)

The company finally dispersed after over

three hours of social enjoyment.

MR. WILLETT BALL, sub-editor of the Railway Review, has been appointed editor in succession to Mr. G. J. Wardle, M.P.

In a few weeks Mr. Clement Shorter and Mr. H. W. Massingham, of the Nation, are to visit America.

Mr. Albert Bennett (Messrs. James Truscott and Sons) had a successful night in the chair on Friday, at Anderton's Hotel,

on the occasion of the Bohemian concert promoted by the Lithographers' Auxiliary to the Printers' Pension Corporation.

Among those supporting Mr. Bennett were Mr. Edmund Walker, Mr. Harold Bolton, Mr. Oscar Griffiths, Mr. W. H. Burchell, and Mr. Ward Cox.

MR. BENNETT had the satisfaction of raising the sum of 80 guineas for the benefit of the Corporation.

Lord Burnham has been elected an honorary member of the Swedish Chamber of Commerce of the United Kingdom as a mark of appreciation of his interest in Anglo-Swedish affairs.

THE Right Hon. C. W. Bowerman, M.P., isto lecture at Saddler's Hall, Cheapside, E.C., on June 25th next, the subject being "Some Industrial Problems." Applications for tickets should be made to the secretary, Industrial Reconstruction Council, 2-4, Tudor-street, E.C.4.

MR. CHARLES BRUNSDON FLETCHER, who has been associate-editor of the Sydney Morning Herald for many years, has now been appointed editor-in-chief of that journal.

MR. J. SPRIGGS and MRS. SPRIGGS, of Forestgate, have just celebrated their golden wedding. Mr Spriggs was managing editor of the Wakefield Herald, and also the proprietor of the Cornish Evening Mail.

LIEUT. E. T. D. STEVENS (acting Captain and Adjutant), 21st Midland Batt. the Rifle Brigade, has been again mentioned in despatches. This gallant officer served his apprenticeship with Messrs. Hobbs, printers, Maidstone, and went to Leicester, setting up for himself as a lithographic artist and designer. Lieut. Stevens is at present stationed in India as adjutant of his battalion.

Printers' Costing in the U.S.

Our American contemporary, the Editor and Publisher, has the following interesting notes on costing in a recent issue. It tells us that the printers in Rochester, N.Y., are discussing a plan "to stabilise, standardise, and nationalise" the printing industry. It is what is called the "three year plan" of the United Typothetæ of America, which is in operation in a number of large cities, and is said to be very efficient. It involves a paid secretary-manager in full charge of local operations, the installation in every printing plant of a standard cost accounting system, various local and educational features and courses of study for employees, and the free services of a national research and advertising bureau.

That Rochester is sadly in need of some system of cost-accounting was brought out at a recent meeting, when the president of the Rochester Typothetæ showed the printers of that city that, figured on a 25 per cent. basis, the trade was in bad financial condition. He

produced charts to prove that.

The eighty eight plants of Rochester employ 999 persons. Including the various special plants, trade service shops, etc., the total employed force of the printing industry and allied trades of Rochester is 1,549, with a total annual pay roll of \$1,154,475. Eight thousand persons, it is figured, are directly dependent upon those employees for a livelihood. The survey and figures do not include newspaper publishing plants, as such, or lithographers and other trades that cannot be directly classed as part of the printing industry.

Thirty-one of the plants, doing a yearly business of \$5,000 and less, showed an actual loss of \$25,486 for one year, and a total loss and lost profit of \$57,514. Those thirty-one plants do less than 5 per cent. of the total commercial printing business of the city, the

figures showed.

Sixteen plants, doing \$5,000 to \$10,000 annual business, show an actual loss of \$11,046, and a total loss and lost profit of \$44.367. The average salary of the heads of those sixteen plants is only \$1,504 a year, and but nine of them are receiving an amount equal to that paid to journeymen printers

under the Rochester scale.

Twenty-one plants, doing \$10,000 to \$25,000 annual business, show an actual loss of \$4,575, and a total loss and lost profit of \$96,005. Five plants, doing \$25,000 to \$50,000 annual business, show a 3½ per cent. profit of \$5,968, but a lost profit of \$36,309. Eight plants, doing \$50,000 to \$100,000 annual business, show a 7 per cent. profit of \$33,257, but a lost profit of \$38,472. Seven plants, doing an annual business of \$100,000 or more, representing only one-twelfth of all commercial printing plants in the city, but handling one half of all the business, show an 8'3 per cent. profit of £107,123, but a lost profit of \$215,319.

The total profit of the eighty-eight plants

is only \$102,341 a year, as compared to a yearly business of more than two and a half million dollars, and their total lost profit is figured at \$535,986.

Too much guessing at costs and proper selling prices, faulty bookkeeping systems, and inability to estimate were some of the most impressive shortcomings of the Rochester printing industry as shown by the survey.

Prosperous American Firms.

According to the same publication, every manufacturer of printing presses in the United States is feeling the surge of new business, and all believe that 1919 will be their banner year. Messrs. R. Hoe and Co. devoted nearly their entire plant to war business until recently, but still found time to complete many new presses that were under way when the Government called for their services. This meant a very satisfactory 1918 to them. Oscar Roesen, second vice-president of Hoe's. made a long trip through the West recently. and found a distinct change in the sentiment of the publishers on the coast, who felt two years ago that the war was not benefiting the West as much as it was the East. Everybody, Mr. Roesen says, is doing good business and is optimistic for greater returns from advertising and better prices for publications.

Government work pressed equally the Gess Printing Press Co., which gave up its entire facilities to ordnance work, being permitted only to finish up the few presses that were in process of manufacture when it was asked to aid the Government. Domestic and foreign orders are growding in, especially since the signing of the armistice, and the factory is working to its limit on new contracts and contracts taken before the war. To it also the year holds forth not only promises but

pledges of a big business.

The Mergenthaler Linotype Company opens the year with a substantial improvement in both domestic and export business, following closely the increase in general business all over the country, and they find labour conditions much easier than they were a short time

ago.

There has been a steady increase in the business of the Ludlow Typograph Co., too, and preparations have been made for a large

volume of trade.

Among the improvements introduced is a method of melting the metal of typecasting machines by electricity. A type of electric metal pot used on these machines to great advantage is manufactured by the Cutler-Hammer Co. It is designed so that the heating elements, or units, are plunged directly into the metal itself, thereby obtaining, the highest efficiency and economy in operation. These linotype metal pots take about fourteen amperes on high heat and four and one-half to five amperes on low or normal running heat. The temperature of the metal is taken care of by a sensitive mercury bulb tnermostat.

LORILLEUX & BOLTON Ltd.

11, 17 & 18, Tooks Court, Furnival Street, E.C. 4.

IMPORTANT NOTICE.

It will interest the Printing Trade to know that the English Branch of Ch. Lorilleux & Co. has been amalgamated with the firm of Morris & Bolton Ltd., as from March 31st, 1919, and that the business will in future be carried on under the title of:

LORILLEUX & BOLTON LTD.

The principal object of the amalgamation is to gain additional strength to meet the inevitable Foreign competition in the future, and to endevour to secure the premier position in the world's markets.

The fusion of these two progressive businesses will enable many economies and improvements to be effected, and the combined resources and experience of the two houses will enable

LORILLEUX & BOLTON LTD.

to offer the trade adequate supplies of all kinds of Printing Inks of exceptional quality and value.

Ch. Lorillaux & Co and Morris & Bolton Ltd. thank their customers for past favours, and trust that the confidence and support extended to them in the past will be continued to

Lorilleux & Bolton Ltd.

Varied Uses of Paper.

The part to be played by paper in reconstruction work in northern France and Belgium is described in an article in the New York Sun. Ideas taken from the Germans and extension of present uses by American and British manufacturers are becoming com-bined. The work is going forward rapidly despite the shortage in wood pulp and its Waterproof pasteboard houses, products. easily handled and put together, are probably the most important development. Such dwellings have oiled paper in place of glass windows. Screws made of wood pulp are used in putting the houses together. Tables, chairs and other pieces of furniture are being made of paper. Even kitchen utensils are so constructed. Ease of transportation due to the enormous saving in weight, as well as the ease of replacement, are the chief factors that are making paper a universal material of re-construction days. Tin canisters are being replaced rapidly by paper containers. Paper buckets are more durable than galvanised iron or wood.

Some other uses being made of paper are the following: Garages, fireproofed by a special process; harness and saddlery; driving belts for machinery, and roofing tiles. Paper clothes, counterpanes, bed-quilts, and blankets were made in Germany during the latter period of the war to offset the efficacious British blockade. Some of the ships which carry the paper-made material to the stricken nations will be equipped with paper lifeboats. This contribution comes from the Japanese, who do not only thoroughly water-proof the boats, but are enabled by a procesof cementing to build them strong and serviceable.

Working for the Pleasure of it.—The Canadian Printer and Publisher says that there is a printing office in a certain Ontario town where they work for their health and not for a livelihood. In that town there is a "movie" theatre. But this movie house is very much alert to advertising possibilities and plasters the town with posters which should mean good business for the printing offices of this town. But unfortunately it does not mean good business-not for at least one of these printing offices-which prints 500 eight-sheet posters for \$1.50. The stock used was coloured "news" and the typesetting would run into an hour's work; or close to it. Then there is the lock-up, makeready and running to be considered. All this for \$1.50, without considering overhead expenses. This is competition—strangling with a vengeance. The competitor in this case charged \$3.25 for a like poster and a like number. The printer who charges \$1.50 for 500 eight-sheet coloured posters is not making any profit himself and he is standing in the way of those who would.

PATENTS FOR SALE OR LICENCE.

THE Proprietors of British Patent No. 100,278, relating to TYPE-BAR-MAKING MACHINES, desire to enter into negotiations with one or more firms in Great Britain for the sale of the Patent Rights or for the Grant of Licences to manufacture under Royalty. Inquiries to be addressed to D. Young and Co., Patent Agents, 11 [and 12, Southampton Buildings, London, W.C.2. 13648

Scandinavian Notes.

Norway.

At the recent meeting of shareholders of the Phonix Paper Mills a profit of 115,000 kroner was announced, thus enabling a dividend of 10 per cent. to be paid. The mill, which has been closed down for four weeks owing to a fire, is now at full working capacity again. Mr. O. Juvodden, Nore, was re-elected on the board of directors. The other directors are Mr. Th. Lövig, Krogskerred, and Mr. T. M. Kleppen, Sanland.

JARLSBERG PAPER MILLS have increased their share capital from 1,200,000 to 1,800,000 kroners fully paid. The directors are Messrs. O. T. Storin, T. Schjelderup, Carl F. Petersen, and Oscar Bommen.

At the annual meeting of the Holmen-Hellefos Mills, Ltd, Christiania, the chairman mentioned that the company's new plant would be ready for starting up in April or the middle of May. The retiring director, Mr. All Whist, was re-elected on the Board.

NORWAY'S imports and exports for November, 1918, have just been published.

THE Gulskogen Pulp Mills have declared a dividend of 12 per cent. after allowing for the necessary depreciation. Mr. Mads K. Strand was re elected a director. The profits exceed 900,000 kroner.

The following dividends have been declared for 1918:—Greaker Sulphite Mills, 15 per cent.; Tofte Sulphite Mills, 15 per cent.; Randsfjord Paper Mills, 5 per cent.; Hofsfos Mechanicical Pulp and Paper Mills, 30 per cent.; Mjöndalen Sulphite Mills, 25 per cent.; Katfos Sulphite Mills, preference shares, 10 per cent.; ordinary shares, 5 per cent.

The Greaker Sulphite Mills are noted as one of Norway's most enterprising firms. They have practically completed their new plant for the utilisation of the waste sulphite liquors for fuel purposes. This is the first of its kind in the history of pulp manufacture, and if it proves successful will revolutionise the pulp industries, as the fuel question will be solved. The calorific values of the waste liquors have been found by experiments to be equal to the best steam coals.

Sweden.

MÖLNBACKA-TRYSIL PULP AND PAPER MILLS, LTD., have declared a dividend of 15 per cent.. absorbing 2,083,356 kr.; 1,700,000 kr. has been reserved for taxes, and 200 000 kr for the pension fund.

Finland.

SAHKÖVOIMA LAPPS PAPER MILLS, LTD have decided to build a new paper mill in Finland, the share capital to be 12 million marks.

Profit Sharing with Employees.

The Law Stationers' Society's System.

The following views on this subject were expressed by Mr. H. B. Cahusac, of the Law Stationers' Society, at a meeting of the Central Districts branch of the London

Master Printers' Association :-

The profit sharing should be arranged by an employer not with a view to profit to himself, but on the principle that where the profits are more than sufficient to provide a reasonable return upon the share capital those who helped to make the profit should be given a share of it. My experience is that the profits of the business improve through giving a share to the staff and that shareholders therefore need not be afraid of profit sharing schemes. As an instance, our scheme was announced to our employees in May, 1912; the preceding year had been a bad one for the Society owing to the printers' strike. Notwithstanding, however, that the scheme was not announced until five months of our financial year had been passed, the profits for the year were more than double those of 1911 and higher than in any year in the Society's history. The scheme is a very simple one, and I venture to say might be introduced in many limited companies, and is as follows:-

The Articles of Association of the Society provide that everyone exclusively employed by the Society during the whole of any year in respect of which a dividend exceeding the rate of 6 per cent. per annum is paid to the shareholders, shall receive in respect of such year for each additional 1 per cent. of dividend so paid, a bonus of 1 per cent. on the total amount (exclusive of expenses) paid to him or her during such year as wages, salary, or commission. As an example, if the dividend paid in respect of any year is at the rate of 10 per cent., as in 1912, the bonus to the

staff will be at the rate of 4 per cent. The bonus is payable after the annual general meeting in each year to those who qualify. Employees may, if they wish, allow the amount due to them as bonus to remain on deposit with the Society at simple interest at the rate of 4 per cent. per annum, the principal with interest to date to be payable to them on any Friday between the hours of 11 a.m. and 3 p.m., except on Good Friday or a public holiday, by giving 14 days' previous notice in writing.

On the recommendation of the directors the shareholders in general meeting have power, except in respect of a past year, to fix a lower rate of payment either in respect of the then current year or of any future years, or generally, or may alter the qualification of the employees to participate therein, or the system upon which the payments are to be computed, or may resolve that such or any similar payments be discontinued, either permanently, or for any specified period, or until the happening of any specified event.

No employee of the Society shall have any

No employee of the Society shall have any right to investigate the accounts or books of the Society, and the determination of the directors in regard to any question arising under or in relation to the bonus shall be conclusive as against the employees of the Society, whether shareholders or not.

I am not in favour of what is called "copartnership" that is, an arrangement under which the employees are told that they are to have a share in the profits, and then when the time comes for them to receive that share they are told that a certain amount of it will be invested in the shares of the company, as I contend that the dividend the workers receive under profit sharing should be just as

BRITISH & COLONIAL PRINTER & STATIONER

much payable in cash as the dividend received by shareholders. Further, it is quite possible that the money would be safer if invested in the Post Office Savings Bank. The balance-sheet should be available for all who are interested to see it, but the chief safeguard against creating unnecessary reserves or otherwise dealing with the figures so that the workers' share may be kept down is that the dividend also has to be kept down, and it would be certainly very foolish of any firm to start a profit sharing scheme and then be anxious to keep at a minimum the amount received by the staff. Many of our staff have purchased shares at market price and on their own initiative, and this policy we encourage.

Finally, I can strongly recommend the system of profit sharing to all employers as one that tends to elevate their employees and give them an interest in the business beyond that of just drawing their weekly wages or salary. Everything that tends towards taking greater interest on the part of the workers should surely be encouraged.

Where Printers Stumble

In making estimates there are various ways of tripping up that mean loss instead of profit. One way is to calculate from a former job and have the new one take much more time than figured, through dissimilarity and extra trouble, or by less efficient workmanship. Regardless of knowledge or care there are elements that can never be reckoned with The chances are assurance of accuracy. against any printer who enters into a competition for the lowest price. He can't expect to get the job when he figures with a knowledge of costs against others who are not as well posted. These competitors surely believe they are able to do work for less than anyone who pays to find out what each customer gets from him in return for the cash received. It follows that the successful bidder has usually made a sacrifice without being aware of it Where it is a house that bases its estimates on costs it needs to go over its figures again very carefully, for it may have blundered, and it is sure to be charged with price-cutting by those The printer who who are unsuccessful. always tries to get work by under bidding competitors is the first to make an outcry when he meets his match in the game. In many cases mistaken ideas of the cost of overhead will account for the low figures which land the job. Depreciation, for instance, may be consciously or unconsciously ignored, but that means a loss just the same. Printers who disregard costs may, without competition, be fortunate enough, through friendship or favour, to get the work that pays well, and this may bring a profit sufficient to carry the plant along under the handicaps of jobs that are unprofitable; but they are ever in danger of a serious fall should the "angel" die or withdraw his favour for any reason. The resultant collapse later would probably not be

attributed to the proper cause, as it is common for those ignorant of costs to throw the blame for failure on some other defect. Then he is likely to hear people say: "A fool convinced against his will is of the same opinion still."—Ben Franklin Monthly.

The Late Mr. R. M. Burch.

Sir,—Over 21 years ago I received a copy of the British and Colonial Printer and Stationer, containing an article on "Some Typographical Incidents of the Nineteenth Century," -Phonotypy, with a notification that the series of articles would run to, I think, They ran on and on until they reacht XXVII. I found out that the riter was Mr. R. M. Burch, with whom I had considerabl corespondence. ultimately blossoming into intimasy and frendship. I had the plesure ov meeting him at Tynemouth and later on having him twice at my home, he meeting an American printer ther on one ov the occasions ov his vizit. The last time I saw him was when in town in November last. I cald at your offis, and found him absent, thru cold. Mrs. Burch kindly sujested my running down to Norbiton to see her husband. I am glad she askt me and I am glad I had the opportunity ov embrasing her invitation, for it was the last chance I had ov seeing nim. I had a nice chat with him and his family. When leaving him I indulid alas, in th fond hope ov seeing him again in the north!

He was always kind and frank with me, and I shal ever be grateful to him and his firm for the servises renderd on behaaf ov Speling Reform, by the articles referd to, which wer a jeneral history ov the Speling

Reform Moovment.

The sketch must hav entaild an enormus amount ov reserch and the mastering ov much intricate detail, far beyond the original forcast, as shown by the continued extension and scope ov the articles. The survey was caracterized by insight, candor and justice, such as had never been meeted out to the propaganda before. It is a unique event in printery. and deserves permanent form. He had hoped, had not the war intervened, ov seeing his meny labors crownd by being bound in book form. I longd, when he was in the flesh, to so see it; now that he has left us I fervently hope it wil becom a memorial to his memory. and a step towards rational English speling. H. DRUMMOND.

Hetton-le-Hole, April 11th, 1919.

A PRINTEE should not waste his time taking hints.

Some Paper Topics.

The slight revival in paper buying has continued during the last week; and although the increased business may only be due to dwindling stocks, there is no doubt it is very acceptable to anxious representatives. Salesmen have for the last four months experienced themost heart-breaking period of their career. No matter what inducements have been offered in the endeavour to create business, buyers have all along assumed an attitude of blank resistance. The meagre orders that have been placed have only been tendered through absolute compulsion, due to lack of stocks for actual orders in hand. Under curstocks for actual orders in hand. rent conditions past service counts for nothing, and the lowest quotation gets the business. Wholesale houses have been at a disadvantage since the armistice, owing to the high prices which were paid for their stocks during the war. As a consequence, wherever a buyer has been able to secure his requirements direct from the mill-people, he has done so. It must be observed, however, that all through the war, wholesalers were in an advantageous position compared with the mills, for while the latter were working under great difficulty and charging reasonable prices, the wholesaler was under less restrictive influence, and realised abnormal prices.

For a long time, many wholesale houses endeavoured to pursue the policy of profitable, or, at least, equitable, prices in the hope of clearing off their dearly-purchased stock without heavy loss. Time and experience have taught the lesson that such a policy is doomed to failure from the start. Instead of avoiding loss, many wholesalers have courted the danger of incurring an unnecessarily heavy loss by holding back stocks while the market value wasfalling almost hourly. Many opportunities of booking small orders at fairly reasonable prices have been deliberately lost through adhering to the wrong principle, and now, too late, it is realised that unless prepared to make sacrifices, the stock will lay in

hand indefinitely Evidently this truth has gone home in many quarters, for there is distinct evidence of a general levelling up in price. In fact, it is becoming apparent that we are nearing the end of paper reductions, and already relative value is assuming shape for the first time in four years. During the week we have come into contact with the following figures: ES. writing papers, good quality, 83d. per lb.; esparto writings, 9d. per lb.; second quality E.S., 81d. per lb.; common writings, 61d. per lb.; S.C. and imitation art printing, 7d. per lb.; fine M.F. printing, 61d. to 71d. per lb.; common printing, 5d. and 5½d. per lb.; news printings, 4d. per lb. Antique printings are offered at 7d. per lb. Common English bank is offered at 8d. per lb.; foreign rag banks at 1s. id. per lb.; good English banks (named), 11d. to 18. 2d. per lb. Foreign coloured S.C. printings are on sale at 6d. per lb.; English tinted writ-

ings at 8d and 10d. per lb.

Very little demand is being made for wrapping paper, despite a rapid tumbling in price. Agents are offering rope brown wrapping at £32 per ton, good quality, English imitation kraft at £70 per ton, glazed casing at £56 per ton; Scandinavian kraft at £60 to £80 per ton, the former price being the lowest we have heard of. Foreign millboards are selling at £45 per ton, best English millboards at £55 per ton, but it must be observed that in quality the English millboard is infinitely superior to the imported product. English boxboards of good quality can be secured at £18 to £20 per ton, which compares favourably with the price asked for direct fulfilment of Dutch strawboard. For forward delivery (May or June) of the latter, quotations are based upon £16 10s. per ton minimum, with extras for lining, or for 11 lb. boards and Doubtless by the time delivery upwards. is made for orders booked at this price, the English board makers will be in a position to offer still better terms and value. Another factor influences the situation, and that is the probability of renewed restriction and a change in our fiscal policy. Very few orders are being booked for forward delivery, which do not take cognisance of the fact that revenue may have a very great effect upon the selling price of imported goods.

RECLAIMING ROLLER COMPOSITION. — Mr. T. H. Grozier, of Sydney, N.S.W., has been granted a British patent for a process for separating the fusible from the infusible parts of old printers' roller composition or analogous substances which consists in treating the composition by the action of low-pressure superheated steam in a closed vessel and intercepting and vaporising the water of condensation to prevent its admixture with the re-covered composition. The old composition is placed in cages in a vessel to which steam from a superheater is admitted by a pipe and perforated pipes. The steam passes to the atmosphere through perforations and an opening in a two-part cover, the outer part of which is domed or conical so that water of condensation formed thereon runs down into the inner dished part and is again vaporised. The fused composition flows into the bottom of the vessel and is run off as desired into moulds divided into small pockets, so that the resultant slabs of composition may be more readily divided, and to provide a large surface area to promote rapid seasoning. The moulds may be hollow for the circulation of cooling water. In another form of apparatus, the pipes are omitted, and the wall of the vessel is provided with perforations and surrounded by a jacket to which the steam is admitted.

A CONFERENCE on "Incentives to Efficiency in Scientific Management" will be held under the auspices of the Industrial Reconstruction Council, on Tuesday, April 29th, at 5.30 p.m., in the Hall of the Institute of Journalists, 2-4, Tudor-street, E.C.4. Mr. Henry Atkinson, M.I.M.E. will give the opening address, after which will follow questions and discussion. No tickets are necessary.

BRITISH & COLONIAL PRINTER & STATIONER

Trade Notes.

An increase in the postal rate on newspapers is demanded by the Canadian Postmasters' Association.

A rour days' sale of printed books and MSS., at Messrs. Sotheby's, last week produced a total of £12,959.

AT Sotheby's, a copy of "The Snob," a literary and scientific journal, containing Thackeray's earliest published work, was sold for £300.

The late Captain Frank Mercer Bentley, M.C., Lancashire Fusiliers, a member of the Bury Times Printing and Publishing Co., Ltd, Bury, has left property of the value of £9,103.

The death has taken place of Mr. W. E. Allen, managing director of the well-known firm of Messrs. David Allen and Sons, printers and theatre proprietors. Mr. Allen, who was 56 years of age, died suddenly on Saturday at his residence, Chipperfield, Herts, although at the time he was seemingly in his usual good health.

The Times has purchased for 100 guineas a box for Mr. George Robey's concert at the Coliseum, on Sunday, April 27th, in aid of the Printers' Pension Corporation (for the support of children of printers who have fallen in the war), and is prepared to sell this box to the highest bidder. Offers should be sent to the manager, The Times, Printing-house-square, E.C.4, and must reach the office by the first post on April 25th.

In the Chancery Division, before Mr. Justice Sargant, Lord Morley, of Blackburn, and Messrs. John Crost Deverell and William Maxse Meredith, the executors of the will of George Meredith, moved for an injunction to the defendants, Messrs. Richards, Ltd., and the Riverdale Press, Ltd., until the trial of the action or further order, from printing, publishing, selling, or otherwise disposing of a book called "George Meredith—His Life and Friends in relation to his Work," or any copies thereof containing any passages copied, taken, or colourably altered from (a) the poems of George Meredith; (b) the novels of George Meredith; or (c) a book called "Letters of George Meredith." After hearing counsel Me There After hearing counsel, Mr. Justice Sargant granted an interim injunction until the trial of the action.

PAPER LEADING THE WAY.—The West-minster Gazette, referring to the appointment of a committee of inquiry into the paper trade, expresses anxiety as to the adoption of a policy of protection, and adds:—"Paper may well be the substance round which the whole future of the trade policy of this country will be decided. We should very much like the committee to be an open inquiry, on the same lines as the Coal Commission. It has to decide questions of principle important to the future of our trade and

commerce, and whatever is done may well prove the working model of the future trade legislation of the country."

STREETS around Fleet-street have been filled with reels of paper lately, importers evidently making the best use of the additional import facilities.

A NATIONAL Printing and Kindred Trades Federation meeting was held at Exeter, the other day, at which it was decided to form an industrial council, and appointed 25 representatives to meet an equal number of representatives of the Employers' Federation. It was also decided to adopt arrangements with employers for a 48-hour week, with a week's holiday and six bank holidays per year with pay.

The retirement is announced of Mr. John Walsh, the manager of the book and periodical department of Messrs. Spottiswoode, Ballantyne and Co., Ltd., London, the well-known firm of printers. Mr. Walsh was apprenticed to that business, then known as Spottiswoode and Shaw, in 1852, and has remained continuously in their employment until the end of last month, thus completing over68 years' service, which must be nearly a record in the annals of the printing trade. In his retirement Mr. Walsh carries with him the best wishes and goodwill of a very large circle of personal and business friends.

A NEW BRITISH PAPER MILL.—Albert E. Reed and Co., Ltd., have bought a large site on the borders of Aylesford, and intend to build a big paper mill. The site, which is in Newhythe parish, lies close to the river Medway, with the advantages of its tidal waterway, and is bounded on one side by the North Kent Railway. A stream of fresh water runs through the grounds. Messrs. Reed contemplate putting up their new mill as soon as the condition of the labour market and facilities in the building trade become more settled. It is part of their plan to erect dwellings within a convenient distance for their employees.

RATING OF MACHINERY.—At the forthcoming meeting of the Association of Chambers of Commerce the following resolution will be moved from Birmingham: "I. That the law relating to the assessment of works and factories to local rates should be altered so as to avoid undue impositions upon the productive industries of the country, and especially that the law with regard to the rating of machinery should be amended in accordance with the recommendations of the Royal Commission on Local Taxation (1901). 2. That a representation to this effect be made to the Prime Minister, the President of the Board of Trade, and the Minister of Reconstruction."

A New House Journal.—Under the title of Sticks and Stones, Messrs. Hill, Siffken and Co., have instituted a house journal in connection with their Grafton Printing Works, North-road, Holloway. The first number is a thoroughly bright and neat production, which cannot fail to arouse the interest and the pride of the employees. House organs serve a very useful purpose; they help the

ritish & Colonia

workpeople to see something more in their daily task than mere necessity, and this purpose Sticks and Stones may well be expected to serve. In addition to notable house re-- cords and short articles in a more serious vein, humour and illustrations, a skilful makeup and a handy size render it attractive. We wish the latest house journal every success.

State of the Paper Industry.

Committee of Inquiry Appointed,

Some result has been produced by the attention which has been directed in Parliament to the effect of unrestricted imports of paper upon the paper industry in this country, and the following committee has been appointed to inquire into the matter: Mr. H. A. Vernet (chairman), Mr. A. F. Blades, Mr. H. G. Bradly, Mr. H. Brownsey, Sir Andrew Caird, K.B.E., Mr. George Clapperton, Mr. William Culross, Mr. J. Dixon, Mr. W. Dyson, Mr. H. Godfrey, Mr. G. R. Hall Caine, Mr. W. M. Meredith, Mr. T. G. Newland, Captain W. F. Nuttall, Mr. Foster G. Robinson, Mr. C. R. Seddon, Mr. H. G. Spicer, Mr. W. L. Tod, and Mr. Thomas Young. Mrs. E. S. Francis, Paper Control Department, 23, Buckingham gate, London, SW.1, is secretary to the Committee, and all communications should be sent to her at that address.

The terms of reference are: "To consider and report on the conditions prevailing in the paper industry, with particular reference to the restriction of manufacture in British mills owing to competition of imported paper and the resulting unemployment of labour; and

to make recommendations.

Mr. Bridgeman, Parliamentary Secretary to the Board of Trade, had already intimated that such a committee was being formed. At the same time he informed Mr. Remer in a written Parliamentary reply that among the great industries which are being prejudiced by the restriction of paper imports are the newspaper, periodical, publishing, printing, box making, and paper bag making industries, together with the general run of commercial businesses to which paper is an essential article of use. On March 21st, he said, the number of persons drawing out-of-work donation in the paper industry was as follows: Paper manufacture, 1,444; subsidiary trades, including paper stainers, stationery men, envelope makers, paper bag makers, cardboard box makers, and other workers in paper, 4,665-total, 6,109. Mr. Bridgeman added that the representations on the matter made to the President of the Board of Trade have been on the ground both of scarcity of paper and of excessive prices asked in this country. The President gave his decision after consultation with various experts, but in view of the numerous representations which have been made to him in this connection, he arranged for the appointment of

the above committee to investigate fully the present position of the papermaking industry, and to report to him at an early date.

Current Topics.

The Work of a "Book Doctor."

A DOCTOR for library books is a feature of the New York Public Library, and in that institution the post is held by a lady who diagnoses and prescribes for the diseases and damages of about eight millions of volumes, and who is directly responsible for their health and welfare. In quite a businesslike way this lady wears a surgeon's apron that completely covers her gown, a cheese-cloth veil with holes cut for the eyes, and white cotton gloves. Thus equipped, she is ready to fight any bookworms or germs that might be lurking in the pages of the musty books. In an interview with the representative of the Evening World the lady explained he,

methods and taking up a volume said:-'This book cost between 30 to 35 cents to bind. It has been out only 50 times. This you see, is much too expensive. Here is another book. Look at its record-out 208 times, and with a little thin bandage on some of its crippled pages it is ready for another round of visits. Books which are hopelessly stricken are retired from active life. So often,' she said, " we find the outside better than the inside, the binding is in good condition, but the pages hopelessly soiled. A great deal depends upon the neighbourhood the books visit. Many of the public school pupils come to the library to do reference work; they are taught to regard the books as tools, to respect them, to give them the proper care. This has been a great help in preserving the books, and it is a rare occasion when any of the school children return a frayed or soiled book nowadays. It is not possible to fumigate a book," Miss Murray continued. "The Department of health sends daily a list of contagious diseases in the neighbourhood of the libraries, and if we find any names on our cards at the tabooed addresses we notify card-holders not to return the books, as these will be called for by representatives of the Health Department. Little chests are provided for these infected books. The public has nothing to fear from possible contagion, as the strictest care is maintained in regard to this matter."

Capital and Labour in Co-operation.

In an article that appears in the Textile Recorder on the cotton industry. Sir Charles Macara makes some pertinent remarks that apply equally well to industry in general, and says that "from a large experience of both national and international trade, I hold the firm conviction that, especially in times of crisis, if the organisations of Capital and Labour would co-operate and deal with industries as industries, and not in the interests of competing concerns, adopting the recommendation made by the Industrial Council in 1912, viz., that where three-quarters of an industry, masters and men, decide upon any line of action in times of difficulty, the remaining quarter must toe the line, it would be possible, when employment is reduced from any cause whatever, to secure a return on the capital invested in all industries, and at the same time to make provision for the temporarily unemployed. If the nations of the world would only realise their interdependence, as they have already done, to so large an extent, by working together in perfect harmony in two international organisations—the International Cotton Federation, established in 1904, and the International Institute of Agriculture, established in 1905—and if organised Capital and Labour were to work together in developing the undeveloped resources of the world, which I believe would give ample employment to all, the appalling waste resulting from the war might be made up in a much shorter period than is generally believed, especially when one bears in mind the enormous benefits that would follow a reduction in the burden of armaments under which all the nations of the world have been labouring."

The Australian " Hansard."

ECONOMIES in the Victoria State Printing Bill are being effected and an endeavour made to economise in the paper used in the Government Printing Office. A beginning has been made with the printing of the State "Hansard," and the saving of paper in that item alone is measured by the ton. In 1916, when 64,200 copies of "Hansard" were issued for the session, 14 tons of paper were used. The issue of this useless record of the verbosity of members was reduced last session to seven tons, and the opinion is expressed by the treasurer that had he been able to commence his policy of curtailment earlier in the year the reduction would have been much greater. Fewer copies than formerly are now issued to members, but no one complains. A report by the Government Printer shows that the adoption of the rule that all orders for printing must pass through the hands of the treasurer has proved distinctly beneficial, having led to an appreciable saving. Curtailments had been made in the number of copies of various publications; printing that was previously done without question is not now left with the printer; reports of departmental heads have been cut down; free copies of the Year Book reduced, Government advertising curtailed, and the printing of the Statistical Register discontinued. These and other reforms have resulted in a saving of between £2,000 and £3,000.

The Paper Inquiry.

The fact that the Committee of Inquiry into the state of the paper trade has been appointed and has been hard at work all this week is a satisfactory step so far as it goes. No complaint can be made of the composition of the committee. A sound body in every respect, it represents all interests in the industry, including the unions, and it may be assumed that no prejudices or pre-

conceived views will influence the decisions arrived at. The Westminster Gazette, however, is not sanguine over the matter, and states that it should not be difficult to forecast the findings of the committee before any evidence is taken or a word said. It regards the paper trade as a complete working model for Protection, and it seems to fear that that principle will commend itself. Apparently the position of the trade already makes a period of protection necessary in all the circumstances, and thus reading the signs, the Westminster Gazette is apprehensive of the only possible determination to which the deliberations can lead.

The Real Problem.

It should be well understood, however, that what is concerning the paper industry is not the distant future, but the immediate present. The period of re-construction is more difficult even than people imagined it would be, and the position has been rendered infinitely more complex by the decision of the authorities to allow practically unrestricted import of foreign paper at once. Matters were bad enough before that; and the action of the Government only intensified the position. Just when papermakers were expecting the fulfilment of pledges that service and sacrifice during the war would be recognised, they found themselves cast adrift. Depression in commerce generally was encouraged in the case of the paper trade by this decision. Instead of being assisted through the period of transition, the industry has been shackled hand and foot. It rests with the Committee to see whether it can remove the fetters or in some degree ease their pressure. But whatever the recommendations of the Committee, steps will need to be taken to see that sufficient back-bone is imparted to the authorities so that they will support the Committee in the action they may recommend. It is one thing to appoint a committee, but quite another matter to carry out its advice. Papermakers know this from recent experience to their cost. Forewarned, therefore, is to be forearmed.

FRENCH PREFERENCE FOR THE ENTENTE.—
A French Mission recently visited the Dominion of New Zealand with a view to establishing reciprocal trade relations between France and New Zealand. During the visit, members of the Mission stated that the industrial future of France is bound up with two problems—raw materials and markets. The French Government and the French people are determined they will not become dependent on Germany for supplies, but will give preference to the nations of the Entente in future trade relations.

DIVIDENDS AND REPORTS.

WATERLEW AND SONS.—The board propose a scheme for the capitalisation of a portion of the reserve fund. It will mean the capitalisation of £270,000 out of a total of £510,000 by the issue to holders of the 27,000 new deferred shares of £10 each. It will be necessary to increase the capital to £1,620,000. It is also proposed to increase the dividend on the cumulative preference shares from $3\frac{1}{2}$ to 4 per cent. and on the non-cumulative preferred ordinary shares from 6 to $6\frac{1}{2}$ per cent.

WM. COLLINS, SONS AND CO.—The directors propose a final dividend on the ordinary shares for 1918 of 5 per cent., making 10 per cent. for the year. After previding for depreciation of plant £4,813 is carried forward. For the previous year a similar dividend was paid, £8,960 being carried forward.

Lamson Paragon Supply.—The report of the Lamson Paragon Supply Co. for the year ended January 31st states that the profits amounted to £48,024; £15,273 was brought forward, making £64,197, and after a provision of £25,435 for reserves, depreciations of premises, plant and machinery, excess profits duty and directors' fees, there remains £38,762. The directors propose to pay a final dividend on the ordinary shares of 7½ per cent. (making 10 per cent.) for the year, and to carry forward £9,227.

NEW COMPANIES.

ALLEN, DAVIES AND Co., LTD.—Registered with a capital of £35,000, in £10 shares, to adopt an agreement with E. W. Allen, H. J. Davies and Rosa K. Butler, and to carry on the business of printers, stationers, publishers, advertising agents, etc. Private company. Directors: E. W. Allen, T. Butler and H. J. Davies.

Franklyn Williams, Ltd.—Registered with a capital of £5,000, in £1 shares, as wholesale and retail booksellers, newsagents, fancy dealers, stationers, printers, publishers, advertising agents, furniture dealers, etc. Private company. First directors: F. Williams and Mrs. E. Williams. Registered office: 106, Queen-street, Cardiff.

Bucks Free Press, Ltd.—Registered with a capital of £15,000, in £1 shares, as printers and publishers of the Bucks Free Press, carried on by T. H. and J. H. Butler, at 20, Highstreet, High Wycombe. Private company. Permanent directors: H. M. Hobson and F. R. M. Phelps.

BUSBRIDGE AND Co. (1919), LTD.—Registered with a capital of £30,000, in £1 shares, to acquire the business of paper manufacturers, carried on by a company with similar title. The subscribers are W. Manning and G. Blunden. Private company. Table "A" mainly applies. Registered office: 24, Coleman-street, E.C.2.

LORILLEUX AND BOLTON, LTD.—Registered with a capital of £100,000, in £1 shares, to acquire, by licence of the Board of Trade, the undertaking of Charles Lorilleux, carried on at 2, McLean's-buildings, New-street-square, E.C., to enter into agreements (a) with Morris and Bolton, Ltd., and (b) with G. A. J. G. Lorilleux, and P. R. C. A. Lorilleux, and to carry on the business of printing ink and varnish makers, oil distillers and refiners, black, bronze and fine colour manufacturers, colour grinders, oil and colourmen, manufacturers of chemical preparations, etc. The subscribers are A. W. Morris and H. C. Bolton. Private company. First directors, P. R. C. A. Lorilleux, H. C. Bolton, and C. E. Marsden. The two first-named are permanent. Secretary, J. E. Reeves, 17, Took's-court, Cursitor-street, E.C.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 16 of the Companies Act, 1900. (The registration of Satisfaction is not compulsory.)

ALDINE PUBLISHING Co., LTD.—Satisfaction to the extent of £3,000, on March 29th, 1919, of first debentures dated 1907 securing £8,000.

DEE AND Co., LTD. (formerly Dorendorff and Co., Ltd.).—Satisfaction in full on April 1st, 1919, of debenture dated February 18th, 1916, securing £3,000.

CYCLE TRADE PUBLISHING Co., LTD.—(a) Statement under section 12 of 1907 Act (old charges now first registered): Floating charge on the company's undertaking and trust deed mortgaging copyrights, dated July 30th, 1897, securing £5,000; (b) Satisfaction in full on February 25th, 1919, of debenture stock secured by trust deeds, dated July 30th, 1897, and September 26th, 1905, securing

£6,000 (being the above £5,000 and an additional £1,000).

WHITEHAVEN NEWS, LTD.—Satisfaction in full on December 31st, 1918, of debentures dated December 22nd, 1909, securing £900.

PETERBOROUGH PRESS, LTD.—Particulars of £1,000 debentures created and all issued March 28th, 1919, charged on the company's undertaking and property, present and future, including uncalled capital.

COMPANY NOTICES, etc.

London News Agency Ltd.—At a meeting of the company, held at London, on March 17th, the following resolution was passed; and at a subsequent meeting on April 2nd, was duly confirmed:—"That the company, having sold its business of supplying news to newspapers, be wound up voluntarily; and that Charles H. Mawson, 46, Fleet-street, be appointed liquidator for the purpose of such winding-up."

THE RUBENS PHOTOGRAVURE Co., LTD. (in voluntary liquidation).—Notice is given, that a meeting of the company will be held at London, on May 19th, to receive the report of the liquidator showing how the winding-up of the company has been conducted and its property disposed of, and to hear any explanation that may be surnished by the liquidator.

ASSOCIATED WHOLESALE NEWSAGENTS, LTD. (in voluntary liquidation).—Notice is given that a meeting of the creditors of the company will be held at London on April 23rd.

Gazette.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

APPOINTMENT OF TRUSTEE.

King, Demiah, carrying on business as newsagent and stationer at 166, Northernsoad, Southampton. Trustee, Augustus Granville White, 14, Old Jewry-chambers, London, E.C.2.

NOTICE OF INTENDED DIVIDEND.

Croft, John Page, photographic paper and apparatus maker, carrying on business at 394, Cooksey-road, Small Heath, Birmingham. Last day for receiving proofs, April 26th. Trustee, A. S. Cully, official receiver, Ruskin-chambers, 191, Corporation-street, Birmingham.

Developing U.S. Paper and Pulp

Development of the paper, pulp and allied industries in foreign countries is given an important place in the plans for a \$25,000,000 foreign trade corporation which have been approved by the board of directors of the Chamber of Commerce, of St. Louis, U.S.A., and the formation of which by private capital is urged in a resolution of the board. Among the purposes of the organisation, which will be known as the St. Louis Trading and Navigation Co., as outlined in a provisional application for Federal charter, are: To promote and engage in all countries in such industries as will help exploit and develop the interests of the company, such as paper mills; and to promote and engage in the marketing throughout the world of the products and goods of American manufacturers, and especially those of the Mississippi Valley. It is proposed to admit foreign capital to the extent of 40 per cent of the capitalization. The corporation, when perfected, will most probably turn first to the development of Latin America and South American industries.

Bookbinding Notes and News.

The bookbinding trade continues quiet throughout the country and in many houses it has not been found possible to reinstate the demobilised men. Customers have not yet overcome their scruples as to the falling market and much good contract work is held up in consequence. In face of the scarcity of work many binders are making anxious efforts to secure Stationery Office contracts, and in fact competition on any class of work is becoming keener every week. All hopes are centred upon the speedy settlement of peace and the raising of the blockade, by which measures it is hoped that the promised business boom will commence.

The prices of bookbinding material have not followed in the wake of paper prices except in the case of boards, but as this class of material constitutes one of the most telling factors in the clothing of a book the reduced cost has had a big influence on the cost of bookbinding generally. English hand-made millboards are now obtainable at £52 per tou; machine-made millboards at £44 per ton and common board at £20 to £26 per ton. Dutch strawboards are now quoted £16 10s. per ton for forward delivery, £18 10s. for immediate delivery, thick boards and lining extra. Buyers of foreign boards will do well to keep an eye on tariffs and already it will be noted that agents are quoting and accepting orders subject to alteration of our fiscal policy.

Marble papers are becoming more in evidence and fairly good parcels have already arrived from Belgium. The quality is very indifferent, especially in regard to thickness and makers do not appear to appreciate the difficulty of running thin paper through the glueing machine. The present price averages about 40s. per ream medium and 50s. in double foolscap, i.e., for the usual account book patterns and qualities. The use of British-made marble paper appears further from realisation than it did in days before the war. qualities that were then shown are now conspicuous by their absence and the foreign product has the market to itself, hence the price.

We are informed that calicos and fabrics generally are undergoing a big fall in price within the next few days. Bookbinders should note this for a fall in cotton prices (and we have already seen advanced lists of cotton goods showing a 25 per cent. to 33½ per cent. drop) influences many types of material used in bookbinding. At the present time 9d. and 9¼d. per yard is being charged for white lining calicos. The price will shortly drop to 6d. or thereabouts. Bookcloths, buckrams, cotton tapes and threads should shortly be affected, hence the buyer of these goods will be well

advised to carry along as best he can on short commons.

Gum arabic is quoted at 70s. per cwt., a drop of 35s. in the last two to three months. Glue remains high and 200s. per cwt. is the prevailing price for best Scotch glues. Quotations are very firm and show no sign of rapid decline. Adhesive pastes are vastly improved in quality though the price holds good. Here again we anticipate only a very slight and gradual decrease in price. Similarly thread, tapes, gold leaf and other types of material have maintained a steady level for months and though we to recast a fall in thread and tape prices, there is small hope of gold leaf becoming either more plentiful or more cheap.

Lastly, referring to leathers; here the position is difficult, for notwithstanding the release of a large number of pelts, and the importation of shipments of Australian, New Zealand and Indian skins, competition for the arrivals is so keen that high prices are the order of the day. A million and a-half East Indian sheep and goat skins figured at the recent sale, the first since the war, and brokers representing all the leather-using trades, and the American boot trade, were present in force. The keenness to buy and the high prices paid afford ample evidence that leather prices will continue high. All grades of leather (except real russia) are daily becoming more accessible, but so far no appreciable reduction in price has been made except in the case of skivers, pastegrains and the better class makes of leather which, during the war, brought any price owing to extreme scarcity.

In the Printing and Binding Trades during last month, employment was fairly good on the whole. A good deal of overtime was worked in London, but some bookbinders reported a considerable amount of short time. The percentage unemployed in binding was 2.24, as against 1.1 in January and 0.1 a year ago. In 1914 the percentage was 4.5.

The Ministry of Labour has for some time been investigating the condition of the binding trade, and recently convened a conference of representatives of employers' associations to discuss the question of the establishment of a Trade Board. Mr. E. J. Wardle, M.P., Parliamentary Secretary to the Ministry of Labour, presided, and there attended on behalf of the employers' associations the president of the Master Printers' Federation (Mr. Blades). Mr. Waterson, president of the Scottish Alliance; Mr. Keliher, president of the London Association; Mr. Baker (Cardiff). Mr. Adams (clothbinders), Mr. Lake, director of

the Federa Tion, and others. It was pointed out to Mr. Wardle that not only was the existing that chinery for the effective regulation of was sees through the organisations of the employers and the trade unions concerned fully adequate for the purpose, as the agreement in Operation would show, but that the Industrial Council just coming into existence was admirably adapted to supplement the existing machinery. Mr. Wardle seemed impressed by what was said, and adjourned the Conference for further consideration by the Ministry.

Separately received by Mr. Wardle, representatives of the binders' and rulers' organisations, being present.

of finely-bound books took place A sale last week at Sotheby's, when a number of interesting volumes were offered, the bidding for them realising a total of £2,608. The most attractive volumes bore the arms of Thomas Wotton, "the English Grolier," and were in English bindings of brown contemporary calf, and mostly tooled and gilt to a Lyonnese pattern. A volume containing Contarenus, pattern. A volume containing Contarenus, "De Elementis," etc., 1548, and another work, sold for £175; and "T. Livii Latinae Historiae Principis," 1542, brought £125, a second copy of the latter work, similarly bound bringing £108. A copy of the London 1779 edition of Boccaccio, "Contes," in 10 volumes. sold for £68; H. Alkens's "National Sport of Great Britain," 1823-£59, "The Principles of the Art Militaire," 1637, the author's presentation copy to Prince Charles of Wales, afterwards Charles II—£70, and R. Hakluyt, "Principall Navigations," 1599-1600, with the arms of Philip, Earl of Chesterfield, on the sides - £52.

A handsome bequest of books has been been made to the London Library, the late Sir Donald Mackenzie Wallace, who was for many years foreign correspondent and foreign editor of The Times, having bequeathed the whole of his collection of books to the London Library, in St. James's-square. The collection comprises some 3,000 or 4,000 volumes, dealing chiefly with history and travel. It is particularly larlystrong in books on Russia and in Russian, but it is Chiefly remarkable in this department for a collection of the revolutionary pamphlets of the Cross Britain lets of 1905. probably unique in Great Britain. There is a Considerable variety of bindings in the collection, which as a whole, is of an interesting Character.

In the Bookbinder the following notes on the United States Covernment Bindery are given:—The section where all cloth-covered documents are bound. This section is a bindery of itself, chinery necessary to handle the great output. When you enter the room you hear nothing the books pass from one operation to the The first to meet the eye as you enter

is the large continuous feed trimmer, four duplex trimmers, six rounding and backing machines, three head-banding, crashing and lining machines, one crash cutter, one deckeling machine. Next comes the four casing-in machines, forty upright book presses, also a large number of temporary presses that can be rolled away to any space available. This section is in charge of Mr. Edward F, Flanagan, formerly of Hannibal, Mo.

No bindery in the country has such an output of the larger sizes of books and the quantity that is handled by the forty bookbinders employed at this branch who are careful and thoroughly skilled in the work is enormous. They also have a model glue room—the walls are white enamel brick, stone floor, with drain in centre; no dirt, flies or roaches are to be found there, and an old and trusty employee, James Nally, makes paste, light, dark and flexible glue and tablet composition.

The bindery consumed during the year 1918, 100,000 pounds of glue, 21.250 gallons of paste, 18,000 pounds of tablet composition, and same amount of flexible glue. The paste machine or mixer is of solid copper with a hopper with four brushes to sift the flour. The capacity is two barrels, and it is run by electricity. There are two glue boilers and two gum boilers.

The case-making branch is in charge of Edward F. McCarthy, formerly of Boston, Mass. Here there are six case-making machines, three board cutters, five indexing machines, and one scoring machine. In this branch workmen who are capable put on round corners, leather and buckram by machine, also make collapsible boxes. Three cloth-cutting machines are kept busy going eight hours a day. The amount of binder's board, chipboard and strawboard used in the bindery in 1918 was 1,045,800 sheets.

The stamping section keeps employed seven stampers who are ever busy on all classes of work. There are ten stamping and embossing machines and one case-cleaning machine. During the year 1918, the bindery turned out, approximately, 4,500,000 volumes of printed books. These books were machine and hand-sewed. This does not include quarter-bound or paper-covered work, which runs into the millions. These books were bound in various styles, viz.: Full cloth, flexible, full cloth, stiff board cover, full fabrikoid, full buckram, half cowhide, and full canvas; this work being lettered in gold, metal, ink and oeserfoil. It required, approximately, 670,000 yards of cloth, fabrikoid, canvas and buckram, and 72,000 feet of leather to bind this work, the orders ranging from 500 volumes up to 450,000 volumes. All mounting. guarding and gumming is done in what is known as the map-mounting section, which is in charge of Mr. Edward P. Butscher, formerly of Philadelphia, Pa. Here are employed fourteen bookbinders and six girls

BRITISH & COLONIAL PRINTER & STATIONER

separating, mounting and guarding. All original documents, reports and bills from the House of Representatives and U.S. Senate are prepared, also all the foreign patents. During the war period one job from the Navy Department was the mounting of 16,500 maps, many of these measuring 4 by 5 feet in size. Material used: 8,750 yards of cotton 81 inches wide.

The following recipe for egg albumen size is said to be a good one:—Put one half gill of good, clean, commercial egg albumen into a large bowl or crock and add two quarts of lukewarm water. In summer let stand three or four days; in winter, one to two weeks. Use water as specified in white of egg size. When the solution is good and melloweasily detected by its smell-stir with a bone folder and add 30 to 50 drops of muriatic acid, enough to give it a slightly sour taste. The size should not be allowed to assume a greenish hue before adding the acid; in this case it is useless. The addition of the acid leaves the solution as clear as crystal. Strain and add gum camphor and cover. The acid and camphor must not be added until the size has properly aged, as stated above, neither must the acid be added in quantities sufficient to impart a burning sensation to the tongue. The correct amount of acid depends largely upon the success in gilding. If necessary to use size the first or second day after preparing-that is, before it is properly aged -take out enough for immediate use only, adding correct proportion of acid and gum camphor, leaving the remainder in the bowl until it has reached the stage mentioned above, then adding acid and camphor.

In an interesting article on the industries carried on at the Ruhleben prisoners' camp the Leather World says that the bookbinding department accomplished some marvellous feats, for, as materials were also very short in this department, substitutes had to be found somewhere, and many books were bound in the canvas wrappings from parcels; these were very interesting, as they showed the name and address of the recipient and the post office stamp. One man had the unique idea of having an inset on the front of a book of pigskin made from a piece of bacon rind from which the salt and fat had to be extracted and the rind tanned in the usual Ruhleben way. Old gloves were also used, and old boots, trousers and shirts. In fact, anything that could be found could be used for something or other.

WATERPROOF VARNISH FOR LEATHER.— Under a recent French patent the following method for preparing a varnish for leather is given:—33 parts each of linseed oil, turpentine, and rosin and one part of wax are heated together until a uniform product results. The mixture can then be applied either warm or cold to the leather.

FOR SALE BY PUBLIC TENDER.

BY DIRECTION OF THE DISPOSAL BOARD.

The Printing Machinery etc., & D. C. Motors comprising the

Lithographic, Letterpress & Photographic Plants at the

ROYAL COLLEGE OF SCIENCE, EXHIBITION ROAD, SOUTH KENSINGTON.

The machinery includes the following:-

Two "Reliable" Litho Machines 60-in. by 40-in. and 30-in. by 40-in. respectively, together with Iron Beds.

One Newman Flat Bed "Off Set" Machine 30-in, by 40-in.; also with Iron Bed.

One Litho Press, 53-in. by 32-in. with 3 32-in.
Box-wood Scrapers.

One Double Demy "Defiance" Wharfedale, with geared inkers, lifting flyers, jogging-up apparatus and counter.

Two Guillotines—hand—42-in. and 17-in. Six Leather Press Rollers 2 14-in., 4 12-in.

14 D.C. Motors from 1 to 6-H.P., and 200 to 240 volts.

Complete Photographic Plant comprising Quarter plate folding Camera, half-plate folding Camera, copying Camera, Enlarging Lanterns and Blackboards, Lens', together with usual photographic material etc., etc.,

The above will be sold as a whole or in part.

Permits to view and Tender Forms to be obtained on application to:—

The CONTROLLER,
Machinery and Plant (D) Section,
Charing Cross Embankment Buildings,
London, W. C. 2. 15780

LONDON COUNTY COUNCIL.

SUPPLY OF STORES, Etc.

A PPLICATIONS are invited from persons and firms and particularly manufacturers to have their names placed on the lists of persons and firms from whom the Council from time to time invited tenders for the supply of PRINTING, MANUFACTURED STATIONERY and OFFICE SUNDRIES.

In those cases in which tenders are limited to manufacturers or producers applications from agents, middlemen or dealers will not be considered.

Applications must be made on the official form, copies of which, together with a statement giving further information on the subject, including the standard conditions of contract, can be obtained from the Clerk of the London County Council, County Hall, Spring-gardens, S.W.I.

Particular attention is drawn to the fact that when an application has been made to the Council by a person or firm for a place on the Council's list and the application has been acceded to, it is not necessary for such person or firm to apply for forms of tender, as in all suitable cases forms of tender will be sent from time to time as issued.

Printers' Managers and Overseers **ASSOCIATION.**

MANCHESTER & DISTRICT CENTRE.

At the new headquarters, the "Old Swan" Restaurant, Market-street, Manchester, there was an exceptionally large gathering of members the other Saturday. During the temporary absence of the president an efficient chairman was found in the person of Mr. Fred W. Seeley.

The minutes being read and confirmed, the members agreed that the names of the president, vice-president and secretary be attached to the testimonial which is to be presented to Mr. Moyce in June next.

The Leicester Centre submitted two queries as follows :-

1. "The need of extending membership to P. M. and O. A. beyond that of letterpress and lithographic printers, and to include artists, process engravers, electrotypers, etc., and even to include bookbinders." There being already in existence several societies for the craftsmen named, it was agreed that the question be not entertained, so that there would be no fear of overlapping and injuring the other associa-

2. "The consideration for improving the status of managers and overseers.

It was agreed that the Centre support the Liverpool recommendation which reads as follows:-"That the Liverpool Centre recommends that the conference of delegates to be held in London, on June 7th, shall consider what action is necessary for this Association to place before the Master Printers' Federation the unsatisfactory position of managers and overseers compared with pre-war standards, and to make representations that they are deserving of greater remuneration commensurate with the concessions given to other

employees, and that they should point out the loyalty and services rendered during the war, and the fact that in all reconstruction schemes the managers and overseers usually bear the burden of re-organisation.

The delegates to the conference on June 7th Mr. J. H. Nuttall (president) and F. J. Hughes (secretary) were then elected to repre-

sent Manchester.

Mr. Arthur Whittaker (letterpress machine-room overseer) and Mr. Wm. Dougall (lithographic overseer) with Messrs. Jas. Broadley, Ltd., Clayton-le-Moors, Accrington, were admitted to membership

Several recommendations from London were considered and amended as follows:-

1. 19—Delegate Meeting.—A meeting of delegates from the Parent Association and the Provincial Centres shall be held in alternate years, each being represented by two elected delegates. The president of the Parent Association (or in his absence the vice-president) with the general secretary shall attend as ex-officio members.

II. A special delegate meeting may becalled at any other time, in case of necessity. by a request from a majority of Centres of the

Association.

III. The meeting shall be held in the month of May or June at the place at which the united gathering for the year is to be held.

IV. 19A—Annual United Gathering.—A

united social meeting of members and friends may be held annually in the month of May or June at such place as may be from time to time determined by the previous delegate meeting

V. (7)—General Fund (last paragraph)— The accounts of the general fund shall be closed on April 30th of each year and published in the official journal not later than the July following. In the years when delegate meeting's are held the accounts shall be first submitted to the delegates, and the delegate meeting shall also have the right to discuss the report and accounts of the previous year. In years when there is no delegate meeting

the report and accounts shall be sent to the councils of the centres, prior to publication.

Mr. R. F. Singleton and Mr. Fred. W. Seeley moved that the centre have a ramble on Saturday, June 21st, in the districts of Saddleworth, Bill's o' Jacks and Tue Valley, for members and their male friends only.

The Whitley Report then came up for dis-

cussion.

Mr. F. W. Seeley said that so far the Association had not been able to place a representative on the Board. The position of manager and overseer prevented members of the P. M. and O. A. from sitting either on the employers' side or the employees' side. The Whitley scheme aimed at dealing with trade unions only, and there was on foot a desire to compel every person to become a member of the particular association connected with his business. The P. M. and O. A. was founded on the great principle that no applicant shall be asked whether he is, or is not, a member of the employers' association or of the workmen's union. According to the present scheme he did not see how they could sit on the Board unless they formed themselves into a trade union.

Mr. Charles N. Knowles laid emphasis on the fact that the scheme applied only to organised bodies, and that no doubt the Government were behind it. There was a danger of the unions becoming so strong that they would squeeze out all smaller bodies of craftsmen. Undoubtedly it was necessary that the members of the P. M. and O. A. should be independent of the two extremes.

Mr. G. W. W. Paterson remarked that so long as they were workpeople they should have a lot to do with the scheme as the employers would require their advice. In the clauses there was a special consideration for co opting members, and the individual manager and overseer would be called upon to help in the working of the scheme.

Mr. Charles N. Knowles added that the councils already formed had refused to proceed further until the scheme was placed on

a compulsory basis.

Mr. F. J. Hughes argued that the P. M. and O. A. should not be absorbed by either the employer or the employee, and as to compelling every person to become a member of a certain union, he thought those who pressed it would be the first to wish the tables turned when they had tried it. He would not like the P. M. and O. A. to be compelled to take in every manager and overseer as it would do away with the choice of sorting the wheat from the chaff.

About a dozen other members added their views, the general opinion being that time would show the weakness of the present Whitley scheme.

WEE MAC.

THE Jessop collection of Whistler lithographs has just been disposed of by private sale in America. Whistler's work is well represented in the collection, which includes a few colour subjects.

The Printing Trades Alliance.

The quarterly meeting of this alliance was held the other day at the Old Bell Restaurant, Holborn, and the hall was filled to overflowing. The chairman, Mr. H. Basil Cahusac, in his opening speech, pointed out that the meeting was quite an informal one. It was called for propaganda purposes, to give members an opportunity of asking questions, and to enable them to get in touch with one another. He explained the position of the Alliance with regard to the Industrial Council and the steps which had been taken with a view to getting representation.

The vice-chairman, Mr. Thomas Goldsmith, followed, and called attention to the increase of membership in London and Colchester, the membership having now reached 2,000. He explained the Alliance programme which had been published in propaganda literature, and which he hoped would bring about a better feeling between employers and employed. He mentioned the recent deputation to the Labour Ministry, which was received by Mr. E. J. Wardle, the Parliamentary Secretary to the Ministry, a report of which he read, as follows:—

Report on Deputation to Labour Ministry.

Mr. Wardle: I believe you gentlemen want

to have a chat with me.

Mr. Goldsmith: "That is so." And then asked why as a registered trade union, with a membership upwards of 2,000, we should not be allowed representation on the Industrial Council, the alliance being absolutely in harmony with the betterment scheme (quoting the last two lines in the first paragraph of the betterment scheme). The alliance had led the way with payment of holidays, and is absolutely in accordance with the Federated Union principles, except for the strike, all our disputes being settled by arbitration. Is it fair that the Federated unions should dictate to the federated masters who their representatives should be on the Industrial Council?

Mr. Wardle said: "I fail to understand

what you mean."

Mr. Goldsmith once again referred to the betterment scheme, to which Mr. Wardle replied, after consultation with Mr. Ryan, that he could now see the position. The federated unions only wished to confer with federated masters who were employing their members, and the alliance must do the same with its employers.

Mr. Goldsmith: Then we are an Industrial

Council?

Mr. Wardle replied: "I want you to thoroughly understand, Mr. Goldsmith, that the Industrial Council is to be formed of separate associations of employees and employers, who will come together and discuss trade matters. You claim to be doing this, so, therefore, you are doing what the other fellow is talking of doing. I fail to see how we could give you representation, you being a hybrid trade union."

Mr. Goldsmith drew attention to the clause referring to sanatoria treatment for tuberculosis, and asked what was the position of the Alliance members, or would it only be for those represented on the Industrial Council?

Mr. Wardle did not answer this point, but said that the alliance had not made any provision for strikes should arbitration fail. It was pointed out to him that should such a contingency arise, which we did not contemplate, we should withdraw our labour, and they would come on the unemployment fund, but we should not picket that house.

It was asked why we had not received an invitation to the last Industrial Conference, when a small body like the Colchester Typographical Association sent two representa-

tives.

Mr. Wardle replied that this was not in his department, and asked if we had any other branches outside London, and was informed that we had one branch at Colchester consisting of over one hundred members. He inquired how many employers belonged to the Alliance, and was informed 75.

Mr. Haddock pointed out that sederated unionists number 100,000, and if they were to represent the printing trade, what was the position of the other 200,000 who were not represented? Mr. Haddock stated an instance when he went to the Stationery Office for employment, and was refused on the grounds that he only held a "P.T.A." card.

Mr. Wardle stated that this was too big a question for him to go into, and pointed out to Mr. Haddock that he could only deal with the question of representation on the Indus-

trial Council.

Mr. Jacobs asked if employee members only could be represented on the Industrial Council, leaving representation of the employers to the Federation of Master Printers.

Mr. Wardle stated that this was a new proposition, and he could not see how he could fit in representatives of a hybrid union like the alliance. By using the term "hybrid" he did not wish to cast any slur, because hybrid roses very often gave the best perfume.

Mr. Wardle thought that Mr. Haddock's figures respecting the Industrial Council were

incorrect, but promised to see into it.

Mr. Haddock thought the organisation ought to cover the whole of the printing trade.

Mr. Goldsmith then asked whether the Industrial Council was going to legislate for the whole of the industry, and was there going to be an inquiry into the constitution of the joint council as to what percentage of the industry it would represent?

Mr. Wardle replied that such an inquiry was contemplated, and pointed out that the federated unions speak for themselves and it was up to the Alliance to do the same.

Mr. Goldsmith asked if in Mr. Wardle's opinion there could be two Industrial Councils in one industry, and Mr. Wardle said he was afraid there could.

Mr. Faning pointed out that as the Alliance has been doing what the Industrial Council is starting to do, we should like representa-

tives on the Industrial Council to assist with trade betterment. In answer to this Mr. Wardle stated he could not see how he could bring two councils together, but would make inquiries.

Mr. Wardle pointed out that Industrial Councils could only make suggestions, but could not enforce them, only submit them to

the Government.

Mr. Haddock asked if the federated unions could set up a position which would menace us, and Mr. Wardle said he did not see how they could. We must arrange to work with ourselves. Asked if we had full recognition, Mr. Wardle answered that we had. As far as the Government were concerned, we are a registered trade union.

It was then asked by Mr. Goldsmith whether the same trouble had arisen in other indus-

tries

Mr. Wardle answered (with a smile) it had

in several.

Mr. Faning said: "Then we are doing what the Industrial Council is going to do?" And Mr. Wardle said "I think so."

Mr. Goldsmith then thanked Mr. Wardle for his courteous attention, and reminded him of

the promised inquiry.
This concluded the interview.

The chairman spoke on profit-sharing which he was strongly in favour of, and explained the system used by his own firm. Questions were then asked for with the result that several suggestions were put forward to be discussed at the general meeting. The chairman then asked to be excused, and after a vote of thanks to him had been passed, he left the chair, which was taken by the vice-chairman, who, replying to a question respecting the forming of a sickness section, stated that this would be considered when some figures that were being drawn up by a member of the committee were completed. The meeting terminated with a hearty vote of thanks to the vice-chairman.

Co-Operative Buying in France.

A joint-stock company, Comptoir du Livre, has just been constituted to aid French publishers to procure what is necessary for the manufacture of books. To this end their manufacture of books. needs in raw materials will be centralised. papers, cardboards, cloth, skins, as well as all other products or machines required in the industry and commerce of books. The company will buy these materials and divide them amongst the shareholders according to their needs and deliver them to their works. Membership is limited to actual future members of the syndicate of publishers or firms of which a partner, administrator, director or manager is a member of the syndicate. The duration of the company is fixed at fifteen years, counting from the date of its definitive formation. The capital is 50,000 francs, divided into shares of 100 francs

Trade Notes.

LORD READING is to be the guest of the Association of foreign press correspondents at a dinner in the Hôtel Plaza, New York, on April 24th (to-day).

MR. REGINALD J. LAKE, secretary of the L.M.P.A., and director of the Federation, has been ordered by his doctor to take a complete rest, and he is deriving benefit from a sojourn at Broadstairs.

MR. JAMES SANSOM, a member of the staff of the Morning Advertiser, was knocked down in the street by a taxicab last week, and had his collarbone broken, and sustained severe injuries to his face.

MR. A. J. HAND, editor of the *Doncaster Gazette*, has been presented with a handsome travelling bag on the occasion of his leaving that journal to take up the editorship of the *Boston Guardian*.

The death has taken place at Windermere of Major Ernest N. Cunliffe, R.A.M.C., the youngest son of Mr. Thomas Cunliffe, proprietor of the Bolton Guardian. He contracted his last illness while on active service in France.

TENDERS WANTED.—For the county printing for the Carmarthenshire County Council; particulars from Mr. J. W. Nicholas, clerk, County Offices, Carmarthen.—For printing and stationery for the Bedfordshire County Council; particulars from the office of the clerk of the County Council, Shire Hall, Bedford.

The eightieth annual general meeting of the Newsvendors' Benevolent and Provident Institution will be held at the Memorial Hall, Farringdon-street, E.C., on Tuesday evening, 29th inst., at seven o'clock. Lord Burnham will occupy the chair. A special feature of this occasion will probably be an authority to forward each of the 70 aged members who are in receipt of this society's permanent pension benefit a peace gift of £5. In view of the increased cost of the necessaries of life, it is felt that some such award ought to be made.

Trade Valuations, Etc.—On retiring from active service, Mr. Edwin W. Evans (late of R. H. Ruddock) has taken the opportunity to commence business on his own account as auctioneer and valuer to the printing and allied trades, at 150, Fleet-street, London. Fully conversant with the detailed working of the above trades, he is in a position to give expert attention to such responsible work as is involved in valuations, assessments for fire losses, sales by auction, conversion of businesses, transfers and sales of going concerns. Over ten years' experience of practical work in the directions indicated, during which time he has valued over half a million's worth of printing plant per annum, explains the confidence with which he asks all printers and others to entrust their valuations and sales to him.

An Order in Council in Christiania states that the publication of newspapers will not be permitted on Sundays or holidays in future.

THE Disposal Board have for sale the printing machinery and motors of the lithographic, letterpress, and photographic plants at the Royal College of Science, South Kensington.

The Northfleet Paper Mills, Ltd., are inviting owners of $4\frac{1}{2}$ per cent. first mortgage debentures to tender for their sale, at par or under, the company having a sum of about $f_{1,200}$ for the purchase and cancellation of its debentures.

MR. J. J. KELIHER presided on Wednesday last week at the monthly luncheon of the London Master Printers' Association, the proceedings being merely formal in view of the discussion which took place at a subsequent meeting.

The death has taken place of Mr. Frank Wayland, a well-known Irish journalist. Mr. Wayland was associated with the Dublin Daily Express and the Dublin Evening Mail, from the staffs of which he had retired a few years ago owing to ill-health. He was a prominent member of the Institute of Journalists, of which he was a fellow and a past vice-president.

NATIONAL UNION OF JOURNALISTS.—At the session of the National Union of Journalists at London on Saturday it was decided to remove the headquarters from Manchester to London. Mr. J. Haslam (Manchester) was elected president for 1919, and Mr. J. B. Hobman, editor of the Birmingham Gazette, vice-president. The subscription of members was raised from 26s. to 36s. per annum, while the unemployment benefit was doubled, and the present limit on strike pay removed.

Scottish Master Printers.—The following resolution has been passed by the executive board of the Scottish Alliance of Employers in the Printing and Kindred Trades:
—"The executive board, in view of repeated inquiries from their members, resolves to request that the Treasury issue forthwith instructions as to the method of recovering from excess profits duty already paid the loss on depreciation in value of stocks due to the altered conditions since the armistice; and, further, that a statement of policy should be announced by the Government at an early date."

Process Engraving Prices. — Owing to the continued upward tendency of labour costs in the process engraving industry there is no longer any prospect of modifying the existing advance in prices, and it is therefore deemed advisable, with a view to simplifying accounts, to incorporate in the schedule the 40 per cent. advance at present shown on invoices and to charge at inclusive prices. It is felt that such simplification will meet the convenience of all concerned. A revised schedule of minimum prices has accordingly been prepared by the Federation of Master Process Engravers, and takes effect as from the present month.

Some Paper Topies.

Business in the paper trade is becoming distinctly better, and several good sales have been effected in recent days. The settling down of prices has proceeded with remarkable activity since our last notes appeared, and the fact that in some cases quotations for forward delivery are based on an advance in price affords obvious support to the belief that some grades of paper have touched their minimum. Such advances refer only to foreign-made papers at present, but there are some English papers being made and sold for the sake of keeping business and machines moving only. Given an impetus in buying, and the support of a protective tariff, there is small doubt that these particular makes of paper will realise a more profitable figure. It is within the bounds of possibility that the lifting of the blockade will synchronise with the imposition of a tariff on many imported manufactured goods including The fact that the continuance of the blockade is killing trade appears at last to have penetrated the blank wall of officialdom, and as there are hopes of a Peace Settlement within a week or so, there is also reason to assume the termination of the useless and vicious blockade policy. In plain words, there are hopes of a speedy resumption of the normal course of free, unfettered manufacture, trade and business. Applied to the paper trade our own reasoning is that we are now at the stage when mill prices (in most cases) have touched bottom, and the next month will mark an eventful period in our trade history as coinciding with renewed business, a tariff or protective imposition on imported paper, and a forward movement in the price of cheaper grades of stock.

Meantime what has become of the "Standardisation of Paper" scheme. The first draft of the proposed alterations was issued and accepted by the printing trade in May, 1917. Nothing further was done until late on in 1918, when the scheme was brought forward and revised in the light of later experience. The amended draft was issued on January and this year, and after satisfying the requirements of the printing trade was put in hand for consideration by the other interests involved. The appropriateness of putting Standardisation in practice while stocks were low and just at the time when old standards were negatived by stress of war conditions was fully recognised by the authors of the scheme. Delay is prejudicing the prospects of a successful inauguration, and every week sees a diminution in the appropriateness of the period. Old-time standards and pre-war conservatism are rapidly emerging from the chaos of war's effect, and the trade will soon be in a less adaptable condition for a reformation in customs. There has been ample time for everybody concerned to digest fully and consider minutely the pros and cons of the Standardisation scheme. It is now

about three months or more since a committee representative of printers, papermakers, wholesalers and stationers took the matter in hand, and so far nothing has been made public of their findings or decisions so far as we know. It appears as though the "Standardisation of Civilisation," which was taken in hand about the same time as the Standardisation of Paper, will be the first policy to assume concrete shape and practical application. If the gentlemen constituting the Paper Committee should ever feel disposed to criticise the delay of the Peace settlement, we hope they will first ruminate over the interminable

delay in settling the sizes of paper.

The printing world is disturbed at present over the question of wholesalers and mills supplying paper direct to certain users and advertisers. From our own experience we know that there are some wholesalers who will not only sell to the printer, but will also get behind the printer and sell to his customer. There are also some mills open to accept orders for the wholesale paper merchant and equally willing to make paper for the wholesaler's customer. In the printing trade the practice of advertisers buying their own paper and supplying it to the printer for printing only has reached such proportions that the Master Printers' Federation has prepared an agreement, which members are signing, declaring emphatically against printing advertisers' own paper. The situation has become complex, and requires straightening out. The wholesaler argues that if the printer goes to mill for his paper, he, the wholesaler, has an equal right to go behind the printer. The presence of certain wholesalers who are their own makers, complicates matters.

The best solution would appear to be an agreement on a common policy based on the principle that no mill would supply paper to an actual user (i.e., the ultimate user, not the printer), under any circumstances. If a mill accepts an order direct from a printer, the price charged should be not less than that charged by the wholesale trade. In the event of a wholesaler receiving an order from the printer's customer, the price charged should be that which would be charged by the printer. By such methods the practice of undercutting the distributor would be discouraged, and orders would pursue the normal course of route. Mills which act as their own distributive agents or wholesalers have always worked to the same scale of prices as the ordinary wholesale trade, and they would work in line with other wholesalers. The time has come for the formulation of a policy agreeable to all concerned, and it is directly to the interest of the wholesaler to seek a settlement. A great part of the demand for co-operative buying among printers has been created by the knowledge that the printer was not safe with his customer while the wholesaler was about.

H. A. M.

Ir a printer is unable to say nothing and saw wood, he should at least try to do one or the other.

Current Topics.

The Shorter Working Week.

The shorter working hours week in the various sections of industry is being gradually arranged and the Industrial Council has laid down 48 hours as the basis and left the adjustment within this maximum to the experts in the different trades. Conditions of working vary with each trade, and in each section of the country and many arrangements of a widely differing character are possible. In fact 46, 44 and even 40 hours in some businesses are now being worked, while Lord Leverhulme's scheme of a 36-hour week probably represents the lowest limit as yet advanced. In this shortening the hours of labour the output, naturally, must suffer, at

least for a time, but there seems to be no reason why double shifts should not be worked. With a six-hour day two double shifts could be easily worked, without night work, and thus the best could be got out of the machinery and plant, while the overhead charges are but little increased. Six hours a day for the workmen may seem revolutionary to some of the older school, but we are living in revolutionary times, and the shorter workday is bound to come. It is up to both employers and employed to make the best of it and to so arrange the working conditions that the output and the profits may be increased. Many factors may have to be considered before a six-hour day becomes possible, but there are brains enough among the leaders of industry to solve the problems that may arise and remove the difficulties that at present seem insurmountable.

Newspaper Consorship.

An official announcement recently appeared notifying the closing of the official Press Bureau on the 30th inst., and it was understood that from that date there would be no censorship of Press articles or telegrams. It appears that the conditions are not to be quite as would be expected from the terms of the announcement, at least the correspondent of a foreign paper in this country has found it so, and the Manchester Guardian gives the facts of the case thus:-The said correspondent wrote to the Chief Postal Censor saying that he understood from the announcement that newspaper articles sent by post would be treated in the same way as ordinary letters, and that there would be no delay in their delivery. In reply to this letter the Chief Postal Censor said that, although no permit was necessary to despatch matter for publication to foreign countries, such matter was still subject to censorship, and that in order to avoid delay the correspondent should send all articles intended for publication addressed under an outer cover to the Chief Postal Censor. With a simple faith in British official announcements, the correspondent of the foreign paper wrote again, drawing the Censor's attention once more to the statement that the censorship would not be continued after April 30th. Thereupon the Censor, with an almost fatherly note in his diction, replied that "until further notice has been issued matter for publication abroad will be subject to censorship by this department." There the matter ends. Will it be the same, after all, with Press telegrams and articles for the home newspapers?

British Printing Orders Going to America.

A QUESTION was put in the House of Commens, last week, by Sir J. Butcher, who asked the Parliamentary Secretary to the Board of Trade whether his attention had been called to the fact that, in consequence of the recent order of the Paper Controller withdrawing the restrictions on printed matter being imported into this country, large orders were being placed with American houses for calendars, Christmas cards, toy books, and other printed matter at English pre-war prices; and whether, in view of the largelyincreased cost of production of printed matter in this country and of the fact that the unrestricted import of printed matter from abroad would seriously injure the British printing industry, he would reconsider the matter with the view of modifying the recent order of the Paper Controller. Mr. Bridgeman, in replying, said that the Board of Trade had no definite information as to the placing of orders for printed matter of the descriptions mentioned with American houses, but saw no reason to doubt that orders are being placed. The Committee appointed by the Board of Trade to consider the position of the Paper Industry was sitting from day to day, and he was informed that the question raised had been brought before it and was receiving consideration. As the Committee expects to report at an early date, he did not consider that action in the direction suggested was desirableat the present time.

Anti-Dumping.

MR. E. MANVILLE, M.P., in his presidential address at the annual meeting of the Association of Chambers of Commerce held in London last week, dealt with the measures which the Government had promised for the abolition of dumping into this country. Mr. Manville said that this had been an evil in our fiscal system which had in the past prevented the establishment of industries that might well have been undertaken to our profit and to the employment of labour. It was satisfactory to know that provision against dumping was receiving the earnest attention of the Government, and he trusted at no late date a Bill would be introduced into the House of Commons. Secondary only to the desirability of protecting key industries was that of utilising the great resources of the Empire in raw materials for the benefit, in the first place, of the Empire, and, secondly of its Allies. The decision of the Government that Imperial preference should be an outstanding feature of its immediate policy had given the greatest satisfaction to all of them engaged in commerce and industry here, and, he believed equal satisfaction to those similarly engaged in our Dominions and Colonies.

Lithographie Auxiliary

TO THE

PRINTERS' PENSION CORPORATION.

The above auxiliary held their last concert of the season the other evening at Anderton's Hotel, Fleet street. The chair was occupied by Mr. Albert Bennett (Jas. Truscott and Sons), supported by Mr. Burchell, Mr. H. C. Bolton, Mr. Edmund Walker, Mr. Oscar Griffiths, and other friends who rallied to the support of the chairman, whose popularity and enthusiasm added the sum of £80 to the above fund—a splendid effort. Altogether, the evening was a high sucess, as, apart from the good financial result, the concert was voted by many quite the best held at "Anderton's."

The chairman, in his remarks at the conclusion of the first half of the programme, brought home to all those present the necessity of continuing and increasing their efforts on behalf of this admirable corporation, making special reference to the great increase of expenses for the upkeep of the orphanages, almshouses, etc.

Mr. Albert Bennett paid a tribute to his secretary, Miss Thompson, whose untiring efforts, he said, had contributed greatly to the success of the evening. The committee thoroughly appreciate this, and extend to Miss Thompson their sincere thanks. The chairman expressed his own and the committee's deep regret at the absence of Mr. and Mrs. Laurence Blades, occasioned by the latter's illness, which, he hoped, would be of short duration, a sentiment received sympathetically by all present.

I he financial result was received with loud cheers and many a "Well done, sir." Mr. E. A. Lowe, in an appropriate speech, moved a vote of thanks to the chairman, which was carried with acclamation, all present singing with gusto, "For he's a jolly good fellow."

With regard to the social and musical side of the programme it is indeed difficult to distinguish between such a constellation of "stars." Mr. Jack Cottrell (tenor) was perhaps the lion of the evening, but he was run very close by Mr. Frank Crawford (humorist), as clever as he was comic. Mr. W. Granville Britton (cellist, Queen's Hall concerts), and Mr. Arthur E. Cox (violin), each of whom earned and received the sustained applause and encores of the company. Amongst others who sang well and received encores were Miss Gioconda Papa (soprano) and Mr. Alec Farmer, a fine baritone, whilst the accompanist, Mr. Stephen Cottrell, was voted an artist in himself.

DIVIDENDS AND REPORTS.

VALENTINE AND SONS, LTD., DUNDEE.—The report shows balance of profit £14,309, out of which last year's debit balance (£5,158) has been met, leaving £9,151. Dividend on preference shares for year to June 30th, 1915, absorbs £2,780, and the balance of £6,370 is meantime carried forward. The directors hope to pay a further year's dividend during the course of the year.

INTERNATIONAL LINOTYPE.—The report for the year ended March 31st states that the net profits available amount to £32,277. Deducting interim dividend of 21 per cent. paid on November 1st, 1918, £3,892, there remains £18,385. The directors recommend the payment on May 1st of a balance dividend of per cent., making with the interim dividend 51 per cent. for the year, as against 61 last year, leaving to be carried forward £1,715. The Mergenthaler Linotype Co (of whose stock this company holds 14,404 shares of \$100 each, fully paid) has distributed dividends amounting to 10 per cent., as against 12½ per cent. in the preceding year. The net profit for the year ended September 30th, 1918, amounted to \$1,343,545, as compared with \$1,883,159, while the surplus amounted to \$7,093,869 on September 30th, 1918.

JOHN DICKINSON AND Co.—The report for the year ended December, 1918, states that the net profit, after providing for depreciation, bad and doubtful debts, excess profits duty and interest on debentures, amounts to £213,351, which is practically the same as last Dividends of 5 per cent. have been paid on the preference stock and 10 per cent. and a bonus of 21 per cent. on the ordinary shares for the year 1918, and, as stated in their circular of March 21st, 1919, the directors do not propose to recommend any further divi-dend for that period. The arrangements for the consolidation of the interests of Millington and Sons, Ltd., with this company have been duly carried out in accordance with the terms of the agreement approved by the shareholders on November 14th, 1918, and the two companies are now working under the same directorate.

NEW COMPANIES.

DISPLAY, LTD.—Registered with a capital of £2,000, in £1 shares. Agreement with W. C. Johnson, H. P. Somner, L. W. Hunt and J. Zwart, and to publish a newspaper devoted to the art of window dressing. Private company. Permanent directors: W. C. Johnson, H. P. Somner, L. W. Hunt and J. Zwart. Office: 274, Edgware-road, W.

H. R. Green and Co., Ltd.—Registered with a capital of £2,000, in £1 shares, as booksellers, stationers, printers, dealers in wallpapers and fancy goods. Private company. Directors: H. R. Green and C. W. Bell.

AFRICAN PUBLICATIONS, LTD.—Registered with a capital of £12,500, in £1 shares, as publishers, journalists, newspaper and magazine proprietors, etc. The subscribers are E. S. M. Perowne and H. V. Tulley. Private company. Directors to be appointed by subscribers. Registered office: Salisbury House, Londonwall, E.C.

PHILATELIC STORES, LTD.—Registered with a capital of £10,000, in £1 shares, to adopt an agreement with A. J. Sefi and to carry on business as philatelists, auctioneers, printers and publishers. Private company. First directors: A. J. Sefi, E. F. T. Heap, Mrs. E. F. J. Sefi (alternate for A. J. Sefi) and H. A. Dowson (alternate for E. F. T. Heap). Registered office: 3, South Molton-street, W.

LAWES BROS., LTD.—Registered with a capital of £1,500, in £1 shares, as lithographic, photographic and commercial printers, stationers and photographic dealers, etc. The subscribers are D. H. Gaskain and G. W. Lawes. Private company.

COMMERCIAL ART PUBLISHING Co., LTD.—Registered with a capital of £3,000, in 2,000 ordinary shares of £1 each and 10,000 founders' shares of 2s. each, as publishers, printers, post card and fancy card manufacturers, etc. The subscribers are F. E. Catling, R. S. Mason and G. Goodman. Private company. First directors to be appointed by the subscribers. Registered office: 9, Wine Office-court, E.C.

ROPACO SUPPLY Co., LTD.—Registered with a capital of £3,000, in £1 shares, to take over the business of manufacturers of and dealers in waste and other paper, carried on at Rochdale and Bolton by H. Bleakley, F. Simm, J. Deveney and J. Williamson as the "Rochdale Paper Co." Private company. First directors: F. Simm, J. Williamson, H. Bleakley and J. Deveney.

COMPANY NOTICES, etc.

NORTHERN ENGINEERING AND CONSTRUCTION Co., LTD.—At a meeting of the company, held on March 17th, the following resolution was passed, and at a subsequent meeting on March 31st, was duly confirmed, namely:—"That the company be wound up voluntarily; and that Mr. Thomas Herdman

the younger, of Middlesbrough, be appointed liquidator for the purposes of such windingup.

BANKRUPTCIES, etc.

Re Chas. H. Buckland (Bookseller).—This bankrupt carried on business at 139, Knightsbridge, W., and failed in May, 1915, with liabilities £1,222 10s. 4d. He applied on April 16th at the London Bankruptcy Court for an order of discharge, when the official receiver reported that the assets had realised £84 is. and a dividend of iold in the £ had been distributed. The bankrupt commenced business in 1908 with a capital of £1,000, borrowed from his mother. He attributed his insolvency to bad trade and heavy business expenses, but immediately to the outbreak of war. The offences alleged were (1) insufficiency of assets to equal 10s. in the £ on the amount of the liabilities; (2) omission to keep proper books of account; and (3) trading with knowledge of insolvency. The discharge was suspended for two years.

WEST AND NORTH-WEST London Master Printers' Associa

A well-attended meeting of this Association was held on April 14th, at Westbourne Park Institute, the president (Mr. F. A. Perry) in the chair. Addresses were delivered by Mr. R. A. Austen-Leigh on "The Imprint Movement," and by Mr. G. Eaton Hart on "The Printers' Trade Board," both addresses being followed by interesting discussions.

Canadian Poper Trade Mark.

The Canadian Pulp and Paper Association is offering a prize of \$100, in addition to paying the cost, for the best design for a trade mark or insignia, suitable for use as a label to be attached to the various products made by its members, submitted on or before April 15th next. The purpose of the trade mark is to increase the use of Canadian-made paper by enabling purchasers readily to identify such paper as distinct from that made in countries other than Canada. The accepted design is to be used as the basis for an extensive advertising campaign. The design must bear the words "Canadian Pulp and Paper Association." The competition is open to any one living in Canada not directly connected with the Association.

The Point System for Paper & Boards The Lamson Paragon Supply Co.

At a meeting of the Association of Established Technical Officers in H.M. Stationery Office, held the other day, a paper was read by Mr. E. A. Dawe on "The Point System for Paper and Boards." The subject was treated on similar lines to those outlined by Mr. Dawe at St. Bride's Institute in January, 1918, when his scheme was first brought to the notice of those interested.

Briefly, the chief points are: -

I. A standard ream of 500 sheets.

 Standard weights per ream to be based in grammes per square metre, e.g., 28 lbs. demy (500=100 grammes per square metre)

 Thickness of boards: units of '0025 inch per sheet (approximately '063 milli-

metre.

 Standard sizes of paper to be based on a unit of 1'25 inches. A series of new sizes proposed in which the dimensions progress by 1'25 in. or multiples.

 Adoption of a standard label for paper and boards, giving substance, weight, thickness and metric equivalents.

After considerable, discussion the meeting adopted 1, 2, 3 and 5, leaving 4 for further discussion.

This was the first lecture and discussion on technical subjects which has taken place before the association, but it is intended to have a series, dealing with technical subjects of interest to the members.

The members of the association comprise the established technical officers of H.M. Stationery Office, all belonging to the binding, paper and printing branches, and discussion of such subjects as come within the scope of these departments will be held regularly. There are many questions which arise that call for concerted action and co-operation, and it is confidently expected by the members that this side of the activities of the association will result in progress and greater efficiency in H.M. Stationery Office.

Durban Library. — The librarian of the Durban Municipal Library desires to receive trade publications from the United Kingdom for display in the reading-rooms. He points out that over 1,000 people visit the reading-rooms daily, and a selection of British commercial publications should prove an excellent advertising medium. Several orders, he states, have been known to have gone to some of our competitors through the presence of the latter's publications in the reading-rooms. Publishers of United Kingdom trade and technical papers wishing to avail themselves of this opportunity should write to the Borough Librarian, Municipal Library, Durban, Natal

THE printers that don't know their costs are those who think they know but are without a system.

At the meeting of the shareholders of the Lamson Paragon Supply Co., Ltd., held last week at Winchester House, Old Broad-street, E.C., Mr. Stephen Herring presided, and in the course of his remarks said :- After making provision for depreciation, bad debts, directors' fees, etc., the amount carried forward to the general profit and loss account is £40,488 igs. 6d. In the general profit and loss account the amount carried forward from last year's account is £15,273 os. 11d., making a total of £55,762 os. 6d., which, after making a reserve of £17,000 to provide for excess profits duty for two years to date, leaves a balance of £38,762 os. 6d. The preference dividend for the year absorbs £9,889, and the interim dividend on the ordinary shares absorbs £4,911 9s. 6d., which, with the proposed dividend on the ordinary shares of 71 per cent. (making 10 per cent. for the year), will absorb £14,734 8s. 6d., leaving a balance to carry forward of \$9,227 2s. 6d., which is a better carry forward than last year, since excess profits have now been provided for. On the assets side of the balance-sheet you will find that the additions to plant have been £12,167, the major portion of which has been expended in acquiring a valuable freehold, which forms part of our future plans for development. After providing for the usual depreciation, our land, buildings, plant, etc., now stand at £173,962 4s. 5d., which, it is interesting to note, compares with £180,446 in the balance-sheet for the year ended January 31st, 1914, or actually £6,484 less, although in this period of five years we have added (mostly freehold land and buildings) the substantial sum of £29,558—a year's preference and ordinary dividends. From this it will be seen that our depreciation has been ample. Our goodwill remains at £50,000, which we consider a modest figure. Furthermore against this item there is a general reserve of £30,000, which for the time being your directors think is ample. The next item is cash in hand and at bankers, £8,577 gs. rod., against the bank loan of £85.000, or a total indebtedness to the bank of £76,422 10s. 2d., which compares with £37,877 in last year's balance sheet. Our investments stand at £161,642 65. 3d., an increase of £13,225, most of which is to provide additional capital for our principal investment, the Caribonum Co, Ltd. Our book debts stand at £100,4969s. 2d. and while slightly in excess of last year's, are low, having regard to our considerable increase in turnover.

The report, accounts, and balance-sheet were approved and adopted, and a final dividend on the ordinary shares of the company of 7½ per cent. was declared, making, with the interim dividend of 2½ per cent. paid in October last, a dividend for the year ended January 31st, 1919, of 10 per cent. per annum.

Some printers can't even hope to have brain fever.

Indian Notes

(From Our Own Correspondent.)

There have been many notes in the Press of late regarding the delay and the scarcity of the news received from Europe, but so far no reason has been given for this. The cable news of the day is often and often eked out with trivialities which are an insult to the intelligence of the hypercritical public which reads the important papers. It is also true that Reuter gives undue prominence to matters which create a glow in the breast of the official but leave the independent reader cold. Newspapers in India cannot afford to pay for the excellent service Reuter gives to Australia for the simple reason that Europeans in India and the English reading Indians do not support newspapers with the same generosity as Australians.

It is stated that Reuter has taken over the Associated Press of India. If this is so it will mean that the service of Indian telegrams will be as uniform as the service of foreign cablegrams. Whether that will be a boon and a blessing to the daily Press it cannot at present be said. Some of the old Indian journalists often regret the passing of the ancient independence when every important daily paper had its own correspondent in every important centre in India, and there was keen competition in the collection of news. The Associated Press gave the death blow to that independence, and because its chief partners were always at the headquarters of the Government of India, the service became essentially imperial, that is to say that everything else was sacrificed to gossip about the Government of India, and the transmission of Simla and Delhi communiques. Reuter can, and we hope he will, go one better than that. He has vast resources and should be able to keep his constituents informed of things that matter in other places than the Government of India.

Books and other printed matter imported into British India during 1918 amounted to 25,806 cwts of the value of £307,924, as compared with 28,266 cwts. of the value of £298,813 during the previous year. The exports during the year under review totalled 2,631 cwts. valued at £18,584, and those for 1917 amounted to 5,395 cwts. valued at £23,644. The re-exports show very little difference, the figures being: 1918, 553 cwts., £5,720; 1917, 584 cwts., £5,912.

The value of the printing and lithographic machinery and materials (excluding paper) imported into British India during the year 1918 was £40,589, as against £41,197 for the previous year.

There is just now a lot of advertisements appearing in the Indian newspapers for printers, most of them being for men serving

in the army and who will shortly be released. I have made some inquiries regarding these posts and find that the firms advertising, or most of them, are trying to get men at a very low salary. The men who have been serving in India during the war have very little or no knowledge of the cost of living in big towns such as Calcutta and Bombay, and an offer of Rs. 300 (£20) per month appears a good salary to them, and I should not be a bit surprised if many of them accepted that amount. It is a great pity that someone who could advise them cannot get into touch with them before they sign any agreement with those firms advertising. The writer had the pleasure of advising two men who were seeking engagements with the result that one was given a fair salary and the other declined to take up the appointment he sought.

Before the war Rs. 300 was a very fair salary to start on in a new appointment, but since the war that amount is hardly sufficient to keep body and soul together, and for a married man to accept that amount it is out of the question. In the out-stations one can manage on that sum, but it leaves nothing for a passage to England if the person wishes to take a holiday at any time. Indian controlled printing establishments are the worst in this respect of under paying assistants, and territorials and others would do well to consider the question very carefully before accepting appointments with any Indian controlled printing house.

There was an article in the British Printer a short while back regarding the conditions of employment in the trade in Ceylon, and what was stated in that article applied equally to India, and if this should reach the hands of any men now serving in H.M. Forces who are thinking of staying in or returning to India, they would be well advised if they read the article referred to before entertaining any offers made to them by any printing house in this country. They should also see that their agreement is a fair one and that it is made a proper legal document.

PAPER PROTECTION.—It is interesting at the present stage of the paper industry in this country to note that the American Paper and Pulp Association at its annual convention passed the following resolution on the question of tariffs: — "Whereas, it is imminent that there will be a renewed effort in the near future to revise the existing tariff laws, and it is manifestly to the interest of our industry to see that the legislative branch of our Government is possessed. of the proper knowledge of our business and its tariff requirements; therefore be it resolved, that our present tariff laws shall be revised so as to properly conserve American. industry and fully protect American labour; and, further, be it resolved, that this association shall place its utilities and information in the hands of the Government officials so that the interests of the paper industry will be properly

An Intaglio Printing Machine.

Mr. T. Ruddiman Johnston, of Tokyo, Japan, whose inventions in printing machinery we have from time to time recorded in our pages, has sent us the following details of another of his inventions in relation to intaglio printing: This new design produces a machine with a printing surface identical with that of any machine now in use, but thin plates are used in it instead of copper sleeves. The inking of the surface and removal of the surplus ink by means of a scraper blade are done in exactly the same way, as the annexed diagram will make clear. di is the cylinder which carries the etched plate d2 that is fastened to it by the wedges d3, and d4 is the bridge. c1 is the inking roller, and c2 the ink trough. bi is the scraper blade, and fi the brush for smoothing out the sheets before they are printed. (Right diagram). hi is the cylinder carrying the etched plate h4, the ends of which are held by the wedge h3, and h2 is the bridge.

One end of the plate being fastened by means of one of the wedges d3 to the cylinder di, the latter is turned round and the other end also secured by the other wedge. The plate will then be stretched tight over the cylinder's surface. The bridge-piece d4 is then inserted, and its ends secured to those of The bridge-piece is of very the cylinder. light construction, so as to be easily handled, it being only sufficiently strong to take the slight pressure of the inking roller and that of the scraper blade, and as it comes opposite the gap in the impression cylinder it cannot be injured by the latter. When the plate and bridge-piece are in position the printing cylinder presents an absolutely smooth continuous surface, excepting where the edges of the bridge-piece meet the etched plate, and there two fine lines will appear. A very small quantity of ink may lodge in these lines, though this will not signify, but if desired, they can be temporarily filled in with any substance,

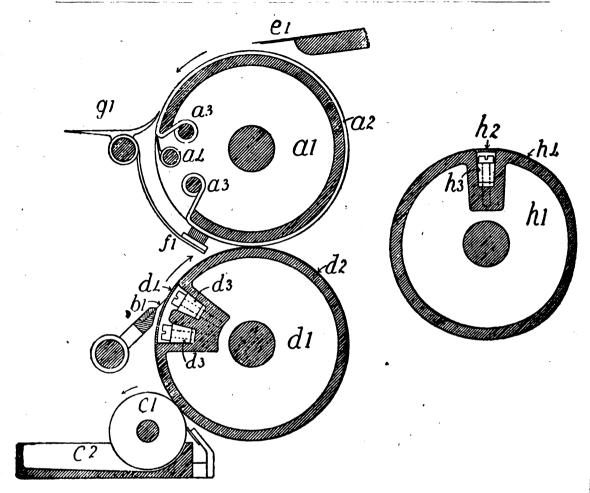

such as paraffin wax, that will not dissolve in the medium in which the pigment is mixed. To prevent any injury to the delicate scraper blade it can, if found necessary, be slightly, raised where it meets the edges of the bridgepiece.

The cylinders make two revolutions for every impression produced. At the first revolution printing takes place, and at the second the impression cylinder at passes the sheet to the delivery apparatus gt, where it is delivered face upwards. The etched plates can be printed from either end, and their under surface can also be utilised, and as the plate cylinder can be turned on its shaft and fixed in a new position, it is possible to print any size of sheet, however small, from any part of a plate's surface. The inking roller ct, ink trough c2, and scraper bt can be easily removed and replaced.

The machine is of most simple construction, and occupies small space. For printing from a web of paper a small bridge is used, as shown in the diagram to the right, and one wedge holds both ends of the etched plate.

With this machine no grinding and polishing machine, no transferring and developing machine, and no electro-depositing plant are required, and the plates, unlike cylindrical sleeves, can be stored in a small space, if they are likely to be wanted again.

As the surface of the etched plate and that of the paper, when the blanket of the impression cylinder is compressed as it is during printing, always travel at the pitch circles of the geared wheels which drive the cylinders, there is no friction, or very little, between the surfaces, and therefore no wear to the plates. The present machines do not offer this advantage, for as the etched surfaces of their sleeves are ground off several times, it is evident that only at one time can they travel on the pitch circles. They consequently at other times produce a rubbing action between the surface of the etched plate and that of the paper, which not only wears the plate, but accounts for the variation in the quality of the work they produce,

Johnston's Intaglio Printing Machine.

for only when they are travelling at the pitch circles can the work be perfect. It is a mistaken view that the scraper wears the printing surface. As there is always a film of moisture left on the plate after the scraper has acted, this being removed by an air blast in some machines, the scraper never actually comes in contact with the plate, any more than a lubricated shaft comes in contact with its bearings. It is the friction of the paper on the printing surface that wears it.

A machine of the above type is now being made in Japan, for Japanese printers are keenly desirous of working this beautiful process, the great cost of the present plant alone preventing its very general adoption

alone preventing its very general adoption.

Mr. Johnston will be glad to submit scale and fully detailed drawings to any firm that may be interested in a method of printing that will in the future, at least in his opinion, be more generally adopted than any other, judging by the many advantages it possesses.

MESSRS. OLIVER AND BOYD, London and Edinburgh, have issued a useful booklet on the Rent Restriction Acts, in which the position of landlords and tenants of houses up to £70 yearly rental is clearly set forth in regard to rentals and their increase, fixity of tenure, and furnished houses. As the acts themselves are so framed and expressed that the ordinary individual finds much difficulty in grasping their provisions this handbook will be found of great value in instructing both landlord and tenant as to where they stand under the new legislation. Couched in popular and understandable language it states clearly the whole position. The price of the book is sevenpence, by post eightpence.

A STORY is told of a Chicago millionaire who took his guests into his library which was filled with sumptuous volumes bound in calf, and waving his hand airily round the apartment observed proudly, "Nice, aren't they? And I killed all those calves myself!"

Australian Notes.

(From Our Own Correspondent.)

MR. MULLETT, the Victorian Government Printer, has lately been on a visit to the United States and Canada, and found that the prices ruling for paper supplies in these countries were much lower than those paid in-Australia, even taking into consideration the The paper suppliers in high freightage. America, Mr. Mullett states in his report to the State Treasurer, take certain risks, for which the Victorian Government formerly paid. He estimated that the saving on the paper he has purchased will be not less than £15,000 on the prices ruling in Australia. Mr. Mullett visited the mills in nearly all the papermaking centres from Seattle to Montreal, and from Massachusetts to those in the middle west. Amongst the larger offices which Mr. Mullett saw were the King's printing office, Ottawa; the Public Printery at Washington, where there are over 5,000 employees; the Bureau of Engraving, with 6,000 employees; the American Bank Note Printing Co. at Ottawa, and the Curtis Publishing Co. at Philadelphia, which prints only three publications, and employs 3,500 persons; the Donaldson Co. at Chicago, and the Charles Francis Co. at New York.

THAT it is the oldest firm existing in Australia is the boast of Messrs. John Sands, Ltd., printers and stationers, of George street, Sydney. It was established in 1837. The employees held their annual picnic at The Avenue picnic grounds, Lane Cove River, in weather that, except for a boisterous nor'easter, was idealistic. At the luncheon Mr. H. Price (manager), in proposing the health of Mr. Robert Sands, coupled with the firm of John Sands, Ltd., said that many of their employees had enlisted. Mr. Robert Sands, in replying, said that many of their employees had been with them for as long as 50 years; and he considered a well-trained staff the best asset of any business. His firm was the oldest of any in Australia. Its account was the oldest extant with the Bank of New South Wales.

The Sunday Times of Sydney pays a tribute to the hon. W. M. Brooks, M.L.C. of N.S.W., and says he is one of the men who, arriving in Australia with few friends and small oppertunities, have won their way to positions in the inner circle of high finance and big business. He is by trade a compositor, and soon after coming to Sydney in 1884 he started in a small way the great printing and publishing concern of which he is now the managing director. For a number of years he was president of the Master Printers' Association of the State, has held the position of president of the Employers' Federation for five

years in succession, was first president of the Returned Soldiers' Association, and has been closely associated with all the movements for raising funds for war purposes. At the time of the threatened print-paper famine in the Common wealth he was appointed by the Federal Government as Paper Controller. In 1917 he was appointed a member of the Legislative Council of N.S.W.

Morton's, Ltd., printers and bookbinders, of Sydney, have brought out an attractive calendar. The admirably - printed central picture shows a bowl of native flowers beautifully presented in colour. The design is by Moginia, of Bathurst-street, the blocks were made by Randle, of Castlereagh-street, and the printing was done on the firm's own presses. There isn't anything about it that isn't Australian.

MR. JUSTICE EDMUNDS was applied to exparte in the Sydney Industrial Court on behalf of the Master Printers and Connected Trades' Association for leave to appeal from an award of the Manufacturing (No. 2) Group, No. 6 (Cardboard Box-makers, State) Board, of December 20th last, and for an order suspending the award pending the result of appeal. Mr. N. M'William, batrister, was the chairman of the board. The objection to his award was that it was an entirely unsuitable regulation of the industry for the first time under its present conditions. The Court was asked to direct that the new scheme pre-scribed by the award should not for the present be enforced, as, if subsequently altered by the Court, confusion would be created. His Honour granted the applica-tron, subject to the applicant association complying with the conditions set down in the case of suspension, which involve the keeping of proper accounts and the payment of back money.

AUSTRALIAN printers have their difficulties as well as those of this country, and the vexed question of payment for overtime is as acute there as here. The Chief Industrial Magistrate of Sydney has delivered judgment in a case in which a breach of the award of the Printing Trades Group, No. 1 (Compositors and Operators) Board was The respondents were Robert Dey, Son, and Co., general printers, of 275, Clarencestreet, Sydney, and they were called upon to answer an information charging them with having, between July 1st and 30th, failed to pay a machine keyboard operator, in their employ, double rate of wages for work done For the defence, it was argued on Sundays. that the man was paid 2s. an hour as a night staff hand, which was no different from the rate paid on other nights, but he did not award did not expressly provide for double pay for linotype operators for Sunday work in regard to the night staff. The custom in the trade, it was contended, had been that night

BRITISH & COLONIAL PRINTER & STATIONER

staff workers should work six shifts a week, one of which might be a Sunday night, but paid for at the ordinary rate. The magistrate said he was satisfied that the custom in regard to Sunday night work in respondents' establishment had been established, and, therefore, the wording of the award was not sufficient to cover the complaint alleged. No order was made against respondents, but they were allowed £6 6s. professional costs, and £5 9s. witnesses' expenses.

JUDGE CURLEWIS, in No. 3 Industrial Court at Sydney has decided the question of the rates of pay to employees on special printing machines. Mr. Cantor (with Mr. T. H. Bell, the secretary of the Letterpress Printers' Machinists' Union) appeared on behalf of the union; and Mr. Stuart Thom (of Messrs. Stuart, Thom and Co.), for the New South Wales Master Printers and Connected Trades' Association. The Judge decided previously not to alter the conditions of the existing award except in matters appertaining to the rates of pay. He granted 7s. 6d. per week increase to employees on all classes of printing machines, with the exception of platen machines. The decision brought in the special machines. He also allowed a provision in the award that no adult member should receive less than £3 a week. The question of the platen machinists receiving the increase referred to has been left to the Full Industrial Court to decide.

The State of Victoria imported, during 1918, paper to the value of £1,073,774, as compared with £809,050, in 1917.

ACCORDING to a statement, certified by a firm of public accountants, and recently issued, the Sydney Morning Herald has attained to a circulation of over one million nine thousand copies per week. The Sun also issues a certificate of sales showing a net actual result, exclusive of all complimentary and free copies, of seven hundred and ninety-four thousand nine hundred and eighty-eight copies for the week of six days.

THE SOCIETY OF AUTHORS AND RISING BOOK PRICES.

The annual report of this society, which has just been issued, contains, among other matters, the following remarks on the subject of the rising prices of books:—

"The committee tried in the beginning to work with the Publishers' Association and the trade. From neither of these two bodies did they receive substantial support. In consequence, the prices of books continued to rise and the authors' royalties to be reduced or to remain stationary, without any system of uniformity. They tried to get sufficient cooperation among the authors to carry through a definite scheme, and would have succeeded

if it had not been, on the one hand, that a good many authors apparently misunderstood their proposal, and, on the other, that some agents advised in opposition to the authors' best interests. However, the committee's action had one satisfactory result, that about half a dozen well-known publishers fell in with their suggestion, so that when they raised the price of books to meet the cost of production, they raised the author's royalties. The committee have again approached the publishers, and have arranged to meet and discuss matters."

The society's annual meeting will be held at Central Buildings, Tothill street, Westminster, S.W.1, on Wednesday, May 14th next.

Mr. Robey Helps the Printers.

\$4,300 Raised at the Collseum Concert on Sunday.

The concert organised by Mr. George Robey in aid of the Printers' Pension Orphan Fund was held at the Coliseum on Sunday, and turned out a complete success, about £4,300 being raised. The musical programme was an excellent one, and the artistes acquitted themselves well, greatly to the enjoyment of the large audience, most of the singers having to answer encores.

Three and a half hours was the time occupied by the entertainment, and among those those who gave their services were Mr. Septimus Hunt, Miss Helen Blain, Mr. Rupert Hazell, Mr. Sidney Pointer, Mr. Fred Allandale, Mr. Sam Walsh, Mr. Thornley Dodge, Messrs. G. Parker, H. Barratt, F. Henry, and F. Stewart, Mr. Godfrey Tearle, Miss Ethel Cadman, Mr. Phillip Cathie, the Gresham Singers, the Alhambra Orchestra, and Mr. Robey himself took part in the programme.

A feature of the day was the auctioning of a number of interesting articles, among them being a facsimile of the first copy of the Observer, dated 1791, which was bought by Mrs. Waldorf Astor for £30, and resold several times, until it raised a total of £350. A cheque for five guineas signed by Charles Dickens in favour of the Printers' Pension Orphan Fund, and dated May 1st, 1866, brought £75. The first copy of L'Echo du Nord to reach Lille on armistice day, bringing news that fighting was over, found a buyer at 55 guineas.

A sum of 1,000 guineas was received from leading newspapers as the price of ten boxes sold by them, to which was added over £1,000 obtained through the public auctioning of the boxes by the papers.

The programme sellers were women authors and journalists, who worked under the direction of Mrs. Cecil Frail and Miss Margaret Chute.

If the average printer's digestive apparatus is all right, his conscience doesn't trouble him much.

An Appeal.

Sir,—I shall have the honour to preside at the Connaught Rooms on May 30th, at the annual festival of the Printers' Pension Corporation, one of the oldest and certainly one of the best managed Institutions in the world. This year the council have decided to give all donations towards the support of those children whose fathers were killed in the war. More than 2,000 children have to be provided for.

I feel sure that for so good a cause I can count on the generous support of the trade.

Yours, etc., W. Astor.

April 24th, 1919.

Shorter Working Week,

SIR,—We consistently read the interesting "leaderettes" in your excellent British and Colonial Printer and Stationer. In our judgment, the "fancy" hours of forty or forty-four, being now experimented with in some other trades will be subject to revision, for they are inimical to the welfare of the country industrially as a whole. Something more reasonable will eventually materialise out of such hours for such other trades.

The printing trade has set a pattern. great textile trades of Yorkshire, employing many hundreds of thousands of workers and formerly running as high as fifty-five hours per week have also settled on a forty-eight hour week and it is working well, just as the new forty-eight hour week in the printing trades, which will run smoothly and need not increase the amount of overtime to any material extent depending upon increasingly good results arising from better money and shorter hours. As to Lord Leverhulme's scheme of a thirty-six hour week that is really outside the range of practical politics. matters little to such industries as soap, etc., whether the hours are 36, 46, or 56, for in point of fact they work on piece and the shorter their hours the better for the employers, providing only they can secure an unlimited amount of unskilled labour. We know well enough in the printing industry our limitations There the printing industry our limitations is practically no such thing as piece work and nearly the whole of the labour employed is highly skilled. The shortage of such skilled labour in pre-war times was of a considerable sort. It will be much worse in the future unless there is a more enlightened allowance of learners agreed to by the unions of the federated trades and operating outside the sphere of the London Society of Compositors, which allows a more reasonable number of learners, and in so doing they render great service to the cause and will build up a stronger and larger union.

The great engineering trades in this country would never have assumed such colossal proportions if learners had been hindered from coming in. It is to be hoped that the leaders and controllers of the E.C. at Manchester will some day think over the advantages to be gained by recasting the number of apprentices allowed in the various departments of the printing trade and so to assimilate with the more enlightened policy of the London Society of Compositors.

Vours. etc.,

Yours, etc,
WESLEY PETTY,
Chairman and Controller,
Petty and Sons (Leeds) Ltd.

The Arnold Testimonial

Our readers will be interested to know that the amount subscribed to this fund was £468 8s. and £6 os. Id. was received as interest on bank deposit making a total of £474 8s. Id. The subscribers included 15 associations and 286 individual subscribers whose subscriptions were limited to one guinea. Out of the above total the sum of £39 15s. was expended on a tea tray and fruit dish, selected by Mr. and Mrs. Arnold, on which there was inscribed, with the Federation badge, the following:—

"In recognition of his great services to the Federation of Master Printers of the United Kingdom and to the whole Printing Trade whilst President of the Federation from May, 1916, to May, 1918, this Tray and Fruit Dish were presented to

MR. E. G. ARNOLD,

of Leeds, by the members of the Federation, and as a further testimony of appreciation of his services and of the esteem in which he was held, a sum of nearly £400 resulting from a limited subscription by the members was devoted at his wish to various charities connected with the Trade."

By Mr. Arnold's wish the sum of £395 was distributed amongst the charities designated by Mr. Arnold as follows:—£100, Printers' Pension War Orphans Fund; £95, Leeds General Infirmary; £50, Lloyd Memorial Seaside Home, Deal; £50 Printers' Alms Houses, Wood Green; £50, Master Printers' Benevolent Fund; £50, Meanwood Convalescent Home for Children, Leeds. The balance of £39 13s. Id. was transferred to the Federation account to cover printing, postage and sundry expenses.

PARCHMENTISED PAPER.—Under a patent by Mr. W. Dagnall, paper is parchmentised, and rendered waterproof, acidproof, and of great strength, by passing it through two baths of sulphuric acid or sulphuric acid mixed with sulphurous acid, the second being more dilute than the first, the acid being squeezed out after each operation, the paper being afterwards neutralised by means of an alkali bath, washed, softened by means of a bath of glycerine, calcium chloride, salt, or the like with or without admixed loading-material and then dried.

Trade Notes.

THE Western Mail, Cardiff, celebrates its jubilee to-day (Thursday).

MR. COLEBATCH, a journalist, has succeeded Mr. Lefroy as Premier of Western Australia.

THE late Mr. Kenmuir Whitworth Douglas, at one time proprietor of the North Wales Chronicle, has left £30,296, with net personalty £25,753.

It is announced that Lord Decies has resigned the office of Press Censor in Ireland, and that Major Bryan R. Cooper has been appointed in his place.

PRESS FUND DINNER.—The Lord Mayor is to preside at the 56th annual dinner of the Newspaper Press Fund at the Mansion House on May 27th. The company will include the American Ambassador, Sir Edward Hulton, Sir Robert Kindersley, the Hon. Sir Thomas Mackenzie, Sir George Toulmin, and Lord Weir.

A SMOKING CONCERT and exhibition of work will be held to-morrow (Friday, May 2nd), at 6.45 p.m., in the large hall of the Saint Bride Foundation Institute. The concert will be given entirely by the students, and pianoforte selections will take place between 6 and 6.45 p.m. Competition work will be on view in the small hall from 6 p.m. Past and present students are cordially welcomed.

The Printing Trades Exhibition.—We understand that at a recent meeting of the advisory committee it was decided, on account of the inability of many of the printers' engineering firms to have exhibits ready in time, to postpone the exhibition, which was to be held next year till May, 1921, when it is expected that the promoters will be able to organise a show that will surpass all previous exhibitions.

VISCOUNT BURNHAM presided on Tuesday night at the eightieth annual meeting of the Newsvendors' Benevolent and Provident Institution, and congratulated the trade on coming to the end of the troubles which war had brought to them. No calling had given a larger proportion of its best men to the service of the country, and there was none in which the business was so often a one-man concern. Seventy members who are in receipt of a permanent pension, are to receive a peace gift of £10 each.

The death has taken place of Mr. Matthew Paterson, a well-known Glasgow journalist. Mr. Paterson, who was in his 80th year, joined the editorial staff of the Edinburgh Daily Review about the time when Charles Kingsley's brother was editor. Later he was on the North British Daily Mail and the Glasgow Weekly Mail, on which he began and continued for many years the department dealing with answers to queries. After the Daily Mail passed into the hands of Messrs. Harmsworth Mr. Paterson edited the Weekly Mail.

The late Mr. Mark Smith, well known in the printing world as the inventor of the "fudge box" and other appliances for printers, has left estate of the value of £3,530.

LONDON COMPOSITORS' WAGES,—A delegate meeting of compositors employed on the London morning and evening newspapers was held at the Memorial Hall, Farringdon-street, on Saturday evening, to discuss the proposed increased wages scale. The proceedings, which were private, were adjourned for a fortnight.

MR. ALFRED F. BLADES, president of the Federation of Master Printers, is issuing an appeal for donations to the Printers' Pension Corporation to enable that institution to provide help for the widows and children of those printers who have fallen in the war. Contributions may be sent to Mr. Blades at the Federation Offices, 24, Holborn, E.C.

The death has occurred at Torquay of Mr. R. J. T. Knight, representative of the *Torbay News*. A native of Liskeard, his first journalistic work was on the *Cornish Leader* in that town. He afterwards did work on newspapers at Oldham, Peterborough, and Burnley, and went to Torquay about twelve months ago. Mr. Knight was only thirty years of age.

WE understand that the Readers' Pensions Committee has decided to revive the annual dinners, which were suspended during the war. The object is to raise funds on behalf of the Readers' Pensions Committee, an organisation which exists for the purpose of securing pensions for printers' readers or their widows. Sir George Riddell has promised to take the chair at the next dinner.

THE INDUSTRIAL RECONSTRUCTION COUNCIL—A conference on "Workmen as Directors" will be held under the auspices of the Industrial Reconstruction Council on Tuesday, May 6th, at 6 p.m., in the hall of the Institute of Journalists. 2 and 4, Tudor-street, E.C.4. The chair will be taken by Mr. Gordon Selfridge, and the opening address given by Mr. G. H. Humphrey (Messrs. John Dawson and Co., Ltd.), after which will follow questions and discussion. No tickets are necessary.

BLACK LISTS WITHDRAWN .-- The Foreign Trade Department of the Foreign Office has announced that the Allied and Associated Governments have decided that after April 29th, all Black Lists of firms and persons which they have published or compiled shall be withdrawn, and that all disabilities attaching to trade and communication with firms or persons on such lists shall cease to operate. The Allied and Associated Governments reserve the right to reintroduce all or any of such Black Lists should such action The Foreign Trade Debecome necessary. partment of the Foreign Office also announce that goods to be exported to China and Siam may now be consigned to all persons and firms in those countries.

Bei.GIAN PRINTERS STRIKE.—In reply to a demand for increased wages on the part of Antwerp printers, the newspaper proprietors

Digitized by GOOGLE

pointed out that as the men were affiliated to the Brussels Federation they would have to await the decision of the Federation before taking action. The printers would not wait, however, and consequently four of the leading daily papers were unable to appear.

The death is announced of Mr. Charles Geake, at the age of 52. He commenced his journalistic career as editor of Granta, and was for several years a frequent contributor to Punch. In 1896 he joined the staff of the Westminster Gazette. Mr. Geake's best work, however, is represented by the Liberal Publication Department, of which he was the founder. Since 1894 he had been editor of its two leading publications, the Liberal Magazine and the Liberal Year Book.

THE PRESS CENSORSHIP.—The Official Press Bureau in Whitehall ended its career last night. In view of the closing of the Bureau the Home Secretary has authorised the librarian, at the Home Office, to receive all leaflets, etc., which are required by the Defence of the Realm Regulation 27 C to be submitted before publication. On and after May 1st copies of such leaflets must be delivered to or sent addressed to the librarian 72 hours before publication in accordance with the terms of the regulation.

THE DIRECTORY OF PAPERMAKERS, 1919 (London: Messrs. Marchant, Singer and Co., 25. 6d. net.).—The 1919 edition, which is to hand, has been most authentically revised and brought thoroughly up-to-date. It contains the old features which have been of such service to the trade in the past. Among these are a list of papermakers of the United Kingdom under various headings, a list of papermakers' representatives in London and in the chief provincial towns, a catalogue of trade designations, together with actual watermarks, trade names and paper trade customs. Careful attention has been devoted to make all sections complete, the alphabetical list of mills and the classification of makes being very valuable for reference purposes. The volume is nicely got-up and clearly printed, and is a necessary office adjunct to all who are in any way concerned with paper.

Personal.

SIR ROWLAND BLADES, M.P., is a member of the Commission which the Bishop of Lonhas appointed to inquire and report as to the present and future use of the churches within the City of London.

MR. C. GILBERT-Wood, well known for the excellent work he has done as publisher of Army and Navy literature, has resigned after ten years, his position as London director of the Shipbuilder. He is continuing his work in connection with the official service publications.

The Honours List.

A rather belated New Year's Honours List was published on Tuesday containing the names of those who for war services, Parliamentary and other work had received distinctions. Among those who figure in the list are the following gentlemen who are connected with paper and print.

Viscounts.

BARON BURNHAM. — M.P. for West St. Pancras, 1885 92; East Gloucestershire, 1893-95; Tower Hamlets, 1905-6 and 1910-16; chairman of Newspaper Proprietors' Association and Newspaper Conference; president Empire Press Union, etc.

BARON ROTHERMERE.—Proprietor of the Daily Mirror. He was first Air Minister, and brought together the separate air forces of Navy and Army.

Baronets,

Davison Dalziel.—M.P. for Brixton since 1910. Founder of Dalziel's News Agency. For some time proprietor of the *Evening Standard*.

EDWARD HULTON.—Newspaper proprietor. Was instrumental in raising among other charitable funds: For the Manchester Hospital Radium Fund £31,000, and for the Nation's Tribute to Nurses £16 500.

Tribute to Nurses £16,500.

WILLIAM THOMAS MADGE.—Managing director of the People, Ltd. Formerly manager of the Globe newspaper, with which he was connected for 42 years.

Knights.

JOHN COODE-ADAMS.—Secretary Pall Mall Gazette for over 20 years. Original member of Civil Liabilities Committee Advisory Board.

JOHN ERNEST HODDER WILLIAMS.—Head of the firm of Hodder and Stoughton, pub-

DAVID DUNCAN.—The senior partner of the firm of David Duncan and Sons, Ltd., proprietors of the South Wales News, South Wales Echo and Cardiff Times. Being president of the Southern Federation of Newspaper Owners, he was invited to join the Admiralty, War Office and Press Committee, through whom the fighting departments of the Administration maintained regular communication with the newspapers of the country.

"HUNTING FOR A JOB" is the title of a useful, topical article in the May Pearson's. Written by Herbert N. Casson, the well-known efficiency expert, it contains much sound advice to the great army of the demobilised. Miss Doris Keane, the new "Juliet," is the subject of an interesting interview. Dr. Edwin Bowers gives some striking facts about the drug peril, and shows the danger of alcoholic prohibition in relation to this evil. Fred M. White, George Robey, Madame Maeterlinck, Mrs. George Wemyss, and Byers Fletcher are other contributors to an excellent number.

FORTY-FIRST YEAR.

Printed and Published EVERY THURSDAY

London and District—Mr. HENRY C. WILLMOTT.
Lancashire and Yorkshire—Wr. C. FOSTER, 1, Duncanstreet, Higher Broughton, Manchester.
Scandinavia—Mr. JORGEN SORENSEN, Bygdo Alle 60,
Christiania, Norway.
United States—LOOKWOOD TRADE JOURNAL CO., 10,
Rast 39th-street, New York.

Representatives also in Australia, India, South Africa, Canada, etc.

All communications for the "British and Colonial PRINTER AND STATIONER" should be addressed and Cheques and Post Office Orders made payable to—STONHILL & GILLIS, 58, Shor-lane, London, E.C.

COPIES may be purchased at the Offices, as above or from Messrs. W. H. Everett and Son, Ltd., newsagents, 11, St. Bride-street, E.C.4.

THURSDAY, MAY 1, 1919.

Current Topics.

The Government Printing Estimates.

The detailed estimates for the current financial year are now issued and give many interesting details of the national expenditure. Stationery and printing are estimated to cost £6,180,442; but it is expected that receipts, from sales, etc., will reduce this total to £5,280,442. Among the items of expenditure we find that printing for Public Departments is estimated to cost £2,300,000; paper for Public Departments, £2,600,000; binding, £170,000; books and maps, £80,000; printing, paper, binding, etc., for the two Houses of Parliament, £55,000; printing, paper, binding, etc., for the "Gazettes," £15,000; and for Parliamentary debates and records, £16,000. It is

explained that the estimate for printing includes £1.085,000 for the printing required under the Representation of the People Act, one half of which is recoverable from local authorities. The cost of the printing works under the control of the Stationery Office is estimated at £350,000, and the value of the work to be executed at £400,000. Under the "Paper for Public Departments" there is included paper for official correspondence, £650,000; for envelopes, £300,000; account books, £200,000; and wrapping household and miscellaneous paper, £355,000.

French Printers and Labour Demands.

In the French printing and allied trades the demands of labour and the problems created by them are just as acute as in this country, and require just as careful handling. In this connection it is interesting to note that at a recent meeting of the Union Syndicale des Maitres Imprimeurs de France (Association of Master Printers of France), the president of the permanent committee of this body referred to the surprise felt in all industrial circles at the news that an International Commission of Labour Legislation at the Peace Conference was going to be charged with discussing the general conditions of labour, and notably the establishment of the eighthour day. It should be remembered, said the president, that the Paris Chamber of Commerce took the initiative by calling a meeting to which all the masters' associations of the capital and its environs were invited. In a first resolution, adopted unanimously, the presidents and delegates of employers' industrial and commercial groups and association s having branches in Paris, or in the Seine department (representing over 800 bodies), had protested vigorously against the absence of a delegate from among their members to the International Commission of Labour Legislation at the Peace Conference, when admission was granted to a representative of the General Federation of Labour, and the masters had requested the authorities to permit at once the addition of a masters' delegate to the Commission, to enjoy the same prerogatives as the labour delegate. In a second resolution the masters, after expressing surprise that the question of the eight-hour day should be considered to be within the province of the Peace Treaty, the last chapter in the military victory, demanded that that question be not treated at the Peace Conference, which includes only the Allied powers: if, however, an International Commission were subsequently constituted, they de-

manded that representatives of the chambers of commerce and of the masters' associations should take part in it, as well as representatives of the workmen's unions. Government seems to have recognised the justice of the claim of the masters' associations, at least as far as the latter part of the second resolution is concerned, for it proceeded to nominate to a preliminary Commission, eleven master delegates, together with eleven workmen delegates and a dozen Members of Parliament, the object of this Commission being to study, with practical suggestions for their solution, the various questions-notably the eight-hour day-to be submitted to the International Commission of Labour Legislation at the Peace Conference. French master printers, the speaker went on to say, are earnestly requested to forward all documents capable of influencing decisions on matters of grave moment to the industry, which before the war was far from prosperous, and which will now find it hard to combat the fresh obstacles in its path. There is at present a federative moment amongst masters which is drawing ever closer together all employers. A certain number of associations declared the time ripe for a National Federation of Masters. The Utopias of anarchistic Socialists must be met by the healthy principles of work based on production. Such a formula could rally to one flag all those masters' and workmen who consider that increase of production is the foundation for normal conditions of labour, those conditions which bring well-being and industrial and commercial prosperity to the country.

"Some" Trade Board.

HAVING tried to force a trade board on many industries which resisted successfully such an imposition, the Ministry of Labour is now attempting to rope into such an organisation at one fell swoop all the rest of the trades that have not yet been dealt with. They propose, in effect, a trade board for all the disfributing trades of the country, and the scope of the scheme may be understood when it is pointed out that among them are included such diversified callings as those of the wholesale stationer and the butcher, the retail chemist and the costermonger. To regulate conditions and wages of such a diversity of businesses as are comprised in the category of distributors is a task which only a ministry out for trouble could conceive. Something like two million people are said to be represented in the "unconsidered trifles' which the Ministry of Labour seek to shepherd under

the latest trade board, the composition of which would require to be of a very adaptable and encyclopædic character if it is to achieve its colossal task. It will, in fact, require "some" trade board to regulate such a family of sorts.

The Paper Inquiry.

Nearing the End.

Last week saw the close of the Inquiry into the condition of the paper trade. The Committee is bending all its energies upon the task of presenting its report at the earliest

possible moment.

Printers were much in evidence, Mr. C. A. Bates (Messis. Johnson, Riddle and Co.), and Mr. A. E. Goodwin (secretary of the Federation of Master Printers) presenting their case. Mr. J. M. Watson gave the view of the British Paper Stock Merchants Association. Mr. F. T. Mudie, Scottish Daily Newspaper Society, and Mr. R. J. Young, of the Canadian Mission, were followed by Mr. P. H. Eusden (Messrs. C. W. Faulkner and Co., Ltd., colour printers), and Mr. P. J. Machin (Machin and Kingsley), the latter explaining the position of strawboards. The National Union of Manufacturers were represented by Colonel Grant, Mr. Sergeant (Lilywhite, Ltd.), and Mr. E. H. Harrison (Valentine and Sons), the case of manufacturers of pictorial post cards and Christmas cards being elucidated by the two last-

The Thursday was only a short session, confined to the morning. Mr. A. W. Foster (secretary of the Papermakers' Association), the only witness, amplified his previous statement as to the general position of the trade with statistics which had since come to hand. A discussion ensued until the Committee

broke up for the holidays at 1.15.

A resumption was made with Mr. F. J. North (Messrs. Charles Clarke and Sons), followed by Mr. Standring, of the Motor Cycle and Cycle Trader, and Mr. Dewsnap (Messrs. Davis and Royle). Evidence from the point of view of the journalists came from Mr. Frederick Hinde and Mr. G. Springfield, who attended from the Institute of Journalists. In the afternoon Mr. Franklin Smith (Cone Tube Co., Ltd., Timperley, Cheshire), occupied the attention of the Committee.

This practically concluded the taking of evidence, after which the rest of the time was occupied with discussion and the prepara-

tion of the report.

On March 21st the number of persons drawing out-of-work donation in the paper industry was as follows: — Paper manufacture, 1.444; subsidiary trades, including paper stainers, stationery men, envelope-makers, paper-bag-makers, cardboard box-makers, and other workers in papers, 4,665—total, 6,109.

NEW COMPANIES.

ALLAN AND WILLIAMSON, LTD.—Registered in Edinburgh with a capital of £3,000, in £1 shares, to acquire the business of John Allan, manufacturing stationer, carried on at 10, Garthland-street, Glasgow. First directors, J. Allan and J. Macgregor Williamson. Private company. Registered office, 68, Gordon-street, Glasgow.

H. B. B. CORRUGATED PACKING Co., LTD.—Registered with a capital of £5,000, in £1 shares, as manufacturers of and dealers in strawboard and paper corrugating machines and products made by the same, etc. First directors, T. J. Coucher and H. B. Barton. Private company. Registered office, 20, Bathstreet, Old-street, E.C.

BRITISH WIRE STITCHING MACHINE Co. (1919). LTD.—Registered with a capital of £5,000, in £1 shares, to carry on business as indicated by the title. The subscribers are J. Hess and A. Hess. Private company. Table "A" mainly applies.

THORNTON BUTTERWORTH, LTD. — Registered with a capital of £10,000, in £1 shares, to acquire the business of a publisher carried on at 62, St. Martin's-lane, W.C., as "Thornton Butterworth," and to carry on the business of general publishers, printers, etc. (legal and medical books and publications expressly excluded). Permanent directors, Thornton Butterworth and Mrs. K. L. Butterworth. Private company. Registered office, 62, St. Martin's-lane, W.C.2.

MANSFIELDS (NORWICH), LTD.—Registered with a capital of £30,000, in £1 shares (10,000 7 per cent. non-cumulative preference), to acquire the business of a manufacturer of and dealer in millboard, cardboard, wood, fibre and other boxes (folding, collapsible or otherwise), packing cases, manufacturers' and drapers', chemists', boot dealers', and general tradesmen's sundries, etc., carried on by D. Mansfield at Norwich. First directors, W. Hurrell, S. L. Witton, and H. H. Clarke.

Private company. Registered office, 24, St. Saviour's-lane, Norwich.

SUN BOX, LTD.—Registered with a capital of £2,000, in £1 shares, as plain and fancy box manufacturers, printers, etc. The subscribers are M. C. Cahen and F. Taylor, signing for 200 and 50 shares respectively. First directors, M. S. Cahen, H. E. Davis and J. N. Nabarro. Private company. Registered office, Sunstreet, Finsbury, E.C.2.

STYLEX Co., LTD.—Registered with a capital of £5,000, in 4,950 preference shares of £1 and 1,000 ordinary shares of 1s. each, as manufacturers and dealers in the Stylex Dupligraph colour process, half-tone engravers, stationers, printers, lithographers, stereotypers, electric photographic printers, photo-lithographers, etc. The subscribers are H. Towns and S. G. Tydeman. Private company. Governing and managing director, H. Towns. Registered office, 45-7, Broad-street House, E.C.4.

BROCKHURST STUDIOS, LTD. — Registered with a capital of £2,000, in £1 shares, to take over the business carried on by H. Brockhurst at Byron House, Fleet-street, E.C., and to carry on the business of printers, publishers, artists, advertisers, advertising agents and contractors, advertisement writers and consultants, business organisers, photographic advertisers, etc. The subscribers are Florence Powell and A. J. Lloyd. Private company. First directors to be appointed by the subscribers.

Tool Engineering and Directory Publishing Co., Ltd.—Registered with a capital of £1,000, in 500 "A" preference shares of £1 each, and 600 "B" shares of 10s. each, and 4,000 "C" shares of 1s. each, to acquire the copyright of the Tool Engineer and Tool Engineers' Directory. Subscribers are E. C. D. Hipkins, B. Sc.Eng., and R. L. Wallis. Private company. First directors to be appointed by the subscribers. Registered office, Test House, The Quadrangle, Queen's College. Birmingham.

FINANCIAL MAIL, LTD.—Registered with a capital of £100,000, in 360,000 ordinary shares of 5s each, and 200,000 deferred shares of 1s. each, to acquire the Financial Mail, to carry on the business of proprietors and publishers of newspapers, magazines, books and other works, to establish competitions and grant prizes, to carry on financial and other operations, etc. Minimum cash subscription, 5 per cent. of any shares offered to the public. First directors, Alexis Moreton Mandeville (permanent governing director), E. A. Macmillan, and H. S. Murphy. Private company.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 16 of the Companies Act, 1900. (The registration of Satisfaction is not compulsory.)

JOHN DUTTON (CHELMSFORD), LTD. (printers and publishers).—Particulars of £600 debentures, created and all issued March 14th, 1919.

charged on the company's undertaking and property, present and future, including uncalled capital.

EXCELSIOR PRINTERS' SUPPLY Co., LTD.-Assignment on March 13th, 1919, of sub-contracts from the Gnome and Le Rhone Engine Co., Peter Hooker, Ltd., to secure all moneys to become due from company to Barclay's

United Newspapers (1918), Ltd.—(a) Trust deed dated March 28th, 1919, securing £220,000 4½ per cent. 1st mortgage debenture stock, charged on freehold and leasehold land and premises at Salisbury-square, Crown court and elsewhere, the copyright of the Daily Chronicle and Lloyd's News, and the company's undertaking and property, present and future, including uncalled capital. Holders: Frank and Harry Lloyd. (b) Trust deed, dated March 29th, 1919, securing £200,000 5½ per cent. second mortgage debenture stock, charged on same property, subject to above. Holders: Frank and Harry Lloyd.

MBE AND WILSON, LTD. (printers, Derby).— Particulars of £2,000 debentures, created and all issued March 31st, 1919, charged on the company's undertaking and property, present and future, including uncalled capital.

COMPANY NOTICES, etc.

CADET PUBLICATIONS, LTD.—At a meeting of the company held at London on April 1st. the following resolution was passed; and at a subsequent meeting on April 17th was duly confirmed:—(a) "That Cadet Publications, Ltd., be wound up voluntarily"; (b) "That Mr. J. N. Firth, of 23, Bride-lane, E.C., be appointed liquidates for the large for the confirmation of the confirmatio pointed liquidator for the purposes of such winding-up." Notice is given that a meeting of the creditors of the company will be held at 4, Featherstone-buildings, Holborn, W.C 1, on May 3rd.

BANKRUPTCIES, etc.

Re R. Shirley and Sons (ink manufacturers and agents, 18-19, Bridge-road, Stratford).-Creditors under this failure met on April 24th at the London Bankruptcy Court. Mr. J. B. Knight, official receiver, reported that no statement of affairs had been lodged by the debtor, who roughly estimated his liabilities at £312 and had no assets whatever. He had stated that he carried on business as a marking-ink manufacturer from 1901 till 1915, when owing to the difficulty in obtaining bottles and dyes, and excessive prices consequent on the outbreak of war he had to close down. He subsequently acted as a manufacturers' agent in the fancy goods trade. The failure was attributed to the collapse of the ink business; the expenses of bringing up a large family; the excessive cost of living, and the high prices of goods. In the absence of any offer the case was left in the hands of the official receiver to be wound up in bankruptcy.

'Will English Paper Mills

What Our Canadian Friends Think of Our Present Position.

Under the quoted heading the Pulp and Paper Magazine of Canada thus sets forth its views, which will be of interest to British

papermakers:-

There is ground for satisfaction in the announcement that the policy of Empire preference declared by England becomes a practical reality with the removal of import licences for goods for Canada and other Dominions. It is a matter which will inspire much serious thought in several countries. It appears that several factors have been operating in such a way as really to give preference in the British market to goods from neutral countries at the expense of British Dominions. This has been particularly the case with pulp and paper from Scandinavia. Under the licence system until recently in force, the lowering of freight rates seemed to favour the import of Norwegian and Swedish products. On account of the attitude of the latter country during the war there has been a feeling that that this is unfair, and as far as possible, British trade should be kept in the Empire. Vigorous re-presentations of the rights of the various Dominions have been made to London, and the result is a situation that is now much more favourable, at least to Canadians.

The pulp and paper industry naturally shares in the good fortune, and a considerable expansion of our export business is to be expected if stocks are available from mills that are not tied up with domestic and American obligations to the extent of their capacity. Permanent overseas business might even induce our mills to proceed with developments that have necessarily been held in abeyance

for some time.

Joy is not unalloyed in England, however, over the prospect of large imports of Canadian papers, especially news. English publishers, like some others we know, are eager to get sufficient supplies at minimum prices. The mills at home are handicapped by the lack and high price of pulp and other materials, and the disorganisation and shortage of labour due to war conditions. All this has naturally restricted output, and shortage of paper has circumscribed the activities of most publishers. They argue that plenty of paper will enable them to employ more help, and the handling of their product will make work for others all along the line. This is particularly true of book publishers, whose output has been far below normal for several years. They want imported supplies to eke out their requirements. A permanent market for Canadian paper in this field would give a great impetus to our book paper industry, which at present can just about supply home requirements. There is some question as to whether this demand would be very permanent, however, in consideration of the rather favourable situation of British book mills with regard to supplies of rags, esparto and clay at home, and the availability of Canadian (and other) high grade sulphite. We think Canada should also furnish soda pulp to the Mother Country. For wood-fibre papers of any grade, we are yet to be convinced that Canada is not the logical place for their production.

logical place for their production. When it comes to news print paper, we find a rather complicated situation. The newspapers want supplies, and the mills are apparently unable to make the paper required. For several years the publishers have been greatly restricted in the size of their papers. and greatly handicapped in consequence. The Paper Controller has set a price of 41d., which is still in force, and this does not allow much profit, considering costs of raw material and operation. The mills are naturally disappointed in the removal of import restrictions on Canadian products, which not only lets in much-needed supplies of pulp, but also admits news-print at prices they cannot possibly meet. It is said that Canadian newsprint has been offered in England at six cents, which is about the cost of raw material to the home mills. This would not be a serious difficulty if there were a continued demand for all the paper the British mills can make as well as the amounts available here for export, which are probably not great at this But England is getting her armies back into civilian life, and putting her munition workers at peaceful production. Many women workers have had a taste of industrial life, and like it. Their efficiency and aptitude at certain work may be a big asset in many lines of manufacture. Every opportunity for employment is being watched because it is only the production of goods that will keep the people busy. This is of even greater importance than any mere difference in price.

The relative price of home-made and imported articles is receiving serious attention and there are indications that England will very likely adopt in some degree the policy of a protective tariff. The war has furnished much data on costs of production, and the machinery by which this was collected could serve such a policy and make it possible to base tariff regulations on a scientific foundation. Since but little pulp is made in Britain, such a policy would tend to insure a market for ground wood and sulphite to supply the protected paper mills. It would be likely to make competition with Scandinavian mills very keen, unless the protective policy were extended to cover Empire products, perhaps to the extent of equalising freight rates. Under such conditions Canadian pulp ought to stand a better chance in the game. Certainly we cannot rely on war sentiment to last very long as a trade factor, at least, in neutral countries.

Launching out on a policy of trade protection is not the end of difficulties for our brother papermakers in England. They may expect constant efforts of the press to lower or remove the tariff on news-print, as Ameri-

BRITISH & COLONIAL PRINTER & STATIONER

can history will show. Of course, the real solution of the problem is to come to Canada with their mills, and bring their families along. We can show them some fine manufacturing sites, and would extend a hearty welcome. Nothing like getting back to nature, i.e., Canada's woods, water powers, productive soil and ocean and rivers for transport.

Some Paper Topics.

The slightly improved business appears to be still maintained, though the volume is far below the standard that might be expected at this time of the year under normal condi-tions. There is, fortunately, accumulating evidence that prices are rapidly approaching the post-war standard of stability, if, indeed, that much-desired period has not already become an attained fact. It is very doubtful whether any other type of manufactured goods has receded in price at the same rate and to the same extent as paper. Without a question the privileged treatment accorded to incoming paper by the Government has been responsible for the landslide. However, the signs are multiplying to show that stability point is at hand. Makers of high-class papers are holding firmly to their prices, with very good reason, for the costs of the material and chemicals which go to the make-up of quality stock show no tendency to become less.

It is a feature of the market that all the tumbling in prices has been confined to foreign stuff and the commoner grades of English papers. The better class stock has not been affected in like degree. Excepting for a few named papers sold by profiteers, the war price charged for T.S. stock was never unreasonably high. The bulk of the big profits was made on low quality papers. Consequently there has been much greater leeway for the fall in the case of the lower qualities. There are the case of the lower qualities. quite a number of brands of T.S. writing papers which have not suffered a reduction in price since the Armistice was declared, and we believe it to be a fact that all hand-made papers are still listed at their war-time figures. This by no means infers an unduly high present-day price, for by comparison the same papers work out cheaper in proportion to lower grades than they did in pre-war We are assured that the ratio of profit on high-grade paper is less to-day than it was either during or before the war. In fact, one of our best known houses has in preparation a list of advanced prices for their papers.

Among other prices which have passed under our notice these last few days are the tollowing: News offcuts, £36 per ton; common printings, 4d. per lb.; fine printings, 5½d. per lb.; S.C. litho., 5½d. per lb ; railway buff, 5d. per lb.; foreign glazed tinted, 5½d. per lb.; antique printings, 5d. to 7d. per lb.; esparto writing papers, 6½d. per lb.; Scotch esparto printings, 7d. per lb.; bleached greaseproof, 9d. per lb.; unbleached greaseproof, 7½d. per lb.; genuine kraft, 59s. 6d. per cwt.; English kraft and M.G. sulphite wrappings, 56s. per cwt. Dutch strawboards are still quoted £16 and £16 tos. per ton, with extra for heavy weights or lining.

Waste paper is no longer the requirement that it has been during the war. Despite the loud outcry for permanent conservation of waste, there has always been the feeling in practical circles that except for the com-

monest grades of paper, waste stock was a war measure only. Its influence has always been towards deterioration-we refer strictly to common waste—and its presence in a paper has coincided with a reduced real value. Now that wood pulp is reasonable and abundant, mills are leaving waste stock of the lower grades to the manufacturers of brown wrapping and common printings. The consequence is that the war-time schedule of minimum and maximum prices has fallen to pieces. Only the best firms are willing to give anything at all for common waste, and it is quite to be expected that within a very short time the value of waste stock will be very little removed from pre-war standards. H. A. M.

Parchmentised Paper.

Mr. Walter Dagnall, of 26, Sandy-lane, Hampton Wick, Middlesex, manufacturer, has been granted a British patent covering "an improved process for the manufacture of parchmentised or like paper," The object of the invention is to treat paper so as to render it like parchment and waterproof, acidproof, and of great strength. The inventor uses two baths of different strength—the first of a specific gravity of 1.700 to 1.800, and the second commencing with a specific gravity of 1200 to 1400 at 60 degs. F., according to the quality and texture of the paper to be treated. The thicker the paper the greater the strength of acid required. The paper is then washed, and afterwards taken through an alkali bath and again washed and softened in any known manner, either by glycerine, calcium chloride, salt or the like, during which further process the paper or parchment can be loaded with any suitable material or mineral earth. In carrying the invention into practice. the paper is first taken from the reel into the first acid bath, which is kept cool and is then squeezed, passing under rollers to the second bath, which is also kept cool, and again squeezed through rollers. Spraying and washing follow to remove the acid, and after the application of rollers the paper is passed through an alkali bath to take out any remaining acid that may be left in the paper. Further treatment by rollers and spraying is then applied and, if necessary, a softening bath, the paper being finally dried, calendered, and cut up ready for market. For some makes of paper sulphuric acid is mixed with water to register 1.800 at 60 degs. F., sulphurous acid being added to reduce it till it registers 1.700 to 1.750 from the first bath, and 1.200 to 1'400 for the second.

If is claimed that by this process papers can be treated more thoroughly and quickly, and at the same time are more thoroughly parchmentised; hence a greater quantity can be treated, resulting in economy and cheaper working. Furthermore, it is held that the parchment paper is better owing to its not being brittle.

Important Notice.

It will interest the Printing Trade to know that the English Branch of Ch. Lorilleux & Co. has been amalgamated with the firm of Morris & Bolton, Ltd., as from March 31st, 1919, and that the business will in future be carried on under the title of LORILLEUX & BOLTON, Ltd.

The principal object of the amalgamation is to gain additional strength to meet the inevitable Foreign competition in the future, and to endeavour to secure the premier position in the world's markets.

The fusion of these two progressive businesses will enable many improvements to be effected, and the combined resources and experience of the two houses will enable LORILLEUX & BOLTON, Ltd., to offer the trade adequate supplies of all kinds of Printing Inks of exceptional quality and value.

Ch. Lorilleux & Co. and Morris and Bolton Ltd. thank their customers for past favours, and trust that the confidence and support extended to them in the past will be continued to

11, 17 & 18, Tooks Court, Furnival Street, E.C. 4.

A Plaien Dodge.

The greatest time-savers are the simplest, says a writer in the Inland Printer. As an illustration, the platen pressman was rooting feverishly through an accumulation of extension grippers, bent brass rule, string, cork, etc., in his private collection of make-shifts. The coloured label job he was making ready, with its invisible gripper margins, solid cut in the centre, and ink as tacky as a can of mucilage, "had him going." Besides, the extra thirty minutes spent in tying an intricate pattern of string and dangling corks on to the grippers were wasted. The sheet still refused to part company with the form promptly enough to allow the rollers a clear course. He was nearing his wits' end when a trump idea, concealed in a small oblong package, carrying with it the boss's compliments, was sent to him from the front office.

The package proved to be a complete assortment of narrow rubber bands, ranging from four inches in length by one eighth inch wide up to a giant sixteen-incher. Ten minutes afterwards four of the bands of suitable length were in place, and the job was running. And it was the simplicity of the thing that ap-

pealed to the press-room force.

Two or three rubber bands, judiciously placed, we found would draw the flimsiest sheet gently, and with a human-touch motion, away from the most leech-like form; whereas the rigid grippers and taut string had attempted to jerk the sheet away, with disastrous results. Bands longer than nine inches, we also found, having a width too great for practical use, could be slit into half and quarter inch widths. A rubber band could be safely stretched to approximately one and a third times its normal length. A band sixteen inches long, slit into four quarter-inch widths, made excellent labour-savers, stretching easily across a twenty-two inch form. And, further, the rubber bands could be snapped into place instantly, always kept taut, did not work down the grippers, and, because of their gradually increasing yet resilient pull, had an action that was peculiarly suited to the purpose, and one that could not be obtained with any other device.

But it was while experimenting with the rubber bands that the pressman discovered the greatest little time-saver of them all. This was a coil of fine tabric-covered elastic cord, that may be bought in any dry-goods store under the name of hat elastic. It has a diameter of six points, and can be worked between display lines where the space is equal to eight points. It can be cut to any length, knotted as easily as string, and, when made into an endless band, is ready to slip over the grippers at a moment's notice. In fact, it became common practice, on the average run of small jobs, to eliminate entirely the time usually spent in adjusting grippers. These were locked at the extreme ends of the platen; two elastic cords, slipped over the grippers, were constantly in place, and as each job was put on the press the elastics

were quickly set in place by sliding them up or down until they gripped the top and bottom of the job, or sometimes one cord between two display lines, when no further adjustment was necessary.

Japanese Competition in France

The Marseilles correspondent of Le Papier contributes an interesting article to that paper on the influx of Japanese goods, and in particular paper goods, into the Southern port, an index, as he reads it, of a more formidable bulk of exports yet to come from the land of the Mikado. He considers the footing the Japanese had already obtained before the war is being strengthened by the quiet unostentatious methods they pursue. Every week five large Japanese ships arrive at Marseilles, loaded with varied merchandise, and from this June the number of vessels will be increased. As to the consignments of paper, in December a boat from Yokohama landed 50 cases of laid paper, in January 200 were brought over, and in February 1,200 cases and 400 parcels, containing all sorts of paperpainted, Bristol, news (not on reels), poster. etc. The last arrival from Kobé brought, for the first time, a large quantity of letter paper and envelopes. These papers, according to information received, are much cheaper in price than the French, in spite of the rise in The importation has not as yet freights. reached great importance, but it is a beginning, which, the writer suggests, it is as well for French commerce to note, for henceforth there will be a new competitor to meet, and one who may, any day, flood the market with his products. In Japan raw material abounds in considerable quantities, and the forests are intact. Furthermore, the many textiles which the Japanese have at their disposal permit them to prepare abundant quantities of the various sorts of celluloses necessary for their paper works.

Another Spicer Invention.

A British patent has been granted to Mr. Albert Dykes Spicer and Messrs. James Spicer and Sons, Ltd., of 50, Upper Thames-street, E.C.4, for improvements in and relating to the production of composite sheeting and articles formed from sheet material. The object of the invention is to provide an improved composite sheeting suitable for use in substitution for metal plate in the construction of roofing. panelling and the like, and in the construction of utensils or vessels adapted to contain solids, liquids, or gases and other articles. According to the invention, the composite sheeting comprises a sheet of vulcanised fibre or an equivalent parchmentised material roughened, perforated or otherwise treated to ensure satisfactory connection between the material and rubber, and a layer of rubber. preferably in the vulcanised state, securely connected with the vulcanised fibre.

French Papers During the Occupation

Even under the German occupation romance -the romance of achievement under peril and difficulty-still flourished, and the venerable and honourable work of the printer was maintained alike in Belgium and the Northeastern portion of France. In Belgium La Libre Belgique bravely flaunted its clandestine wings right in the face of the Huns' oppression and inquisitions, and round Lille and Roubaix, in France, several organs were printed, notably La Patience, edited, printed and owned by Monsieur Joseph Willot, a chemist of Roubaix and a professor of pharmacology at the Catholic University at Lille, assisted by Abbé Pinte, a professor at the Technical Institute of Roubaix. Monsieur Pinte had managed to instal a wireless station, where he received messages, day and night, from the Eiffel Tower, Paris, and the English wireless station of Poldhu. This news was then typed and communicated to a circle of friends. Monsieur Willot circulated it in Roubaix and passed it on to Lille, carefully hidden in a match-box or a secret pocket of a pocket book. At Roubaix a business man, Monsieur Firmin Dubar, had brought together these items of news and inserted them in the Journal des Occupés Inoccupés (which title is a light play upon words, rather difficult of translation) at the end of December, 1914. This review was at first fortnightly and then weekly, only a few specimens being printed. Monsieur Willot took the undertaking in hand and developed it so as to reach a larger public. On February 16th, 1915, various well-known inhabitants of Lille found the first copy of a new journal, La Patience, had been lest at their houses. Its dimensions were at first somewhat modest, and it was copied on a Roneo machine. Only about 250 specimens being thus reproduced. In March of the same year the paper was printed, with great secrecy, by Monsieur Willot himself on a press lent by the Journal de Roubaix. It was changed to a daily in February, 1916, with a circulation of 600 to 700 copies. The contents of the paper were essentially patriotic, diplomatic and military events were narrated in it and the population was invited to resist the requisitions of gold, metals and labour for military purposes. Unfortunately, in consequence of indiscretions, the review had to change its title, and became L'Oiseau de France (The Bird of France). It was understood to be printed at the National Printing Works and transported thence by aeroplane. The Germans were incensed at the great success attained by this publication, and determined on its sup pression. Messieurs Willot, Pinte and Veber were therefore arrested in April, 1917, and condemned to ten years' imprisonment, and confined in the fortress of Rheinbach. The fined in the fortress of Rheinbach. armistice happily put an end to their term of durance.

America's Foreign Paper Trade.

The Monthly Summary of Foreign Commerce of the United States, covering the first full month since the armistice was signed, shows that the total exports of paper and manufactures of paper for December amounted to \$6,180,626, which was a considerable gain over November, when the figures amounted to only \$5,705,729. The figures for December a year ago, however, amounted to \$6,427,413. The total sales of paper and manufactures of paper for the twelve months ending with December amounted to \$54,169,821, as compared with \$46.393,655 for the same period in 1917 and \$39,576,879 in 1916. The export of newsprint paper for the month amounted to \$527,122, as compared with \$617,522 for November and \$993,994 for December a year ago. The export of news-print for the twelve months ending with December amounted to \$7,978,539, as compared with \$7,586,374 for the same period in 1917 and \$4,126,617 in 1916. The foreign sales of wrapping paper for the month of December totalled \$576,464, as compared with \$477,634 for November and \$609,814 for December a year ago. foreign sales of this commodity for the twelve months ending with December amounted to \$4,828,850, as compared with \$3,987,239 for the same period in 1917 and \$4,025,388 in 1916.

The exports of writing paper and envelopes for December amounted to \$731,924, as compared with \$753,660 for November and \$567,945 for December a year ago. The foreign sales of writing paper and envelopes for the twelve months ending with December amounted to \$6,113,498, as compared with \$3,636,235 in 1917 and \$2,490,055 in 1916. The sales for abroad of paperboard and strawboard for December totalled \$445,213, as compared with \$351,293 for November and \$322,056 for December a year ago. The exports of these goods for the year ending with December amounted to \$3,055,255, compared with \$2,232,135 in 1917 and \$1,924,105 in 1916. The exports of toilet paper and tissue paper continued about the same as for the preceding month. The figures for December amounted to \$200,597, as compared with \$213,956 for November. The exports of this commodity for the twelve months ending with December amounted to \$1,443,578.

The total imports of paper and manufactures of paper for the month amounted to \$3,929,797, as compared with \$3,696,525 for November and \$3,955,429 for December a year ago. The total imports of paper and manufactures of paper for the twelve months ending with December amounted to \$42,753,780, as compared with \$41,734,084 for the same period in 1917 and \$28,189,998 in 1916. The imports of printing paper and book paper valued at not above 5 cents per pound amounted to \$3,247,086, as compared with \$3,121,949 in November and \$3,200,793 a year ago in December. The imports of printing paper of this variety for the twelve months

ending with December amounted to \$35.023,161, as compared with \$30.959,628 for the same period in 1917 and \$15,527.748 in 1016.

The imports of mechanically ground wood pulp for the month amounted to \$393,638, as compared with \$458,153 for November, and \$617,276 for December a year ago The imports of ground wood for the twelve months ending with December amounted to \$4,729,036, as compared with \$7.991,368 for the same period in 1917 and \$4,696,801 in 1916.

The imports of chemical pulp for December reached the total of \$2.545.431, as compared with \$2,366,207 for November. The figures for December a year ago amounted only to \$1,166.332. The imports of chemical pulp for the twelve months ending with December amounted to \$24,944,607, as against \$29,284,580 in 1917 and \$19,227.973 in 1916.

Printers' Medical Aid.

Steady Progress of a Useful Institution.

The Printers' Medical Aid and Sanatoria Association continues to make steady progress in its useful work, and it has recently entered into new and enlarged offices at 30, Fleet-street. With the view of recognising the occasion, what was called "a little dinner" was held last Thursday night at Stone's Restaurant, Broadway, Ludgate - hill. Mr. O'Connor, the vigorous and enthusiastic secretary of the Association, made excellent arrangements for the company, which included several very well-known in the printing trade. The Right Hon. C. W. Bowerman, M.P., president of the association, presided, with Mr. William Vandy, chairman of committee, in the vice-chair, and among those present were the Right Hon. G. H. Roberts, M.P., Minister of Food, Mr. A E. Holmes, secretary, National Printing and Kindred Trades' Federation, Mr. T. E. Naylor, general secretary, L.S.C., Mr. G. A. Isaacs (N.S.O.P. and A.), Mr. Wilson Howes, Mr. Stevens, and Mr. John Stokes.

The Association's Work.

A thoroughly good entertainment was provided, an excellent dinner being followed by a programme of music and some interesting toasts. The chairman, in proposing the toast of the P.M.A., said they were there that night to congratulate themselves on the success of the movement. Starting from small beginnings, as it did, it had developed beyond the expectations of the originators, who hardly knew how well they were building. They knew there was a need for an association of that kind, but none of them expected eleven years ago that it would grow to the extent it had. Last year nearly 8,000 letters were issued through the London office, and

that with a staff of only one paid official—a very active, energetic and zealous young fellow. (Laughter and applause.) All the other work was characteristic of the printing trade, being voluntary, which he thought was one of the marked features of the craft. Wherever they found printing, whether in this country or in America, it was a gratifying feature to note the amount of voluntary work men were ready to undertake

To Help Their Fellow Craftsmen,

and the P.M.A. was a case in point. members of the committee had to meet many times during the year, but they were content to place their energies at the disposal of that association, rendering excellent service. Then there were 145 convalescent homes letters, which meant a great deal to the men and women who received them; over 1,500 surgical appliances of various kinds; 4,600 pairs of spectacles; 1,520 special letters for special hospitals; while 118 first-aid boxes were placed in various offices, and no fewer than 4,900 The income recases had to be attended to. ceived last year amounted to 3,000, and the expenditure amounted to just over £2,900. That in a nutshell, said Mr. Bowerman, was the work the association was doing, and it was spreading its influence.

Widoning Usefulness.

Branches were being established outside London, and he had no doubt if the secretary was given the time he would be able to link up the important printing centres of the country. The work of the association, he was sure, was one which commended itself to every member of the printing craft. It was done at an insignificant contribution of a penny. Those who received the benefits of the association were not getting what was commonly called "charity," but something for which they subscribed; but the members subscribed, not because they thought they might need assistance, but as printers the world over did, in order to benefit somebody

else, although, of course, it sometimes happened that the subscribers themselves were obliged to seek help.

Mr. Vandy's Work.

Mr. Bowerman then proceeded to acknowledge the amount of voluntary work which Mr Vandy had put in in connection with trade philanthropy. It would be interesting to know the scores of benefits for which he had been either the secretary or chairman, extending over a period certainly of more than thirty years. (Applause.) Mr. Vandy's work had never been recognised except through the hearts and by the words of men and women; there had been no recognition of those valuable services in a way that he (Mr. Bowerman) liked to see them recognised.

The toast, which was coupled with the names of Mr. Arthur O'Connor and Mr. Vandy, was enthusiastically received.

The Secretary's Reminiscences.

Mr. O'Connor replied in a characteristically humorous speech. He recalled how the conference eleven years ago decided by the narrow majority of one to form that Association, and mentioned the various difficulties they had to contend with, such as the strike of 1911, the Insurance Act, and so on, and other events which were milestones in the history of the Medical Aid. He said that following the appointment of a paid secretary the income nad increased, until now it was £3 coo. (Applause) It was exceptionally satisfactory that the working expenses only amounted to a percentage of one fifth of • a penny throughout their career, which showed they were giving really good benefit.

In the early days of their movement they were told they would be a danger to other trade organisations, but instead, with a healthy competition, other organisations had flourished. They had been threatened with libel, and actions and imprisonment, but they managed to dodge that, and were doing well. (Laughter.)

He was hopeful that the income would be over £4,000 next year, and that they would continue to progress in the same direction. He remarked that that festive gathering was due to a few friends, and he hoped that it would be repeated, or they might blossom out into a large festival dinner. (Applause.)

A Housewarn ing.

Mr. Vandy, who also replied, said it was a very great privilege for him to work for the Medical Aid Association. He was in his element when he was doing that kind of work, because nothing gave him greater pleasure than being able to do his little bit for the good of his fellows (Applause.) There was no finality to the work of that Association, and he pointed out that from the time they opened their doors in the morning until they closed them at night there was a continual disbursement of good things, and this was an illustration of what a few men could do. He acknowledged the assistance which they were receiving from the ladies, who were now associated with them. He described that gathering as really a "house-warming," to celebrate their entry into their new offices. Carlyle had said, "Infinite is the help that man can give to man," and they exemplified that in the P.M.A. They could not form any idea from the reports of the real value of the work they did, which he hoped to see extend until even the present premises were too small for them.

The Food Minister Speaks.

Mr. G. H. Roberts, in proposing the toast of "The Press," said he was glad to be among his printer friends once more, and he desired to congratulate the officers and committee and all the Association on the great work they were performing. Men and women who were engaged in this sort of work were giving the real charity, and earned the appreciation of those to whom they extended help. He was one of those who believed that as a flower could not blossom without sunshine, so a man could not live without love. That society was doing substantial work for the betterment of their fellows. Mr. Roberts went on to refer to the incidence of tuberculosis in the printing trade, which at one time had the highest rate of mortality for that disease. His friend Mr. Isaacs reminded him that despite the great improvements which had been made in the sanitary arrangements of our printing offices, the disease still levied high tribute upon working printers. He was optimistic enough to believe that some of the things that were happening in our day and generation were helping them to deal in very substantial fashion with that fell disease, improving as they were the standards of life of their class. Speaking of the work of the Association particularly, Mr. Roberts said they took hold of the afflicted and helped them to the best treatment possible, and he held that if they only saved a few lives, then the money that had been expended had been well spent and represented the highest form of charity without any taint or degradation, because it was charity born of the heart and with a desire to do something on behalf of those with whom they were associated.

Mr. Roberts also expressed his pleasure at seeing the ladies present, and remarked upon the value of their support in any work of that kind. He concluded with a tribute to the value of the press, pointing out that the press could not exist without the printers, and that the printers could not be successful without the press.

Mr. F. W. Bridges, in acknowledging the toast, said the trade press were always ready to help the craft in any direction, and especially in those changing times it was necessary that the members of the craft should read their trade journals.

Mr. T. E. Naylor proposed the toast of the visitors, and particularly included "The Ladies."

The Shorter Week.

Mr. John Stokes, in the absence of Mr. G. H Stuart Bunning, O B.E., J.P., responded to the toast, and spoke of his long association with the printing press. As chairman of the directors of the Twentieth Century Press he mentioned that they had the honour to institute, only a few weeks ago, the 44-hour week, thus keeping right in the van, as they had done every since their establishment. Before long he hoped the whole of the printing trade would enjoy the privilege, in fact the right, of working normal hours. He was glad to hear how that society had grown, and he mentioned how great a gain it was, compared with the old forms of charity to which the members of the craft had to go.

Mr. Bowerman's Popularity.

Mr. A. E. Holmes proposed the health of the chairman in a very happy address, in the course of which he described the unique position which Mr. Bowerman held in the printing trade. The chairman, he said, had a monopoly of the goodwill of the printing trade. Wherever they went they found him in the chair, and he was always most active on behalf of their fellow-craftsmen. The compliment which Mr. Bowerman had paid to Mr. Vandy could very well be paid by Mr. Vandy to Mr. Bowerman. Mr. Bowerman had been an asset to the printing trade.

Mr. Bowerman suitably acknowledged the

toast.

The programme of music provided during the evening was exceptionally good throughout. After Mr. Joseph Batten had opened at the piano, Mr. Powell O'Connor, son of the secretary, delighted the audience with his fine baritone singing. Miss Hetty Rains and Miss G. Tonge presented some very acceptable soprano numbers, and the humour of the evening was well sustained by Miss Susie Welsh, Miss Mollie Mercer, Mr. Fred Emerton, and Mr. Rowley Cowper.

The comfort of the company was well looked after by the stewards, Messrs. J. C.

Mead and G. T. Richards.

Italian Paper Progress.

At the annual general meeting of the Association of Paper Manufacturers held recently at Milan, an interesting account was given of the improvements to be made in the Royal Experimental School for the Study of Paper and Vegetable Textiles. Some time ago measures were set on foot to enlarge the School. We now learn, says the Industria della Carta, that these measures, pushed forward vigorously, are now almost complete, and that their objective may be said to be reached. The Ministry of Industry has promised annual contributions for the maintenance of the School, and to this maintenance, by virtue of a decree of 1917 concerning protessional instruction, only members of the paper and cotton trades shall be entitled. The programme of the School, drawn up by the Director, Professor Levi, stipulates the provision of a new building as a first necessity.

To secure the initial capital, paper and textile manufacturers are invited to give contributions, and many very large contributions have been made from leading men in the trades. The new institute will be of a national character and will be unique in Italy. Notwithstanding the difficulties of the present period, business men have not hesitated to give royally to the foundation of an institute which will certainly be an object of pride to the national industry. Dr. Levi, the Director of the Experimental School, has spared no pains to bring to a successful termination the scheme, whence the Italian paper industry will derive indubitably immense advantages. To this institute, which will be able to dispose largely of money, personnel, machinery and apparatus, all members of the trades in Italy will be able to go. Thus, it is pointed out, the need is recognised for industry to attain, by means of guiding science, new methods of development in its technical and economic relations.

The Training of Apprentices.

The Ministry of Labour has issued particulars of a scheme which has been prepared by a joint committee of the Master Printers' Federation and the Printing and Kindred Trades Federation, as representing the associations of employers and of workpeople in the printing and allied trades, and approved by the Minister of Labour. The following is the text of the scheme, which does not apply to Scotland:—

This scheme shall come into force on and as

from January 1st, 1919.

I. The scheme shall relate to the following skilled trades in the said industry:—

Electroty pers and stereotypers, letterpress printers, lithographic trade, paper machine rulers, printers warehousemen and cutters, pattern card makers.

In the above schedule the trades named are

taken to include:-

Compositors (including machine operators), lithographic printers and/or transferers, lithographic artists, lithographic designers, lithographic music printers, engravers, process work is (including (i) line operators, (ii) half tone operators, (iii) etchers, (iv) provers, letterpress machine minders.

The provisions of the scheme shall apply

equally to all these trades.

2. The following shall be recognised as apprentices in these trades under this scheme, on production of satisfactory proof of training prior to enlistment:—

(a) Those who were serving under indentures.

entures.

(b) Those who were serving under written agreements.(c) Those who were serving under the

usual custom of the trade concerned. 3. No apprentice shall be entitled to State

assistance under this scheme who was in the last year of his service on the date of his enlistment, unless for special reasons the Minister of Labour otherwise determines.

4. The employer shall undertake:

 (i) To give to the apprentice such training as will enable him to become a skilled workman;

(ii) To comply with the provisions of this

scheme.

5. Every employer training an apprentice, and every apprentice being trained under this scheme, shall enter into an agreement to complete the training in accordance with the

agreement attached hereto.

6. The period of training required to be served by an apprentice to complete his apprenticeship shall be reduced by one half of the period of service in H.M. Forces, provided that such reduction shall not exceed one-half of the unexpired period of the original apprenticeship.

7. The training under this scheme shall be continuous. It shall consist of training in the employer's establishment, and/or, if found desirable, of part-time or whole-time training

in a technical institution.

Where after the apprentice has commenced his training in accordance with this scheme, he desires to receive training in a technical institution, application may be made by him or on his behalf to the Minister of Labour, who may (with the consent of his employer) arrange for such training, if this can be provided. The period of training in the technical institution shall be decided on the reports reports received from the institution on the work of the apprentice, but shall in no case exceed forty weeks where such training is whole-time or an equivalent of forty weeks whole-time training, where such training is part-time.

8. Where whole-time training in a technical institution is provided, the period so spent shall be counted as part of the training in the employer's establishment, so that the time spent in a technical institution shall be equivalent to the time spent in the employer's

establishment.

9. Where during his war service an apprentice has worked at his trade or at work of a similar nature, whether in a technical unit or otherwise, the whole of the time so worked shall count as part of his apprenticeship.

10. Payments made to apprentices under this scheme shall consist of wages paid by the employer and allowances paid by the State, and shall, subject to the exceptions set out below, be such as to secure to them the stated proportions (see below) of a fully qualified workman's rate (including war bonus, if any) prevailing in that trade and district hereinafter referred to as the prescribed rate.

11. The following allowances shall be paid

by the State :-

(i) A "wages allowance" payable in respect of training in the employer's establishment at the rate of one-third of the prescribed rate per week. No such allowance shall be paid to any apprentice:—

(a) Until he reaches the age of 19.

(b) For a longer period than two years.
 (ii) A "maintenance allowance" in respect of training in a technical institution which shall be at the following rates:—
 SINGLE MAN.

Maintenance allowance

of 33s. a week.

If living away from home, and where necessary, a dependent's

allowance of ios. a week.

MARRIED MAN.

Maintenance allowance

of 33s. a week.

Children's allowance ist child

Children's allowance—
other children ... 3s.

If living away from home, an allowance

... 12s. 6d

Where part-time training is arranged the allowance shall be in proportion to the number of hours spent in such part-time training. No maintenance allowance shall be made where attendance involves no reduction of the wages paid by the employer.

(iii) A "Fees Allowance" to cover the fees charged to apprentices who are receiving training in a technical institution, to an amount to be determined by the Minister

of Labour.

12. Wages shall be paid by the employer to the apprentice for the time in which he is employed in the employer's establishment at

the following rates:—

(i) Until an apprentice reaches the age of 19 the wages now paid in that trade and district to apprentices who are in that year of training which would have been reached by the apprentice had his apprenticeship not been interrupted by service in H.M. Forces.

(ii) Subsequently the following rates of wages according to the length of the subsequent period of training to be

served :-

For the first year of this period of training three-fourths of the prescribed

For the remainder of this period of training five-sixths of the prescribed rate.

Note.—The rates prescribed in (ii) above are inclusive of the allowance payable by

the State in terms of Clase 11 (i).

13. Where a period of training is given in a technical institution such period shall be counted as part of the training in an employer's establishment for the purpose of calculating the rate to which the apprentice is entitled so that the time spent in such technical institution is equivalent to the time spent in an employer's establishment.

14. Nothing in this scheme shall prevent an

employer from paying an apprentice:—
(i) A rate of wages higher than that set out

above; or

(ii) Any additional sum by way of bonus for efficiency, good time-keeping, etc., and such further payments shall not

affect the amount of wages allowance payable by the State.

15. At the close of his period of training as defined in clause 6, the apprentice shall receive the prescribed rate for a skilled workman in his trade and district.

16. The prescribed rate under this scheme shall be the prescribed rate as laid down in the Wages (Temporary Regulation) Act, 1918.

17. If any question, other than a question of the determination of the prescribed rate or of the payment of any allowance payable by the State, arises as to the application of this scheme to an individual employer or an individual apprentice, or if any dispute occurs between the employer and apprentice, the Minister of Labour shall on the request of either the employer or apprentice refer the question or dispute to the local advisory committee of the employment exchange for the district, who shall arrange for the determination of such questions and disputes occurring in that trade by panels representative of associations of employers and of workpeople connected with the trade or branch of industry concerned and the decision of such committee or panel shall be final; or in the event of such committee or panel being unable to come to a decision, by a single arbitrator appointed by the Minister of Labour.

18. (i) Nothing in this scheme shall give any person an absolute right to an allowance payable by the State under this scheme, and the decision of the Minister on any question affecting qualifications for, or the amount of, any such allowance, shall be final.

(ii) The Minister may, at his discretion, discontinue the payment of, or vary the amount of any allowance payable by the State, if in his opinion the training which is being received by the apprentice is not of a satisfactory nature, or that the apprentice through want of industry or otherwise, is not benefiting in any reasonable degree by the training.

A form of agreement between the employer and the guardian of the apprentice accompanies the scheme.

Personal.

THE Controller of H.M. Stationery Office, Mr. W. R. Codling, is to be the guest of the London Master Printers' Association at the monthly lunch at the Holborn Restaurant on May 21st. Mr. J J. Keliher, president of the Association, is to take the chair.

Previous to the closing of the Press Bureau Mr. F. H. Meade, the secretary, wished the assembled Pressmen good-bye and good luck, and referred with appreciation to the amicable relations which had existed between them

Mr. A. V. Anderson, who has had charge

of the issuing of communiqués, etc., was presented with a suit case and clock.

A CLOCK was also given to Mr. T. E-Popkins, the acting office-keeper, and silver match-boxes were also presented to the telephone supervisors and switchboard attendants.

MR. H. W. Panfold, the Press representatives' secretary, was presented with a silver cigarette cabinet, and his assistant, Mr. L. A, Wood, with a walking-stick.

THE HON. HAL PATESHALL COLEBATCH, who has just succeeded Sir H. B. Lefroy in the Premiership of the State of Western Australia, has been engaged in active journalism in Australia all his working life, and is the editor and proprietor of one of the most influential newspapers in the State of which he is now the political head.

The new Premier has two sons in the Australian Imperial Forces, and they have both been on active service on the Western front, where one was badly wounded.

FOLLOWING the series of presentations made to him at Doncaster, Mr. D. B. Campbell, late of the publishing department of the Sheffield Daily Telegraph and allied journals, was at Barnsley the recipient of a handsome case of pipes and a piece of Sheffield plate, the gift of the managers of the Sheffield Telegraph branch.

MR EDWARD PRICE BELL, London editor of the Chicago Daily News and doyen of the American Press in London, is to be entertained at dinner at the Carlton Hotel this (Thursday) evening.

MR. A. F. BLADES, president of the Federation of Master Printers, will preside at the seventh Cost Congress, at Blackpool, on May 27th, and at the annual meeting of the Federation on the following day.

MR. JOHN SEVER is chairman of the reception committee, and full arrangements have been made for an enjoyable and profitable time.

MR. E. H. BERRYMAN presided at the monthly meeting of the Printers' Managers and Overseers' Association on Tuesday, a report of which will appear next week. We are sorry to learn that Mr. Berryman's health is not satisfactory.

The president (Mr. Berryman), Mr. E. C. Moyce, and Mr. J. C. Pugh were elected as delegates to the conference on June 7th.

MR. E. C. MOYCE, in recognition of his 21 years as secretary, is to be presented with an illuminated address and a gold watch and chain in the course of the social evening which will follow the delegate meeting.

Trade Notes.

The Antwerp newspaper proprietorshaving come to terms with their printers, newspapers are again appearing in that city.

THE Press Censorship in Canada ceased on April 30th. The former regulations remain in force, but the responsibility for compliance rests with the publishers.

An original autograph copy of Tennyson's "Maud" brought £400 at a book sale in New York. The copy contained several alterations and deletions of importance.

FIFTEEN German journalists accompany the German peace delegates to the Peace Conference. Among the papers represented are the Berliner Tageblatt, Vorwaerts, Neue Mittagszeitung, Vossische Zeitung and the Frankfurter Zeitung.

PURCHASERS of wall-paper will be delighted to learn that manufacturers have agreed on a reduction in the price of medium and low grades. The highest priced hangings affected by the new schedule are those at 2s. 9d., which drop 3d., and the lowest fall from 2s. to 1s. 6d.

In the Bow County Court, last week, Judge Graham told a Leyton printer's manager that he did not believe his story that he could not get work, as there was plenty of work going begging for those who would look for it. The printer's manager said that he was not wanted, as he was 59 years old.

LAST week an order to leave India was served on Mr. Horniman, the editor of the Bombay Chronicle. He was at once placed on board a steamer for England. An order was also served on the directors of the Bombay Chronicle requiring them to submit all their matter to the Government before publication.

An account of the effects of the bomb dropped from a German aeroplane on the premises of Messrs. Odhams, Ltd., printers, Long-acre, has been prepared by the chairman of the company for the information of the shareholders, and is issued as a pamphlet. The official figures gave 35 deaths and nearly 100 injured.

MR. RONALD ELDRIDGE and Mr. J. W. Beebe have resigned their positions as director and works manager and secretary and advertising manager respectively, of Messrs. James Collins and Co, Ltd., printers, etc., Southgate, Manchester, and have entered into partnership and commenced business under the style of the Palatine Press, 40 and 44, Tonmanstreet, Manchester.

OWING to the increased cost of living, printers of Montreal, Toronto, and Ottawa are presenting a claim for higher wages. The present scale in the job offices in Toronto is \$24 per week. In Windsor, Ont., the printers recently received an increase of \$8 per week, and it is stated that the Typographical Unions of Ottawa, Toronto and Montreal will ask for \$32 per week.

At a meeting of the Newspaper Conference, representing the London and Provincial Press, a vote was passed congratulating Viscount Burnham upon the honour his Majesty has conferred on him, and it was unanimously decided to present his lordship with his portrait in oils as a token of the high regard and esteem in which he is regarded by his colleagues.

On Thursday last a memorial service was held at St. James's Church, Garlick-hill, for those fallen in the war connected with the house of Messrs. J. Spicer and Sons, Ltd. The Rev. B. Saunders Lloyd, R.N., officiated, and the lesson for the day was read by Sir Albert Spicer, the chairman of the directors. A total of 323 members of the firm joined the colours, and of these 38 have made the great sacrifice.

A SEAPLANE carrying newspapers for delivery at Margate, Westgate, and other places on the Kent coast, left the Thames at Westminster-bridge on Saturday. The machine was piloted by Mr. Sydney Pickles, the well-known airman, who is entered for the Atlantic flight. It was towed to Westminster-bridge, where it went up the river under Lambeth-bridge, made a splendid rise, and flew away eastward.

AT a meeting of the National Joint Board of Retail Newsagents, held last week, it was reported that nearly all the organised trade of Great Britain and Ireland had, either by ballot or at annual meetings, declared overwhelmingly in favour of national unity. A conference is to be held at Leicester on July 9th when the new National Federation of Retail Newsagents, Booksellers and Stationers will be definitely formed.

MR. GEORGE HENRY DAVIS, who was wellknown as the outdoor representative of the Religious Tract Society's Magazines, died at his residence. Palmer's Green, on Saturday, from cerebral hæmorrhage, aged 54 years. For some years he was with Mr. Elliot Stock, at 62, Paternoster row. Then for health reasons he went into business at Bexhill. After a time in that seaside town he disposed of his business and returned to London, entering the service of Mr. Thomas Brown, the advertising agent. Afterwards for Messrs. Marshall Brothers he canvassed for advertisements for the Life of Faith. He left Keswick House in 1900 to do similar work for the R.T.S. publications, at 4. Bouverie street. This he continued successfully, until some few weeks before his decease. He leaves a widow. a daughter, and a son who has just returned from service at Salonica.

PRINTERS' PENSION CORPORATION. — The Prince of Wales has consented to be present at the annual dinner of the Printers' Pension Corporation on May 30th, at the Connaught Rooms. In view of the fact that this year the proceeds will be devoted to the support of children of printers who have been killed in the war, the kindly action of His Royal Highness will be much appreciated. His Excellency the American Ambassador has also signified his intention of being present. Full particu-

lars about the dinner can be obtained from the secretary, Mr. Joseph Mortimer, at the offices, 20, High Holborn, W.C.

The death has taken place of Mr. W. E. Allen, managing director of the well-known firm of Messrs. David Allen and Sons, printers and theatre proprietors. Mr. Allen, who was 56 years of age, died suddenly the other day at his residence, Chipperfield, Herts, although at the time he was seemingly in his usual good health.

PRESS correspondents at Versailles are indignant at the limited accommodation provided and the restrictions that are put on their actions. Some of the arrangements are looked upon as insulting, especially confining the pressmen in a small barbed wire enclosure during one of the functions. British journalists especially resent the way they are being treated.

INDUSTRIAL RECONSTRUCTION COUNCIL.—The third lecture of the series arranged by the Industrial Reconstruction Council will be held in the Saddlers' Hall, Cheapside, E.C.2, on Wednesday, May 14th. The chair will be taken at 4.30 by Sir Lynden Macassey, and a lecture on "The Economic Limits of Nationalisation" will be delivered by Brigadier-General Cockerill, C.B., M.P. Applications for tickets should be made to the secretary, I.R.C., 2-4, Tudor-street, E.C.4.

A CONFERENCE on "Costing in Relation to Scientific Management" will be held under the auspices of the Industrial Reconstruction Council on Tuesday, May 13th, at 5.30 p.m., in the Hall of the Institute of Journalists, 2 and 4, Tudor-street, E.C.4. The chair will be taken by Sir Herbert Austin, K.B.E., and the address given by Mr. J. H. Bovd (Director of Costs and Efficiency Methods, Central Stores Department, Ministry of Munitions). This will be followed by questions and discussion. No tickets are necessary.

A NEW ZEALAND EXHIBITION.—It has been decided to hold an Industrial Exhibition in Christchurch, New Zealand, under the auspices of the Canterbury Industrial Association, probably about next November. At a meeting held to discuss this matter, it was decided that the Exhibition should be of goods solely of New Zealand manufacture, but that a special class should be set aside for the exhibition of certain goods which could be but were not being manufactured in New Zealand at the present time.

The jubilee issue of the Western Mail, Cardiff, to which we briefly referred last week, was a splendid production of 16 pp., containing the interesting history of that newspaper since its first issue fifty years ago. Half-tone illustrations and portraits adorned its pages, and there were also a number of appreciatory tributes from eminent journalists and others. The paper used for the issue was made by the well-known papermakers, Messrs. Thomas Owen and Co., Ltd., who have supplied the Western Mail with its paper for many years.

MR. JOHN EDWARD TAYLOR ALLEN, an expressident of the Federation of Master Printers and Allied Trades, and part proprietor of the Manchester Evening News, died on Tuesday, at Mobberley, Cheshire.

"THE MONTHLY STATEMENT," the house organ of Messrs. William Strain and Sons, Ltd., Belfast, is a bright little publication, very neatly got up, and well printed in two colours. The contents are wise and witty and form interesting reading.

Printing, Bookbinding & Kindred trades overseers' association.

There was a good muster of members of the Printing, Bookbinding and Kindred Trades Overseers' Association at the monthly general meeting held on Tuesday last at the head-quarters, St. Bride Institute, Bride-lane, E.C.4, the president (Mr. A. J. Daines) occupied the chair, and the vice-president (Mr. A. W. Hunt) supported him. The preliminary business comprised the reading of the minutes of last month's general meeting, which were duly confirmed.

The next item on the agenda was the election of the following new members:—Mr. W. H. Clapham (Oxtord University Binding House) and Mr. W. Loweth (Dangerfield Printing Co., St. Albans).

A proposal to hold a whist drive next engaged the attention of the members, and after some discussion it was agreed to put the matter off till the close of the year.

For the annual outing Mr. George A. Eden (secretary) and Mr. A. E. Harvey were elected stewards, and it was resolved to leave the arrangements in their hands, the matter to be brought up again at the next monthly meeting.

Mr. J. E. Dixon next proposed that a grant be made from the Association to the organisation for the support of the children of printers who had been killed in the war, and it was decided that a sum of £10 be granted from the Association's General Fund.

On the motion of the vice chairman the secretary was instructed to send to the family of the late Mr. W. Coffey a letter of condolence expressing the deep sympathy of the meeting.

The remainder of the evening was taken up by a little educational treat given by the president, who took for his subject one of the works of Eden Philpotts, namely, "The Secret Woman." He took his hearers through the story in the book, and examined in detail the various characters portrayed, making special allusion to the "Delirium of Jessie Redvers."

After a short discussion, to which Messis, J. Walker and J. Lee contributed, the proceedings terminated.

A FLAW in the foundation is pretty sure to be followed by a crack in the superstructure.

London Printers' Wages.

A MEMORIAL from the London Printing and Kindred Trades' Federation for 7s. 6d. advance in wages and heavy increases in overtime rates has been presented to the London Master Printers' Association. Following a special general meeting of the Masters' Association, held at the Holborn Restaurant, under the presidency of Mr. J. J. Keliher, a conference has been arranged for the two parties for to-day (Thursday). At the meeting referred to, the leading master printers pointed out the danger of forcing the prices of printing up to an extent which would result in considerable unemployment and in orders being placed abroad for both book and commercial work. Emphasis was laid on the

fact that the United States and Japan were already proving very formidable competitors and that orders are being placed locally by certain American firms which had hitherto come to this country for their advertising and commercial matter. We understand that in the case of one British firm alone hundreds and thousands of pounds worth of export work is in danger of being lost through the already high cost of production in this country, while 200 or 300 periodicals have ceased publication or been greatly reduced in size for the same reason. It is contended that the effect of the present demand in respect of overtime rates alone, if conceded, would be an increase of from 50 to 100 per cent., which would obviously menace the existence of the bulk of periodicals, which are necessarily produced in overtime. The whole position of the trade, in view of the growing cost of production, is regarded as most serious.

Persistent Advertising.

ADDRESSING the American Association of Advertising Agents Mr. O. H. Blackman, of the Blackman-Rose Co., New York, alluded to the necessity for persistent advertising, and pointed out the experience of consistent advertisers in the lean days of the war period. "Those advertisers," he said, "who have been constantly before the public through consistent advertising for a number of years weathered the war period without showing any great depreciation of business. Business concerns that did not believe in advertising were the ones that suffered the greatest loss of business and prestige." Mr. Blackman also expressed the belief that advertising must be planned on a much broader basis and with a clearer vision than has ordinarily been the case. Instead of advertising for to-day and to-morrow merely, the campaign must have in view the potential effect for years to come. "It is only by planning on such a far-sighted basis that the best results can be obtained through advertising expenditures." This but confirms what we so often tell our readers that it requires reiteration to be successful in advertising Firms must call attention to their manufactures until they become known, and even then keep their qualities and capacity always before the buying members of the trades they cater for by means of regular advertising.

A Turn in the Tide.

THERE are signs that the paper trade of the United Kingdom has passed through its great

 $\mathsf{Digitized} \ \mathsf{by} \ Google$

that the future is now again brighter and more full of hope. Uncertainty has always the effect of stifling initiative, which was the effect produced upon the paper industry by the conditions which recently prevailed. Now that the Committee of Inquiry has concluded its investigations and the Government has announced its decision on the recommendations made, papermakers know where they are. The decision of the Government concedes as much as could have been expected, and the passing of the state of uncertainty is a distinct relief. Manufacturers can now go ahead knowing what they have to contend with. The evidence of something like stability having been reached is found in the general opinion that prices have reached the lowest level to which they will go. This, at least, is the view of the makers of fine rag papers. Everywhere there is the feeling that business is improving, and with the ending of practically all control by June 1st opportunities for development will increase.

Wages Settlement.

A FURTHER fact which is helping to give strength to the paper trade is the settlement of the wages question with the unions. As a result of conferences men of 21 and upwards are to receive an increase of 5s.; women of 18 and up wards 3s. 6d.; and youths 16 to 21 2s. 6d. A proviso is that when a man has had an increase Of 30s. since the war he receives no more, which also applies to women and youths who have had 120 per cent. increase on their pre-war wage. The settlement is retrospective to the pay-day in the week ending March ist. At the request of the employers there is to be a conference within three months as to the application of a 48 hour week, with the understanding that there is to be a longer mill week. The agreement does not apply to hand-made mills.

Opportunities for Our Engineers.

advantage of it, an excellent market is opening for their productions in Finland. During the recent difficult period of trouble pulp and paper mills in that northern country have suffered very severely, and steps are now being war Germany largely supplied Finland with on the ground of price. Since the war Finland is not so friendly disposed towards ground with the object of obtaining as much of the business as possible. If British engi-

neers were only able to entertain orders, it is believed they would find much favour with the Finns, but of course they are not in the same position as America, which suffered very much less from the ravages of the war than did manufacturers in this country. All the same we stand, geographically, in a much better position than America does, and it is to be hoped that British engineers will be able to take advantage of the opportunities which the Finnish market offers in pulp and paper developments.

Profit-Sharing.

SIR,—There much to be said in favour of the profit-sharing scheme propounded by Mr. Cahusac, of the Law Stationers' Society, but it has several serious defects.

1. It is a gift, not a right, and can be withheld at the option of the employers. This is seen by the fact that no employee has the right to "investigate the accounts."

2. Employers may—I do not say they will—place an undue amount to reserve, renovations or renewals, thus preventing the dividend rising above 6 per cent.

3. In manufacturing concerns, the profits often depend to a large extent upon the valuation placed on the stocks, and any employer wishing to make an extra profit for himself could easily undervalue the stocks.

Now, employees as employees have only an indirect interest in profits and can only do their share in making them. All they do can be annulled by want of judgment on the part of theemployer. But they can do much to produce overturn, alike in the selling, manufacturing and transport departments, and so if they are paid a percentage of the gross receipts of the firm, i.e., the gross value of all goods manufactured and sold, they are bound to produce a profit to the manufacturer if his business is well conducted.

It is, of course, evident that the manufacturer must be protected against inferior workmanship, but badly made articles would also tell against the remuneration paid to the employee and the employer would have the support of the men in dismissing anyone who

worked badly.

By paying a percentage on gross receipts, the employer would have no difficulty in making estimates of cost, and consequently have less risk of working at a loss, for the cost of wages is the point on which no reliable estimate can now be made.

Yours faithfully, LEX.

Edinburgh, April 28th, 1919.

DIVIDENDS AND REPORTS.

VALENTINE AND SONS.—Mr. H. J. Valentine presided over the annual meeting in Dundee, last week, and moved the approval of the report. He said the increased profit was not due to inflated margins but to increased sales, which were 50 per cent. over the previous year. He hoped that whatever provisions were made for the protection of British trade in the near future, provision would be made to protect the British fine art printing trade, and not allow it to drift back to factories in Germany or elsewhere abroad. The report was adopted.

Odhams.—The trading profit for the year amounted to £50,774, against £36,286, and the net profit to £35,333, against £22,075. Adding £20,195 brought forward and deducting the preference dividend to June last, managing directors' percentage of profit, and incometax, there remains £44,118. The directors recommend a dividend at the rate of 8 per cent. for the half year to December on the preference shares, a dividend of 12 per cent. for the year on the ordinary, the addition of £6,443 to reserve, and the carrying forward of £27,259.

OLIVE AND PARTINGTON, LTD.—The directors have decided to increase the capital to £600,000 by the creation of 40,000 new ordinary shares of £5 each, and to give each holder of ordinary shares as a bonus a new share for each £5 ordinary share already held. In a circular to the shareholders, it is stated that for some years' past, and especially during the war, the directors have pursued the policy of declaring a moderate dividend only on the ordinary shares and writing down the value of the fixed assets, with the result that the assets stand at the nominal figure of £20,668 in the balance sheet issued in December last. The necessity for such a policy has now ceased, and in view of the prospects of future trade, the directors now propose that the issued share capital of the company shall be raised to a figure more appropriate to the present value of the fixed

NEW COMPANIES.

N. A. G. Press, Ltd.—Registered, with a capital of £1,000, in £1 shares, as proprietors and publishers of newspapers, journals, magazines, books, etc. The subscribers are S. Sanders, and C. L. Burnett. Private company. First directors—W. A. Perry, G. H. Clapham, E. K. Spiegelhalter, E. H. Sermon, S. Sanders, and C. L. Burnett.

CROCKFORD THORN SERVICE, LTD.—Registered with a capital of £2,500, in £1 shares (1,000 preferred), to acquire the business carried on at 63, High Holborn, by S. J. Crockford and W. C. Thorn, as "P. A. Advertising Service, Agents for Advertisers." The subscribers are S. J. Crockford, and W. C. Thorn. Private company. Directors—S. J. Crockford and W. C. Thorn. Registered office, 182-3, Fleet-street, E.C.

Drawing Office Supplies, LTD—Registered with a capital of £50,000, in £1 shares, to take over the business of manufacturing stationers, lithographers, engineers, photographic paper manufacturers, photographic printers, manufacturers of drawing office supplies, etc., carried on by A. E. Mallandain, at 51, Cheapside, and 14, Wormwood-street, E.C., at 24, Whites ground, Bermondsey, S.E., at 25, Victoria-street, S.W., at Herschell Works, the Burroughs, Hendon, at 1, Shepherd's-court, Deansgate, and Exchange-buildings, St. Mary's-court, Manchester, and at 18, Park-row, Leeds. Private company. First directors—A. E. Mallandain, H. T. Baynes, and H. E. McMeel. Registered office, 51, Cheapside, E.C.

B. M. BAKER, LTD.—Registered with a capital of £2,000, in £1 shares, as advertising contractors and agents, printers, publishers, engravers, etc. The subscribers are E. P. Cutcliffe, and Miss H. Cooksey. Private company. The first directors are—B. M. Baker (American by birth), and B. Weiser, 47, Chatsworth-road, N.W. (British, of Venezuelan origin). Registered office, 105-6, Moorgate-station-buildings, E.C.

GEORGE STARK AND SONS, LTD.—Registered in Edinburgh, with a capital of £40,000, in £1 shares, to take over the business of coated papermakers and card and pasteboard manufacturers, carried on by G. S. Christie, J. S. Christie, F. Christie, and W. M. Christie, at Glasgow, as "George Stark and Sons." The subscribers are G. S. Christie, J. S. Christie, and A. Christie. Private company. First directors—G. S. Christie, J. S. Christie, F. Christie, and W. M. Christie. Registered office, Grove-park Paper Mills, 188, North Woodside-road, Glasgow.

F. J. HOLMBS AND Co., LTD.—Registered with a capital of £2,500, in £1 shares, to take over the business of printers, bookbinders, and manufacturing stationers carried on by F. J. Holmes and Co., at 161, Lower Kennington lane, S.E. Private company. First directors—A. W. Eldridge, and C. A. Webb. Registered office, 78, Turnmill-street, E.C.

Registered with a capital of £10,000, in £1 shares (9.500 ordinary and 500 management), to carry on the business of publishers, journalists, newspaper and magazine proprietors, press news and literature agents and stationers, to purchase, sell and deal in space in newspapers, magazine and publications, stories, pictures, maps and illustrations, etc. The subscribers are E.S. M. Perowne, and G. T. Heard. Private company. The directors are to be appointed by the subscribers. Registered office, Salisbury House, E.C.

DERBYSHIRE WORKER NEWSPAPER CO., LTD.—Registered with a capital of £500, in £1 shares, to establish, print and publish a weekly newspaper or newspapers called the Derbyshire Worker and Labour Leader, in the interests of the principles and objects of the Labour Party. The subscribers are G. Daley, W. R. A. Pilcher, J. Redgate, J. S. Reynolds, O. W. Wright, H. Asher, and C. Howard. Minimum cash subscription, £100. First directors—G. Daley, W. R. A. Pilcher, J. Redgate, J. S. Reynolds, O. W. Wright, H. Asher, F. Lee (Alfieton, builder), J. Stone (Ripley, miner), W. Taylor (Ripley, miner), F. Murgin (Ripley, miner), C. Bishop (Alfreton, railway guard), F. Burton (Alfreton, planer). and J. H. Raynes (Alfreton, foreman).

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 16 of the Companies Act, 1900. (The registration of Satisfaction is not compulsory.)

EVENING News AND HAMPSHIRE TELE-GRAPH Co., LTD.—Satisfaction in full on August 13th, 1918, of debentures dated June 15th, 1905, securing £20,000.

COLLIBRY GUARDIAN Co., LTD.—Satisfaction in full between September 29th and December 9th, 1918, of second debentures (Notice filed April 17th, 1919).

March 3rd, 1919, of £2,750, and on April 7th of registered.

Bucks Free Press, Ltd.—Particulars of 16,000 debentures created, and all issued April 15th, 1919, charged on the company's including uncalled capital.

BANKRUPTCIES, etc.

RE FREDERICK GEORGE SAYERS, stationer, newsagent, etc., 118, Lordship lane, East Dulardhip' and 3, Maxted-road, Peckham. — An application for an order of discharge was at the On April 29th to Mr. Registrar Mellor, of this bankrupt who failed in May, 1913. Mr. the provable claims amounted to £927 16s. 8d.;

the assets valued at £ 148 fgs. 8d. had realised £80 15s. 5d. and a first and final dividend of 11d. in the £ had been paid. As offences the receiver reported (1) insufficiency of assets to equal 10s. in the £ on the amount of the unsecured liabilities; (2) omission to keep proper books of accounts, and (3) trading with knowledge of insolvency. The bankrupt intimated that he might be able to provide £5 to satisfy a judgment if the discharge could be granted on those terms, and his Honour adjourned the application for one month.

Gazette.

A WORD OF CAUTION.

[In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIPS DISSOLVED.

The partnership heretofore subsisting between Francis Allerston and Fred Everingham carrying on business as booksellers and stationers, at 40, King-street, Bridlington, Yorks, under the style or firm of "F. Allerston and Co.," has been dissolved by mutual consent as from April 19th, 1919. The business will be carried on by Francis Allerston, who will receive and pay all debts due to and owing by the firm.

The partnership heretofore subsisting between Eli Moore and Clement John Livermore, carrying on business as printers and stationers, at 44 and 46, Hampstead-road, London, under the style or firm of "Livermore and Keetch," has been dissolved by mutual consent as from April 29th, 1919. All debts due to and owing by the late firm will be received and paid by Clement John Livermore.

The partnership heretofore subsisting between Herbert Slater and Fred Dawson, carrying on business as printers, bookbinders, stationers, pattern card and pattern book makers, at 54, George-street, Manchester, under the style or firm of "Slater and Dawson," has been dissolved by mutual consent as and from April 29th, 1919.

THE BANKRUPTCY ACT, 1914. FIRST MEETING AND PUBLIC EXAMINATION.

Hobson, Joseph Harry John, papermakers' agent and merchant, Norfolk House, 7, Laurence Pountney Hill, E.C. Date of petition, April 30th, on debtor's application. First meeting and public examination, May 13th, 12 (noon), Bankruptcy-buildings, Careystreet, E.C.

APPLICATION FOR DEBTOR'S DISCHARGE.

Wallace, Richard Horatio, The Limes, Bedford-park, Middlesex, journalist. To be heard at the Court of Bankruptcy on May 28th.

BRITISH & COLONIAL PRINTER & STATIONER

Luncheon to Mr. G. R. Hall Gaine.

Deputy Controller's Work Recognised.

There was a large and representative gathering of the paper trade at the Connaught Rooms, last week, when Mr. G. R. Hall Caine, the Deputy Controller of Paper, was entertained to lunch in recognition of his public services during the war. Colonel the Viscount Burnham presided, and among the company of 150, in addition to the guest, were: Sir Henry Dalziel, Sir Geo. Riddell, Sir Hall Caine, Sir Arthur Spurgeon, Sir Howard Spicer, Sir George Toulmin, Mr. Lloyd Harris (of the Canadian Mission), Mr. E. G. Sahlin (Consul General, Sweden), Baron Mannerheim (Sweden), Mr. H. A. Vernet (Paper Controller), Mr. W. M. Meredith (Publishers' Association), Mr. A. F. Blades (president of the Federation of Master Printers), Captain Nuttall, Mr. H. G. Spicer, Mr. Henry Godfrey, Mr. Joseph Dixon, Mr. Stanley Cousins, Mr. A. W. Foster, Mr. R. Erikson, Mr. Fred Bowater, Mr. G. Buchanan, Mr. S. Nicol, Mr. C. Greenhalgh, Mr. H. Bradly, Mr. Walter Hyman, Mr. E. S. Lendrum, Mr. J. M. Watson, Mr. W. W. Birrell, Mr. T. O. L. Becker, Mr. C. R. Seddon, Mr. W. C. Corke, Mr. W. H. Palmer, and Mr. Percy Denson.

Lord Burnham's Tribute.

After the loyal toast had been duly honoured, Lord Burnham proposed that of "Our Guest," who, he said, must have been immensely gratified by the assembly of distinguished and representative men gathered together in that room and by the greeting given to him by the whole of the members of a mighty trade. (Applause.) They were giving him the parting glass instead of the parting kick. (Laughter and applause.) His lordship went on to say that there were no signs there that afternoon that the paper trade was absolutely ruined, and proceeded to say he was personally very glad to have the opportunity of paying honour to a public servant who had deserved well of the State during the crisis of our fate, one who had shown, during the performance of his duty, ingenuity of mind, strength of purpose and keen appreciation of the public wants. He (his lordship) felt he was speaking as the representative of a great trade: they felt there was nothing like paper. His lordship went on to speak of the varied parts which paper had played during the war, and of the ability shown by the Paper Control Department in preventing a paper famine in this country. The task of providing raw material for the papermaker was indicated by the fact that latterly only 16 per cent, of the imports of the raw materials of 1914 were allowed to the papermakers in this country. He instanced particularly the part which the collection of waste paper had performed during the last two years of the war. After reference to the work of Sir

Howard Spicer and ethers in turning our resources to the best advantage, his Lordship said they had every reason to take a pleasant farewell of the Paper Control. Their guest would look back afterwards with a feeling of satisfaction to the period of years that he passed in the public service. It was no mean thing to have done what he had done. (Hear, hear.)

In conclusion, his Lordship presented to Mr. Hall Caine a silver salver containing the inscription, "Presented to G. R. Hall Caine, Esq., in recognition of his voluntary services to the country and the paper trade during the

war. April 30th, 1919."

Mr. Hall Caine's Reply.

Mr. Hall Caine, who was cordially received on rising to respond, expressed his high appreciation of the honour being done to him that day, and proceeded to speak of the important part played by paper in modern times. In view of this fact, it was astonishing, he said, how lightly paper was regarded as recently as four and a half years ago. It was a thing to wrap up parcels with, to write letters with, and of course, it had some nobler uses. But it was too often a thing of contempt, and even when an international treaty had to be destroyed, it was only "a scrap of paper." His official connection with paper began two and a half years ago, when he was invited by the Ministry of Munitions to join their headquarters' staff to advise upon paper. Even down to that time paper as munition material was almost a joke to the powers that were. Nobody considered it seriously as a weapon of Who ever thought of fighting with paper? The change in that attitude came slowly. He was not going to say it was due to anybody in particular, although his friend, Sir Howard Spicer, played, with others, an important part in impressing upon the official mind the immense possibilities of paper as a munition of war. (Hear, hear.) In that effort he (the speaker) could only claim to have taken his small part.

Demand for Paper.

Paper of all kinds was costing them more, but it was only right to say that as the nation realised that paper was for the first time being used as a weapon of war, it bore its privations patiently. There had been great waste of paper, and when called upon to do so, the nation began to save. It saved vast quantities of paper which had hitherto gone into the grate or the dustbin. But there was a serious aspect to the paper shortage, caused largely by the employment of paper as a munition of war. Many industries were hard hit. Publishers, printers and box-makers suffered severely, for lack of paper meant tack of livelihood. The newspapers, above all. were in danger of running short, and this was a double danger, beca se newspapers themselves were a weapon of war, and it was possible so to impoverish them as to weaken what was called the home front. His position at that time was not always an enviable one. He fully realised the danger of what he was doing, but in those days he stood solely

ľ.

for the Ministry of Munitions, and his first business was to feed that voracious consumer. In doing so he might have starved some others of their necessary supplies. Perhaps it was natural if the newspaper proprietors sometimes thought he was in danger of starving them. If so, he could only say that from Viscount Burnham and Sir George Riddell, representing the newspaper proprietors, he met with nothing but the kindest appreciation of the difficulties of his position. And the best assurance he had that he did not go too far astray was that his lordship was occupying the chair that day. (Applause.)

Sir Henry Dalziel, in proposing the health of Viscount Burnham, took occasion to welcome Mr. Vernet, the Paper Controller, and paid a tribute to the work of his depart-

Lord Burnham, in reply, read a letter from Lord Leverhulme, who regretted his absence. At the instance of Sir Howard Spicer, the company cordially drank the health of the Paper Controller and Sir Hall Caine.

Mr. Vernet, responding, said in taking over the position of Controller he set out to act justly between the consumer and producer, and in carrying out that task he had beeh most ably assisted by the officers of his de-partment Mr. Ralph Hall Caine and Mr. H. (Applause.)

Sir Hall Caine also made an impressive

speech.

S1. Bride Printing School.

Students' Night.

It is Senerally recognised that thoroughness is the key to the successful work undertaken at S. at St. Bride, which applies not only to the technical work, but also to the social side of the school. This was clearly manifested on Friday last, when a "Students' Night," taking the form of a concert and an exhibition of work. Was held to mark the breaking up of the evening class season.

his opening remarks, the principal, Mr. Riddell, said that it brought back to memory old times, when, before the war, the social side of the school was a prominent feature of its activities. He made feeling reference to the memory of those students who had made the supreme sacrifice for their king and "adde the supreme securior rising as a trib. Country, the large audience rising as a tribute to the memory of St. Bride boys who

had fallen in the war. An excellent programme of a most varied character, entirely contributed students, provided enjoyment, and gave the opportunity of demonstrating that St. Bride students can play as enthusiastically as they In so splendid a programme it is im-Possible to differentiate between those who Part. Each item was excellent, and the 1919 Social evening will long be remembered as the most enjoyable of its kind held in connection with the school.

Mr. T. W. McAra, J.P., chairman of the Printing School Committee, was present, and referred in a humorous vein to the different attitude of the students that evening compared with the nights in the early part of the week when they were sitting for examination.

Mr. Charles Harrap in a felicitous manner proposed a hearty vote of thanks to the contributors to the programme, and in particular to Mr. J. H. Golder and his assistants for the able manner in which they had stagemanaged the long programme.

An exhibition of work was on view in an adjacent hall, and gave rise to animated discussion. It was interesting to hear the various comments on the judges' criticisms and

It was a happy idea to get men of recognised technical reputation to adjudicate on the work. Mr. T. E. Naylor and Mr. H. Whetton made the awards in the composing section; Mr. Geo. W. Jones and Mr. D. Greenhill decided the machine competition, and Mr. B. C. Albert and Mr. Joseph Goodman dealt with the litho students' work.

Printers' Metals.

We are informed from a reliable source that there is on the market at the present time a considerable quantity of bullet metal not required for war purposes, which is being offered "cheap" as a substitute for printing metals. Bullet metal contains impurities which though not deleterious for its original purpose of being fired at the Germans, yet which render it quite unsatisfactory when used for printing purposes.

When only a proportion of such low grade material is used by the manufacturer or the printer, a considerable risk is run, as even a small percentage of the impurities usually found in bullet metal will cause printing metal to run "sticky" and to clog the mouthpiece or nipple, and also to throw up large quantities of dross. Where one or two printers have been tempted by "cheap" prices to experiment with this class of metal in their foundry, the troubles which have resulted have made them say "never again." Messrs. Fry's Metal Foundry assure us that bullet metal never has been used in the manufacture of their "Fryotype" brands of printing metals, and never will be so used. Printers would be well advised to adhere to the reliable manufacturers who have a thorough knowledge of the requirements of the trade, and who have the printers' interests at heart.

The man who once most wisely said, "Be sure you're right, then go ahead," might well have added this, to wit: "Be sure you're wrong before you quit.'

Some Paper Topics.

The best news recently has been the relazation of the blockade restrictions on cotton It is not generally appreciated to what extent the stagnation of the textile trades of this country is reflected in every other sphere of industry. The paper trade received part force of every blow dealt to or by the textile trades, and particularly in the North, the profound depression which has for so long been settled upon the paper trade owes something of its origin to the effect of the blockade upon the cotton mills. Shippers, home traders and commercial offices have all been doing little or nothing for six months, despite which, demobilised men have been taken back in large numbers. Thousands upon thousands of pounds worth of goods have been held up and depreciated in value through lack of facility for export. Fortunately, the authorities have at last been forced to see the injurious nature of their blockade policy, which has assuredly been the means of crippling our own trades in as great a degree as those of either neutrals or enemies

With facilities for fairly free export, the textile trades will begin to liven up; shippers, brokers and the manifold variety of interests which find their roots in manufacture and exwill quicken into action, and paper, which is an unnecessary luxury when business demand dead, will once more come into Good though the latest bursting of official fetters may be, it is only part measure of what must still come before we dare think of normal or stable conditions. Earlier in Year we hazarded the opinion that the Probable month which would stability in the paper trade would be June. As time draws on, it begins to appear as though the forecast may prove to be fairly correct. It is not wise to become too sanguine in the control of the in these revolutionary days, for no man knows what the next month holds in store. Granted Continuance of events along the current however, June should see the preliminary peace terms signed and sealed. That, we think, will also set the seal on speedy stability in trade and manufacture. Even now the paper market is probably nearer to a permanent basis of relative value than any other prominent branch of manufacture. sacrifices which have been made in the course of achieving this rectification of value have also been probably greater than those made in any Other trade. The future holds no recompense and the only satisfaction open to the many whose recent trading has been conducted on a basis of losses is in the fact that Profits were on a scale commensurate With Present loss. And, of course, we anticithe reply to this, but have our own views still on excess profits.

the week from those in our last notes. For one thing, the holiday season had the usual effect of killing the business spirit. Doubt-

less by the time this copy gets into print the few days necessary to bring men's minds back to paper will have done their work. Orders are certainly becoming more plentiful, but they are being passed on to the latest caller whose quotations are the least. Representatives of some of the larger houses are a bit sore at losing old accustomed business, but this is due to the fact that the said houses are always a bit behind. When, after due deliberation, they decide to ease down a little and bring their prices down to the level of the mill agent, they find the mill agent has already got below again. There is a limit, of course, and the signs are that in many cases the limit has been reached.

We said some weeks ago, after thorough consideration of all the facts at our command, that post war prices all round would be just over twice the pre-war figures. lapse of time seems to confirm our reckoning, and some quotations which we have seen within the last day or two conform approximately to expectations. For instance, E.S. writings, which would have sold in 1914 at 21d. per lb., are now offered at 51d. per lb.; banks, which would have brought 3d. per lb., are on offer at 6id.; common printings, which would have sold at 2d per lb., are selling at 4 d. per lb. Foreign banks, printings and tinteds are obtainable at the same relative standard, i.e., not more than $2\frac{1}{2}$ times the prewar price. When we come to wrappings and boards, however, the case is different, for here we find the selling prices to be three or four times greater than 1914 quotations. Kraft, which sold at £18 per ton, is to day bringing £60; millboards, which formerly were offered at £12 per ton, are now rarely sold below £40. Dutch strawboards, which in 1914 were sold by English agents at £3 10s. to £4 per ton, are to day quoted £16 to £16 10s. for forward de-The question users are likely to be asking is whether it is permissible to look ahead to drastic reductions in these quotations, bringing them into closer conformity with the relative values shown by the other classes of paper mentioned above.

A little close reasoning may throw some light on the matter, and we may preface the discussion with the comment that forward quotations on the classes of goods in question are already based on a slight advance, a fact which seems at first glance to dispose of any anticipations of reduced values.

The grades of wrapping paper and boards which have maintained a comparatively higher level of price as shown against prewar quotations are precisely those which we always imported and could never make cheaply ourselves. On precisely this character of stuff the restrictions during the war and after were much stiffer than on the grades of paper which we were always well able to make and export. In consequence of a great restriction and a comparatively great demand, the selling price of wrappings and boards rose to a height which was infinitely greater in comparison than that reached by our accustomed makes of paper. The small qualitity of foreign stuff imported naturally found its selling figure on a basis

BRITISH & COLONIAL PRINTER & STATIONER

conforming with that asked for the inferior home-made stock. Incidentally the foreigner, as well as the English seller, realised "fat profits." Meantime, quite a number of profits." Meantime, quite a number of English mills found it profitable and convenient to turn their attention to these grades which were in good demand at a high price. Also, there were hopes, official and otherwise, that in the future we should be self-supporting in the production of boards and wrappings. Unfortunately it is proved in practice that our costs of production are so great as to preclude much prospect of successful com-The demand petition against the foreigner. is principally for the better stuff, if the price is commensurate, and as things are at present, the foreigner can sell his stuff here at even a lower price than we can make it, and yet realise a very large profit. So long as conditions are at work which prevent large importations of the foreign stuff, the price will remain very high, although this is due to our high cost of labour and production, accentuated by inferior facilities and organisation, rather than to fat profits. If, on the other hand, the time speedily comes when large importations of foreign wrappings and boards can be made without official or fiscal interference, the price will certainly fall considerably; but probably our own mills engaged in like manufacture would be shut down through inability to compete. And now we land ourselves into the realm of tariffs, impositions, and colonial preferences, a subject of far too wide a scope for paragraphic

It is an indicative sign of post-war laxity that all the talk is of protecting our trade as the means to development. Possibly quite a laudable idea, and one to which many erstwhile opponents have perforce drifted through altered conditions. But little or nothing is being done to develop our own resources, material and human. Waste paper has done its war service, and now bids fair to pass from sight. Straw partly came to its own, in patches, and will probably sink back to oblivion, so far as papermaking is concerned. Technical education, research, economic development, improved organisation, all are already classed with the rumours of the war and laid aside until another Armageddon bids the paper trade get a move on.

H. A. M.

THE GERMAN PAPER TRADE.—The paper industry in Germany is stated to be suffering severely from shortages of wood, coal and rosin. Of the 200,000 workers engaged in this industry in 1913 only 115,000 were men adults. Since, at present, the output is very limited, it has room for many returning soldiers The chemical industry in 1913 employed 180,600 workers, of whom 140,000 were adult males. Phere is a vast demand throughout the world for German aniline dyes and other articles, we are told. During the war the industry has evolved new methods of manufacture, which will continue to be of great importance.

Trans-Atlantic Paper Rivalry.

Canada's Whip Hand.

The net income of the International Paper Co., U.S.A., for 1918, according to its annual report just made public, was \$5,152,577. after all charges and Federal taxes, or \$18.47 a share on the common stock after deduction of preferred dividends. In 1917 \$34.02 a share was earned. The total income for 1918 was \$8,194,884, against \$12,932,173. Depreciation was only slightly higher and taxes and interest charges decreased materially. A million and a half was paid in dividends on the preferred stock, leaving a surplus for the year of \$3,652,577, against \$6,719,687 in 1917. The total profit and loss surplus on December 31st,

1918, stood at \$19,104,763.

Mr. P. T. Dodge, the president, in his report, referred to the unusual and dangerous conditions of business during the year, and proceeded: "Owing to the vast consumption for various uses, the wood of the continent, suitable for pulp, is rapidly disappearing. The remaining stand is largely in the Canadian provinces where your company has very extensive holdings in fee and under Crown leases, in addition to its large holdings in the United States. The strength of every newsprint manufacturing company must be large

extensive holdings in fee and under Crown leases, in addition to its large holdings in the United States. The strength of every newsprint manufacturing company must be large in its timber holdings, the value of which will steadily increase as the supply decreases. time the cost of producing paper must rise to levels which to day seem impossible. The Canadian wood from leased Crown lands is not available to the United States mills, since its exportation to the States is prohibited, although exportation was permitted when the leases were made and although free admission is given to Canadian paper manufactured in the provinces. This grossly unfair condition is due to the failure of the Washington legislators and officials to protect a home industry. The result has been the steady growth of Canadian mills, with no increase in the United States for some years. Certain it is that many of the 'news' mills in the United States—outside of those owned by the company—will be compelled to discontinue and that the industry will be confined largely to Canada and European countries. It is equally certain that your company to protect its interests and secure proper profits will be compelled to transfer its operations in part to Canada in order to utilise its unexcelled wood holdings and water powers. When the publishers of this country are compelled to deal principally with foreign makers, both they and Congress will awake to the harm and folly of neglecting proper protection to an immense home industry. Common justice and common sense demand that reciprocity on the part of Canada should be compelled. They should permit pulp wood to continue its course to the United States, or obvious retaliatory action should be

taken by Congress"

Printers' Jobbing Prices.

Proposed New Price List Discussed by East London Master Printers.

London master printers are giving serious attention just now to the proposed minimum jobbing price list which has been drafted by the Organisation Committee of the London Association and placed before the district Associations for their consideration. On Thursday night members of the East and North-East Association gave the price-list their full consideration, after they had been entertained to tea by the president, Mr. E. R. Alexander. The price-list is based on the hour-cost rates of the London Costing Committee.

Price List Discussed.

Mr. R. Austen-Leigh, chairman of the Organisation Committee, paid a special visit to Stratford and introduced the subject of the meeting. He referred to the presence (at considerable personal inconvenience) of Mr. D. A. Whitehead, North London Association, who, he said, had done yeoman service on a small committee which drafted the price-list. Incidentally Mr. Austen-Leigh mentioned the work of the Organisation Committee, which aimed specially at considering the needs of the district associations. In order to make the membership of the London Association attractive, they had issued a member's certificate, and had been able to obtain from the Process Engravers' Federation a special discount in their favour. Whilst that discount was not a large one, it was a beginning, and in the case of at least one firm it represented a saving of the whole of their subscription to the LM P.A. Now, in order still further to help the local associations, they were getting out a new jobbing price list, such as already existed in some of the provincial towns. They would agree with him that there was no reason why a lot of these small jobs-such as programmes and visiting-cards—should not have a fixed price. They would run up against difficulty with people outside the Association who charged less, but they were up against that already. To be successful, he had always held that for printers there were three desiderata as regards. prices. First, there was the imprint, then for new work they must have a price list, and there should be average costing rates on which printers could form their estimates, with a fixed profit to be added. With all that they would not get all the estimates the same, for the human element came in. If they could eliminate the difference in hourly costing and the difference in profit they would have made an enormous advance. With regard to the price list, in drawing it up they had to go upon certain principles. They had taken the hourly rates which had been issued for London, and then they calculated as carefully as they could the time to be taken in the various operations, that was, the number of hours. At first sight some of the prices might appear rather high, but he thought that was chiefly in regard to the smaller jobs; on the larger work the prices were not questioned. They had framed them all on the same principle. Mr. Austen-Leigh asked for constructive criticism of the list. On the previous evening, he mentioned, the South-West Association had referred the matter to a small committee, and when all had made their suggestions these would be brought before the central sub-committee. He men-

tioned that the costs were made out before reduction in hours and the granting of the paid holidays, and the figures would therefore be subject to some alteration.

The president thought Mr. Austen-Leigh's suggestion of a committee was one which they ought to adopt. The price-list was the sort of thing for which they had been waiting for years. They wanted to be in agreement so far as figures were concerned, and he hoped printers would get a fair return for the labour and capital put into their business.

A committee was thereupon formed to go into the question.

The View of the Small Printer.

Mr. J. W. Sparks read a paper on the new price list, illustrating his remarks by quoting his own figures and comparing them with the proposals from headquarters. He said his first feeling on seeing the prices was that he should like to get them. He felt now that every printer ought to get them. The only difficulty was how to get them. (Hear, hear.) The costs were, from the standpoint of many of them, high; and he quite agreed with those printers who said they could work at a lower rate. Indeed if their plant and their staff were always adequately employed, they might well be satisfied with a lower scale. But it was highly questionable whether any printer often had just enough to do, and a reasonable time to do it in. How frequently was there an unprofitable wait between the finish of one job and the start of the next? And how often. had a machine to be kept open for an urgent job which was not quite ready? When they had too little work, loss was incurred through wasted wages and unoccupied plant. When they had too much to do, extreme measures had to be resorted to, which frequently meant loss in other ways; and this was probably how the costing experts, with their insight into the working of various offices, arrived at the formidable looking figures they placed before them. The proposed scale might not be such a jump as at first appeared. Some of them would very likely be asking why they should be making any alteration in their prices. Why should the new scale of charges be adopted if the present ones provided a reasonable profit? But do they? Did they get anything which they could call profit, or were they merely getting a moderate and erratic wage for the work they did, without adequate remuneration for the capital invested and the risk and responsibility under-If the small printer employed a ∢aken? manager to take his place, what sort of dividend would be left after the manager had been paid such a salary as he might reasonably demand? And would the manager put in the same amount of work, or would a further increase of staff be necessary? He would like to compare the earnings of the printing business with those of some others, but that of course, would be difficult, as the facts were not easily obtainable.

A Handicap.

What he believed they were apt to overlook was their limited output, which was natur-

ally governed by the extent and character of their plant. Most successful businesses owed their prosperity to rapid turnover—something which was impossible for the printer. Hence the need for a reliable margin on complete costs. A small printer with a capital investment of £1,500 might, perhaps, do a trade of (3,000, thus turning it over only twice per year. In some businesses, however, the capital was turned over many times. A certain buyer's commission last year indicated a net profit, approximately more than the capital involved in the department concerned. But in printing, the profit on the individual job loomed large, and they were apt to forget how few of them they could do in a given period. The point about jobbing work was that it was so erratic in character, and consequently required such a large plant in pro-portion to the amount of work. Consequently they got high overhead charges. This applied to practically all, jobbing offices. When a printer was well equipped, a large proportion of his plant, and some of his staff, were often waiting for a job. When his resources were scanty, he was always doing work under difficulties, or refusing it even when he had not enough to do. Consequently the costs which would be reliable when everything fitted perfectly did not represent the average actual cost of production. And then there was the spoilage. Very few small firms escaped loss of this kind. It was an accepted risk, and if they could insure against that risk, the premium would have to be added to their costs. They had heard of soldiers getting over shellshyness, and they hoped some of the population would soon get over their work-shyness, but what printers must try and get over was profit-shyness. (Applause.)

Idle Machines.

In the discussion which followed, reference was made to machines which were sometimes idle, but which it was necessary to possess in order to cope with any urgent work which might come in. It was only reasonable that this provision, which was for the benefit of the customer should be included in the machine-rate.

Mr. Sparks said he felt that the local charges were too small, but he did not see what they could do until they got everyone into the Association. His own figures, however, did not cover the idle time of the machines.

Mr. Whitehead mentioned that the figures in the draft proposal were based on the costing system, and Mr. Ward suggested they should work them out on the basis of per thousand instead of per hour.

Mr. Austen-Leigh observed that the figures were based on the average—700 or 750 per hour—which came to the same thing. He added that when their fellow master-printers spent money on a better machine, there was no reason why they should make a present of the benefit to the customer.

Various speakers went on to emphasise the advantages of the costing system.

Mr. Tomkin said it only took a few minutes every day to get his figures out.

ritishee Colonia

Mr. Whitehead declared that the costing system showed them at once the cost of a job. In that system the overhead charges were worked into the hour charges, and one of the revelations to him in adopting the system was the time occupied in dissing and clearing. It showed them a profit on the capital invested; it included depreciation through wear and tear of type; and it took account of rent, rates and taxes, so they were absolutely certain to cover all those items. In the weekly cost-sheet if the cost of production was more than the value of production, they knew they were losing money. It was undoubtedly a scientific system which left no item of cost out.

Mr. Austen-Leigh mentioned that the cost of installing the system was only about £1 per £1,000 of turnover, although there was a

minimum of three guineas.

Mr. Phelp thought if an expert could visit individual offices, which differed from one another, eight or nine people out of every ten would adopt the system.

Mr. J. Johnson, organising secretary from headquarters, said he had been surprised to find from many printers that they did not include reading in the composition hour.

With regard to small printers charging lower rates, Mr. Austen-Leigh said he did not see why they should do this at all. It simply meant they were giving away their labour, and did not provide for depreciation, and so

The chairman, in winding up the discussion, said the master printers were just realising that they had been working in the past for the benefit of the customer, and not for themselves. He went on to propose a vote of thanks to Mr. Sparks for his very practical and useful address, and the resolution was cordially

Votes of thanks were also accorded to Mr. Austen-Leigh, Mr. Whitehead and Mr. Johnson for their presence and assistance.

Mr. Austen-Leigh, in his reply, paid a tribute to the work of Mr. Johnson in organising the master printers of London, adding that during the year they hoped to reach the 1,000 membership mark. The criticism of those present on the price list had been very helpful, although milder than he expected. There were three things to consider: the rates, the price of paper and the time taken. They could trust the committee to take paper at the market price when the time came for putting the list into operation, and they could work out the prices provided the time bases were accepted. He added that it was a great moral help to a printer if he could produce something in print in support of his charges, instead of working something out on his shirt

Mr. Whitehead also briefly replied, and on the motion of Mr. Phelp, a vote of thanks was accorded to Mr. Alexander for his hospitality.

REMEMBER, the printer lives in a world of advertising. His suggestions should be valuable if he knows his business.

Printers' Managers and Overseers ASSOCIATION.

PARENT CENTRE.

Mr. E. H. Berryman, the president, was in the chair at the meeting of the parent Association at the "Old Bell," Holborn, on May 6th, and there was a gratifying attendance of members.

After the minutes had been adopted a new member in the person of Mr. P. J. Tuhill (Messrs. J. J. Keliher and Co., Ltd., letterpress machine), was elected.

The president extended a cordial welcome to Mr. Tuhill.

Mr. Phillips mentioned the case of a North Midland member, who was suffering from a serious illness. The council, he said, had already made the maximum allowance of five guineas, and it was suggested that this should be increased to ten guineas. He said that the member was well known to many of them in London, and that his illness had been one of long-standing. He felt sure that the members would adopt the recommendation of the council.

Several members present paid a warm tribute to the earnest work of the gentleman in question, and the additional grant was

agreed to unanimously.

The meeting then became a special one for the purpose of considering the agenda which will be submitted to the annual delegate meeting at Cannon-street Hotel on Saturday, June 7th, the various subjects being debated and the views of the members obtained for the guidance of the delegates from the parent Association.

A variety of subjects will come up for consideration together with the recommendations which have been lately discussed by the

Parent Association.

Two items on the agenda refer to the matter of the proposed broadening of the basis of membership. While the members of the Parent Association were opposed to an extended movement in this direction, there was a fairly strong feeling that lithographic artists might be included.

Other items on the agenda for the delegate meeting have reference to representation of the Association on the Industrial Council of

the printing trade and remuneration.

Nominations having been received for the appointment of delegates for the conference, the following were finally elected:—The president (Mr. E. H. Berryman), Mr. E. C. Moyee and Mr. I. C. Bush and Mr. E. C. Moyce and Mr. J. C. Pugh, each of whom acknowledged the honour which had been conferred upon him. Mr. Berryman stated that his health was rather indifferent just now, but, should he be unable to attend, he had a very efficient deputy in Mr. A. E. Jarvis, the vice-president.

For the first time since the establishment of the annual meeting of delegates that event

will be held in London, at the Cannon-street Hotel. Saturday morning will be devoted to the first session of the business meeting, after which the delegates will adjourn for luncheon. If the business of the meeting is concluded before lunch there will be an impromptu sight-seeing arrangement to fill up the interval until tea, which will be held at 5 p.m. A feature of the day will be a revival of the pre-war bohemian concert (ladies' night), which will be held in the large hall at Cannon-street Hotel, and a programme worthy of old traditions is being arranged. During the evening the presentation of an illuminated address and gold watch and chain and cheque will be made to Mr. E. C. Moyce in recognition of his twenty-one years' services to the Association.

A Well-Timed Advance.

At the present moment, when the peoples of the world are seeking to uplift themselves and advance to true civilisation, it is particularly interesting to note that the Assyriac languages have now been adapted to mechanical methods of type composition. In view of the immense number of people comprising the Assyriac group throughout Northern Africa and Western Asia, it is a fact of the utmost importance that these languages can now be composed on the Linotype.

The Linotype has made it possible to compose Nestorian, Jacobite, Estrangela, Marconite, Carshuni, Chaldaic, and in fact all the languages and dialects comprising the entire Assyrian group. The Jacobite form is used by the Assyrians in Northern Africa and Mesopotamia, a large percentage of whom, we understand, object to the Arabic script which has been forced upon then in recent

Now that the Assyrians and other peoples of Asia Minor and the countries adjacent thereto have been delivered from Turkish rule and influence, and in a measure are independent, it is only natural that they should return to the use of the original forms of their respective written languages. In this connection the Linotype will enable them to recover lost ground, and produce quickly and economically fresh supplies of literature in their

own original languages.

The Linotype alphabets are not restricted in the slightest degree, every character known to be in existence having been provided for. The Linotype alphabets are more complete and contain a greater variety of characters than any hitherto produced by typefounders and at present in commercial use. The Linotype will therefore produce any class of work, ancient or modern, that may be required in these languages.

Incidentally it may be mentioned that the printing of books and literature of every description in Assyriac has hitherto been confined exclusively to printing houses in Berlin, Leipzig and Constantinople.

Trade Notes.

MR. W. H. MARSTON, the secretary of the Empire Press Union, died, last week, at Leyton from pneumonia.

THE Australian soldiers' magazine, Aussie, has been printed for the last time. It was published early in 1918 in France at the price of 10 centimes, and had a circulation of 80,000 to 100,000.

THE twenty-third annual convention of the American Photo-Engravers' Association is to to be held at Buffalo, N.Y., on June 19th, 20th and 21st next. Photo-engravers from all quarters are invited to attend.

REPLYING to an invitation to attend a meeting of the East and North-East London Master Printers' Association, one of the "members" sent a post card as follows:—"I'll be there, and trust we shall be 'spaced close,' leaving room for 'table matter,' and just a little 'whyte' near the head."

THE Welsh Calvinistic Methodist Connexion has purchased the business of the Welsh Publishing Co., Carnarvon, one of the largest publishing firms in the Principality. The Connexion already owns a weekly newspaper and three monthly magazines. Now it becomes its own printers as well as publishers.

The importation of picture post cards which has hitherto been dealt with by the Department of Import Restrictions will henceforth be dealt with by the Department of the Controller of Paper (Board of Trade), 23, Buckingham-gate, S.W.I, to whom applications for licences should in future be sent.

BRITISH INDUSTRIES FAIRS, 1920.—Taking time by the forelock, arrangements are now being made by the Board of Trade for the British Industries Fairs of next year. The scope of the Fairs will be largely extended, and they will be held simultaneously in London (Crystal Palace), Birmingham and Glasgow.

"PRINTERS' PIE, 1919."—This ever-welcome annual will be published on Monday, the 19th inst., and, judging by the following list of eminent authors and artists who have contributed to its pages. it will come as an additional cheery gleam to the peace celebrations. There are stories by Harry Graham, Sir Henry Lucy, W. Pett Ridge, G. B. Burgin, Geo. R. Sims, Keble Howard, William Le Queux, Hamilton. Fyfe, J. D. Symon, and Gerald Campbell. Drawings are contributed by John Hassall, L. P. Dowd, Wilmot Lunt, P. B. Hickling, J. H. Thorpe, R. H. Brock, Arthur Moreland, Bert Thomas, E. Noble, Frank Hart, Starr Wood, Rene Bull, Laurie Taylor, Fred Buchanan, Harry Low, Ruby Lind, Lawson Wood, G. E. Studdy, Mackenzie, Kay Edmunds, H. H. Harris, Mabel Lucie Attwell, Harold Earnshaw, Alfred Leete, Higgins, Pizer, Charles Folkard, Cecil Aldin, Frank Rey

BRITISH & COLONIAL PRINTER & STATIONER

nolds, W. Heath Robinson, and Will Owen. Printers' Pie is published at 6, Great Newstreet, London, E.C., 18. 6d. net.

TENDERS WANTED.—For printing a year book for the Cardiff Guardians; form of tender from Mr. A. J. Harris, Union Offices, II. Park: place, Cardiff.—For printing abstract of accounts for the year 1918-19, for the stores committee of the West Riding County Council; tender forms from the Manager, Central Stores, Cliff-lane, Wakefield.

MR. JAMES HARVEY DALE, a young reporter on the South-Eastern Herald, was run over and killed by a motor lorry at Greenwich. Young Dale, who was only sixteen years of age, was cycling on his way to the office with copy, and after the accident, while he lay in great pain, he put his hand his pocket and produced a packet of newspaper copy. This he handed to a man standing by, saying, "Take this to No. 139, Greenwich-road. It is very important." "This," observed the editor at the inquest, "was the spirit which on the battlefield would win the Victoria Cross."

SIR EDWARD AND LADY HULTON entertained at dinner in the Abercorn Rooms, Great Eastern Hotel, on Saturday night, the London staffs (editorial, mechanical, advertising, composing and publishing) of Messrs. E. Hulton and Co.'s publications, over 75e being invited. Sir Edward, who was supported by his directors, editors, and departmental chiefs, was in the chair. During the evening an orchestra and members of the various departments contributed a musical programme. Later in the evening Sir Edward and Lady Hulton visited the offices at Shoe-lane, where those employees engaged on the firm's week-end publications were entertained at a reception. At both gatherings the utmost enthusiasm prevailed.

The Late William Coffey.

The interment of the late William Coffey, financial secretary to the newly formed London branch of the National Union of Bookbinders, took place at Kensal Green Cemetery, on May 6th, the funeral service having been held previous at St. Ethelreda's Church, Ely-place, E.C. William Coffey was born in Ireland 68 years ago. He was apprenticed in London to Messrs. Symmons, and he joined the City Consolidated Society of Journeymen Bookbinders in 1875. He was one of the best known trade unionists in the metropolis, and was respected alike by employers and employees. He became secretary in 1900 of the Consolidated Society, and worked hard for the amalgamation of that society with the National Union of Book-

binders, and for which, when it was successfully accomplished, he became the financial secretary. He was for some years vice-president of the London Printing and Kindred Trades Federation, of which body he was one of the original members. He also was an active worker for many trade charities, being for 37 years a member of the committee of the Bookbinders' Pension Asylum. Society, and for 28 years acted as hon. secretary of an auxiliary to this Pension Asylum, that provided the pensioners with a brakeride and a day in the country, and a monetary gift at Christmas. Amongst the numerous wreaths sent were those from the Bookbinders' section of the Chamber of Commerce, the firms of Greycarrie and Co., Straker and Son, and Messrs. Leighton, Son and Hodge.

Costing at St. Bride.

St. Bride Printing School has still another success to add to the many which have been a feature of this educational centre during the last few years.

The Summer Term Costing Class instituted mainly for employers, managers and others holding responsible positions in the printing business, commenced on the 7th inst. with an enrolment of 54 students, which meant that before the opening night the class was closed for further enrolments. Such interest speaks well for the removal of many prejudices on the part of those who have not hitherto been able to recognise the benefits to be derived from the adoption of a method of scientific cost-finding; at the same time it affords an opportunity of getting down to facts which it is hoped will do much to eliminate some of the extravagant claims occasionally put forward by enthusiastic advocates of costing

It is well that intelligent interest should be maintained in this aspect of technical education which can only be successful when supplemented by workshop experience.

At the annual meeting of the Press Association, Ltd., held at London, Mr. Allan Jeans, Liverpool Daily Post, chairman of the Association, presided. After the adoption of the annual report and other business, Mr. Frank Glover, Leamington Spa Courier, proposed that Colonel Egbert Lewis, Bath Herald, be elected to the committee of management in place of Mr. A. Edmund Spender, Western Morning News, Plymouth, who retired by rotation. This was seconded by Mr. Walter Scott, Rochdale Observer, and carried, and Mr. Spender was elected to the consultative board on the motion of Mr. Herbert Archer, Derby Daily Express, seconded by Mr. E. T. Hawkes, Shields Daily Gazette, in the room of Mr. J. S. R. Phillips, Yorkshire Post, Leeds, who retired by rotation.

Current Topics.

The Price of Books.

THE great increase in the prices of new books is causing the question to be asked by the booksellers and the public, will they ever become cheap again? And the answer may be given that, unless conditions change very considerably, there is but little likelihood of any reduction so long as wages and materials remain as they are. The once popular sixpenny reprints are now is. 6d. and novels are up to 8s. Discussing the matter with a London publisher, the other day, a representative of the Daily News got an expression of opinion that the price of the novel and the reprint can never return to the normal, because higher wages mean a permanent addition to the price of everything, paper, printing, cloth, binding, etc., that the publisher requires for the production of books. Whether the price will still go up he found it difficult to say, but the general tendency, he considered, after this year, would probably be towards a slight reduction. As to the effect of higher prices on the output, the authority pointed out that the demand for novels to day is as great as ever it was, if not greater. Authors, who were the last to benefit by the increase in the price of books, have now had their royalties raised by half-a-dozen publishers.

The New Regulations.

THE deadening uncertainty which characterised the condition of the paper trade has at length been removed by the new regulations issued by the Board of Trade, and the effect has been to give new life to the industry. Actually the turn in the tide had begun before the decision of the authorities was made known, although the anticipation of a measure of relief might have had something to do with it. Now that the regulations have been announced, the development of the paper trade of this country will proceed still faster. For the new conditions as to the import of foreign paper give just that encouragement which our manufacturers needed. The scheme adopted by the Board of Trade meets, with great skill, the difficult situation which had It is a scientific adjustment of the proportion of the output in this country and the amount of imported paper needed the consumers' requirements. to supply It satisfies manufacturers and consumers alike, which is no mean achievement. One hears practically no criticism of the scheme; in fact, we learn that it is already working well. Perhaps the fact that half the committee represented the consuming interest was a guarantee that no unnecessary hindrance would be placed in the way of feeding the trades which use paper with that necessary commodity, and the fact that the problem which faced the Committee of Inquiry has been solved in so practical a manner is a tribute to the good sense of all parties, who, of course, recognised the serious condition to which the paper trade of this country had been brought.

NEWSPAPER WHITLEY COUNCILS.—At the annual meeting of the Newspaper Society, Mr. J. S. R. Phillips proposed—"That this meeting accepts the principle of Whitley Councils for the newspaper industry, and that the Newspaper Society will take part in any such Council, provided that the Institute of Journalists be joined in the Council in the same manner as the National Union of Journalists." The resolution was carried by 33 votes to 19.

THE BANKRUPTCY ACT. 1914. RECEIVING ORDER.

Charity. George Thomas, newsagent, residing at Stow. Lincoln. Date of order and of adjudication order, May 9, 1919. Made on debtor's petition.

NOTICE OF RELEASE OF TRUSTEE.

Lucas, Arthur, stationer and newsagent, 489. Upper Richmond-road, East Sheen, Surrey. Trustee, the Hon. Walter John Harry Boyle, 132, York-road, Westminsterbridge-road, S.E.I. Date of release, May 1st, 1919.

BRITISH & COLONIAL PRINTER & STATIONER

Paper Imports.

The New Regulations.

As announced on February 28th, the Paper Control has been abolished as from April 30th. In conformity with the Government's transitional policy with regard to, and in view of the serious increase of unemployment in the papermaking industry, the Board of Trade announce that imports of paper and paper goods will be regulated as set forth beneath. It will be observed that licences are to be given for the importation of all supplies purchased before the date of the announcement, and that the interests of the paper-using industries are adequately safe-guarded.

The Board of Trade announces that from the date of this announcement (May 1st) the importation, from countries without the British Empire, of paper and manufactures thereof, will be prohibited except under licence. Importations of paper manufactured within the British Empire are free of licence. The conditions under which licences will be

issued are as follows:-

1. WRITING OR PRINTING PAPER, and other papers not included in clauses 2 to 6 (excluding news-print).—Import licences will only be issued for qualities or descriptions falling within this category provided that the Board of Trade is satisfied that such qualities or descriptions of British manufacture cannot be obtained in sufficient quantities within the British Empire and/or that the prices demanded for such qualities or descriptions are unreasonable.

2. NEWS-PRINT, GLAZED OR UNGLAZED.—In reels or sheets (not containing more than 30 per cent. chemical pulp).—Import licences will

be issued in this category—

(a) To the extent of 25 per cent. of the tonnage of such paper purchased after this date which has been produced within the British

Empire.

(b) If the Board of Trade is satisfied that such qualities or descriptions of British manufacture cannot be obtained in sufficient quantities within the British Empire and/or that the prices demanded for such qualities or descriptions are unreasonable, it may issue licences in excess of the 25 per cent.

3. PAPER OR CARDBOARD (PRINTED OR COATED).—By printed paper is meant paper printed only with designs or background, and suitable for further printing. Coated paper includes carbon, but excludes sensitised photographic paper.—Import licences will be

issued in this category—

(a) To the extent of 20 per cent. of the tonnage of such paper purchased after this date which has been produced within the

British Empire.

(b) If the Board of Trade is satisfied that such qualities or descriptions of British manufacture cannot be obtained in sufficient quantities within the British Empire and/or that the prices demanded for such qualities or

descriptions are unreasonable, it may issue licences in excess of the 20 per cent.

4. PRINTED MATTER.—Printed forms, writing paper with printed headings, calendars, show-cards, picture post cards, Christmas and greeting cards, and other colour and lithographic printing (except as described in Clause 3), including children's toy books (consisting in regard to cover and contents of one-third or more of lithographic or other colour printing) will be totally prohibited, Licences may, however, be granted for small quantities of stationery, etc., for use in branch offices of foreign firms not intended for re-sale, and may also be granted in special cases for small quantities of other articles in this clause.

Other printed matter, such as books, newspapers, periodicals, catalogues, price lists, and music, published in foreign countries, authors' typewritten and printed proofs, and legal and commercial documents may be imported with

out licence from all sources.

5. Wrapping and Packing Paper.—Import licences will be issued in this category—
(a) To the extent of 25 per cent. of the tonnage of such paper purchased after this date which has been produced within the British

Empire.

(b) If the Board of Trade is satisfied that such qualities or descriptions of British manufacture cannot be obtained in sufficient quantities within the British Empire, and/or that the prices demanded for such qualities or descriptions are unreasonable, it may issue additional licences in excess of the 25 per

cent.

6. CARDBOARD (including strawboard, mill-board, leather-board, wood pulp-board, and other board, excepting other pulp board, ivory board and paste board), minimum subsubstance of strawboards 25 in. by 30 in. 4 ounces per sheet; other grades, 20 in. by 25 in. 4 ounces per sheet.—Import licences will be issued in this category—

(a) To the extent of 250 per cent. of the tonnage of such cardboard purchased after the date of this order which has been pro-

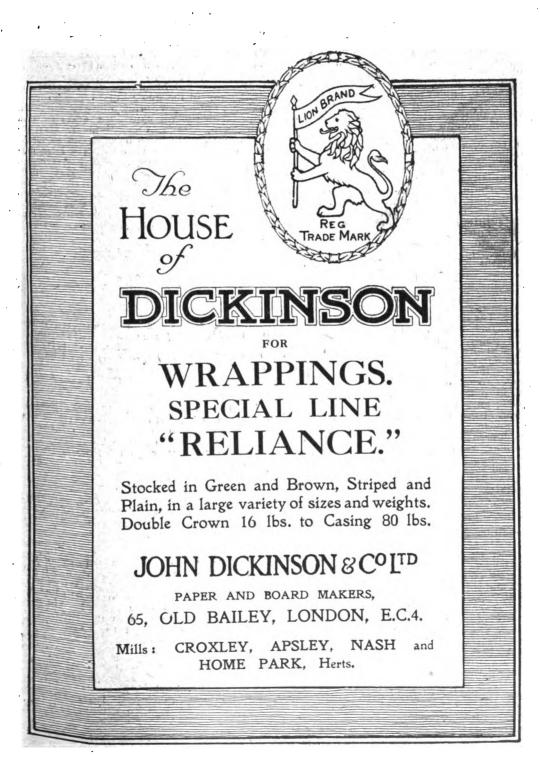

duced within the British Empire.

(b) If the Board of Trade is satisfied that such qualities or descriptions of British manufacture cannot be obtained in sufficient quantities within the British Empire and/or that the prices demanded for such qualities or descriptions are unreasonable, it may issue licences in excess of the 250 per cent.

7. Applicants must produce invoices proving, to the satisfaction of the Board of Trade, their purchases within the British Empire, together with copies of their orders showing the date of such purchases, whereupon an import licence for the proportion of such

purchases will be issued.

8. Where the applicants have not purchased their British supplies direct from a mill, and desire to obtain their foreign supplies through another supplier, or to import direct, they must also submit a certificate, which they are entitled to demand, from their suppliers, to the effect that the purchases in question have been purchased by such suppliers direct from a mill within the British

The tonnage will then be deducted from the supplier's licence.

9. Where a purchaser from a merchant desires to purchase any foreign supplies to which he is entitled under these regulations he must claim such supplies or the corresponding certificate at the time of his original

or qualifying purchase.

10. The Board of Trade will also grant licences to import supplies already purchased from sources without the British Empire provided that the orders were given and accepted prior to April 16th, 1919. If ordered after that date, and before the date of publication of this notice, the tonnage will be licenced, but is deductable from any other import licence to which the applicant may

eventually be entitled.

11. During the existence of these import restrictions, it is a condition that all paper manufacturers, merchants, and importers in Great Britain and Ireland must, if prices be not mutually agreed, supply customers at prices to be determined by the Board of Trade. In default, thereof, and provided Trade. In default, thereof, and provided that the Board of Trade be satisfied that supplies cannot, under proper conditions, be obtained from other British sources, the Board of Trade will issue an import licence to the customer.

12. The term "paper" used in these regulations includes all kinds of writing and printing paper, printed paper hangings, other printed or coated papers (except sensitised photographic paper), wrapping or packing paper, insulating paper, abrasive paper, filter paper and filter pulp, strawboard, millboard, wood pulp board, or unperforated wood pulp; and, whether printed or otherwise, paper bags, envelopes, and manufactured stationery, boxes and cartons of paper, or cardboard; and manufactures of paper and cardboard in which paper or cardboard is the predominant material; all printed matter included in Clause 4, and all other kinds of paper not specified herein, but excluding pictures and drawings executed by hand, prints, engravings, photographs, maps, plans, diagrams, and charts.

13. Licences will be granted subject to the condition that licencees comply with the regulations and requirements of the Board of Trade. They cannot be transferred except with the consent of the Board of Trade; they cannot be bought or sold, and are subject to

withdrawal at any time.

No importation from countries without the British Empire must be made without first

procuring a licence.

Instructions are given covering cases where the licencee purchases through another importer foreign supplies to be cleared upon the licence of the licencee.

14. Licences issued by the Controller of Paper are hereby cancelled.

15. In this notice the word "British" is to be understood as denoting British Empire.

Instructions as to the clearance through H.M. Custom of Paper, etc., by persons other than the licence holder.

Where bills of lading are in the name of the licence holder a representative or agent of

the licence holder may effect clearance as If the bills of lading are not in heretofore. the name of the licence holder he must request the Board of Trade in writing to authorise the use of this licence by his agent or supplier. The application must contain:-1. The name of the person to whom the authority is to be issued, which must correspond with that on the bill of lading. 2. Weight and description of the goods—that is, writing or printing paper, news-print, printed or coated paper, strawboard, cardboard (other than strawboard, etc.) 3. A declaration that the whole of the tonnage to be cleared is for the account of the licence holder. 4. The date the goods were purchased. If not purchased before the date of shipment a permit will be The application should be sent through the person for whom the authority is desired, and must be endorsed by a declara-tion on the part of the latter that he has contracted to supply the licence holder with the goods stated.

Personal

MR. ALBERT E. CAVE, late managing editor of the Municipal Journal, and subsequently divisional director in the National Kitchens Division of the Ministry of Food, has been appointed Press representative to the Motor Legislation Committee, 83, Pall Mall, S.W.I.

LIEUTENANT H. BARRON, a London journalist, who joined the Royal Horse Artillery two years ago, has been appointed officer-incharge and editor of a new weekly newspaper, the Military Magazine, for the troops in Ireland. The first number will appear on May 28th.

MESSRS. E. N. FOSTER AND Co., Aldgate, were elected members of the East and North-East Master Printers' Association at their meeting on Thursday last.

MR. A. D. PHELP, the hon. secretary of the Association, entertained the members with a characteristically humorous description of a fire at his premises, an event for which he said he had been waiting for 45 years! He was glad to report, however, that the "priceless minute book," containing the "inimitable minutes," was preserved.

MR. Phelp explained the absence of a member as due to a burglary at his home any burglar should think it worth while to burgle a printer's residence Mr. Phelp thought showed a lamentable lack of education on the part of the burglar.

"So you sent 5 shillings for that advertised appliance to keep your gas bills down. What did they send you?"—"A paper-weight."

Royal Commission on Income-Tax.

Sra,—Acting upon numerous suggestions made to us, we are compiling a report for presentation to the above Commission embodying instances of glaring anomaly and hardship in the incidence of income-tax, together with suggestions for referm.

The Royal Commission has invited the general public to write to them direct, but we feel that this opportunity for concerted effort

should not be lost.

In order, therefore, to make our report as comprehensive at possible, we should be glad if you would allow us, through the medium of your columns, to invite taxpayers who have suffered hardship or who have suggestions to make for reform, to send us before May 15th a short statement containing their views.

Yours etc., FRY AND MORRISON. 62-63, Queen-street, E.C.4.

Replies to Box Nos. to be addressed to the Offices, "BRITISH AND COLONIAL PRINTER AND STATIONER." 58, SHOE LANE, LONDON, E.C.4.

SPECIAL PREPAID ADVERTISEMENTS

SITUATIONS VACANT, REPRESENTATIVES or MANA-GERS REQUIRING POSITIONS, AGENCIES, BUSI-NESSES WANTED or FOR DISPOSAL, MACHINERY and MISCELLANEOUS.—Charges for Advertisements of the above class are Three. Shillings for 24 Words or under; One Shilling extra for every line or portion after. Eight words to be recknoed for each line.

Telephone: No. 8407 CITY.

Situations Vacant.

A LEADING Firm of Bookbinders' Machine Dealers, with headquarters in London, is desirous of engaging a SALESMAN, mainly for Provincial Travelling.—Those applying should include testimonials, and state age and previous experience, to Box 13656.

A SSISTANT wanted for Wholesale, Book, Stationery and Fancy Leather Goods Trade.—Write full particulars of experience, age and salary required, to Box 13665.

Machinery for Sale.

EIGHT-CROWN WHARFEDALE MACHINE for immediate sale; a bargain.—Apply, Clement's Press, Portugal-street, W.C. 13666

Miscellaneous.

WELL-KNOWN and Old-Established Dutch Firm of Paper Merchants (Wholesale and Export), with its own Warehouses, is OPEN TO REPRESENT First-Class Manufacturing Stationers, Bookbinders, Printers and Allied Trades. Highest banking and trade references. Partner in London until May 30th.—Address for appointment, K., 12, Gower-street, W.C.I. 13664

BOROUGH OF WANDSWORTH.

THE WANDSWORTH BOROUGH COUNCIL is prepared to receive TENDERS for

BOOKBINDING,

and for the supply of

NEW BOOKS and PERIODICAL CASES,

for the PUBLIC LIBRARIES, for varying periods, as per forms of tender.

Specifications and printed Forms of Tender and Contract may be obtained on application to the undersigned, and no tender will be entertained unless it is made upon one of such printed forms and delivered at the Council House, East Hill, Wandsworth, S.W.18, not later than Ten o'clock in the Forenoon of Friday, May 23rd, 1919.

Bookbinding Notes and News.

Bookbinders are looking to business on something like a normal basis in the early future as a consequence of the distinct advances which have lately been made toward a peace settlement and unfettered trading. The lifting of control is having its effect, and industry is getting on the move again. Unfortunately for the binding trade, there is a fly in the ointment in the shape of a new form of control imposed as a result of the findings of the Committee of Inquiry in regard to paper manufacture and import. It is a singular and regrettable fact that, except for the best grade millboards, English mills do not cater successfully for anything in the paper line used by the bookbinder. Certainly there is an attempt to supply strawboards, cheap millboards, and marble paper, etc, but it can-not be said that our product is either as cheap or as good or as efficient as that imported from abroad.

We had hopes that English-made marble paper was making a bid for success, and for a time the hopes appeared likely to be realised. Earlier attempts to produce printed marble did not find favour with the best binding houses, as the body paper was unsuitable and the pattern a very crude imitation of the real-thing. A great advance was made by adopting a very suitable type of body paper, and at the same time resorting to completely different methods of producing the pattern. By not slavishly aiming at a facsimile imitation of the foreign effect, something like a characteristic grade of marble paper was produced. For some reason or other the manufacture of this paper appears to have ceased, so that an end has been put to a promising branch of British service.

Binders are certain to experience a vast amount of inconvenience as a direct result of the new control. However much may be said in favour of tariff reform and protection, etc., it is distinctly unfortunate that its introduction should take the shape of absolute The imposition of a restriction of import. tariff would have left the binding trade with a clear view as to its prospects and mode of procedure. No tariff could have raised the price higher than it is now or has been. Buying would have been a straight and uncomplicated business. Now, however, the question of official licence and consent has already succeeded in stiffening an unreasonable price.
Our help towards Belgium's reconstruction takes as a first step a fetter in free trade. No one expects any British mill to attempt the manufacture of marble papers equal to imported varieties, and the only benefit to be found in the new restriction will be a prospect of higher price, shortly to be extracted by the agents.

As with marble, so with strawboards, the bookbinder is tied down to the Board of Trade. It has never seriously been disputed by any user that British mills cannot make a quality as suitable for bookbinding purposes or as cheap as the Dutch board, yet buyers are to be compelled to buy British board in the proportion of four tons to one ton of foreign unless it can be proved that the home mills cannot supply. Obviously makers will claim to be able to make an efficient board, and it remains to be seen whether the Board Trade will support this ruling. sumably it will, in the endeavour to promote self-dependence, and having little knowledge of the total lack of consideration shown by mills to the binding trade during the war.

During the war boxmakers had the monopoly of British Boards because their business was bigger, and they were better able to use a common type of board. All the waste went the way of the boxmakers, who got their boards at a fraction of the cost incurred by the smaller bookbinder in securing supplies. All the outcry for home production was made by the boxmaker, and it is common knowledge that the trade started upon its own manufacture in its own mills. What is the position to-day? The boxmaker has forgotten the necessity for home-made boards in his anxiety to secure stocks of the cheaper and better Dutch board.

It remains to be seen whether boxmakers will again turn their entire attention to British board. If they do, all the mills will be booked up far ahead, and the bookbinder will be free to secure Dutch boards through the inability of home mills to accept orders. Let the boxmakers infuse as much energy, enterprise and initiative into the uplifting of quality and the reduction of cost as they did into the monopoly of supplies during the war, and the question of having to rely upon the foreigner for suitable boards at a suitable price will cease to exist. In the meantime the first effect of the new policy of licence will be to harden the price of both British and foreign board, the latter particularly, as limited supply and unlimited demand sets the seal on the agent's opportunity.

The paper cover, or jacket, that is used to preserve the bindings of new books has become very popular, and while there are many extremely gaudy examples to be seen on the bookstalls, there are also instances in which the designs and their carrying out in colour are extremely artistic. In the United States there are complaints that these coverings are being degraded by making them advertising mediums, and that from a mere protective device to prevent rubbing of covers, it has

become a medium of advertising, so that now any book which is picked up has the praise of some twenty-odd other books breaking out all over the jacket in offensive blurs. Conscious of the change and not wholly pleased with the result, the Marshall Jones Co., of Boston, is about to adopt a plan half-way between these two extremes. On the back of the jacket it proposes to use an original decorative design drawn by Theodore B. Hapgood; on the front there will be just a line or two of honest description of the book within the jacket. There will be no advertising even on the inner flap of the wrapper. In a word, the jacket is to be as handsome a part of the artistic make-up of the volume as the firm can contrive.

In a dispute that occurred recently at Liverpool the working bookbinders of that city won an interesting victory. The members of the National Union of Bookbinders and Machine Rulers had asked for a new minimum wage, and were offered one of 75s. per week, which was an advance of 5s. The masters, however, made no offer to the larger body of women members of the Union. Though content with the 75s: the men declined it until the women were properly dealt with. They went on strike and were out two weeks on the women's behalf. The fight ended in recognition and a satisfactory advance for the women workers.

Although events are moving slowly in re-

gard to the re-establishment of the Irish tanning industry, yet they seem to be moving surely. According to the Times Trade Supplement, the Irish Packing Co. has bought St. Mary's Gate and West Gate Mills, Drogheda, and has converted the former into a chilledmeat factory, while the latter is intended for a tannery. Provision will be made for dealing with 150,000 cattle a year, in addition to sheep and pigs. It is said the tannery will be a large one, as its capacity will be 4,000 hides weekly, whilst the by-products are to be treated locally. The fellmongering of the sheep skins will also, it is hoped, prove a large and profitable business, as some grades of Irish wool and pelts are much sought after for their excellence. Whether the tanning of basils is also to be undertaken we do not know, but, in view of the determination to handle all animal products in Ireland, it is highly probable the near future will see a big development in turning out Irish basils at any rate, even if splitting and subsequent dressing of skivers and linings is not followed out immediately.

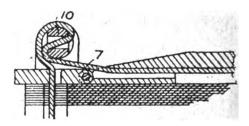

While an American quite naturally prides himself upon his ability to get things done, this progressive trait cannot be claimed by the American alone, as is evidenced by the achievements of Mr. George H. Grubb, the London representative of the firm of G. P. Putnam's Sons. For some time past Mr. Grubb has been doing excellent work as Library Service Secretary for the American Expeditionary Force Y.M.C.A. in the United Kingdom. From the Library Service headquarters in Russell-square he has handled approximately 3,000,000 books that have been purchased by the Association or given by the American people; in addition he has circulated among the troops five million magazines that have been sent as gifts from the American public. These he has distributed to camp libraries, hospitals, naval stations, barracks and mess halls in Great Gibraltar, Britain, France, Switzerland, Russia - wherever American soldiers and In all his sailors have been quartered. work he has shown an efficiency, energy and far-reaching service which has contributed greatly to the maintenance of the morale of the American forces.

Writing on the subject of war books, a contributor to the Bristal Times says:—"In my own modest purchases I have sometimes been surprised by the excellent quality of the materials used in the production of a book, and occasionally disappointed with the poorness of the paper and binding. Evidently there has been a good deal of inequality in the luck of publishers in the paper market. There must have been frequent exercise of discretion by the publishers in choosing from their paper stocks. It is, of course, right to distinguish between the paper for a book that may have but a three months' life, and one that the purchaser will desire to add to his library; but my disappointments have been

due to what I think has been either a faulty exercise of that discretion or to the failure of the publisher to get the paper he ought to have had for a particular book. It is possible that these good books printed on poor paper, bound in poor covers, with never a sign of gilt on them, may hereafter be collected as souvenirs of the great war."

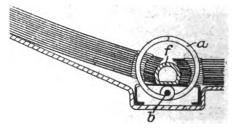

Some Bookbinding Patents.

Under a patent, by Mr. J. A. Brown, in a loose-leaf binder having a pair of blocks or covers connected together by flexible filing-bands 7, these bands pass through slots in a tensioning and binding bar 10 which, when rotated to the position shown, causes the bands to bind on themselves, the binding bar being automatically locked in the binding position. The bar 10 is rotated and locked in

position by a cam or stud engaging a worm or slot thereon, the cam or stud being carried by a slide operated by a screw turned by a key. In a modification, the binding bar is operated directly by a key and is retained in binding position by a spring-pressed stepped block engaging a collar passing part way round the bar. According to the provisional specification, the helix on the binding-bar may be replaced by helically arranged pins, or a cross-pin on the binding-bar may engage ratchet teeth on the face of a spring-pressed collar.

In a loose-leaf ledger in which the leaves are filed on rings a adapted to be opened on pivots b, a supporting part f is provided for

the lower leaves to prevent frictional contac between them and the outer sides of the rings The invention is patented by Mr. A. W. Sanders.

Under a patent by Mr. G. P. Wiggington, loose-leaf binders are provided with open sockets in both binding-members for the reception of detachable posts of determined lengths. Fig. 3 shows binding-members 3 having open sockets 17 to accommodate the tapered ends of the removable posts 16; in the

modification shown in Fig. 6, the upper ends of the posts 16 enter sockets in the upper binding-member, while the lower ends are attached to a bar 22 carrying on its underside socket-engaging pin 23.

Glair and Sizes.

The following recipes for glair and sizes appeared in a recent issue of the *Inland Printer*:—

No. 1.—White of egg glair. To the white of an egg add pure cider vinegar equal in bulk to one-sixth of the white of egg, or, in other words, mix one part vinegar with every six parts egg. To each part vinegar add six drops of oil of wintergreen, six drops of oil of sassifras, and six drops syrup of squills. Beat the mixture well, and let stand twelve hours. Remove surface crust and pour off slowly, taking care not to disturb the useless sediment at the bottom. Bottle tightly and keep in a dark, cool place. Mix in earthen bowl, never tin or other metal. Care should be taken when adding the oils. If too much is put in, the glair soon thickens and turns white, and is useless in this case. Neither should glair be poured back into the bottle when once taken out for use. Dilute with from twenty-five to one hundred per cent. water for stamping leather, the more porous leather requiring a stronger solution. For stamping cloth, one hundred to three , hundred per cent. water may be added according to the material.

No. 2.—Egg albumen glair. Put one-fourth

pint egg albumen in a quart china bowl. Addone teaspoon acetate of soda, one tablespoon ful fresh milk, and one and one-half pints cold water. Let stand about five hours. Carefully remove the scum, stir, and let stand ten or twelve hours longer. Pour off into another bowl, taking care not to disturb the useless sediment. Strain through cloth if necessary. Add one-half teaspoonful oil of wintergreen and one-half teaspoonful oil of sassafras. Beat the mixture well. For stamping, dilute with water-same as No. 1. If this mixture is kept sealed in a glass jar it will keep indefinitely. A good way to economise on egg albumen:

No. 3.—Bleached refined shellac size. Into a four-quart vessel put eight ounces bleached shellac, two ounces ammonia carbonate, commonly known as smelling salts, and two teaspoonfuls oil of spike. Mix it well, and add gradually one quart boiling water, stirring briskly. Place the vessel over heat, and let contents simmer until every particle of shellac has been dissolved, then add one quart of boiling water as before, stir and strain. Keep the mixture bottled in air-tight container, both as a preservative and to prevent thickening.

This is an excellent size for all leathers where a gloss is not objectionable, but should not be used over acid or vinegar wash, as it will coagulate at once. However, should this occur, quickly remove the size with a sponge saturated in a weak solution of ammona and water. Also avoid sizing the same spot twice, as streaks are likely to occur. One coat of this size is ample for all work. Care should be taken in heating the 'tools, as this size requires very little heat. Although hardly suitable for moroccos and levants, this size may be used on these leathers. If leather is to be left grained (not polished) add one to three parts water to six parts size. For stamping cloth or paper with either gold or white or yellow metal, the size may be used full strength for cloth, and diluted one hundred to one thousand per cent. water for paper. The weaker solution will be found suitable for dull-finished paper stamped in gold, and where a glossy finish is desired.

No. 4.—Orange shellac size. To sixteen ounces orange shellac add four ounces powdered borax and two quarts of water. Let simmer in a double boiler until shellac is thoroughly dissolved. Remove scum on surface, strain and bottle. Use same as No. 3.

No. 5.—Egg albumen glair and bleached refined shellac size. By mixing the two solutions in correct proportions a superior size results. For best results on moroccos and levants mix as follows: Ten parts egg albumen glair to six parts bleached refined shellac size. The glair should be slowly poured into the shellac size, meanwhile stirring the latter briskly. Two teaspoonfuls fresh milk should be added to each part glair. Let settle, skim and pour off as explained in No. 2. This combination may be used in all cases where glair can be employed. It is not advisable to prepare this solution in large quantities, as it soon spoils.

Some Paper Topics.

Business has improved distinctly during the last month or two and a more optimistic spirit is in evidence. Recent events have helped to create much better trading conditions, and the full benefit will be felt in a very short time. The relaxation of the blocade, the gradual passing of war restric-tions and the near approach of a signed peace; all have their share in bringing normal trading nearer to realisation. Very much more remains to be done, however, before the business of the country is worked up to full swing. The very wide door of advertising, with its huge opportunities for the papermaker and printer, is still bolted and barred, and even ordinary commercial business is only being conducted under half pressure. Not much more in the way of reduction can be expected in the price of paper, and it is fairly evident that paper cost is not now standing in the way of resumed trade. As we observed last week, paper is one of the few commodities which has rushed back to normal standards with the utmost speed. Until other branches of industry and manufacture reach a level for their goods, the slump in the paper trade will continue, for uncertainty and fluctuation in price precludes the possibility of issuing catalogues, lists, or advertisements of any nature other than those catered for by the periodic press.

So the paper trade is likely to sit on its

So the paper trade is likely to sit on its haunches awaiting the arrival of other trades at the destination of stability. Cotton goods, woollens, home trade in general, boots and leather goods, jewellery and fancy goods; in fact, almost every other commodity made or sold in the country is off the level and uncertain of its course. The Budget will settle many doubts and fears, and the Peace settlement will fix others, after which demand and supply will speedily restore something like an equilibrium. Then we may hope to find a more flourishing state of affairs in our own trade, for there is not the slightest doubt that stability, or its nearest approach, is the one thing necessary to furnish the required fillip in

the paper trade.

It is questionable whether the policy of the Board of Trade, based on the findings of the Committee of Inquiry, will find favour in its actual application. Control of the kind suggested is irksome in the utmost degree, and coming at a time when we were congratulating ourselves on having gained freedom from official restriction and control makes it doubly so. Even those with views opposed to fiscal tariffs would probably have preferred the straight course of business between buyer and seller, with a tariff on imports. At least, that method has the virtue of simplicity. When the Government steps in as a medium in every transaction between the bargaining parties, time, waste and provocation are the result. The greatest advantage of private enterprise as against

public or Governmental enterprise is celerity. And in business time is one of the greatest assets. For such period as the new policy of licences is in vogue the Board of Trade takes up the position of arbitrator and expert as to the capabilities of English paper and boardmaking mills. Who is to decide whether kraft paper, for instance, is produced efficiently and sufficiently in our home mills? Is the Board of Trade equipped with the data and knowledge essential to the decision, and, if so, on what basis is the decision to be applied? It is sufficiently well known that for the normal demand of this class of paper we are very inadequately equipped, both in quantity and quality. A tithe of the demand which may shortly be expected would book up the production of our mills capable of making it for a considerable time ahead. Under such conditions is it presumed that the Board of Trade will keep count of the time of delivery, and after an allotted date permit licences for import? Assuming this, it is evident that the fortunate possessors of the import licences will secure their goods long before the later buyers from English mills see any signs of delivery.

That is one side of the question; the other side is a matter of price. To day, English mills cannot profitably sell a decent kraft under £50 a ton, and, in fact, the only price we know of is £56. Norwegian mills can, and do, quote under £50 per ton delivered, including all charges. On quality, it is no use burking the fact, the foreign stuff is half as good again as our own. In what relation will the buyer of English kraft stand to the importer of the foreign product? We do not envy the Board of Trade experts their function in deciding on matters of price and delivery. Everything that applies to kraft applies with exactly equal force to sulphites, caps, tissues, millboards, strawboards and the innumerable specialities in paper for the production of which we, as a manufacturing country, never had the slightest regard.

In the matter of current prices there is little to add to last week's notes. Kraft paper is selling at £56 to £60 per ton; unbleached greaseproof at 7½d. per lb.; bleached at 8d. to 9d. per lb. Common browns are quoted at £18 ton; rope brown at £24 to £30 ton. Dutch strawboards are on a basis of £16 IOS, and no lower price is anticipated. M.G. sulphites are quoted £56 ton upwards for light weights. Common printings are obtainable at 4d. lb.; fine printings at 5½d. lb.; esparto writings and printings range about 7d. lb., but chemical wood papers are quoted 5½d. to 6½d. per lb. The higher grade T.S. writing and book papers have found their level, very probably permanently, at 1s. 1½d. per lb. upwards. Rag papers are securable at 1s. 3d. per lb.

H. A. M.

WHEN buying printing, remember that the difference between the top of the desk and the waste basket is about thirty-six inches.

PRICE TWOPENCE

The National Wage Basis.

Agreement with the Typographical Association.

On the question of a settlement of wages on a national basis, an agreement has been ratified between the Federation of Master Printers, the organisations representing newspaper interests, and the Typographical Association, which provides for the grading of towns and districts and the fixing of wages for the same. The following is the text of the agreement under which the new rates come into force on the pay day of the week ending May 24th:—

Whereas the method by which the rates of pay have been arranged for members of the Typographical Association has hitherto caused much unsettlement in the printing trade, and resulted in many anomalies in the rates paid, it is mutually agreed between representatives of employers in the printing trade and the executive council of the Typographical Association that wages in the future shall be settled on a national basis. For this purpose branches and sections of branches have been divided into six grades.

In order to give effect to this arrangement the following agreement has been entered into:—

Terms of Agreement.

The branches in the T.A. area shall be classified into six grades, viz.:—No. 1, No. 2, No. 3, No. 4, No. 5 and No. 6.

The jobbing, weekly news, and bi-weekly news case rates shall be:—

Grade No. 1 ... 75s. Grade No. 4 ... 66s. Grade No. 2 ... 72s. Grade No. 5 ... 63s. Grade No. 3 ... 69s. Grade No. 6 ... 60s.

The rate for members of the T.A. (other than composing machine operators) working on evening newspapers shall be 2s. 6d. above the jobbing case rate of the branch.

The case rate for morning and tri-weekly newspapers shall be 8s. above the jobbing case rate of the branch.

Piece Workers.

Pending readjustment of piece-work rates the same amount of advance as received by 'stab workers shall be paid to piece workers.

Overtime.

JOBBING AND WEEKLY NEWS.

(1) Overtime during any one day or night shall be paid for at the rate of time-and aquarter for the first two hours; time-and-a-half for the next three hours; double time to continue afterwards for any further period it may be necessary to work until a rest of eight hours can be given.

(2) Saturdays: Time-and-a-half for the first

five hours; double time afterwards.

(3) Sundays: Double ordinary time.
 (4) Christmas Day, Good Friday, and Bank
 Holidays as per national agreement on hours

and holidays.

(5) Members required to commence work before the ordinary time of starting shall be paid at the rate of time-and-a-half until the usual hour of starting.

Daily Newspapers.

(1) Overtime during any one day or night shall be paid for at the rate of time-and-a-quarter for the first two hours; time-and-a-half for the next three hours; and double time afterwards until a period of eight hours' rest has elapsed.

(2) Christmas Day, Good Friday, and Bank Holidays as per national agreement on hours and holidays for newspapers.

(3) Members engaged on morning newspapers called in to work on Sunday before

the usual hour of starting shall be paid double ordinary rate from the time called in to the usual hour of commencing work. Where notification of the call is not given before leaving work on Saturday, an extra hour at the same rate of overtime shall be paid.

Allowance for Calls.

Any member required to work overtime which is not continuous (meal time excepted) from the usual hour of ceasing, nor within two hours of the usual time of starting work, shall be entitled to an additional hour's overtime as call money over and above the hours worked.

General.

If more favourable conditions prevail at any establishment such conditions shall not be prejudiced by this agreement.

On the introduction of new branches or sections, the wages rates shall be determined by the rates operative in the adjacent district.

Any member of the T.A. called upon to work casually outside the branch to which he belongs, if the wages are lower, shall, for the first six consecutive working days, be paid the same rates of wages as in his own branch.

With the exceptions named in the next clause, it is agreed that the terms of this agreement shall come into force on the first full week after ratification.

In the case of the South-Western and North Wales groups, it is agreed that a period of six months from the date of the signing of the last group agreements shall be allowed in which to bring these areas into compliance with this agreement. Where an advance exceeds 5s., the sum of 5s. shall be paid on the agreement becoming operative, and the balance by quarterly advances of 5s. until the prescribed rate is reached.

It is agreed that a joint labour committee shall be formed, consisting of the members of the executive council of the T.A. and a similar number from the various national

bodies of employers.

The director or secretary of the Master Printers' Federation and the general secretary of the T.A. shall be conveners of the joint labour committee.

On either party giving notice of its desire that the wages rates or other conditions of the agreement should be reconsidered, the joint labour committee shall meet within fourteen days to consider the application, and a decision be arrived at within thirty five days.

Any branch of the T.A. or a local employers' organisation desiring a re-classification shall make application to their respective executives; and should the claim be endorsed, the application shall be considered by the joint labour committee, who shall give a decision within fourteen days of the claim being submitted to them.

No strike or lock-out shall take place during the period named herein for arriving at a decision by the joint labour committee on any question submitted to it.

Signed on behalf of the employers' organisations:—

On behalf of the typographical association:—

The following is the grading as applied to different districts:

Grade I., 75s.; Grade II., 72s.; Grade III., 69s.; Grade IV., 66s.; Grade V., 63s.; Grade VI., 60s.

Monotype Agreement.

At a conference held in London on March 31st, 1919, between the representatives of the national committee of the Monotype Users' Association and of the Typographical Association, the following agreement was arrived at for working the Monotype keyboard when members of the Typographical Association are employed.

'Stab Work.

No. 1. The rate of wages shall be arranged to give operators on the monotype keyboard the following amounts in advance of day case rates agreed to in the national wage settlement.

Grade Grade Grade Grade Grade Grade

1 2 3 4 5 6
8s. 6d. 8s. 7s. 6d. 7s. 6s. 6d. 6s.
and for night work the following amounts in advance of the day case rates:—

Grade Grade Grade Grade Grade Grade 1 2 3 4 - 5 6 17s. 6d. 17s. 16s. 6d. 16s. 15s. 6d. 15s. and the following schedule shall come into operation:—

Day Jobbing Case Rate-

Night Mono Rat	e—	
Grade I	Grade 2	Grade 3
£4 12s. 6d.	£4 9s. od.	£4 5s. 6d.
Grade 4	Grade 5	Grade 6
£4 25. od.	£3 18s. 6d.	£3 15s. od.

One week to be the minimum period for a

If more favourable conditions prevail at any establishment, such conditions shall not be prejudiced by this agreement.

No. 2.—The weekly hours of operators shall be as the case hours of the town, not excerding 48 for day work, and 44 for night work; the hours for each day or night's work to be fixed and defined in each establishment by mutual arrangement and subject to a fortnight's notice of change.

No. 3.—Overtime during any one day or night shall be paid for at the rate of time and a quarter the first two hours, and time and a half for the next three hours, and double time to continue afterwards for any further period it may be necessary to work until a rest of eight hours can be given. On Saturdâys time and a half for the first five hours, double time afterwards, Sundays double ordinary times.

No. 4.—That duly recognised apprentices who have served three years of their apprenticeship shall be allowed to work on the keyboard, such apprentices to be reckoned in the number allowed by rule to each office.

No. 5.—Apprentices may occupy keyboards in the proportion of one to three in the office, but where there are less than three keyboards, or in the case of an irregular number, the time in which apprentices may be employed on them shall not be more than one-third of the

time the keyboards are worked...

No. 6.—Operators transferred from key board to case, or vice versa, shall receive the higher scale of payment for the period in the course of which the change is made. Periods are to be reckoned from the start to the principal meal time, and, from the principal meal time to the close of work. This clause will not be read so as to work operators beyond the hours agreed to in clause 2, without overtime.

No. 7.—All operators shall be members of the Typographical Association. On the introduction of keyboards into any office, preference shall, as far as possible, be given to the members of the companionship into which

they are introduced.

2. The hours for Linotype operators shall be 48 hours for day and 44 hours for night work.

3. All skilled operators shall be members of the T.A.; and on the introduction of composing machines into any office, preference

shall, as far as possible, be given to the members of the companionship into which they are introduced.

4. Members of the T.A. learning to become machine operators shall work for a period of not more than three months at the ordinary stab (case) wages of the town.

5, Duly recognised apprentices who have served three years of their apprenticeship shall be allowed to work on the machines, but such apprentices shall count in the number

allowed by rule to each office.

6. Apprentices shall not permanently occupy machines beyond the proportion of one machine to each three in the office; but where there are less than three machines, or in case of an irregular number of machines, the time in which apprentices may be employed on them shall not be more than one-third of the time the machines are worked.

7. In the case of regular operators in jobbing offices transferred from machine to case, or vice versa, the higher scale of payment is to be in force for the period in the course of which the change is made. Periods are to be reckoned from the start to the principal meal time, and from the principal meal time to the close of work. But nothing in this clause shall permit the regular working of machines by double shifts of men employed alternately at machine and at case.

Lloyd Memorial (Caxion) Seaside

On Saturday last an interesting event took place at this popular Institution, when the two beds recently named by the Daily News and Leader and Star Co. were unveiled. Mr. F. J. Hillier, one of the directors, accompanied by his wife and daughter, Mr. H. Murch and Mr. W. Curtis, journeyed to Deal to unveil the tablets over the beds. The party met with a hearty reception on their arrival at the Home, where a dinner, as served to the patients, was thoroughly enjoyed, everyone agreeing that a better meal could not be desired.

After dinner the party proceeded to view the interior of the Home, and upon arrival at the bedroom containing the tablets, the secretary, in presence of some 75 patients, called upon Mrs. F. J. Hillier to unveil the tablet over the Daily News and Morning Leader Bed, of which Mr. F. J. Hillier is the life governor. Before the ceremony was proceeded with, Mr. Parker on behalf of the Lloyd Memorial Home, thanked Mr. Hillier and his friends for their presence, and said that the large number of patients assembled were present as evidence of the immense good such gifts as that of the Daily News and Star directors had been instrumental in giving. As the largest printers Home in the country, they were also justified in saying that it was also second to none in quality. The expenses had increased enormously of late, and the demand for admittance was

igitized by GOOS

so pressing that the committee had been compelled to hire a villa and sleep some 15 patients therein. They were making strenuous efforts to obtain sufficient funds to add a new wing to the Home, and, therefore, the committee welcomed such functions as these as they materially assisted the finances, for which they were very grateful. Mrs. F. J. Hillier then unveiled the tablet, at the conclusion of which she received hearty applause, Mrs. Frank Hillier being similarly greeted when she unveiled the tablet over the Star bed, of which Mr. H. Murch is the life governor.

Mr. G. Messer, a resident from the Daily Mail, in the name and on behalf of the patients, thanked Mrs. F. J. Hillier and Mrs. Frank Hillier for their presence, as it brought brightness into the lives of the sick and weary folk who were unfortunate enough to require convalescent care. He was sure that Mr. Hillier, Mr. Murch and Mr. Curtis would agree that no finer thing could be done for the workers than to get them back fit and well to resume their daily avocations. The Deal Home was well deserving of their support, the food was of excellent quality and it was ad lib, the matron was most willing and sympathetic—in fact it was a real home from home.

Mr. A. Bispham, a member of the Lloyd Home Committee, said that he should like to second the vote of thanks. It was quite a pleasure to do so, because generally when he met Mr. Hillier it was in his capacity as assistant secretary of the Natsopa Society, and he had to face Mr. F. J. Hillier as the chairman of the technical committee connected with the Master Printers' Association. Mr. Hillier, however, deserved the thanks of the printing trade employees for the very just and sympathetic handling of the many trade disputes and technicalities which they so frequently brought before him. If he was respected by employer and employee alike, it was because he deserved the confidence of them all. His kindness in helping the Lloyd Memorial Home would be widely appreciated, and he was glad to have the privilege of thanking Mr. Hillier for his practical interest in this grand trade Institution. He would like also to couple the names of Mr. H. Murch and Mr. W. Curtis with the vote of thanks. (Applause.)

Mr. F. J. Hillier said it was indeed a pleasant episode to find a common platform for himself and Mr. Bispham. He appreciated the kind remarks of the proposer and seconder, and he assured all present that it was a real pleasure to help so worthy an Institution as the Lloyd Memorial Home. He had ocular demonstration of its scope and usefulness, and could see that an extension was a very pressing necessity. He would do everything in his power to further their cause, and he could not help saying that he felt it was a strange fact that whilst journalists would devote columns to other charities, they never seemed anxious to do anything for their own trade charities. He trusted some day that pressmen would take the question of their own charities up in the same thorough manner they had done for others. On behalf of his wife and daughter, he thanked everyone present for the hearty vote of thanks that had been accorded.

Mr. H. Murch said he would not make a speech for Mr. Hillier had so interpreted his thoughts that he would have to practically repeat his words. Both he and Mr. Curtis were glad to help so good a cause, and, after personal investigation, they could justly say that the Home was worthy of every assistance that could be given it. He felt that the matron was an ideal matron, and a great acquisition to the Home. She made everyone feel quite at home, and took a keen personal interest in every patient that came under her control.

At the conclusion of the ceremony, the youngest lady convalescent presented Mrs. F. J. Hillier with a bouquet in the name of the patients resident in the Home.

The secretary, Mr. H. F. Parker, 80, Black-friars-road, S.E., would be happy to supply any information concerning the Home, and would be grateful for any gift towards the new wing—a finer peace offering could not be desired than that of naming a bed for the small cost of £100.

A "Welcome Home."

The firm of Messrs. R. Robinson and Co, Ltd., printers and stationers, Newcastle-on-Tyne, celebrated the return of their employees who have served with the forces during the war by a pleasing function, the other day, when some 250 workers employed by the firm were entertained to a tea and concert in St. James' Congregational Church Hall, Newcastle, which was kindly lent for the purpose.

Mr. A. C. Wilkie (one of the directors) presided, and supporting him were Mr. G. H. McLean, Mr. J. S. McLean, Mr. E. H. Coysh, and Mr. C. Allan (directors), Mr. W. H. Vause, Mr. R. Gibbs (secretary), Mr. T. H. Turner, Mr. J. Renton, Mr. F. W. Eltringham, Mr. W. Clark, Mr. R. H. Forbester, Mr. A. Sutton and Mr. G. D. Stafford.

The chairman extended to the returned men a hearty welcome back to civil life, and spoke in glowing terms of their patriotism, courage, self-sacrifice and loyalty. They had gloriously fulfilled their mission, and had returned under the banner of victory. Ever since the dark days of 1914 they had realised they were fighting for Right against Might, but the spirit of victory had always been in their hearts. That spirit had greatly assisted in the mobilisation of the female forces, and he was sure the Germans must have trembled when they knew that we had the women of the Empire behind and backing up our fighting men. In conclusion, the speaker wished their returned employees long life and good health to enjoy the fruits of their strenuous labours.

Each man was made the recipient from the directors of a copy of the book, "Rhymes of a

Digitized by GOOGIO

Red Cross Man," by Robert W. Service, which was suitably inscribed, and cigarettes and chocolates were handed round during the course of the evening. An enjoyable musical programme arranged by Mr. R. Humphrey, was contributed to by Miss I. Appleby, Miss Laura Fraser, Miss Evelyn Bewley, Miss Ethel Moore, Mr. and Mrs. G. H. McLean, Mr. John Dixon and Mr. T. P. Foreman.

About 100 members of the firm have served with the colours, and out of that number ten have made the supreme sacrifice, and one has died after being demobilised. A fair proportion of honours have been gained for gallantry

in the field.

Printers' Managers and Overseers

MANCHESTER & DISTRICT CENTRE.

There was a good attendance at the May meeting of the Manchester Centre at the Old Swan Restaurant, Market-street, when Mr. J. H. Nuttall (president) occupied the chair. After the reading and passing of the minutes, Mr. W. Arthur Wise, letterpress machine-room overseer (Messrs. Partridge and Love, Ltd., Bristol), was admitted to membership.

Bristol), was admitted to membership.

Mr. G. W. W. Paterson reported that he had nearly completed the arrangements for the tamble through Saddleworth and over the top to Pots and Pans and Bills o' Jacks, on Saturday, June 21st next. It was agreed that all members and their gentlemen friends should travel by train to Greenfield and then walk.

Members are to be notified nearer the

time by special circular.

The preliminary agenda for the conference which is to be held in London on June 7th was carefully gone over, and full instructions given to the delegates. The following recommendation was sent forward to the conference:

"We recommend that the minimum salary for managers and overseers be increased provata to the increases granted to the men."

WEE MAC.

SOUTH-East London Master Printers'

Councillor Winkley, president of the S.E. Thursday last, entertained members of the Company last, entertained members of the Bridge House Hotel, London Bridge. The House Hotel, London Bridge. The menuscent of pre-war times, and able close of the dinner, which was enjoy-thanked for his hospitality, on the motion of Mr. Prentice, seconded by Mr. Dawe.

Mr. Whyte attended from 24, Holborn, and explained the new Alliance scheme of the Federation, and was also able to give information regarding the negotiations which have been completed with the London unions.

The new minimum price list was recommended for sympathetic consideration to the members at a general meeting to be held at the Bridge House Hotel on June 3rd, at 6.30 p.m., when Mr. R. A. Austen-Leigh, chairman of the Organisation Committee of the L.M.P.A., will address the members.

Refirement of Mr. R. J. Lake.

Owing to the state of his health, Mr. Reginald J. Lake has been obliged to resign his positions of director of the Federation of Master Printers and secretary of the London Master Printers' Association. This is a notable event in the annals of printing, because Mr. Lake's association with the trade has been

very intimate for many years.

Before he became connected with the Master Printers' Association, he was himself managing director of Messrs. Gilbert and Rivington, a firm of Oriental printers, which was subsequently absorbed by Messrs. Clowes. In 1894 he became chairman of the Master Printers' Association and in 1904 was president of the Federation. In 1910 he was elected to the position of secretary both of the London Master Printers' Association and of the Federation, and some two years ago he was given the position of director.

Always a hard worker, the war placed upon Mr. Lake an exceptional burden. New problems arose in regard both to wages and conditions, and Mr. Lake threw himself into the task which faced him wholeheartedly and regardless of his personal comfort. An ardent patriot, he joined the volunteers in the early days of the war, while his two sons were killed on the field of battle. These events gradually affected his constitution, and a few weeks ago he was obliged to give up his public activities, having recently passed his seventieth hirthday.

Mr. Lake is probably the best known personality in the craft, and he is equally widely esteemed. He was a great asset to the organisation, for not only was he a practical printer, but he had a legal training which was of great value in many of the questions which arose. If he could be induced to overcome his natural modesty and relate his experiences, he could tell a fascinating story of modern printing, with a fund of personal reminiscences.

A WELL-KNOWN figure in the French printing world has just disappeared in the person of Monsieur Bigo-Danel, printer, of Lille, and vice-president of the Union of Master Printers of France, who has died at the advanced age of 83.

Trade Notes.

A NEW company has started works at Salt Lake City for the manufacture of pigments and printing inks by a new process.

THE Government at Budapest have been obliged to suspend a number of newspapers owing to the extraordinary shortage of paper.

THE Peking Journalists' Association has adopted a resolution appealing to the newspapers of Europe to take a wider interest in Chinese affairs.

MESSRS. JACKSON AND Co. (E. J. Jackson), printers and stationers, have removed from 82, East-hill to 93, East-hill, Wandsworth, S.W.18, opposite the former premises.

An exhibition of commercial printing is now open at the Corporation Art Gallery, Derby, in connection with the Design and Industries Association. It will remain open until June 21st next.

The first number of a new weekly newspaper for the Bromley (Kent) district has made its appearance under the title of the Bromley Mercury. It is an 8pp., and is well edited and printed, full of local and other news. If the promise of the first number is kept up there should be a successful future for the venture.

The Carnegie United Kingdom Trustees have addressed a circular to all local authorities in the country, pointing out the serious financial position of public libraries, and urging that pressure should be brought to bear on the Government to give local authorities powers to exceed the statutory limitation of the penny rate where required.

A NEW weekly newspaper dealing with Russian and Russo-British affairs has just made its appearance with the title of the Russian Outlook. It is edited and managed by Mr. Stafford C. Talbot, and the first number is well produced and interesting in its contents. The paper is published at 69, Fleet-street, E.C., and is priced at sixpence.

The death took place on Monday of Mr. Thomas Kerr, a Newcastle journalist. Mr. Kerr began his journalistie career on the now-defunct Newcastle Daily Leader, and about twelve years ago became a free lance journalist in that city. He ultimately developed the technical side of journalism, and established a good connection with trade papers in many industries.

At the opening of the proceedings at Woolwich Police Court on Saturday, the representative of the South-Eastern Herald informed Mr. Hay Halket that a proposal had been made by the secretary of the Press Club that a monument should be erected by the newspapers of England over Mr. James Harvey Dale's grave, whose sad death we reported in our last issue, and the magistrate expressed the hope that the idea would be carried out.

AT Birmingham, last Thursday, a man was fined 10s. for causing an obstruction by read-

ing a newspaper in the street. A constable said the man bought a paper and immediately started reading it, causing a crowd to gather to see what the news was. The constable warned him, but he walked away and again opened the paper, causing a crowd. The newsvendor was also fined 10s. for causing a crowd by selling papers while remaining stationary.

THE 13th anniversary of the Chandos-street restaurant of Mr. and Mrs. Eustace Miles was celebrated by a dinner to the Press last week.

A DINNER was given on Thursday last in honour of Mr. Frederic William Wile, of the Daily Mail editorial staff, who is leaving England for a lecture tour in the United States. The host was Sir Harry Brittain, M.P., chairman of the Pilgrims, and among the guests were the Hon. F. E. Guest, Mr. Neville Chamberlain, Mr. Pike Pease, Sir Campbell Stuart, Sir Charles Henry, Sir Shirley Benn, Mr. McCallum Scott, Mr. T. W. Pratt, General Cockerell, and Sir Hamar Greenwood.

AT a meeting of the executive committee of the Newsagents', Booksellers', and Stationers' Asso iation, held at Glasgow, Mr. Alexander Maclaren, hon. secretary of the joint board, explained the movement for a national federation of all the associations in the United Kingdom. He also urged that the trade should be represented on the Distributive Trades Committee which was to meet the Ministry of Labour, when the hours of employment and rates of wages would in all probability be determined.

IRISH MASTER PRINTERS.—The Irish Master Printers' Association have elected the following officers at the annual general meeting:—President, T. J. W. Kenny, Galway; vice-president, H. L. Glasgow, Cookstown; honsec. and treas., T. F. M'Gahan, J. P., Dundalk; executive council, Messrs. W. Weir, Ballymena; R. D. Montgomery, Bangor; M. Lynch, Omagh; W. Copeland Trimble, J. P., Enniskillen; J. F. O'Hanlon, J. P., Cavan; A. C. Shannon, Monaghan; G. F. Croker, Waterford; W. English, Wexford; E. T. Keane, Kilkenny; P. F. Corcoran, Drogheda; J. E. Flynn, Sligo.

HULL.—An interesting presentation took place at Messrs. White and Farrell's, printers and bookbinders, South-street, the occasion being that of the severance with the firm of Mr. Charles Shaw, who had been foreman of the binding department for the past 18 years. In handing Mr. Shaw a gold albert on behalf of the firm Mr. James Farrell made reference to Mr. Shaw's ability and the harmonious relationship which had existed between them during the whole of the time Mr. Shaw had had charge of the department. In addition to the above gift from the firm the employees presented to Mr. Shaw a silver cigarette case, which was accompanied with the best wishes for his future success. Mr. Shaw in accepting the gifts, expressed his heartfelt thanks.

THE Company of Stationers of Glasgow (Incorporated) at their annual meeting elected the following office-bearers for the current

year:—President, Mr. William L. Battison; treasurer, Mr. Andrew Johnston; directors, Messrs. Charles D. Cree, James Paterson, and Robert Wilson. During the year two new members have been admitted, and the funds of the company have been increased by the sum of £120. A sum of £549 has been paid as pensions.

THE Financial Secretary to the Treasury says the quantity of wastepaper sold by the Stationery Office in three years ending December 31st, 1918, was 25,900 tons, and the amount realised was £215,034 10s. In addition, Admiralty wastepaper was sold for £600, and Post Office for £61,635 8s. 10d.

A PRIZE of 20 guineas is offered by the British Industrial "Safety First" Association for a suitable subject for a double-crown poster, in colours, to illustrate the prevention of accidents to industrial workers. Designs must be delivered not later than Monday, June 30th, 1919, to the hon. secretary, Mr. H. E. Blain, 31, Westminster-broadway, S.W.I.

Paper Bag-Making Order.

The Minister of Labour has given notice of his intention to apply the Trade Boards Acts to the paper bag-making trade. The following is the text of the Draft Order, copies of which may be obtained on application to the Secretary, Ministry of Labour, Montagu House, Whitehall, S.W.I.

TRADE BOARDS ACTS, 1909 and 1918. Special Order made in pursuance of Section One of the Trade Boards Act, 1918, with respect to the Paper Bag Trade.

Whereas, the Trade Boards Acts, 1908 and 1918, apply to the trades specified in the schedule to the Trade Boards Act, 1909, and to the trades specified in the schedule to the Trade Boards Provisional Orders Confirmation Act, 1913, and the Minister of Labour is empowered under and by virtue of Section One of the Trade Boards Act. 1918, to make a Special Order applying the Trade Boards Acts, 1909 and 1918, to any specified trade to which they do not at the time apply, if he is of opinion that no adequate machinery exists for the effective regulation of wages throughout the trade, and that accordingly, having regard to the rates of wages prevailing in the trade, or any part of the trade, it is expedient that the Trade Boards Acts, 1909 and 1918, should apply to that trade:

And, whereas, the Trade Boards Acts, 1909 and 1918, do not apply to the trade specified in the appendix of this Order, and the Minister of Labour as respects that trade is of the opinion aforesaid:—

Now, therefore, i, the Minister of Labour, in pursuance of the powers given to me by Section One of the Trade Boards Act, 1918, and by any other statufe in that behalf do hereby make a Special Order that from and after the date hereof the following provision shall have effect (that is to say)

Article 1. The Trade Boards Acts, 1909 and 1918, shall apply to the trade specified in the appendix of this Order.

Article 2. This Order may be cited as the Trade Boards (Paper Bag Trade) Order, 1919.

Appendix.

The Paper Bag Trade, that is to say, the manufacture from paper (including gauze-lined or cloth-lined paper) of any bag or container without a gummed flap, including the operations of packing, parcelling, warehousing, receiving, store keeping, despatching, time-keeping, lift-operating, and cleaning, when these operations are carried on in connection with paper bag manufacture, and including the printing of paper bags when the printing apparatus is attached to the making apparatus; but excluding the manufacture of bags or containers with ungummed flaps (for use in the transmission of printed matter or samples) when made by the same processes as gummed envelopes, and excluding the manufacture of receptacles from cardboard, such as boxes, cartons or skillets.

(Signed) R. S. HORNE, Minister of Labour.

The Federation Annual Meeting.

Next Week at Blackpool,

Arrangements are now fairly complete for the annual meeting of the Federation of Master Printers which is to be held at Blackpool next week. The proceedings open on Monday evening with a reception by the Mayor of Blackpool to the members and their ladies in the bailroom of the Hotel Metropole.

This will be followed on the ensuing day by the more serious business of the Cost Congress in the Winter Garden. Various aspects of the subject will be introduced by the speakers, with discussions to follow. Mr. R. A. Austen Leigh is down to enlighten the members upon the work of the Alliances. Mr. Edward T. Elbourne is to speak on the subject of co-ordinating the efforts of the management and the workers to improve output in quality and quantity. For the first time in the history of the Congress a lady is to occupy the platform in the person of Miss Etherington, who will be remembered for her masterly address at St. Bride's on the subject of costing. At Blackpool she is to enlighten members on the training of cost clerks, while Mr. W. H. Burgin is also down on the programme.

Mr. A. E. Goodwin, who, as secretary, will in future have more responsibility in connection with the work of the Federation, owing to the retirement of Mr. Lake, and Mr. Williamson will doubtless also be heard on the important matter of costing installations.

Wednesday is fixed for the annual general meeting of the Federation in the same locale, with Mr. A. F. Blades in the chair. Luncheon is to be served in the Tower Ballroom for members and ladies.

FORTY-FIRST YEAR.

THURSDAY, MAY 22, 1919.

Current Topics.

Unnecessary Printing.

SIR LEO CHIOZZA MONEY has been writing on printing in the Daily Herald, and has a tilt at the great amount of printing done that, in his opinion, is unnecessary. He says:-"A host of competitive agencies, vying with each other, need separate account books, separate catalogues and price-lists, separate wrappers, separate labels, separate advertisements, and so forth. Thousands of skilled printers spend their time in creating these wholly unnecessary commodities. One of them may be seen setting up the statement that the tea of Brown and Co. is infinitely superior to the tea of Smith and Co., while another printer is setting up an equally veracious announcement to inform us that the tea of Smith and

Co. is infinitely superior to the tea of Brown and Co. Both the statements have no relation to fact. Very often the statements are deliberate falsehoods. For example, I myself once saw in the factory of a friend of mine, engaged in the boot trade, a printed boot box. It was printed all over with statements to the effect that a certain firm made boots and supplied them directly from the factory to the consumer, 'saving all intermediate profits.' This statement was backed by an illustration depicting a big factory with smoking chimneys. These boxes, I ascertained. really belonged to a mere middle-man, who possessed no factory and made no boots. Indeed, my friend the boot manufacturer actually supplied the boots to be put into the Thus a middle-man was using the trade of the printer to deceive the public. It is not a little sad that what is really a very fine thing, the trade of printing, should thus be abused and degraded and made the medium of unnecessary or deceptive announcements." Sir Leo's remedy for all this is the national organisation of the industry. when useless work would give place to the greater production of good books and papers.

Canadian Government Paper Economies.

Much attention has been given in the Canadian Government offices to the economising of paper, owing to its scarcity and high price and considerable economy has resulted. As, for instance, in the case of the Auditor-General's report which a year ago was cut down by 1,200 sets, resulting in a saving in paper alone of six tons of double royal printing, worth approximately \$1.200. It is now found that it can stand a further reduction of 1,500 sets, or 71 tons additional of paper saved, of an approximate value of \$1.500. With regard to the substitution of cheaper paper, this is being done in the case of publications which are not likely to be kept. It is pointed out that the ordinary report paper which in pre-war days cost about 4 cents a pounds, has for many months shaded a fraction under 10 cents a pound. Even the daily routine papers of both Houses of Parliament are now being printed on news-print paper, and this will be continued until the price of double royal printing gets down to normal. The committee has also been engaged in formulating a series of regulations standardising Government stationery and Fourteen rules have been office supplies, laid down, among which may be noted the following: Only British-made typewriting and carbon papers will be permitted; four

standard-sized envelopes are specified, but no special sized envelopes will be allowed, unless approved by the committee; letterheads are to be made in three sizes, 8 by 13, 8 by 10, and 8 by 61; No. 16 substance weight (17 by 22 -16 pounds to 500 sheets) is to be the maximum weight for all correspondence; die-stamped crested paper, with matching envelopes, is allowed only to ministers and deputy ministers. This is a good example to set the public in the matter of paper economy, and might with advantage be followed by our Home authorities.

Aerial Delivery of Newspapers.

THE experiments that are being made in the delivery of newspapers to outlying towns by means of an air service are being watched with much interest by newspaper proprietors in the various large cities, and although, up to the present there has been no advantage in saving of time over sending by train, yet, as the new service is in its infancy, many improvements may be introduced that will economise time and facilitate 'delivery. Although the journey by aeroplane takes much less time than railway transit there is a considerable delay in getting the papers sent by car to the nearest aerodrome, and again in the delivery at the other end. For instance the papers are delivered at the coast towns by being wrapped in waterproof covers and dropped in the sea, thus entailing the picking up and bringing ashore by boat. Doubtless in the near future quicker methods of despatch and delivery may be evolved and in that case delivery by air service will have come to stay.

London Printers' Wages.

Decision of the London Association Yesterday.

Mr. J. J. Keliher, president, was in the chair at a general meeting of the L.M.P.A., which was held yesterday (Wednesday) at the Stationers' Hall to consider the recommendations of the Council, following the two conferences with the federated London unions, on the question of a rise in wages and increased overtime rates.

There was placed before the meeting the following provisional agreement with the London Printing and Kindred Trades Federa-

"To recommend an increase of 5s. per week to adult male members, 3s. to women and male juniors, to come into force on the first pay-day in June. Employers to issue the

usual recommendation regarding apprentices. " The piece scale for women to be adjusted at a separate conference between the M.P.A. and the Printing and Paper Workers' Union.

"Unions agree to consider the question of allowing future wage settlements to be decided under a national agreement.

"Overtime conditions to be the subject of a

later conference.

After the president had described the negotiations leading up to the meeting, a resolution agreeing the increases was adopted after an animated discussion.

MR. W. R. CODLING, Controller of the Stationery Office, was the guest of the London Master Printers' Association at their monthly lunch yesterday (Wednesday).

MR. J. J. KELIHER, president, was in the chair and extended a cordial welcome to Mr. Codling, who delivered an interesting address.

DIVIDENDS AND REPORTS.

The Financial Times.—The directors of the Financial Times, Ltd., recommend a dividend on the preference shares for the half-year ended December 31st at the rate of 5 per cent. per annum, making 5 per cent. for the year, and a dividend on the ordinary shares for the year ended December 31st last at the rate of 10 per cent. per annum. The dividends will be payable on June 3rd to all shareholders registered on 29th instant. The transfer books will be closed from 29th inst. to 5th prox., both dates inclusive.

NEW COMPANIES.

HENRY T. COOK AND Co., LTD.—Registered with a capital of £10,000, in £1 shares, as wholesale manufacturing and general stationers, paper agents and merchants, printers, fashion artists, block-makers, etc. Agreement with Emma L. M. Cook, E. G. Davis and C. Brooks. Private company. First directors, C. Brooks and H. A. J. Brooks.

W. C. Powers and Co., Ltd.—Registered with a capital of £20,000, in £1 shares, as merchants, importers and exporters of papers, boards, pulp and pulp products, etc. The subscribers are L. Jones and D. Davies. Private company. First directors, W. C. Powers, A. L. Wine, F. W. Kell, and L. P. Winby. Registered office, 11-12, Pall Mall, S.W.I.

BLACKETT PRESS, L.TD.—Registered with a capital of £3,500, in £1 shares (1,500 6 per cent. cumulative preference), to take over the business of printers, publishers, stationers and dealers in fancy goods, carried on by E. R. Blacket and S. W. Baster, at 15, Southgatestreet, Bath. The subscribers are G. M. Morton and E. R. Blackett. Private company. Managing director, G. M. Morton.

HILLS AND LACY, LTD.—Registered with a capital of £3,000, in £1 shares, as bookbinders, printers, stationers, etc. The subscribers are W. A. Zebell and M. D. Gross. Private company. First directors to be appointed by the subscribers.

CENTRAL CORNWALL CHINA CLAY CO., LTD.—Registered with a capital of £50,000, in 5s. shares, to acquire the leases or setts of and certain mining and other rights relating to certain china clay and stone, tin, tin ores, mines, railways and tramways in the parishes of Luxulyan and Lanlivery, Cornwall, and to enter into an agreement between G. Bargate and R. H. C. Roche. First directors, G. Bargate, H. W. Thomas, E. Lewis and D. H. Griffiths. Registered office, Hastings House, Norfolk street, W.C.

PREMIER MUSIC PUBLISHING Co., LTD.—Registered with a capital of £:,000, in £1 shares, as music and general printers and publishers, engravers, newspaper and magazine proprietors, etc. The subscribers are N. Sharples and W. B. Taylor. Private company. First directors, N. Sharples and H. Buck, musical publisher, Balham, S.W.

CLERKENWELL FOLDING BOX Co., LTD.—Registered with a capital of £5,000, in £1 shares, as manufacturers of cardboard boxes, skillets and cartons for food packers and others, etc. Agreement with F. W. McGowan First directors, F. W. McGowan and Margaretta E. McGowan. Private company. Registered office, 12, Clerkenwell green, E.C.

G. A. H. DOUGLAS AND Co., LTD.—Registered in Edinburgh with a capital of £10,000, in £1 shares (3,000 6 per cent. cumulative preference), as law and general stationers, printers, lithographers, bookbinders, paper rulers, die-sinkers, etc. Agreement with G. A. H. Douglas and Co., G. A. H. H. Douglas, and A. L. Roxburgh. Private company. First directors, A. L. Roxburgh and J. Forrest. Registered office, 172, Hopestreet, Glasgow.

HILL, PALMER AND HEWS, LTD.—Registered with a capital of £8,500, in £1 shares, as manufacturers of and dealers in paper, cardboard, papier-máché, wood pulp. paper and cardboard boxes, carbons, stationers' sundries. etc. First directors, C. F. Hill, E. H. Palmer, and F. W. Hews. Private company. Registered office, 13, Paper-street, E.C.1.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 16 of the Companies Act, 1900. (The registration of Satisfaction is not compulsory.)

BROCK AND HOLLOWAY, LTD. (printers. London). — Particulars of £750 debentures created, and all issued April 25th, 1919, charged on the company's undertaking and property, present and future, including uncalled capital. No trustees.

WHITEFRIARS PRESS, LTD.—Particulars of second debentures for £5,000, created and all issued April eath, 1919, charged on the company's undertaking, printing works and other property.

STANDARD CATALOGUE Co., LTD.—Particulars of £5,000 debentures, created, and all issued April 29th, 1919, charged on the company's undertaking, and property, present and

SPORTS AND SPORTSMEN, LTD.—Satisfaction in full (a) on February 26th, 1919, of second mortgage debentures, dated June 3rd, 1913, securing £500, and (b) on April 1st, 1919, of second mortgage debentures of same date securing £500.

W. Holmes, Ltd. (printers and publishers, Ulverston).—Satisfaction in full on March 25th, 1919, of debentures, dated February 11th, 1909, securing £2,000.

COMPANY NOTICES, etc.

CARLTON PRESS, LTD. (in voluntary liquidation).—Notice is given that the creditors of the company are required, on or before June 10th, to send their names and addresses, with particulars of their debts or claims to Walter J. C. Hayward, 2, King-street, Nottingham, the liquidator of the company.

GARDEN CITY PRESS, LTD.—At a meeting of the Garden City Press, Ltd., held at the Leichworth Club, on April 7th, the following resolutions were passed; and at a subsequent meeting on May 5th, were duly confirmed :-(1) "That the society be wound up voluntarily." (2) "That Messrs. W. C. Rendle and H. C. Coaten, of Letchworth, Herts, be appointed liquidators of the society for the purposes of such winding-up.

BANKRUPTCIES, etc.

RE PAUL LONG, publisher, late of 3, Amencorner, E.C.—This bankrupt, who failed in December, 1918, applied recently at the London Bankruptcy Court for an order of discharge. The official receiver reported that the provable claims amounted to £4117s. 11d., and the assets realised £15. The applicant and a partner commenced business in March, 1912, as publishers and advertising agents. The bankrupt joined the Royal Naval Air Service in November, 1914, but was discharged, disabled, in May, 1915, and then purchased from his late-partner for £5 the publication rights of a monthly paper entitled Insurance, which he had since produced. He attributed his failure to liability for law costs of an action unsuccessfully brought by him in connection with the production of a musical comedy. The discharge was suspended for two years.

Those who are waiting for their ships to come in should inquire if they were ever launched.

Printing Machinery for Sale.

Oxing to a reconstruction scheme we have for immediate disposal the following Printing Machines, all of which may be seen running at any time by appointment:

MABINONI ROTARY.—Original size, length of page 181-in., cut 20-in. Will print from 4pp to 36pp. and 4pp cover (2 set), in multiples of 4pp. The machine has now been altered to print 12'1-in. pages, same cut. Machine could easily be altered back to. original size if desired. There are two stitching machines attached, and the speed is 6,000 revolutions=12,000 copies per hour prival and wire-stitched com-12.000 copies per hour, printed and wire-stitched com-

MARINONI ROTARY.—Will print 16pp., size of page 113/4-in. by 171/1-in. (2 set), cutting 94-in., taking a 85-in. reel, speed up to 5,000 revolutions or 10,000 copies per hour. Excellent inking arrangements, and altogether is in thoroughly good working order.

MABINONI BOTA 3Y — Will print 16pp., size of page 12-in. by 15-in. or 18-in. (2 set), cutting 48-in, taking a 36-in. reel down to 30-in. Delivers in 16pp. or 8pp. Speed up to 4,000 revolutions or 8,000 copies of 16pp. per hour.

French Printers' Co-operation.

Le Journal, the well-known Paris paper, recently inaugurated a system of co-operation, formed under private deed between Monsieur Mouthon, assistant director of Le Journal, and all owners of shares in the paper who are employees, workpeople, collaborators, cor-respondents, trustees or tradesmen. The objects of the co-operative society are: (1) to obtain on the best conditions possible all products, merchandise, provisions. boots and clothing; (2) the transformation, management and sale of these products; (3) the establishment of one or several co-operative shops; (4) the institution of a restaurant for the employees and members of Le Journal. Goods must be bought for cash. The capital is divided into 2,200 shares of 25 francs each, to produce a maximum interest of 6 per cent. Every member who ceases to belong to Le Journal for other reasons than age or infirmities loses his right of membership of the society. The widow and orphans of a member (until they are of age) may continue to enjoy his benefits.

Electrolype Printing Surfaces.

A method of producing electrotype printing surfaces is patented by Mr. J. A. Corey, and consists in the production of a jointless cylindrical electrotype by depositing the metal under such conditions as to produce a hard and dense deposit. The invention is particularly for use in printing repetition work, such as bank notes and postage stamps. The mould is obtained by electro-deposition upon a cylindrical original or master cylinder, in the form of a dense and hard deposit by the use of a high current density and a moving cathode or circulating electrolyte, and is of such a thickness that it is self-supporting but resilient, so that, after being stripped from the master, it will spring back or may be readily pressed back to cylindrical form. To remove the mould from the master it is cut longitudinally, and boiling water is poured over it. It is then sprung off the master, and the endsjoined together by solder or by wax, which is rendered conductive by a coating of graphite. The mould is then placed in the electrolyte and the electrotype deposited on its inner surface, the conditions under which the deposit is made being the same as for the preparation of the mould. The mould is removed by unsoldering the joint and springing it off the electrotype. The inner surface of the electrotype is ground smooth, and the electrotype is supported during the grinding operation by a pair of semicircular concave jaws secured to the faceplate of a drilling or other machine. When producing relief electrotypes, the mould may be divided along two diametrically opposite longitudinal lines to facilitate separation from the electrotype. To prevent the deposit being thicker at the ends than at the middle of the electrotype, the anode which is disposed at the centre of the mould, may taper towards its ends. The provisional specification states also that the mould may be formed as a flat electrotype from a flat original, and be bent to cylindrical form, or that a flat lead mould may be employed to produce a flat electrotype, which is afterwards bent to cylindrical form, and soldered, brazed, or welded at its meeting edges, and also that a cylindrical lead mould may be employed.

Gazette.

A WORD OF CAUTION.

In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIP DISSOLVED.

The partnership heretofore subsisting between Harry Benjamin Maulden and Edwin Charles Maulden, carrying on business as printers, stationers and fancy goods dealers. at Church-street, Framlingham, Suffolk, under the style or firm of Maulden and Sons, has been dissolved by mutual consent as from April 26th, 1919. All debts due to and owing by the late firm will be received and paid by Harry Benjamin Maulden, who will carry on the business in his own name alone.

APPOINTMENT OF TRUSTEE.

Fabritius Norway

Some Paper Topics.

The publication of the new Regulations marks a turn in the tide of affairs. Already there is evidence that the limit of low price has been reached, and something in the nature of a rebound has resulted. In itself this will force the pace in paper buying, as quite a volume of business has been held in check awaiting the return of level prices. Some buyers who have held unreasonable ideas of post-war probabilities in price will very possibly find themselves in the position of having over-estimated the fall. They will hold their business back too long, if, indeed, they have not already done so, only to find when they finally make the deal that lowwater mark has been reached and passed. We have in mind a large user of paper whose order has been withheld against a further fall in price, while the last week has actually seen a substantial advance. There is no mistaking the influence of the Regulations; they have led to a firmness in price all

We cannot bring ourselves to see much good in the new form of control. Frankly, we are absolutely opposed to obstacles being placed in the way of carrying on business. In wartime there is solid reason for such interference, and to some extent it may be excusable for a certain period after the termination of actual strife. But to suffer its imposition at precisely the time when control in other spheres is rapidly passing away and when in our own trade, too, we were on the point of realising absolute emancipation makes added gall. In the notes of April 18th, we had a paragraph which read: "There are hopes of a speedy resumption of free, unfettered business. Applied to the paper trade our own reasoning is that we are now at the stage when mill prices (in most cases) have touched bottom and the next month (May) will mark an eventful period in our trade history as coinciding with renewed business, a tariff or protective imposition on imported paper, and a forward movement in the price of cheaper grades of stock."

Except for the first sentence, the reasoning seems to have been fairly correct, as events have shown. There is no tariff, but an imposition in more ways than one. A tariff would have been preferable, for it has the merit of comparative simplicity and leaves the private individual a free agent in determining where and how to do his business. The new Regulations are framed to dictate to the paper trade how and where to place this business, and though there may be much good in them, in the way of encouragement to our home and colonial mills, the end will certainly not be favourable to English papermakers, for the encouragement is of a temporary and non-constructive character.

In war and sentiment the British Empire is one family, and it is but right that the members of the family should share common privileges. With this dictum we all agree, though in practice we do not always follow Before the war our foreign out its precepts. competitors held practically equal privilege with our colonies and little sentiment was embodied in our war trade dealings. The loyalty and sacrifice shared in the war by Britishers from every clime has developed the need for a common loyalty in post-war policy. Hence the Preserence clause in the Budget, and hence the immunity from licence of colonial paper wares. British-made paper can be imported into England in unlimited quantity, and, if price permits, the import certainly will be unlimited. With this phase of the Regulations we are in hearty agreement. Judging by the number of representatives now seeking agencies in Canada, there is no doubt that many paper houses also appreciate the principle. It remains to be seen whether English board and paper mills will have as great a regard for imported British paper as for English home-made stuff.

At some time or other, and very probably at not very distant a day, the new restrictions There is a great and powerful must lapse. body of interests in direct opposition to the scheme, and their energies will be directed to bringing it to an early termination. Whatever business may have been created for home papermakers in the interim will have been based upon compulsion and restriction linmediately these forces are removed the business will lapse unless some fresh forces are introduced to maintain the business and the price. Such a new force could only take the shape of fiscal tariffs, and if to this we are driven in the end, the question might well be asked: Why substitute in the interval a vexatious and interfering policy of the nature

of that which is now in practice?

Foreign quotations are now withdrawn, though booked orders will probably stand at the price quoted. English mills are hardening their prices on cheap qualities which had fallen to an almost unprofitable level. Betterclass papers remain at the same figures which have held good for the last month or two. Browns, and wrappings generally, will maintain their present price now that foreign supplies are likely to become difficult. is wanted by the consumer is an English grade equal to pure kraft, a requirement which has not yet been met. Actually, what the consumer will get will be Canadian kraft, of which large quantities will find their way to our market. The Canadian mills are capable of producing splended grades of this type of wrapping at a competitive price. One or two of our big houses are keen on acting as securing agencies for Canadian makers, but the most fortunate ones are those whose agencies are already in being.

THE members of the Irish Newspaper Society and the Belfast Printing Trades Employers' Association have presented Mr. William Darragh, late manager of the Northern Whig, with a cheque, and expressed the esteem and regard felt for the recipient.

The New Wage Advance.

London Printers Go Further Ahead.

A general meeting of the London Master-Printers' Association was held on Wednesday afternoon, last week, at Stationers' Hall to consider the recommendations of the Council with regard to the application for an increase of wages by the federated London unions.

Mr. J. J. Keliher, president of the Association, presided over a large gathering, and expressed regret for the occasion of the meeting. He explained that the cause of therecent demand in London was the movement that had lately taken place in the provinces, the vicious circle having started at Liverpool and Manchester last November in a fresh demand for 10s., which would have brought wages up to £4 a week. Fortunately, however, the Federation Council had been able to come to an agreement with the T.A. with regard to a National Wage Basis, upon which wages would be settled in the future. Mr. Keliher went on to describe the lengthy and anxious negotiations which had taken place with the leaders of the men, and acknowledged the assistance received from a number of firms who had sent information which they had been able to place before the other side. He mentioned that 500 publications had been dropped or greatly reduced during the war, owing principally to the increased cost of production. He also expressed appreciation of the help received from Mr. Ward, of Forest Gate, who was able to show the representatives of the unions that every time the price of labour was advanced it caused the stoppage of a certain amount of printing, for which the funds were limited, and even the printing that was done was reduced in dimensions and in quantity. As a result of spending seven or eight hours in conference, the best terms

which they could get were represented by the following provisional agreement, the original demand having been for an increase of 7s. 6d.:

"To recommend an increase of 5s. per week to adult male members, 3s. to women and male juniors, to come into force on the first pay-day in June. Employers to issue the usual recommendation regarding apprentices.

"The piece scale for women to be adjusted at a separate conference between the M.P.A. and the Printing and Paper Workers' Union.

"Unions agree to consider the question of allowing future wage settlements to be decided under a national agreement.

"Overtime conditions to be the subject of a later conference."

Mr. Keliher then moved that the recommendation of a wage advance of 5s. for menand 3s. for women and male juniors, with equivalent bonuses to piece-workers, on and from the first pay-day in June, be adopted.

Major Stanley Low seconded the resolu-

Mr. Wilmott spoke against the motion and urged that it was time that master printers took a stand against the continual demands. He made a suggestion that members present should agree that they would support the labour committee in any action they took in resisting any further concessions and pledge themselves individually not to concede any demands except those agreed to in conference.

Mr. T. E. Smith referred to the extra cost of living in London, and complimented the labour committee on the result of their negotiations.

Replying to Major Low, who asked if anything had been said about increased production, the president said this point was generally raised, but it did not promote harmony in

talking with the labour leaders. He was persuaded, however, that the leaders of the unions were very much impressed with the necessity

for increased production.

Mr. Blades mentioned, as showing the interest of the unions in this matter, that one of their bodies was going to spend £3,000 or £5,000 in putting down machinery of the latest kind in order to educate the members. That suggested that the unions were out to promote efficiency. It was a question of education and would take some time, but the desired result would be attained.

Mr. Fowler thought there was room for improvement in some of the men obtained through the L.S.C., and suggested that compositors should pass an examination to be set by a joint committee of masters and the L.S.C. He complained of the frequent increases in wages, which did not permit of trade under

any settled conditions.

At the request of the president, Mr. Blades explained the position with regard to the National Wage Basis agreement, which he thought was a considerable achievement. In the future wages would, he hoped, be dealt with by an Industrial Council of the trade, which would be governed eventually by the National Industrial Council, whose recommendations the Government had already pledged themselves to do their best to carry These recommendations would mean a legal maximum number of hours and a legal minimum rate of wages. If therefore they had an agreement between the unions and the masters that minimum would be legal and whether a master was a member of the Association or not he would have to observe it. That would level up and stabilise the wages throughout the country. Mr. Blades added that the Industrial Council of the printing trade was already formed, and they expected to have their first meeting next week. Members were already appointed by the trade unions and the bulk of the members from the Master Printers' Alliances throughout the country.

Mr. A. F. Phelp expressed strong disapproval of the resolution, and moved an

amendment as follows : -

"That this meeting of master printers feel that the present time is inopportune for any further increase in wages, and that the matter should stand over until the Industrial Councils are in working order, as it will be best

settled by national agreement.

Mr. Hunt, in seconding the amendment, bitterly complained of the Labour Committee giving way to the men time after time. more the men got the more they would want. He argued that the demand did not come from the men themselves, but was engineered for the benefit of the leaders. He pointed out that the increase now proposed would be in addition to the wages already being paid however much above the minimum.

Lieutenant Harry supported the resolution and referred to the difficult position of newspaper and magazine printers in the case of a

lock-out or a strike.

Mr. G. Eaton Hart thought the labour committee had done the very best they could in regard to this matter. He resented the strictures on that body, and also the suggestions made regarding the men's leaders. He maintained that if the latter came out into industry they would occupy very much better positions than they did in connection with the unions.

Mr. Truslove spoke of harmonious working in his own establishment, and went on to refer to the necessity for an increased subscription to ensure adequate funds for the

M.P.A

Mr. H. B. Cahusac, as an advocate of peace in the printing trade, declared that the Federation had taken the best peace step in the National Wage Basis scheme. The arrangement was that all the towns were classified, and a town could now only claim to be in its right category. This meant that no initiative such as had recently taken place in Liverpool and Manchester could be started without moving the whole of the country with them. The arrangement for placing London above Manchester and Liverpool to the extent of half a crown would complete the National Wage Basis for the whole country. Under the National Council, to which the unions had agreed, no dispute or hostile action could be taken by any local trade union without first referring the matter to the district committee, and if the district committee could not settle the question it had to come before the National Executive, which should meet within six days. That should do away with strikes altogether, and therefore the meeting would be well advised to approve of the increase now recommended.

Sir Cecil Harrison suggested the universal adoption of a strike clause by magazine and newspaper printers, so that master printers might be able to approach their customers in

a more confident manner.

Mr. Edward Hughes wanted to know if the members of trade unions had advanced any reason why the demand should be made, in view of the reduction in the cost of living of 20 per cent., according to the Ministry of Food.

Mr. Prentice did not see why Manchester and Liverpool need force the pace for

London.

The president, replying to the debate, remarked that there was little or no surplus of labour in London or in the country.

A Voice: There would be if you stopped

the out of work pay.

Mr. Keliher: That is a question the Government have not relegated to us so far. (Laughter.) He urged the meeting to adopt the modified terms which the unions had agreed to.

Mr. Phelp said he had heard no arguments to warrant him in withdrawing his amend-As a poor man he was prepared to lose his all on a question of principle. It was time that they showed Mr. Naylor and the trade union leaders they were determined to see some finality to these frequent demands.

The master printers had to consider their customers, and should have a reasonable time to put before them any increased charges.

Eventually, on being appealed to, Mr. Phelp withdrew his amendment, saying that the one point that induced him to do so was the paragraph in the agreement which stated that further wage settlements would be made under a national agreement.

The resolution was then put to the meeting, and carried with eleven dissentients, and the proceedings closed with a vote of thanks to

the chairman, proposed by Mr. Hunt.

"French Technical Words and Phrases": French-English and English-French Dictionary. By John Topham, barrister-at-law. 24mo., 324pp. Cloth, 5s. net. London: E. Marlborough and Co.

This is a new issue, revised and enlarged, of an English-French' and French-English Dictionary of the words and terms of a technical character employed in the arts, sciences, and all the varied industries of the present day. It is very comprehensive, and one great advantage to be enjoyed in using it, is that, whilst it is alphabetical throughout, lists of the terms connected with each of the principal crafts and industrial pursuits are given (alphabetically, of course), under its subject title. Thus, for example, many pages are occupied by aviation, dentistry, chemistry, the textile, metal and mining incustries, architecture, building, photography, shipping, medicines, etc., etc. It should bean extremely useful volume to commercial, professional and business men, and particularly to the officers and men serving abroad. The neat size and shape of the book, make it handy and convenient for the pocket.

Personal

MR. ARCHIBALD SPARKE, F.R.S.L., chief librarian, Bolton Public Libraries (formerly chief librarian for Bury), has beeen presented. by the past and present members of the staff at Bolton, with a handsome piece of silver plate, to mark the completion of twenty-five years' service.

MR. A. C. LESLIE GUYER, who has just been demobilised from the Flying Branch of the RA.F., has been appointed editor of Aircraft.

AFTER undergoing an operation for appendicitis on Friday, Mr. Arthur W. Dean, director of Messrs. Lepard and Smith, Ltd., is, we are glad to learn, making satisfactory and speedy progress.

Printers' Wages.

According to the Labour Guzette, the following advances in wages took place during the month of April:-

Bradford Lithographers.—Increase of 3s. per

week in the minimum rate.. (67s. to 70s.) Halifax, Huddersfield, and Wakefield Lithographers. - Increase of 3s. per week in the minimum rate. (62s. 6d. to 65s. 6d.)

Hull Lithographers.—Increase of 6s. 6d. per week in the minimum rate. (61s. 6d to 68s.) Leeds Lithographers.—Increase of 5s. per

week in the minimum rate. (65s. to 70s.) Scarborough and York Lithographers.-Increase of 2s. 6d. per week in the minimum rate. (65s. 6d. to 68s.)

Sheffield and Rotherham Lithographers.-Increase of 5s. per week in the minimum rate. (63s. to 68s.)

Manchester, Salford and District.—Journey-

women with five years' apprenticeship) em-ployed in the bookbinding and printing trades: Increase of 2s. per week. · Minimum rate after change, 30s.

Isle of Thanet (including Broadstairs, Margate and Ramsgate).—Compositors, machinemen and linotype and monotype operators (book, jobbing and weekly newspaper): Increase of 4s. per week. Minimum rate after change for jobbing compositors, 60s.

Newton Abbot and Totnes.—Compositors, machinemen and linotype and monotype operators (book, jobbing and weekly newspaper): Increase of 5s. per week. Minimum rate after change for jobbing compositors, 5os.

Dartmouth. - Compositors and machinemen.-Increase of 3s. per week. Minimum rate after change for compositors, 48s.

Londonderry. - Compositors, machinemen, and linotype and monotype operators (book, jobbing and newspaper): Increase of 7s. 6d. per week. Minimum rate after change for jobbing compositors, 57s. 6d.

Advertising in Italy.—H.M. Commercial Counseller at Rome has called attention to the large number of trade advertisements in the Italian Press inserted by foreign exporters other than British, as compared with the practically complete absence of any notices regarding British goods. It is suggested that this matter should receive careful consideration from manufacturers and merchants in the United Kingdom. Lists of advertising agencies and of suitable Italian newspapers can be furnished by the Department of Overseas Trade, 73, Basinghall-street, E.C., who will be glad to help any British firm who may have difficulty in connection with the publication of their advertisements.

"I put in the French phrases here and there," said the would-be author, "to give the book an atmosphere of culture." "That's all right," said the publisher, "but it would have helped still more if you'd put in a little good English here and there

Federation of Master Printers.

Great Gathering at Blackpool. Seventh Cost Congress and Annual Meeting.

For master printers all roads this week led to Blackpool, where there have been large gatherings in connection with the seventh Cost Congress on Tuesday, and the annual meeting on Wednesday. The glorious weather of the last few weeks gave an additional attraction to a visit to Blackpool, and many master printers not only attended on their own account, but took their ladies with them to enjoy the sea breezes of the popular Lan-

cashire watering place.

The programme opened with a reception on Monday night by the Mayor of Blackpool in the ballroom of the Hotel Metropole, which presented a very gay and animated appearance. Among those who attended were:-Mr. A. F. Blades (president), Mr. J. J. Keliher (president of the London Association) and Mrs. Keliher, Sir William and Lady Water-low, Mr. R. A. Austen-Leigh, Mr. and low, Mr. R. A. Austen-Leigh, Mr. and Mrs. H. C. Bolton, Mr. and Mrs. J. H. Williams, Mr. W. J. Burch, Mr. and Mrs. W. H. Lock, Mr. Alfred Langley, Mr. and Mrs. M. S. Chatterton, Mr. and Mrs. Basil Cahusac, Lieut.-Colonel J. R. Truscott, Mr. Edward Unwin, Mr. F. E. Smith, Major H. B. Viney (London), Mr. E. G. Arnold and Mr. Harry Cooke (Leeds), Mr. and Mrs. J. S. Waterston and Mr. Harry Hodge (Edinburgh), Mr. James Patterson (Glasgow), Mr. R. H. H. Baird (Belfast), General W. W. Bemrose and Mr. W. L. Bemrose (Derby), Mr. Sever (Manchester), and many others.

The Congress Opens.

Tuesday was devoted to the seventh Cost Congress, which was opened by Mr. A. F. Blades in the Winter Gardens. There was a large attendance, including representatives of H.M. Stationery Office and the Labour Ministry. Mr. Blades proposed that the members rise as an expression of respect to the late Mr. Allen's memory. In the course of his opening address, the president said costs were increasing and charges must keep pace. Forty-eight hours a week meant a 4s. 6d. hour rate for compositors in London, but every printer must ascertain his own costs.

Fair Prices.

Mr. Austen-Leigh introduced the subject of fair prices. He first paid tribute to the late Mr. Allen, whose work on the Costing Committee was above estimation. He also alluded to the loss to the Costing Committee of Mr. Bishop of the Scottish alliance, and Mr. Baker of South Wales He then referred to the scheme of alliances as an accomplished fact, and to General Bemrose's part in projecting the scheme. Alliances must be live bodies, and to do real work must be effectively organised, financially and otherwise. The alliances can help to maintain a standard of

higher prices, but must first be backed by good subscriptions. The value of support and organisation was evidenced by the success achieved in lifting the status of the industry. The kindred trades associations should help each other. Given this and co operative buying, a good future awaits the printing trade. In the matter of costing, parallel working must be assured. District rates should only vary according and relative to difference in wage rates. With about six different area rates only six different costing rates should be essential.

No alliance ought to fix rates without sanction of the chief secretary. Secretaries should also compile minimum price lists based on alliance average rates. Thus the grading of wages may simplify printers' costing. Imprint protection does not run up against the principle of political free trade. A strenuous campaign should be undertaken in each alliance to promote imprint protection. On the subject of estimating, secretaries of the alliances should safeguard hour rates by eliminating undercutting. Concluding, Mr. Austen-Leigh prophesied an immense and glorious future for the printing industry. (Applause.)

importance of Price Lists.

Mr. Short (chairman of the Cardiff Association) speaking on what the alliances can do to help the small printer? said in Cardiff the schedule of hourly rates and the minimum price list had assisted small printers considerably, particularly those who not yet installed the costing system. He suggested the adoption of a common badge as in the Engineers' Federation, devised on appropriate lines. As an inducement to small printers to adopt the Costing System he suggested that the alliance should instal it free of cost. (Applause.)

Organisation.

Mr. E. T. Elbourne (author of "Factory Administration and Accounts"), said routine output would suffer if printers were less efficient than he found them. Management was the connecting link between industry and capital. Capital originally operated for itself, growth of enterprise had placed capital in a correct perspective, the manager is now as much part of labour as the workers themselves in handling capital not his own. Labour must have a place in the sun, and demands better conditions, hence the present whirl of evolution. One cannot evade the industrial problem. Working ideas must adjust themselves to new principles (1) Ethics; (2) Economics. Capital, management and labour should be considered in regard to these principles. All effort should be to one end -i.e., output, the practical ex-

Digitized by GOOGLE

pression of economics and the result of ethics must deal fairly with labour and find a way to proper co-ordination to secure appropriate output. To establish this new outlook on management, labour must have its proper

part in profit and management. Mutual confidence is a necessity, and must be generated by fairness to employees. The printing trade is about to join the Joint Industrial Council; this is part of co-ordination only, a reflection of faith. Improved administration must go with it. Works committees form part of the new mode . Foremen are not always as a class altogether unbiassed sources of information, but by forming committees there is afforded an opportunity to develop sympathetic co-operation throughout their establishments. The incentive of profitsharing, somewhat remote in the workers' mind, and confidence in management is not yet sufficiently strong to warrant full success from remote incentives. Payment by results holds possibilities which should be examined. Piecework had the evil of setting up unequal conditions between classes of operatives. The problems of intensive output were intricate and demanded close scrutiny. (Applause).

Miss Etherington on Costs.

Miss Etherington speaking on "The Training of Cost Clerks," said: No matter how perfect a costing system may be, accuracy is impossible if the human element is ignored. Many people consider a young inexperienced person capable of recording costing data, but many qualifications were necessary, accuracy, observing power, special perception, technical and practical training. There was no reason why women should not equal men in clerical work if given equal facilities for training. The present supply of costing clerks was not equal to the demand. There was ample facility, for training, though junior institutes were a great necessity to deal with the elements of the subject. Office experiences was essential but technical training was quite as necessary. Great help would be given by the publication of a Costing Hanbbook embodying fuller details. Miss Etherington by urging printers to press for more ample training accommodation for costing clerks. (Applause.)

Importance of Costing.

Mr. W. H. Bergin prophesied success for the Congress, and alluded to Miss Etherington's acumen, as shown while in his costing class and since. He spoke on work on costing at St. Bride's, where intensive classes are being conducted. Fifty-six members at present attend, and more would be there if accommodation were available. Printers were in business to make money, hence the necessity to take jobs which realise profit. To this end, methods of cost finding are an essential, and to secure appropriate assistants training classes are the chief means. The Costing Scheme is not the creation of one man, but the product of many minds. The present system finds costs, and proves their accuracy or otherwise; it is simple, economic, and conclusive. Students are trained to realise this, and are encouraged to question any point embodied in cost finding. Similar classes should be inaugurated all over the country.

Mr. Goodwin Speaks.

Mr. Goodwin, speaking on Costing, said that the demand for help in installing costing was greater than could be met. A standard in costing had been established which other industries were endeavouring to copy. A new book had just been published by the Federation entitled "Office Organisation," with the object of assisting printers, large or small, to improve their office routine. Organisation was the great topic in industry to-day, and our trade, along with others, was in the throes of organisation. To this end the book would help. Mr. Goodwin outlined the Costing System in the now approved manner, familiar to those who already understand and appreciate the elements of printers' cost finding. Regarding war developments, the hours and holidays had considerably affected costs. Two weeks in the year were now given as holidays, and paid for. The cost must be recovered over the working weeks of the year, each department bearing its own expense. It was suggested that a holidays' expense account be opened for the sake of accurate cost recording. (Applause.)

An interesting Discussion.

Mr. Wignall questioned the binders attitude to dockets. Mr. Blades replied that binders are in a conciliatory attitude and will eventually accept the docket.

Mr. Bigg (Stationery Office) asked: (1) How many years will it take to wipe out plant at 10 per cent. on diminishing value? (2) Is not part of the 15 per cent. on material previously

allocated to departments?

Mr. Goodwin answered: (1) That depreciation factors depend on business, some require more than 10 per cent. There was some reason for thinking a set value of depreciation as a practical way of clearing off machinery costs, but the Costing Committee judged the diminishing value the fairer way (2) Percentage is arrived at by allocating to materials a part of the cost of maintaining a staff for performing buying, clerical work, etc.

The meeting then adjourned for lunch. When the conference resumed Mr. King opened the after-lunch session with an interesting address on the recent achievements of the printing trade. Unorganised trades sell below value; organisation uplifts the sale price to its relative value. Equal remuneration for equal service was the desideratum to which organisation gives the approach. Organisation, beginning with one trade, ultimately spreads to touch every other trade. Industrial education must run hand-in-hand with organisation, then the road towards stability will become clearer than it is at present. (Applause)

Mr. Andrews (Ashton-under-Lyne), speaking on "How to Increase the Demand for the Best Class of Printing." advocated opening up further ground for discussion at these Costing Congresses. Granted costs are known, the way is open to consider the subject at issue.

Rather was it a case of how to supply good printing for the demand was there. People were alive to the value of good printing. There was a gradual evolution in things produced towards the ideal. This offers an opportunity for more and better printing.

Mr. Storey (Leeds), speaking on the same subject, said not all printers were convinced of the importance to the customer of good Printed matter has a definite purpose and if it did not fill the need it failed.

Mr. Sessions, speaking on "Model Price Lists," said that the Costing System was not complete without the formation and adoption of minimum price lists. These were not new by any means, there were many in existence. The war had helped users of printing to become accustomed to a higher scale of price and this advantage should not now be thrown away.

Mr. Quinney, of Belfast, spoke of an incident bearing on the docket question, in which masters conferred squarely with men and secured consent and approval to use of the docket.

Mr. Williams spoke of his recent experiences in installing the Costing System. In one place six months ago composition was selling at 1s. 6d. per hour; now it was 3s. 6d. as found under the Costing System. The moral value of the costing system was great; it puts backbone into the printer.

A unanimous vote of thanks was moved to the speakers, chairman and costing staff amidst enthusiasm.

The Executive then adjourned to the Council meeting.

Trade Notes.

LAST week the Daily Telegraph attained its 20,000th number.

THE death took place at Mold, last Friday, of Mr. James Thomas, printer and stationer, in his 81st year.

THE late Mr. William Lotinga, sporting journalist and editor of Lotinga's Weekly, has left estate of the value of £9,119.

SIR EDWARD DANIEL WALKER, who was three times Mayor of Darlington, died on Friday last. Sir Edward who was in his eightieth year, was head of the well-known firm of Walker and Wilson, wholesale newsagents and booksellers.

SATURDAY'S Accrington Observer and Times contains two pages devoted to "What to Wear at Whitsuntide." These pages contain an up to-date fashions article, smart designs, and an attractive display of drapery and millinery announcements.

BOOKSELLERS throughout the country are demanding reduced terms from publishers on the ground that they cannot raise their prices, which are fixed by the publishing firms, and they therefore have to exist on practically the same margin of profit as before the war.

THE Kent District of the Institute of Journalists spent an enjoyable week end at Ramsgate, the members putting up at the St. Cloud Hotel. The business meeting was held at the Town Hall, and afterwards the party was entertained to tea as the guests of the Mayor and Mayoress.

THE House of Cassell last week welcomed home soldier employees who have returned from the war. Sir Arthur Spurgeon said that more than two-thirds of their male staff had joined the forces. The directors, in order to celebrate the coming of peace and to mark their appreciation of their soldiers, are grant ing, in the week following the signing of peace, a double week's salary to every employee of the firm.

On Saturday, at Glasgow, there was a sale of the collection of books formed by the late Mr. T. F. Barrett, LL.D., who was chief librarian of that city. "Transactions and Monographs of the London Bibliographical Society," went for £18 10s.; Ruskin's Works, library edition, in 39 volumes, a special subscriber's copy, with autograph letter by Ruskin, brought £17; the "Transactions of the Edinburgh Bibliographical Society," 20 parts, £16; a set of the Studio, with extra numbers. £9 10s.; "Early Printing—Aristotle," folio vellum, dated 1551, £3; minute book of the Board of Green Cloth. 43s.; "Glasgow Bibliographical Society Record," 8 parts. 40s.; and "Mitchell's Old Glasgow Essays," 36s.

OPENINGS FOR TRADE.—H.M. Trade Commissioner in Melbourne reports that an agent in Brisbane is desirous of obtaining agencies, on a commission basis, for Queensland, for

United Kingdom manufacturers of paper, stationery, printing and allied trades, etc. (Reference No. 815). A former Professor at the Technical School at Liege desires to obtain agencies for United Kingdom manufacturers of drawing paper and supplies, stationery, mathematical instruments, office furniture, coloured inks, artists' colours, etc. (Reference No. 839). The names and addresses of the applicants may be had on application to the Department of Overseas Trade, 73, Basinghall-street, E.C.2.

TENDERS are wanted for the supply of printing and stationery for one year for the Lancashire Constabulary; form of tender from the Chief Constable, Preston.

THE Royal Magazine for July is full of good things in fiction and fact, and is well illustillustrated. The cover is from a design, by Stanley Davis, and the number is really excellent value.

The late Mr. Edward Parker, at one time with the Leicester Advertiser and the Bolton Chronicle, afterwards owner of Eddowes Journal, Shrewsbury, sub-editor of the Manchester Evening Mail, and managing sub-editor of the Western Mail, has left estate of the value of £1,574.

The death has occurred of Mr. John B. Mackie, editor and proprietor of the Dunfermline Journal. Mr. Mackie had a long and distinguished career in journalism both in Scotland and in England. In early life he was a member of the staff of the Glasgow Herald, and for some years held the position of chief sub-editor. Forty years ago he entered into partnership with his brothers in the proprietorship of the Daily Review, Edinburgh. Mr. Mackie afterwards became editor of the North-Eastern Daily Gazette, Middlesbrough, a position which he filled with distinction for a period of 13 years. He was also for a time engaged as leader writer on the Newcastle Daily Leader, and latterly he became proprietor of the Dunfermline Journal.

THE STATE OF TRADE.—According to the Labour Gazette, employment during April was fairly good in the printing trades, but slack in the bookbinding trade and, with some exceptions, slack or bad in the paper With letterpress printers employment was fairly good, and an improvement was reported, especially in London. Except, however, for the usual working of overtime by a portion of the men in London, little or scarcity of labour was re-On the other hand, there was very overtime or ported. little short time; but in Edinburgh it was reported that at several works short time was observed by machinemen owing to shortage of paper and difficulty in securing female layers-on. With lithographic printers, employment was quiet and worse than in the previous month, some short time being worked. In the bookbinding trades employment was slack, and in London there was a considerable amount of short time. At Manchester, however, women employed in the bookbinding trades were reported to be well employed. Digitized by GOOQ

THURSDAY, MAY 29, 1919.

The Blackpool Conference.

THE event of the week is the Seventh Cost Congress and annual meeting of the Federation of Master Printers, which opened on Tuesday in the Winter Gardens, at Blackpool. The proceedings really began with a reception by the Mayor of Blackpool, in the ball-room of the Hotel Metropole on Monday evening, when there was a large gathering of the leading master printers, enlivened by the presence of ladies, and a most enjoyable time was spent. The serious business began on Tuesday, when the Conference was opened by Mr. A. F. Blades, and several of the members spoke on important trade subjects. other page of this issue a report of the proceedings is given up till the time of our going to press.

Hard on the Libraries.

THE rise in the cost of paper and printing, caused by the war, has had its effect in raising

the prices of books and this is bearing hardly on those public libraries whose income is derived from the penny rate and is thus a fixed quantity, as by law the rate cannot be increased, and thus the purchase of new books is practically impossible. The position is. indeed, so serious that the Libraries Association has brought the matter to the attention of the Board of Education, the Local Government Board and the Ministry of Reconstruction, and legislation is asked for to increase the rate that may be levied. Many libraries, owing to increased expenditure cannot make ends meet, and in one case an institution finds itself faced with the problem of paying the expenses of the staff, books and maintenance on the princely income of £85 a year.

The Price of Books.

THERE is quite a pretty quarrel going on between booksellers and publishers, the former asserting that the wholesale prices at which books are supplied to them do not allow of a living profit, and the latter protesting that the profits of the retailers are ample considering the work they do in placing their wares before the public. One of the demands by the booksellers is that all books should be published at net prices. Other claims are for 25 per cent.—at present it is 2d. in the 1s.—off the price of single copies, and 331 per cent. off orders given to the publishers' travellers. The latter is often made a matter of individual arrangement between the bookseller and the publisher's representative. On the other hand the publishers point out that, in their opinion, the retailers are not pushing enough, and one publisher says they would not grudge the retailers a larger profit if they would earn it, or as it is put: - The publishers spend large sums in advertising their publications, while the retailer simply waits till customers come and makes no special effort to attract them. In the matter of cheap novels the publishers declare that the retailers have been doing exceptionally well, charging 2s. for books which they buy at 1s. 3d., and it is stated that "reward" books are generally supplied to the bookseller at half price. On the other hand, the booksellers allege trade oppression on the part of the publishers, and point with indignation to the refusal, just announced, by some of the latter to allow a rebate off retailers' accounts when prices become lower. No doubt there might be concessions made on both sides; for in a dispute of this character there are generally good arguments brought forward to prove that each is in the right.

The Printers' Apprentice.

ARE the printing shops to-day giving their apprentices a real training, one that will fit. them to handle any proposition that may arise in the office? This question is often asked, and Mr. H. P. Moore, a Canadian printer, thus deals with the problem: "Apprentices to the printing business should be treated as pupils registering at a school of. typography, and be treated as pupils, not as errand boys brought in to fill a gap when an exigency occurs in the printing office. Allround printers can only be made in an office outside the cities. In the cities no printers are made. Only specialists are there educated. A boy in a city office is a machine compositor, a job compositor, a stone-hand, a pressman, a feeder, or a proof-reader. In the country office he is drilled in all these, if the office where he isapprenticed is a real printing office and the interest due to him is taken with the apprentice. In the office outside the city the apprentice is personally known to his employer, and if the proprietor does his duty he will have some oversight of the young employee, not only during working hours, but during his hours of leisure. He will encourage him in the formation of upright character, gentlemanly demeanour and good habits. Times have changed, and changed rapidly the past few years, and the apprentice problem may be more difficult now, but at all events, when apprentices are engaged there should be an honest effort on the part of the management of the office to give them a fair chance, with intelligent tuition, and a reasonable oversight in the matter of the formation of character and business methods.'

'A CONFERENCE on "Co-partnership in Industry" will be held under the auspices of the Industrial Reconstruction Council, on Tuesday, June 3rd, at 6 p.m., in the hall of the Institute of Journalists, 2-4, Tudor street, E.C.4. The chair will be taken by Colonel C. L'Estrange Malone, M.P., and the opening address given by Mr. E. H. Mundy, B.A. (secretary of the Labour Co-partnership Association), after which will follow questions and discussions. No tickets are necessary.

MESSRS. TILLOTSON AND SON, LTD., of Bolton and Liverpool, one of the largest cardboard box manufacturers in the country, are interested financially in the Match Trade Combine (Maguire, Paterson and Palmer, Ltd., registered as a private company, with a capital of £500,000). One of the directors of Messrs. Tillotson and Son, Ltd., Mr. J. Lever Tillotson, and the Liverpool manager, Mr. George Petty, have joined the board.

St. Bride Lastitute Printing School.

Appointment of Additional Staff.

The development and progress of the printing classes at the St. Bride Foundation Institute have necessitated the appointment of additional instructors, and an advertisement on another page of this issue gives particulars of appointments that are open. These are a deputy principal, a composing instructor, a letterpress machine instructor, and a lithographic printing instructor. Needless to say that prospective candidates must have had practical experience in modern methods of production, preserably in an executive position, and they will be required to associate themselves with the recognised activities of the School and work for its best interests. The salaries offered are liberal. It is to be hoped that the enlarged staff, when complete, will still further the good work and high reputation to which the St. Bride Printing School has attained.

North London Master Printers.

Mr. G. B. Moore, the local president, was in the chair at a meeting of the Association of Master Printers of North London, on Wednesday last week, at the Finsbury-park Congre-

gational Church.

Mr. R. A. Austen-Leigh attended specially for the purpose of addressing the gathering on the work of the organisation committee, of which he has been chairman since its inception, with special reference to the imprint movement, and a draft rule which has been prepared in anticipation of London forming one of the Alliances in the new Federation scheme of re-organisation. Mr. Austen-Leigh also opened an animated discussion on the new minimum price list, following which a special committee was appointed to examine the list and report to the organisation committee, as has been done in other districts, as a preliminary to the adoption of the list by the Association as a whole. In this connection special reference was made to the hard work put in by the various district representatives on the price list committee of the L.M.P.A., and the speaker thanked Mr. D. A. Whitehead, treasurer of the North London Association, for his personal assistance.

Mr. H. C. Hill, vice-chairman of the L.M.P.A., mentioned the proceedings at the Stationers' Hall meeting that afternoon, when a further advance in wages was agreed to, pointing out that neither strikes nor lock-outs were the remedy for the rapidly increasing cost of production due to wage advances. But the education of the workers to a sense of the critical position of the printing trade, if these increases were to be continued at short

intervals, offered the most practical solution of the problem which was exercising the minds of the employers, including all who were keenly interested in the workers themselves.

Mr. W. Whyte, from 24, Holborn, answered a number of questions dealing particularly with the working of the imprint movement, which has steadily advanced in favour with the members of the Association, and also mentioned the greatly improved organisation of the trade throughout the country, which had been referred to by the Controller of the Stationery Office at the L.M.P.A. lunch held earlier in the day.

At the close of the proceedings Mr. Austen-Leigh was warmly thanked, on the motion of the chairman, for his services on the council and as chairman of the organisation committee, which had already secured substantial benefits for all members of the Association.

Board of Trade Announcement.

Import Restrictions.

The President of the Board of Trade, after duly considering the recommendations of the Consultative Council on Imports has given the following further directions in regard to the prohibitions of import. The restrictions on the importation of the following articles are to be removed:—Printing inks, carbon black, china ink, cobalt oxide, earth colours, earth sienna, gamboge, indian ink, imitation gold leaf umber aluminium powder.

gold leaf, umber, aluminium powder.

The importation of the following article is to be restricted as shown:—The present ration for pencils (50 per cent. of 1916 importation) is

to be maintained.

Applications for special licences should be made as usual to the Department of Import Restrictions, 22, Carlisle-place, London, S.W.1.

It is admitted that figures cannot lie, but iters can figure.

London Masier Printers.

Controller of the Stationery Office Discourses on a Few Problems.

Mr. W. R. Codling, M.V.O., C.B.E., the Controller of the Stationery Office, was the guest of the London Master Printers' Association at their monthly lunch on May 21st, and the presence of so distinguished a visitor brought together a very large gathering of members. Mr. J. J. Keliher, the president, was in the chair, and among those supporting him were Mr. A. F. Blades, president of the Federation, and other members of the London

Council.

The president's warm welcome to Mr. Codling was heartily endorsed by the com-pany. After a reference to his previous visit twelve months ago, Mr. Keliher congratulated the Controller on being the first member of the staff of the Stationery Office to attain the chief position in that Department. Attaining that distinction at so early an age, the master printers hoped that he would live to earn Mr. Keliher had a still greater honours. witty reference to the ability of the civil servants in the Stationery Office, particularly in the matter of finance, a gift which he thought might be exercised with some advantage in other Government Departments.

The toast of Mr. Codling's health was

enthusiastically honoured.

Mr. Codling, who was warmly received,. expressed his pleasure at meeting again the master printers of London, and in a reference to his visit with the late Sir Frederick Atterbury on a previous occasion he paid a tribute to the memory of his late chief, who was not only thorough and just in his official dealings but privately was one of the most lovable of men. Mr. Codling was glad to feel that in spite of occasional differences his department and master printers managed to remain good friends, and he hoped, as the representative of the Stationery Office, always to have their goodwill. Dealing with matters now before the trade, he said one of the most interesting at the moment appeared to be that of costing, which was down for discussion at Blackpool. Other subjects, however, were for the present left to the imagination of the public, and he thought possibly one of them might be how best to take advantage of the youth and innocence of the new Controller of the Stationery Office. The Controller said he still had hopes that he should live to see the day when master printers would arrive at an agreement among themselves in regard to the complex matters of costs, though he hoped that that agreement would not take the form of an agreement in regard to prices to be tendered for Government work, and so eliminate healthy competition. He was afraid there was evidence of a tendency in that direction, and he thought he might say that word of warning before that tendency became

very marked, otherwise it was possible that the Government might have to seek its own He noticed that one of the matters remedy. down for discussion at Blackpool was how to increase the demand for the best class of He thought one of the best ways to achieve that desirable object was to produce more of the article. In this connection, Mr. Codling commented upon the paucity of good faces of type, and suggested that the Federation of Master Printers might appoint a committee to select really artistic and good faces of the types used. He thought that the best type that could be evolved would be that which was the most pleasant to read, and which produced least eye-strain. A strict adherence to absolute utility ultimately produced the best result. And as an illustration he mentioned the case of the aeroplane in flight, which was a beautiful sight, but in which everything had been sacrificed to the purpose for which it was used. In conclusion, Mr. Codling congratulated the printing trade on their services rendered to the State during the war in the face of great difficulties. He hoped the same patriotic spirit would continue to animate the trade in the difficult and dangerous times which were still before them. He intimated that new processes and appliances would need to be fully utilised for the benefit of the consumer and the ultimate profit of the master printers. Whilst labour conditions had been vastly improved, labour still demanded a greater reward for its services. He believed the solution of those problems lay in the direction of knowledge and education, out of which would arise respect, forebearance and consideration on all sides. (Applause.)

Dr. Maclehose, the guest of the president, and representing the Scottish Alliance. in proposing a vote of thanks to Mr. Codling, expressed his pleasure at meeting his fellowcraftsmen in their own area. Incidentally, he mentioned that from his own firm had gone more than one hundred men to the Forces during the war, every man of military age offering his services. The speaker went on to thank Mr. Codling for the sympathetic consideration which he gave to master printers in the difficulties with which they were faced, and he approved of the Controller's observations with regard to type faces which would involve no more trouble in using than any other type. Speaking of the difficulties which confronted master printers in different areas, the speaker said he was convinced that if they approached those problems in a spirit of co-operation with their employees, the result would be infinitely more satisfactory than could be gained by any system of nationalisation.

Seconding the resolution, Mr. Howard Hazell speaking of the capabilities of the Stationery Office officials, said it was another question whether master printers desired that economy should be carried out to benefit the payers of income-tax at the expense of the printers. He added that master printers were agreed as to what costs were, but that some printers had not yet installed the system. He

pointed out that the printing trade was the first to institute its own system of costing, and the only trade that paid officials to carry out a cost campaign. He was certain the Stationery Office and other Government Departments approved of paying reasonable prices based on actual costs, and an industry which worked on any other basis was a nuisance to itself and harmful to the country because it paid no income tax on its own trading.

Mr. Codling, in replying to the resolution, said he saw no reason why the good feeling existing between the master printers and the Stationery Office should be disturbed. He felt it was good policy for the State and more satisfactory to master printers that the prices paid for work required by the State should be fair and reasonable, and he intimated that in the schedules of the contracts which would be issued on the expiration of the existing contracts the cost of printing would be very carefully assessed, and the results of that cost would be adopted in the prices placed in the schedules when the contracts were put up for competition.

Mr. Keliher asked the gathering to offer a greeting to those members who had recently returned from war service and who were present on that afternoon for the first time. It was due to them to give an expression of gratitude for all the hardships and risks which they had gone through.

Lieutenant-Colonel James Truscott acknowledged the greeting on behalf of the many members of the craft, officers and privates, who had served with distinction in the war.

TECHNICAL INSTRUCTORS.

Applications are invited for the following wholetime appointments: (a) Deputy Principal, (b) Composing Instructor, (c) Letterpress Machine Instructor, (d) Lithographic Printing Instructor.

Candidates must have had practical experience in modern methods of production, preferably in an executive position; this is essential in the case of the Deputy Principal. They must be capable of giving a systematised course of instruction in an interesting and clear manner in both theory and practice, possess a sympathetic understanding of students and be capable of enthusing to greater efforts. They will be required to associate themselves with the recognised activities of the school and must not undertake work outside the school.

SALARIES.

Deputy Principal—£350 per annum; increasing by annual increments of £15 to £500 per annum. Instructors—£200 per annum; increasing by annual increments of £10 to £300 per annum.

In addition to the above scale of salaries, there is a War bonus of £39 per annum.

Increments are subject to approved service.

The appointments, it is expected, will date from 1st September, 1919, and will be made in accordance with the usual educational regulations, including the provisions made by the Superanuation Act of 1918.

The attendances are subject to the needs of the school, but average about 7 teaching hours per day.

Canvassing directly or indirectly will disqualify a candidate.

The latest date for receiving applications, which should be endorsed "Instructor," will be 20th June, 1010.

Further particulars and Application Forms can be obtained from the office of the Principal.

Some Printer Heroes.

The Boys of the Grafton Printing Works Entertained to Dinner.

There was a pleasant gathering of employees of the Grafton Printing Works (Hill, Siffkin and Co.), North-road, Holloway, on Friday night at Anderton's Hotel. The occasion was a congratulatory dinner in honour of those members of the staff who have safely returned from the war. Mr. H. C. Hill presided over the gathering, which reflected the good feeling which exists among all engaged at the Grafton Printing Works, where all labour in perfect harmony and good fellowship. Friday's function was of an exceedingly pleasant character, the dinner generously provided by the firm being followed by an enjoyable musical programme, interspersed with a few toasts.

Following "The King," the chairman, who was cordially greeted on rising, proposed "Our Guests." He mentioned the occasion for the dinner, and added that the entertainment was a very small token of their thankfulness for the efforts of the brave lads who had gone to the service of their country in the time of its great need. The Grafton Printing Works had reason to remember when the call was made for men, because their machines were the first to turn out recruiting posters, commencing with the well-known design, "Fall In," and embodying Lord Kitchener's letter. That was the forerunner of many millions of posters which did their share-not an unimportant one-in awakening the country to its peril. (Applause.) During all that time they saw their lads leaving them one by one and going forth with a laugh and a song, although they knew quite well they might never come back. Later, when the age limit was reached, they saw the staid fathers of families putting aside

their civilian clothes and donning khaki. All went forth, not for any hope of personal gain, nor from any selfish motive, but simply because they felt that their country, their homes and their womenfolk were in danger, and, like true men, they decided they would defend them to the end. (Cheers.) The Grafton Works Roll of Honour numbered 63. of whom nine had made the great sacrifice, twenty-nine were still serving, three owing to wounds were incapacitated from returning to their ordinary work, and twenty-one were present that evening. (Cheers.) That was a record of which he thought they might feel justly proud. Mr. Hill was pleased to be able to add that the firm had, up to that time, been able to re-instate every man who had desired to come back. (Applause.) He then read the names of those who had returned, and at his request the blushing heroes stood up to receive the cordial cheers of their colleagues.

War Honours.

It was stated that two members of the staff had so distinguished themselves in the field as to receive decorations.—Alfred Clayton, who was awarded the Military Medal, and F. Goodspead, who gained the Croix de Guerre. The latter is still serving, but Mr. Clayton, who was present, was enthusiastically greeted as he acknowledged the reference to his bravery. The chairman, referring to Clayton's modesty, said he had been unable to learn from him as to how he gained his decoration, except that it was "for nothing at all."

Mr. Hill spoke of another aspect of the war, illustrated in the number of letters he had re-

ceived from the boys at the front. Those letters, which would never have been written but for the war, showed a spirit of friendliness and confidence which he was proud to acknowledge. They were to him evidence of the breaking down of the barriers of restraint and the freeing of the human element in their relations one with another. (Applause.) He thought those communications augured well for the future, and, speaking generally, he believed mutual respect would take the place of a good deal of inherent distrust which had been due to misrepresentation and misunderstanding on both sides. He did not think the last four or five years had been entirely lost, because, hard as their experiences had been, they could be turned to good account in the future for the benefit of the country, the craft and themselves. (Hear, hear.)

The toast was accorded musical honours,

followed by enthusiastic cheers.

Mr. E. Hill proposed the toast of "The Lads still to Return." He said they would be pleased to see their boys back again, and he thought when they did return there would be plenty of work to keep them going. He suggested it might give them an opportunity of having another pleasant evening of that kind (cheers), and they would offer the boys who were still to come back as warm a wel-come as they had given to those whom they

were glad to see there that evening. Mr. R. A. Cook, whom the chairman familiarly addressed as "Reg," replying on behalf of the guests, said he felt far too happy that night to be able to acknowledge the toast as it ought to be acknowledged. The guests, however, thoroughly appreclated the kindly welcome back to the Grafton Printing Works. He could not tell them how much the boys in khaki longed to return to civil employment. He mentioned how those who had been to the Far East or the Near East were reminded of their work by the views which they saw of scenery which they had so frequently elaborated on posters. He remarked, however, that the skies round Marseilles were not always a "clean blue," while the "fleshes" he had seen in Paris and other parts of France were far from being permanent. (Laughter.) Referring to the boys who were yet to return, he said they were looking forward to seeing them, so that they might carry the military victory on to a commercial victory in the

printing trade. (Loud applause.)

Mr. W. L. Bonnett, who was kindly introduced by the chairman and warmly received by the company, proposed in an impressive manner the toast "In Memory of the Lads who Fell." He mentioned how his only son had been wounded at Gallipoli, and, after his condition had given rise to great anxiety, he eventually recovered. (Applause.) Mr. Bonnet proceeded to make a severe indictment of the outrages committed by the enemy during the war. He then read the names of those who had made the great sacrifice, adding that they were all proud of them, and asking those assembled to drink to their memory in silence.

The company then rose, and in perfect

silence honoured the memory of the dead

The toast of the chairman was proposed by Mr. J. W. Cox, who acknowledged Mr. Hill's unceasing thoughtfulness for the employees, both inside and outside of the works. He mentioned the chairman's activities in the early days of the war in getting together a battalion of volunteers from the Grafton Printing Works, and his efforts later on in relation to other matters connected with the trade, such as paper restrictions. He wished Mr. Hill many years of life, attended by good health, in order that he might control and captain the good ship Hill, Siffkin and Co., and, in conclusion, thanked the chairman for that pleasant and memorable evening.

Musical honours were accorded the toast, and Mr. Hill. in his reply, said he not only liked to see the employees hard at work, but he also liked to see them hard at play and they could not give him any greater pleasure than to turn up as they had done that night in great numbers to an affair of that kind. They knew, he said, that his interest in the employees did not cease with the clock, or even with the surroundings of the works. If ever he could do anything to further their interests they had only to approach him.

(Applause.)
The musical part of the programme was of an attractive order, the following contributing: Miss Patty Bowen, Mr. Ernest T. Gyngell, Mr. T. Clayton, Mr. W. Allies, Mr. C. Moore,

and Mr. G. Morrell.

The comfort of the visitors was well looked after in every respect, thanks to the adequate arrangements which had been made and the diligence of the stewards, Mr. J. W. Cox, Mr. McConochie, Mr. A. J. Taylor, and Mr. G. Morrell.

Printers' Pension Corporation.

The Annual Dinner.

` A Record Subscription List.

On Saturday the annual festival dinner of the Printers' Pension Almshouse and Orphan Asylum Corporation took place at the Connaught Rooms, Major the Hon. Waldorf Astor, M.P., in the chair. There was a large attendance, including Mr. Kennedy Jones, M.P., Sir Henry Dalziel, M.P., Sir T. Vezey Strong, Mr. John Walter, Mr. Harry Lloyd, Sir G. Rowland Blades, M.P., Sir William A. Waterlow, Mr. W. A. Clowes, Mr. C. B. E. Codling, Sir Cecil Harrison, Mr. Walter Haddon, Mr. W. L. Bradbury, Mr. H. Dexter Truscott, Mr. Alfred F. Blades, Mr. J. J. Keliher, Sir Howard H. Spicer, Sir Joseph Lawrence, Sir Arthur Spurgeon, Lieut. Colonel G. C. K. Clowes, Mr. G. Orford Smith, Mr. Andrew Spottiswoode, Mr. C. W. Bowerman, M.P., Mr. J. L. Garvin, Mr. Spencer Leigh Hughes, M.P., Mr. Robert H. Ruddock, Mr. C.

Drummond, Mr. W. E. Hebditch, and ners. The Prince of Wales was also preothers. sent, and sat on the right hand of the chair-

The various loyal toasts having been honoured, the president proposed "The Printers' Pension Corporation, and said that these annual dinners had been held without a break since [1828, when the first dinner was held at the London Tavern. Referring to the war, he said that five hundred printers were buried in the soil of France, and there were in this country over 2,000 fatherless children that the Corporation had to provide for. Considerable sums had already been subscribed, but they wanted more, and he reminded those present of the debt the world owed to the There was not a single printing fraternity. progressive public development in the civilised world which had not profited by printing. It was through the printing trade that they kept in touch with their common ideals throughout the world. They were all look-ing to new worlds and a new horizon. He believed in the attainment of that new civilisation and the high ideals which united the Anglo Saxon people, and in the attainment of their high purpose and diffusion of knowledge the printers' trade would be a material factor.

The toast was responded to by Lord Burnham, who made a strong appeal for the corporation, and expressed his desire to see the British printing craft lead the world. As a London printer of the third generation, he was jealous of the efficiency of their craft before the world and against the world.

The Earl of Reading proposed "The World's Peace," and this was replied to by the Prince of Wales, who was received with enthusiasm. He expressed his great pleasure at being present, and his desire that the Printers' Pension Corporation might go on prospering.

Mr. Joseph Mortimer, the secretary of the Corporation, announced that the total amount of the subscription in connection with the dinner was £25,188, which was the largest sum ever collected for the corporation. list included 100 guineas from the Prince of Wales; £450 by Mr. Robert H. Ruddock, for the creation of a pension; the Earl of Reading, £20; Mr. Frank Lloyd, 500 guineas; Mr. Harry Lloyd, £500; News of the World, per Sir George Riddell, 50 guineas; Lady William Waterlow, £837; London Society of Compositors, per Mr. T. E. Naylor, £500; Sir Samuel Waring, 100 guineas; Sir Herbert Morgan, £100, with the promise of another £250 to next year's festival; Mr. Kennedy Jones, M.P., £100; proprietors of the Observer, 250 guineas.

For the first time in the history of Parliament women shorthand writers filled the role of official reporters of the proceedings at two of the grand committees of the House of Commons last week. Four women took halfhour turns at the afternoon session of the Acquisition of Land Bill Committee, and one woman reporter assisted the male staff at the Transport Bill Committee.

The Federation of Master Printers.

The Annual Meeting at Blackpool.

Following our report in last week's issue of the first day's proceedings of the conference, we give a brief resume of the subsequent meetings. On Tuesday evening a banquet was given at the Hotel Metropole to the Monotype Users' Association by the Lanston Monotype Corporation. Lord Askwith, who is about to become the vice-chairman of the Corporation, was in the chair, and in the course of an interesting speech he said that the Corporation had now completed their war work, and were resuming the manufacture of their composing machines, which, he hoped, would be greatly to the advantage of

the printing industry.
The toast of "The Master Printers' Federation and the Monotype Users' Association was replied to by Messrs. A. F. Blades and E. G. Arnold, and a musical programme was

rendered during the evening.

At the annual meeting of the Federation. on Wednesday, there were about 400 members present, and a deal of important business was transacted Mr. A. F. Blades was re elected president, and votes of thanks were awarded to retiring officers.

Mr. E. Unwin, in submitting the balancesheet, said the subscriptions had amounted to £2,316, as against £1,800 in the previous year, and the total income (£3,069) exceeded the expenditure by £77 4s. 5d. The report and balance sheet were adopted.

An interesting presentation of a piece of silver plate was made to Mr. E. G. Arnold, of

Leeds, for his services in raising a considerable fund for printers' charities.

General W. Wright Bemrose proposed the approval of the new constitution and rules for the Federation, and this was carried with General Bemrose pointed out enthusiasm. that this would bring about greater unity of action and co-operation, and would put them in a better position to deal with the Government, and also enable them to take their places on the Industrial Council. The new organisation would concentrate the vexed questions of wages and hours into the hands of the executive.

Mr. J. C. B. Percy had given notice to propose a resolution emphatically protesting against the resolutions issued by the Board of Trade as being selfishly conceived and inimical to the best interests of the trade, and urging the unfettered import of paper from any part of the world, and the absolute abandonment of the control. He, however, withdrew the resolution.

Mr. Harry Cooke, of Leeds, gave an interesting report of his recent visit to the United States, and told of the enormous output he had seen, even from small printing offices, and said that if American printers were to introduce their methods into this country he did

BRITISH & COLONIAD

not very well see how we could compete with them.

Mr. Whittaker spoke on the good results of the national wage settlement, and hoped it would be the solution of a very vexed question.

Luncheon was held at the Hotel Metropole, and in proposing one of the toasts Mr. A. F. Blades said that the results of the future would mainly depend on the sympathy they had with their workpeople; and they must recognise that their employees were human beings like themselves and were entitled to as good a living as they were, commensurate with their position. He also asked the ladies to go down occasionally to the factories and take an interest in the workers.

Alderman Collins, who responded to the toast, said that while the employers were doing all they could to assist their workers, there must be reciprocity, and the men's output ought to be increased, so as to enable a greater return to be made for the high wages

now payable.

THE CHEMISTRY

OF

Dendritic Growths in Paper.

By James Strachan, F.R.M.S.

The formation of these interesting and curious growths in paper were formerly attributed to the oxidation of a particle of bronze or brass included in the sheet of paper during

manufacture. Subsequent investigations have proved, however, that the chemical reactions producing these growths are more complex. The particle of bronze is attacked by chemical residues in the paper, chief among which is sulphate of aluminum, with the formation of soluble sulphate of copper. The latter creeps along the fibres in solution. The sulphate of copper is then reduced to insoluble black sulphide of copper which constitutes the majority of recent dendrites in paper. This sulphide is further oxidised again to sulphate and so by alternate oxidation and reduction, insoluble copper compounds may be deposited along the fibres. The final action in old dendrites is oxidation resulting in the formation of basic copper sulphate.

The author regards the chemistry of these growths important in that they indicate, by secondary reactions, the nature of chemical actions taking place in the deterioration of paper during ageing, in which the cellulose is attacked by chemical residues from various sources.

A new micro-chemical test for the detection of copper sulphide consists in the application to the dendrite of a solution containing the double cyanide of potassium and cadmium. The black copper sulphide dissolves, but is exactly replaced by a brilliant yellow pseudomorph of cadmium sulphide, forming a yellow dendrite. The principle of this mode of testing by replacement appears to be capable of further applications in micro-chemical manipulation.

Tariff Changes

AND

CUSTOMS REGULATIONS.

(From the "Board of Trade lournal.")

CHINA.

The Board of Trade Journal gives the proposed new schedule of duties for China, as adopted by the Conference. The date on which the new duties will come in force will be notified later:—

	Unit	Agreed Value.	Pro- posed Duty Rate.

NEW ZEALAND.

The following Customs decision is contained in a Minister's Order, D.37, dated January 20th, 1919, viz.:—Educational apparatus, etc., viz., National Society's pictures specially prepared for distribution to Sunday School scholars in class, and similar pictures in series, specially suited for Sunday school use, and illustrating biblical subjects, history, or topography; not exceeding in invoice price 5d. per dozen, net, free.

Printers' Managers and Overseers ASSOCIATION.

More New Members.

A useful and pleasant evening was spent by the members of the Parent Association who attended the monthly meeting on Tuesday at

the "Old Bell," Holborn.

Mr. E. H. Berryman, the president, was in the chair; and after the confirmation of the minutes the following new members were elected: Mr. A. F. Belden (Morgan-Reeve Co., Ltd., overseer, machine); Mr. A. E. Brooke (The Doulton Press, general manager); Mr. A. Catharine (Messrs. G. E. Jackson and Co... overseer, letterpress — machine); Mr. P. J. Crowe (Messrs. Stone and Cox, overseer, letterpress-machine); Mr. J. F. Forder (The Ferrestone Press, overseer, composing); Mr. S. Gronow (Messrs. Hazell, Watson and Viney, Ltd., overseer, letterpress—machine); Mr. W. F. Moss (National Labour Press, Ltd., general manager); and Mr. A. Shrimpton (Messrs. Wilde and Kray, overseer, letterpress-machine).

A cordial welcome was extended by the

president to the new members present At the suggestion of Mr. C. J. Gray, secretary of the Moyce Testimonial Committee, the address which is to be presented to Mr. Moyce on Saturday, at the Cannon-street Hotel, was on view during the evening. It is a very beautifully illuminated piece of work framed in oak, and bears tribute to the zeal, ability and courtesy exhibited by Mr. Moyce during the 21 years he was secretary of the Association.

The special feature of the evening was a lecture by Mr. Denison W. Allport, entitled "Famous Scenes in the British Parliament." Mr. Allport dealt with the subject in a very racy manner, his dramatic eloquence at times evoking loud applause. In fine language he depicted the outstanding incidents in Parliament for a period of 300 years, historic and humorous scenes being linked together in a style which alternately impressed and amused The lecturer displayed a the audience. wonderful memory, his quotations from great orations in the British Parliament recalling the mighty men who had figured in that assembly from time to time.

At the close of the lecture the president congratulated Mr. Allport upon his very fine address, which all had thoroughly appre-

ciated.

Mr. Berryman recalled some of the great Parliamentary figures whom he himself remembered, such as Gladstone, Bright, D'Israeli, and Chamberlain, commenting particularly on the pure and beautiful English of Mr. Bright. Incidentally he remarked upon the power of invective, and how a catchy phrase often recoiled upon the inventor, as in the modern case of "wait and see."

Mr. Whittle proposed a vote of thanks to the lecturer, remarking that his discourse had provided them with the greatest pleasure they had had for some time.

Mr. Moyce, in seconding the resolution, recalled the incident of Mr. Bradlaugh's election to Parliament, and the excitement which surrounded the efforts of Mr. Plimsoll. He expressed the hope that they would have the pleasure of listening to Mr. Allport on another occasion.

The resolution was carried amid loud applause, and Mr. Allport, in response, said he hoped to have the privilege of meeting them

Trade Notes.

An Exhibition of War Posters will be held at the Grafton Galleries from Wednesday June 11th, to Saturday, June 28th.

The death has taken place of Mr. William Chudley, printer and stationer, of Exeter, at the age of 81. The deceased was one of the oldest citizens of Exeter.

The death took place last week of Miss Annie A. Smith, who was for years editor of the Vote, the journal of the Women's Freedom League, and of the Indian Magazine and Review.

RECENTLY a fire broke out in the cardboard-counter factory of Monsieur Clerc at St. Denis, near Paris, and one building was destroyed, damages being valued at some 400,000 francs (£16,000).

The late Sir Bertram Lewis Lima, K.B.E. chairman of the board of directors of the Daily Mirror, the Sunday Pictorial, the Leeds Mercury, and the Glasgow Daily Record, has left estate of the value of £92,446.

THE Controller of Paper announces that no applications from newsagents for permission to return unsold newspapers will be considered after Saturday next. The No-Returns Order was withdrawn as from March 31st.

The French Minister of Finance has granted to the staff of the National Printing Works a day's holiday with pay, in recognition of the diligence, care and taste displayed in their work during the war, and particularly on the occasion of the Peace preliminaries.

The Association of Established Technical Officers in H.M. Stationery Office held a further meeting on May 22nd, at which a discussion took place on "Some Aspects of Costing." The discussion was opened by Mr. A. J. Biggs, and his experience in Government printing works, coupled with various points raised by other members, provided a very interesting and instructive evening.

TYPEFOUNDERS' STRIKE.—A few weeks ago the employees at Messrs. Stephenson, Blake and Co.'s type foundry at Sheffield came out on strike for a minimum weekly wage of £3 12s. 6d., including war bonus, and certain alterations in piece work rates. It is stated that the head of the firm, Colonel H. K. Stephenson, M.P., has met the men's representatives, but declines to grant the concessions. The men point out that, although they are highly-skilled workers, their pay is considerably less than that of the Corporation employees.

FIRE.—By a fire which took place in the printing works of the Strathearn Herald at Crieff a good deal of damage was done to stores and running plant. How the fire originated is not known, but it was located amongst some shelving containing printing papers, and these and the woodwork surrounding

them were completely destroyed. By the efforts of the brigade the flames were got under before they had spread further than the machine printing department, although the flooring of the case-room was well alight, and part of it will have to be renewed.

By a circular letter, dated May 5th, 1919the Chamber of French Typographical Master Founders informs printers that its offices will be shut every Saturday after noon from May 10th.

WE regret to record the death, which occurred on or after May 9th, 1915, of Lieutenant Richard H. Powell, Royal Sussex Regiment. He was formerly editor of the Sporting Department of the Times. Though rumour supported the hope that he might have been taken prisoner, four years have passed without further news, and his death must now be presumed.

BOOKBINDERS' WAGES.—Following a conference of the London Master Printers, Association with the National Union of Bookbinders and Machine Rulers (London branch), the following terms have been agreed:—Male members of the National Union of Bookbinders and Machine Rulers in London shall receive a minimum wage of 755. Women (over 18) and male juniors—a wage advance of 35. (making the minimum rate for qualified women 425.). Learners—a wage advance of 15. 6d. These advances to be paid on and from the first pay-day in June. Overtime rates are to be the subject of a later conference.

MR. J. H. PETIT has patented an invention that relates to the manufacture of steel pen nibs and particularly to the grinding operation which is usually effected by hand, each nib being individually ground. According to the invention the grinding is done whilst the material is in the strip form. The steel strip from which two rows of pen blanks are to be produced is subjected before the blanking operation to the action of an emery wheel, etc., so as to produce on one or both sides of the strip a ground surface. By this process, it is claimed that greater uniformity in results may be obtained and a saving of time effected. Also a nib having ground surfaces on both convex and concave sides may be obtained.

A SHORT service was held at the Religious Tract Society's offices, 4, Bouverie-street, E.C., on May 29th, in connection with the unveiling of a war memorial tablet. Twenty-nine of the R.T.S. staff served in the great war, nine of whom were killed. A brass-on-marble tablet chronicles the 29 names. Mr. G. A. King, M.A., Master of the Supreme Court, the society's treasurer, presided at the unveiling ceremony. After the singing of "O God, Our Help in Ages Past," the Rev. Dr. C. H. Irwin (home superintendent) led in prayer, the Rev. F. T. Thornburgh, M.A. (clerical secretary) read Psalm xxvii., and the chairman gave a short address. "For All Thy Saints" was heartily sung, and Mr. James Bowden, the lay secretary and general manager, unveiled the

memorial. Prebendary Webster, M.A. (hon. secretary) concluded the proceedings with an appropriate address, and after the singing of the doxology, pronounced the benediction.

MR. JOHN PETTY (son of the controller, Mr-Wesley Petty), and Mr. William Kay, managing directors of Petty and Sons (Leeds), Ltd., are at present in the U.S.A. on a business tour. New York, Chicago, etc., are being visited in connection with the reconstruction schemes at Whitehall Printeries, Leeds.

Printing, Bookbinding & Kindred trades overseers' association.

The Importance of Standardisation.

Members of the above Association turned out in good numbers on Tuesday last at the monthly general meeting, held at the head-quarters, St. Bride-Institute, Bride-lane, E.C., the president, Mr. A. J. Daines, occupying the chair, and the vice-president, Mr. A. W. Hunt, supporting him. A feature of the evening was a technical address given by Mr. Edward A. Dawe, H.M. Stationery Office, entitled "The Point System for Paper," much interest being evinced by the members for the able way in which the speaker delivered his address.

After the secretary, Mr. Geo. A. Eden, had read the minutes of the last general meeting, which were duly confirmed, some correpondence was submitted. Among the letters received was one from Mr. Rodney Gibbs, acknowledging the generous donation which the Association had made towards the fund for the maintenance of children of printers who had been killed in the war. A letter was also received from the Printers' Managers and Overseers Association, inviting two delegates to attend a bohemian concert on Saturday next, at the Cannon-street Hotel, the chairman and secretary being unanimously chosen for this function.

With regard to the balance-sheet of the annual bohemian concert, there was a deficit of £6 3s. 6d., and after some discussion the meeting unanimously agreed that this deficit should be made good by a grant from the entertainment fund. The balance sheet of the annual dinner not yet being complete, it was left to be brought up again at the next monthly meeting.

Final arrangements regarding the annual outing, which is to take place in July, will be announced later to the members.

Mr. Dawe, who was accorded a hearty welcome on rising to address the meeting, said he counted it a privilege to come before them to air some of his views and to invite discussion on a subject before the paper world and the printing world generally in the matter of standardisation. He mentioned at the outset how necessary the question of standardisation was in the engineering and textile trades even in such simple things as screw threads,

and how printers were finding benefit through the adoption of the point system as applied to type. The question of the standard ream was first dealt with, and Mr. Dawe said his idea was not so revolutionary as that of the Federation of Master Printers, who had suggested that the standard should be a thousand sheets or boards as the case might be. The speaker next proceeded to explain the disadvantages of so many different numbers of sheets to the ream, instancing the publisher's ream of 516 sheets, which he said was supposed to allow the publisher 500 clear sheets with which to print his book, thus leaving 16 sheets for review purposes, which he could do without encroaching on his edition. Mr. Dawe then made a strong plea for the 500-sheet ream, and suggested that the Association should adopt a resolution to that effect so that a little jog to the wheel of progress might be given.

Mr. Dawe's next proposition was for a standard weight (or substance) per ream which he said should be based on grammes per square metre; e.g., 28 lbs., demy 500=100 grammes per square metre, and explained the advantages of this method in correctly calculating

After touching briefly on the question of the standardisation of boards and papers as regards thickness, the lecturer next dealt with the standardisation of paper sizes, his plan being to adopt new sizes in which the dimensions of the paper progress by 1'25-in. or multiples. They as printers and binders knew the difficulties that often accrued through the varying sizes of papers they now had to contend with, and he (the speaker) maintained that the adoption of a standard method would do away with those difficulties.

In conclusion, Mr. Dawe advocated the adoption by the trade of the standard label, which would show substance, weight, thickness and metric equivalents.

An interesting discussion followed, in which several speakers spoke of the need for the standardisation of paper so that they as binders and printers might more readily understand one another's requirements.

After a vote of thanks had been accorded to Mr. Dawe for his instructive address the proceedings terminated.

A New Press Blanker .- A new blanket for printing presses is the invention of Messrs. Albert W. Cochran and Fred M. Youngs, of Portland, Ore., U.S.A. It is patented by them and called the "Monocork Press Blanket." is made of ground cork and oxidised oils rolled on fabric foundation with coated nonoffset facing. The blanket is is one piece of thickness approximating the thickness of both the felt and rubber that are now used. The Hoe Co. says: "It is a surface printer, giving a clean sharp print, on both letterpress. and half-tones. The comeback of the cork blanket is one of the most important features, as it does not beat down, returns to the original plane at every revolution, eliminating paper breaks.

THURSDAY, JUNE 5, 1919.

Current Topics.

The Corporation Dinner.

The ninety-second annual dinner of the Printers' Pension Corporation, which took place on Friday evening last was a remarkable triumph for that trade charity and the result should be most gratifying to those who for long years have worked hard to get the funds into a thoroughly prosperous condition, and the large amount of money subscribed only goes to show what can be done by persevering energy. A total subscription for the evening of over £25,000 is no small achievement, and the fact that the money came from all parts of the country may be regarded as a generous acknowledgment of the useful part

which is played by printers in the social life of the nation. The claims of the Corporation can scarcely be overstated and let us hope that the next dinner will bring even a larger amount of money into its coffers.

Which is Right?

Can figures lie is a question on which there has been a deal of discussion at various times, and those in favour of the affirmative or negative hold their own opinions on the matter. Judging, however, from two maps that have just come into our possession, the question in these days when diagrams are used to convey truths to one's mind should be can diagrams lie? The maps in question have been got up to show to what extent the metric system has been adopted throughout the world, and, if we are to believe one of the maps, that has its origin in San Francisco, practically the whole world has adopted the system in some way, while the very small portion that has not adopted it is seeking for some method of getting into line with other countries. The other map, which is issued from the Federation of British Industries shows the countries in which British weights and measures predominate, and in this case, too, the greater portion of the globe is shown to be in favour of the British system. Both maps are extremely interesting as showing the uses that can be made of diagrams, but the question is. which is right?

Newspapers and Advertising.

An American printer has been taking up the cudgels in favour of newspaper advertising for the would-be successful business man or manufacturer, and his words prove as applicable on this side of the Atlantic as in the United States. "Advertising stimulates industry," he says, "and is not the task of stimulating industry quite as legitimate a public service as is the printing of intelligence which stimulates political and social progress? And is there any other force for stimulating industry comparable with the force of auvertising? The revenues derived from the publication of advertising make possible the nominal price at which our newspapers are sold to their readers. The economic miracle of a complete modern newspaper, carrying the story of the world day by day, and selling for a penny is achieved only through the inclusion of a great volume of paid advertising within its legitimate con-Could we still have great newspapers tents.

if the reader were forced to pay the entire cost of production?"

French Papermakers and the Decimal System.

THE position of standardisation in regard to papers appears to have made no further advance in this country. In the meantime, our French friends are discussing the matter in addition to decimalisation. This question aroused the attention of the paper and printing trades in France some years before the war, when Monsieur Gabriel Delmas, a printer of Bordeaux, circularised members of the trades in order to obtain their views on the innovation. Monsieur Delmas recently reprinted the pamphlet containing extracts from the replies received, and at the same time urged the French Printers' Association to nominate a Commission charged with considering, in concert with the French Association of Paper Manufacturers and Merchants and the Office of Pulps and Papers (1) a change in the sizes of papers, rendered necessary in order to avoid the difficulties which arise to-day in regard to the diversity of present sizes and weights, and (2) the uniformity of papers in reams and on reels necessitated by the new-style margin on reels for flat or rotary printing machines. The primary cause of the inquiry instituted by Monsieur Delmas was the request to a paper manufacturer by a public authority for paper weighed by the square metre, the progressive variations being by 10 grammes. As Monsieur Delmas remarks in his letter to papermakers and printers, up till then paper had been delivered in sizes bearing the old names of crown, demy, etc., etc., and at fixed weights of 4, 5, 6, 7, 8, 10 kilos., etc., the ream. The new plan consists in delivering all papers in weights of 30 grammes, 40, 50, etc. (progressing by ten grammes) the square metre.

Varied Opinions.

The replies received by M. Delmas indicate that views are as varied in France as in the United Kingdom. Certain papermakers appear much impressed with the scheme's utility, one of the great advantages, from the maker's point of view, being that makers and buyers in home and foreign countries could speak the same language as regards their material of commerce. Useful conclusions have been drawn up by Monsieur Delmas which we may here briefly summarise. It would seem difficult to modify at one blow the traditional usages of papermakers and printers concerning the sizes and denomina-

tions of papers, but general opinion is favourable to a reduction in the number of the sizes and a unification of measures, sizes and weights, especially since the war, the old stocks being now no longer in existence. The basis of this transformation should be adopted by representative associations of the printers and papermakers, and to this end there might. be a list of about 15 sizes which makers of stock could always have in warehouse. The French Papermakers' Association has already adopted fifteen fixed sizes. Paper could be manufactured on reels varying by 5 centimetres in size and 10 grammes in weight per square metre. Makers would still produce all weights and sizes for customers, at a minimum of 500, 700 or 1,000 kilos. This would not neces. sitate any change in present usage. By adopting the decimal system, it is pointed out, printers would have many advantages, such as being able to take from any papermaker the required size and quality; holding a smaller supply in warehouse and sorting it more easily; reel paper would correspond, as to size and weight, with ream paper; the old denominations would be suppressed, as at present it is necessary to add the measurements in order to distinguish the different measures of the same sort; in the factories all employees verifying the thickness of paper during manufacture only know the weight per square metre; provisionally the new sizes might exist alongside the others, and gradually buyers, recognising the advantages of the new system, would abandon the old sizes. Similar arguments have been advanced on this side of the Channel, but the change has not yet come to pass, and there seems to be no immediate prospect of it doing so.

Personal

VISCOUNT BURNHAM was entertained at luncheon on Monday by his fellow citizens in the Ward of Farringdon Without, the gathering taking place in the picturesque old hall of the Butchers' Company.

SIR WILLIAM TRELOAR, who presided over a large and representative gathering, expressed the pleasure felt by all his fellow citizens at Lord Burnham being made a viscount.

To MARK the attainment of their jubilee in the service of Messrs. D. C. Thomson and Co., Ltd, Dundee, Mr. John Douglas, general manager, and Mr. John Johnston, manager of the advertising department were made the recipients of handsome gifts from the firm's employees.

DIVIDENDS AND REPORTS.

Associated Newspapers, Ltd.—The directors report a profit for the year ending March 31st, after charging income-tax and providing for depreciation and adding £5,000 to the pension fund, of £170,501, as against £168,041 in 1918. The increased cost of production of newspapers—a cost which is still rising—makes the present time one of considerable difficulty. The report does not state the dividend paid on the privately-held deferred shares, but the accounts indicate that after paying the dividends on the 5 per cent. preference and the 7 per cent. cumulative ordinary shares, the 500,000 deferred shares got 20 per cent. dividend, absorbing £100,000, the same as a year ago. The carry forward is £35,984, against £32,482.

NEW COMPANIES.

NEWSPAPER LITERARY AGENCY, LTD.—Registered with a capital of £5,000, in £1 shares, as newspaper, literary and news agency, etc. The subscribers are D. Caird and E. C. Elsmore. Private company. Table "A" mainly applies. Registered office: 34, Norfolk-street, W.C.

H. J. BILLINGE AND Co., LTD.—Registered with a capital of £15,000, in £1 shares, to acquire the business of manufacturers of lead and other pencils and of stationers, carried on at Greto Mills, Keswick, under the style of Banks and Co. The subscribers are H. J. Billinge, and W. P. Jackson. Private company. Directors—H. J. Billinge, W. P. Jackson, I. J. Rogers, and H. Cooper. Registered office, 12, Booth-street, Manchester.

JOHN BLACKBURN, LTD.—Registered with a capital of £1,000, in £1 shares, to acquire the business of music and general printer, publisher and bookbinder, carried on by John

Blackburn, at Phlox Printing Works, 188, Cardigan-road, Leeds, as "Blackburn and Co." The subscribers are J. Blackburn, and Mrs. S. Blackburn. Private company.

C. NICHOLLS AND Co., LTD.—Registered with a capital of £20,000, in £1 shares (8,000 6½ per cent. pref.), to acquire the business of printers, stationers and bookbinders, carried on at Manchester, under the style of Cuthbertson and Black, and the business of fine art and colour printers, stationers and bookbinders, carried on at Manchester, under the style of C. Nicholls and Co., Ltd. The subscribers are C. Nicholls, S. A. Bird, and H. M. Darrah. Private company. Directors—C. Nicholls, S. A. Bird, H. M. Darrah.

Services and Sports Publishing Co., Ltd.—Registered with a capital of £1,000, in 950 7 per cent. cum. pref. shares, of £1 each, and 1,000 ordinary shares of 1s. each, as military, technical, magazine, newspaper, music and general publishers, etc. The subscribers are P. Long, and J. N. Firth. Private company. Table "A" mainly applies. Registered office, Featherstone-buildings, Holborn, W.C.I.

EVELEIGH NASH Co., LTD.—Registered with a capital of £10,000, in £1 shares, (4,000 pref.), to acquire from J. M. E. Nash, the business of publishers, lately carried on by a company of the same name and purchased by him from the liquidator. The subscribers are—J. M. E. Nash, and T. E. Crease. Private company. The first directors are—J. M. E. Nash, and T. E. Crease.

TREMEWAN (COSMOS), LTD. — Registered with a capital of £30,000, in £1 shares (10,000 pref.), to acquire the undertaking of W. Tremewan, Ltd., and to enter into agreements (1) between W. Tremewan, Ltd., of the first part, its liquidator of the second part, and the company of the third part; (2) between the company and Cosmos Consolidated, Ltd., and to carry on the business of wholesale, retail, export and manufacturing stationers, photographers, publishers, newspaper proprietors, etc. The subscribers are J. W. Ridout and R. Tregaskis. Private company. Directors, J. A. Taylor, F. C. Yeo and W. H. Tremewan. Registered office, Orient House, 42-5, New Broad-street, E.C.

W. H. VEALE, LTD. — Registered with a capital of £2,500, in £1 shares, as printers, publishers, art journalists, advertising agents, etc. The subscribers are W. H. Veale, G. F. Knights, and J. A. Johnson. Private company. Directors, W. H. Veale, G. F. Knights, and J. A. Johnson. Registered office, 3, Row 79, Great Yarmouth.

ST. STEPHEN'S PHOTO-ENGRAVING CO., LTD.—Registered with a capital of £5,000, in £1 shares, as photographic process block makers, designers, engravers, photographers, printers, etc. The subscribers are H. W. Hawkins, W. J. Robinson and F. P. Leach. Private company. First directors, H. W. Hawkins, W. J. Robinson and F. P. Leach.

BURROW'S PRESS, LTD.—Registered with a capital of £7,000, in £1 shares (4,000 7 per cent. pref.), to enter into an agreement with

R. J. Purnell and E. J. Burrow, and to carry on the business of publishers, printers, etc. The subscribers are Francis Louisa Carter and W. E. Drinkwater. Private company. Directors, E. J. Burrow, Beatrice M. Burrow, E. W. Beckingsale, Francis Louisa Carter, and E. R. Cross. Registered office, Royal House, Montpelier street, Cheltenham.

Dunedin Press, Ltd.—Registered in Edinburgh with a capital of £5,000, in £1 shares, as printers, publishers, lithographers, stereotypers, electrotypers, engravers, typefounders, bookbinders, booksellers, stationers, papermakers, and merchants, etc. The subscribers are J. R. Baillie and J. Livingstone. Private company. First directors are not named.

Universal Pattern Card Co., Ltd.—Registered with a capital of £2,000, in £1 shares, as pattern card manufacturers, stationers, etc. The subscribers are H. V. Greenwood, and A. Thornton. Private company. First directors to be appointed by the subscribers. Registered office, Industry Works, Sunbridge-road, Bradford.

Langham Press, Ltd.—Registered with a capital of £2,000, in £1 shares, as proprietors and publishers of newspapers, magazines, books, etc., printers and stationers. The subscribers are H. V. Dorey and C.W. Wright. Private company. Table "A" mainly applies. Registered office: 275, Regent-street, W.

CHARLES PICKERING, LTD.—Registered with a capital of £5,000, in £1 shares, to acquire the wholesale stationery business carried on at King-street, Northampton, by Charles Pickering and Co. The subscribers are T.W. Lea and C. Pickering Lea. Private company. Table "A" mainly applies. Registered office: 24-28, King-street, Northampton.

UNDERHILL (FOWEY), LTD.—Registered with a capital of £600, in £1 shares, to take over the business of printers, stationers, publishers, booksellers and lithographers, carried on at Fowey as "Underhill and Co." Private company. First directors: F. Underhill and E. R. Underhill. Registered office: Station-road Post Office, Fowey.

UNDERHILL (PLYMOUTH), LTD.—Registered with a capital of £6,000, in £1 shares, to take over the business of printers, stationers, publishers, booksellers and lithographers, carried on at Plymouth as "Underhill and Co." Private company. First directors: F. Underhill, F. A. Underhill and E. R. Underhill. Registered office: 14, Frankfort-street, Plymouth.

UNDERHILL (TRURO), LTD.—Registered with a capital of £600, in £1 shares, to take over the business of printers, stationers, publishers, booksellers and lithographers, carried on at Truro as "Underhill and Co." Private company. First directors: F. and E. R. Underhill. Registered office: Bishop's Library, Truro.

EBURITE PAPER Co. (1919), LTD.—Registered with a capital of £101,000, in £1 shares, to enter into an agreement with the Eburite Paper Co., Ltd., and the liquidator thereof, and to carry on the business of paper manu-

facturers, merchants and contractors, manufacturers of corrugated and crinkled paper, wax paper, paper shavings and decorations, and paper fancy goods, wholesale and retail stationers, etc. The subscribers are C. Scaramanga-Ralli, and M. D. E. G. Lyon. Private company. First directors—C. Scaramanga-Ralli, J.P.; M. D. E. G. Lyon, and B. F. Popham. Registered office, 50-56, Formosastreet, Paddington, W.9.

Estimating Examination.

The examiners, Mr. Harold Curwen and Mr. W. Howard Hazell, have now issued their awards on the estimating examination held at St. Bride Institute on April 30th, 1919. The following are the successful candidates:—

Totham, W. H. 124 marks Burns, F. A. J. ... 122 Golder, J. H. ... 120 ... Dennis, A. J. ... 118 Fuller, J. Parsons, F. 114 113 Knowles, D. 106 ... Limpenny, H. H. J. 101

The first two candidates receive the prizes given by the costing committee of the Master Printers' Federation.

West and North-West London Master Printers, Association.

There was a good attendance at this association's third local bi-monthly meeting, which was held at William's Restaurant, Camden Town, the other evening. Light refreshments having been "distributed" and "cleared," the chair was taken by the president, Mr. F. A. Perry, supported by Mr. W. J. Pollock (vice-president), Mr. A. Langley (expresident), Mr. Weston. Mr. Howell, Mr. J. R. Burt, etc.

The president opened the meeting by extending a cordial welcome to those present who had not hitherto recognised the advantages and the necessity of joining the association. He briefly outlined the benefits the association placed at the service of the master printer, and said he was convinced that if any master printer who had joined the association did not get value for his subscription, the fault lay with that printer, and not with the association. He urged those present to try co-operation with their competitors, and not rest until every printer in Camden Town came into their ranks. These sentiments were endorsed by other speakers, and several new members were elected.

Draft copies of the new "Minimum Price were handed round, and the president invited criticism, asking speakers to direct their criticism to the basic rates on which the list had been compiled, rather than to the possibility of obtaining the prices which the application of those rates evolved. The rates were those laid down by the Costing Committee, and were the average rates of a number of houses, both large and small being represented. The cost of paper could that evening be left out of account; that would be adjusted later on. The percentage to be added for handling paper, the hourly rates for composing, machining, and the various other operations, the time estimated for them. and then finally the proper percentage to be added as profit were the principles he would ask them to deal with.

In the discussion which followed the opinion was expressed, and confirmed by a vote of nearly four to one, that the handling and storing addition should be graded according to the size of the job, 25 per cent. up to 1,000, 20 per cent. from 2,000 to 5,000, and 15 per cent. over 5,000 copies, being the ratio which received the confirmation of the meeting.

Criticism was next turned on the hourly rate for composition, and a suggestion that every printer present should declare by ballot what he considered his hourly cost for composition resulted in an average of 3s. 9d., the amounts given rising as high as 5s. down to a minimum of 2s. 9d.

Mr. Hunger drew attention to the fact that no machine smaller than f'cap folio was scheduled, and suggested that much small work was executed on Pearls and similar

machines. He moved that 2s, per hour should be reckoned for work which could be done on this class of machine. Mr. Odell seconded. Mr. Pollock, moved as an amendment that the costing or price list committee should be asked to ascertain the hourly cost of running platens smaller than f'cap folio, and, on being put to the vote, the amendment was carried The meeting unaniby a large majority. mously declared the rates given for binding were too low, and the president promised to convey that opinion to the price list committee, as well as the other criticisms which had been made.

Labour Conditions Abroad

France.—The Government has voted a law establishing the eight-hour day; the measure was passed in three weeks. Furthermore, at a general meeting of the Parisian Typo-graphical Section held on January 24th last a delegate informed the assembly of the result of the conferences with the syndicates of the Parisian Press and the leading newspapers on the question of obtaining increased wages. The workmen's propositions have now been accepted and rates have been fixed as follows: -Day, 18 francs; night, 20 francs; and overtime hours at 3 and 4 francs. In agreement with the masters' associations the men's organisation has agreed to modify these rates in accordance with the fluctuations in the prices for necessaries.

ITALY.—The eight-hour day has been established in the metallurgical industries. The silk and cotton industries have also instituted it for their trade throughout the country, and on March 9th it was introduced in Milan for the book industry and on the 17th of that month for the whole of the country.

SWITZERLAND.—The 50 hour week for the typographical industry came into force on April 1st.

SPAIN. - The eight-hour day has been accorded to builders' workmen, and for trade generally Government will organise arbitration councils composed of delegates from the workers and the masters to advise on all cases of conflict between labour and capital.

Trade Competition in South Africa.

In a report to the Royal Colonial Institute on the trade position in South Africa, great stress is laid on the state of uncertainty into which the suddenness of the armistice plunged the trade with the outside world. Many merchants have been caught with heavy stocks in addition to orders still to be fulfilled. No definite information seems obtainable as to prices and deliveries, or of what conditions The most formidare likely to affect these. able workers in the South African field appear to be Japan and the United States of America. The correspondent summarises his remarks on Japan in five points: - (1) That they got into this market purely as a result of war conditions; (2) that operations have been limited. especially lately, owing to the uncertainty above mentioned; (3) their goods consist for the most part of inferior imitations; (4) though entering the market with low prices, they have lately become much higher; (5) their seas freights to South Africa are naturally very heavy. In short, he considers that though it would be unwise to entirely ignore Japanese competition, it should not be too seriously feared in the electrical trades in South Africa. There is beyond question a systematic and intense campaign being waged by the United

States of America to hold and extend the large connections they made in this market during the war, especially in the earlier years of it. With regard to certain trades, the correspondent is gravely apprehensive that a policy akin to the destructive pre-war policy of German combinations is likely to be the guiding principle of the United States firms. Here he puts in a strong plea for Imperial preference, which, in his opinion, will be welcome in the extreme by the great majority of the business men in that country.

Making Paper Waterproof.

A Japanese Invention.

A British patent has been granted to Mr. Kotaro Konagi, a merchant, of Toyko, Japan, relating to improvements in waterproof paper. The process consists first of immersing the paper to be treated in a bath of gelatine solution, the solution being made insoluble by applying thereto a mixed solution of chrome alum and ammoniacal alum, subsequently coating with a second mixture of a solution consisting of castor seed oil, tung oil, and lead or zinc salt. It is sought by the invention to obtain an impermeable paper which is completely wrinkleless, but having the resistance necessary in the purpose for which the paper is used, while preserving its water-

proof character.

In carrying out the invention, the sheet of paper is first painted with vegetable paste, preferably bracken paste, then immersed in a bath of gelatine solution. When the sheet leaves the bath completely impregnated, it is coated over with a mixture of chrome alum and ammoniacal alum, which forms a base adapted and ready to receive the first ingredients of the paint. This paint the inventor prepares by mixing five grammes of castor seed oil with five grammes of lead oxide, boiling for about one hour to a temperature preferably lower than 200 degs. F. The first mixture thus prepared, which may be diluted with pine oil, is applied in an appropriate manner over the base already described, and in order to ensure satisfactory results a further layer of paint is applied, the second paint being prepared by mixing 5 grammes of castor seed oil with 5 grammes of white lead, heating it for about half-an-hour as in the previous case, and adding to grammes of zinc oxide, 20 grammes of tung oil, 15 grammes of boiled linseed oil, and subsequently heating it for about two hours to the temperature This preparation, when before specified. diluted with pine oil, is painted over the first paint previously coated.

In addition to the above ingredients of the second paint, the inventor sometimes mixes with them a suitable quantity of zinc oxide and infusorial earth, and finishes with a final coating of caoutchouc solution. The wrinkling tendency of the ordinary tung oil is overcome by moderating the drying property of the oil before the proper dryers are added.

Printers' Managers and Overseers Association.

Great Day in London.

Presentation to Mr. E. C. Moyce.

Saturday was a great day for the Printers' Managers and Overseers Association. Delegates came to London from the various provincial centres to attend the annual conference, which grows in importance with the increase in membership. By a happy thought, too, it had been decided to inaugurate anew the bohemian concerts which, before the world was plunged into war, were so happy a feature of the social amenities provided by the Parent Association. Furthermore, a feature of the gatherings was the presentation of a testimonial to Mr. E. C. Moyce in recognition of 21 years of faithful and efficient service as general secretary. The delegate meeting of the Victory Year, therefore, is likely to stand out as a prominent and important milestone in the history of the P. M. and O. A. Record weather attended the occasion, and if this was rather too warm and fine for an indoor conference in London it was enjoyed to the full by the ladies and friends who were being shown the sights while the men folk debated graver matters.

The Conference opened at the Cannonstreet Hotel at 10 a.m. under the chairmanship of Mr. E. H. Berryman, president, of the
Parent Association, and the following delegates attended:—Parent Association—Messrs.
E. H. Berryman, E. C. Moyce, and J. C. Pugh.
Liverpool—Messrs. A. Burns and J. N. Poole.
Manchester—Messrs. J. H. Nuttall and F. J.
Hughes. Yorkshire—Messrs. J. W. Wormall
and W. H. Crowther. Birmingham—Messrs.
W. E. Martin and G. W. Hughes. Glasgow—
Messrs. W. Guild and C. Stewart. Edinburgh
—Messrs. R. N. Stuart and F. B. Sandie.

Dublin-Messrs. P. H. Williams and C. Holley. North Midlands-Messrs. C. E. Evans and G. Low. Leicester-Messrs. J. W. Holroyd and W. H. Crane. Ex-officio-The general secretary.

There was a long agenda for the consideration of the delegates, and the various items concerning the internal working of the Association were fully considered. At 12.30 the conference adjourned for lunch, resuming at 2.30 and terminating at 4.45, after which tea was served. Most of the delegates, taking advantage of the Whitsuntide holidays, had brought their ladies with them, and while the gentlemen were engaged at the delegate meeting they were agreeably entertained by a drive round the metropolis, the reception committee having made adequate arrangements in this direction.

The evening was devoted to the bohemian concert, for which an excellent programme had been arranged. Such is the reputation these concerts have attained that a great number of ladies and gentlemen attended. The large Pillar Hall was all too small to accommodate them all and the programme had to be repeated simultaneously in another room, where Mr. A. E. Jarvis, vice-president of the Parent Association presided. On arrival the visitors were received and welcomed by Mr. Berryman. Among the visitors were Mr. H. Wilson Howes, and Messrs. Daines and G. A. Eden (representing the Bookbinders and Kindred Trades Overseers Association.) Altogether there was an attendance of over 500.

For their delectation Mr. Rawel Adams, the musical director, presented an attractive musical programme, which opened with a pianoforte selection by Mr. Herbert Townsend, and was sustained at a high level throughout. Miss Annie Bartle increased her popularity by her very efficient singing, and Mr. Frederick Lake's fine voice made a deep impression. A great ovation was accorded these two artists for their beautiful rendering of the Miserere Scene from "11 Trovatore." A prominent place was given to the lighter side of the entertainment, which was much to the taste of the audience, who were kept

BRITISH & COLONIAL PRINTER & STATIONER

thoroughly well amused by Miss Edith Eatherley, Mr. Rawel Adams, Mr. Ben Lawes. and the human marionettes, Messrs. Wilkin and McGowan.

At a suitable interval came the presentation to Mr. Moyce. Asking the provincial delegates to stand, Mr. Berryman, who presided over the concert as he had done at the various gatherings throughout the day, said one of the reasons for bringing that large company together on a beautiful summer night was in order that their bohemian concert might harmonise with a visit from their provincial friends and the presentation they had to make. It was only natural that their provincial friends, who were as much interested as were the London representatives, should desire to take part in the proceedings of that evening. It would be entirely erroneous and misleading, continued the president, to say that that fine Association had been built up entirely by It had been built up the efforts of one man. by a body of earnest and able men. Some of them had passed away and gone and they had left with them only memories. Others were resting after good and strenuous work; while many more gentlemen, he was glad to think, were with them that night. But he was going to tell them without fear of contradiction that among all these builders Mr. Edward Moyce was the master builder all the (Cheers.) No task had been too too heavy and no detail had been to slight or too trivial engage his earnest attention, and at all times he had gone forward with fresh thoughts and new ideas, inspiring every man who worked with him. But the time came last year when Mr. Moyce felt he must put down the pen, and his friends and fellow members felt it was a fitting time to recognise the work he had performed for the Association during 21 years. The result was that a small but influential committee was formed, with their friend Mr. Chas. Gray as the secretary, and so well had he conducted the matter that a testimonial fund had been raised amounting to £125, composed mainly of small subscriptions from The idea of the committee fellow members. was to present to Mr. Moyce a gold watch, suitably inscribed, and chain, an illuminated address, and the balance of £73 odd. Well, they knew what a cheque meant in these ex-With regard to the gold pensive times. watch, when Mr. Moyce attended the council meetings there was no knowing what might happen to it. (Laughter.) The address, happen to it. (Laughter.) however, would remain, and he (Mr. Berryman) hoped it would be handed on from generation to generation; he could imagine a little Moyce of the fourth generation, looking at the address, saying: "What a wonderful old chap my great grandfather must have been. I wonder what became of the watch and I wonder what he bought with the cheque." (Loud laughter.) In conclusion the president, shaking hands with Mr. Moyce on behalf of the large assembly, offered the greeting of the old dramatist: "Here is your good health and your wife's and your family and may you live long, and prosper. (Cheers.)

The gifts were then handed to Mr. Moyce, the address being as follows:—

PRINTERS' MANAGERS AND OVERSEERS ASSOCIATION.

On behalf of the entire Membership of the Association in the United Kingdom and Abroad, we, the undersigned, desire to place upon record Our Sincere and Hearty Congratulations to

MR. EDWARD CHARLES MOYCE on the completion of Twenty-One Years valuable work as General Secretary.

We would recognise his unfailing zeal and energy, his tast and courtesy at all times and the fine constructive ability which has been an inspiration and an example to all his Colleagues tending in no small degree to the unity, progress and financial prosperity of the Association.

In testifying to the value of his public work, we are also mindful of the high personal gifts of the sterling character and business integrity which have gained for him the enduring respect and esteem of his fellow members, and we sincerely trust that good health, prosperity and every blessing may attend him always.

A PRESENTATION GOLD WATCH and CHAIR and Chair and Chaque accompany this Address.

Mr. C. J. Gray, at the request of the president, also said a few words as secretary of the testimonial committee. He mentioned that he had paid his tribute to Mr. Moyce at Birmingham, where the testimonial fund was first mooted. His had really been an easy task, because the scheme was taken up so readily. They had kept the subscriptions to the membership of the Association. wondered what the amount would have been if they had extended it to all the friends in London who knew Mr. Moyce and who had profited by his advice and valuable services. Mr. Gray thanked every member of the Association who had subscribed to the fund, and the officials of the association, the treasurer and general secretary for the assistance they had given him. Speaking of his own connection with the association for fourteen years, occupying practically every office, including that of president, Mr. Gray said he had always worked harmoniously with Mr. Moyce. He had ever found him a true friend and a true brother, expressing the real spirit of brotherhood, which was what they wanted in these days. Mr. Moyce had always been most helpful, not only to him, but to everyone with whom he came in contact—a sympathetic, kind and hard-working man. (Applause.)

Mr. Moyce was received with demonstrative applause on rising to respond. While he had no difficulty in recognising the kindly praises of the president and the cordial reception of them by all the friends who were around him old friends and new friends—the task of acknowledging their kindness was the most difficult he had ever had to face, because he knew that when he sat down he would not have said all that he ought to have said, and perhaps would not have said in the right way what he would have tried to say. could he say to them, to all the subscribers to the testimonial, and to all who had worked so hard, that would mean more than his very heartiest thanks. He was very proud indeed

to think that it was a gift from his friends within the association itself. It was far more gratifying than if they had gone to all and sundry, many as his friends were in the trade. He had been thinking that night as he sat there of the colleagues with whom he had worked. He had been associated with about five different presidents - Mr. Morley, Mr. Davies, whom they all loved until the day of his lamented death; Mr. Gray, who was his helpful, always ready, president; Mr. Pugh, who was ever prepared to assist him in every possible way; and his present friend and colleague, Mr. Berryman, with whom anyone might be proud to be associated. (Applause.) Then he had had the continued support of the secretaries of all the provincial centres, not only those who were still in office, but

Mr. B. C. Moyce.

those who had resigned or gone to other spheres. They would excuse him mentioning one name, one who had the honour of being the senior officer of the association, Mr. Poole. who had been secretary of the Liverpool Centre since its inception 16 years ago. He held the record for long service, and he (Mr. Moyce) hoped yet to have the pleasure of congratulating Mr. Poole and the Liverpool Centre on his services, which he hoped would not terminate at the end of 21 years. Mr. Moyce assured his hearers that the work of the Association had always interested him and he did not give it up because he was tired of it. With the editorial work, however, the duties became too heavy for a leisure time hobby, and he felt he could no longer do jus-tice to the work. Mr. Phillips, who was his valued colleague, first as assistant secretary and afterwards as financial secretary, had stepped into the breach and filled the gap that was made by his withdrawal. He was sure the Association was to be congratulated by his accession to the post of general secretary. In Mr. Phillips they had the right man in the right place. (Loud applanse). Wher-

ever he went he was popular, he was a good man of business and he would carry on the traditions of the P. M. and O. A. as his colleagues wished them to be carried on. (Applause.) The president had rightly said that the Association was not built up by one man. It had taken hundreds of men. Every man who had joined the Association and worked for it had helped to build the structure. When he took over the secretaryship, close upon 22 years ago, the membership was about 200; it was now nearly 1,100. (Applause.) He thought that was great progress in the time, but it could not be the work of one man, however much he might do towards it. Mr. Moyce went on to assure the president that when he went to the "Old Bell" to attend their meetings, as he hoped to do for a good many years, he would safeguard the watch as one of the greatest treasures a man could have. The associations surrounding it would be far more to him than its intrinsic value and he hoped the watch would be handed down to his children and his grandchildren, together with the illuminated address so kindly and eloquently worded. Asking to be forgiven for his shortcomings in his few remarks, Mr. Moyce concluded by thanking his friends for all their kindness from the bottom of his

The concert then proceeded to a happy termination, bringing to an end a memorable day in the annals of the P. M. and O. A. The stewards for the occasion, who attended to the comfort of the visitors were Messrs. J. Dernie, G. W. R. Greig and J. J. Smith.

The Importation of Paper.

In the House of Commons Captain Tudor Rees asked the Prime Minister whether paper is the raw material of the printing industry, and whether in pursuance of his pledge that raw materials should not be taxed he will immediately abolish the order which, in restricting the importation of foreign paper, is in effect a tax on that commodity?

Mr. Bridgeman said, that it is an undoubted fact that paper is a raw material of the printing industry, but it is also a manufactured article. No tax is imposed upon paper by the regulations now in force, which merely restrict importation. When articles are the production of one industry and the raw material of others it is necessary to consider the effect which unrestricted imports would produce upon both the producing and consuming industries. So far as can be judged by the experience gained during the past month, the regulations are working in the direction intended, namely, to avoid unnecessary disturbances to the numerous and important industries whose raw material consists of various kinds of paper, to enable mills to resume full working and employ their labour fully and to cheapen the cost of production. It is accordingly not proposed to abolish the Order restricting the importation of foreign paper.

BRITISH & COLONIAL PRINTER & STATIONER

Trade Notes.

TENDER ACCEPTED.—For printing new supplementary catalogue of the Central Library (lending department), for the Kensington Borough Council: Messrs. Hunt, Barnard, and Co.'s (£40 5s.), tender has been accepted.

At the Scottish Press dinner arranged by the Scottish Council of the National Union of Journalists held at Linlithgow on Saturday, Mr. James Kidd, M.P., proposing the toast of the Union, said the services rendered by the Press of Great Britain, and especially the Press of Scotland, during the war had been of inestimable value.

MR. CHARLES SOUTHWELL, who was imprisoned at Lima for printing a publication containing seditious articles, is still detained, although the responsible editor of the publication has been released. Mr. Southwell's printing establishment has now been reopened and the troops withdrawn, following an energetic protest lodged by the American Minister.

AT a meeting of the Committee of Management of the Press Association, Sir George Toulmin (Lancashire Daily Post, Preston), was elected chairman of the Association for the ensuing year, and Mr. Charles W. Henderson (Belfast News Letter) deputy chairman. Col. Joseph Reed (Newcastle Chronicle), and Col. Egbert Lewis (Bath Herald), were appointed the Finance Committee.

THR Cronique de la Société des Gens de Lectures informs its readers that French books are in request by English publishers, and the latter are willing to have them translated. French publishers being less and less able to produce books, for want of cheap raw materials, the question is, will French editions have to be printed in London? Certainly a disquieting proposition for our Allies.

FRANCE.—During the last session of the Department of the Board of Works for the Nord Department Monsieur Barrois-Brains announced that 147 factories and workshops, 84 of them printing establishments, had been re-opened in the Department since the liberation from the enemy. Also the firm of M. H. David, printers, of Béthune, that town so prominent during hostilities, in the Pas-de-Calais Department, is resuming some of its activity.

MESSRS. LENDRUMS, LTD.—Owing to the increased volume of business with which they are called upon to deal Messrs. Lendrum, Ltd., Manchester, have removed their paper and manufacturing stationery department from 21 Spring-gardens to commodious premises at Quay street, where they have a very fine suite of offices and a large warehouse equipped with every facility for handling paper. Much of the success of the Manchester department has been due to the energy and

enterprise of the genial manager, Mr. F. L. Wright, who has turned his extensive experience in the trade to good account.

A conference on "Some Methods of Regulating Wages" will be held under the auspices of the Industrial Reconstruction Council, on Tuesday, June 17th, at 6 p.m., in the Hall of the Institute of Journalists, 2 and 4, Tudorstreet, E.C.4. The chair will be taken by Mr. Lewis Haslam, M.P., and the opening address given by Mr. John Baker, after which will follow questions and discussion. No tickets are necessary.

A NEW organisation, in the interests of newspaper, printing, and publishing clerks in London, has been formed under the title of the Newspaper, Printing, and Publishing Clerks' Guild. The membership exceeds 400, and the objects of the Guild are "for the maintenance of friendly relations between the staffs" of the offices in London and "the protection and furtherance of their common interests."

TENDERS WANTED.—For printing and binding the annual abstract of accounts for the Southampton Corporation; particulars from the Borough Treasurer's Office, Municipal Offices, Southampton.—For school requisites and printing and stationery required during year ending July 31st, 1920, for the Rawtenstall Education Authority; forms of tender from Mr. J. Ed. Kirk, Education Offices, Cloughfold, via Manchester.—For school requisites and printing and stationery required during year ending July 31st, 1920, for the Bacup and Rawtenstall Secondary and Technical School; forms of tender from Mr. J. E. Kirk, Education Offices, Cloughfold.

The identity of Rafbird the author of "Zooms and Spins," a book that is attracting considerable attention just now, is a great secret, but it has been remarked that the work contains internal evidence that the writer has an intimate firsthand knowledge of aircraft. It may, however, be of interest to booksellers and to those engaged in the publishing business, to know that Rafbird is what may be called "a son of the book trade," for his father (now deceased) was for many years manager to a firm of publishers whose place of business was in the neighbourhood of Paternoster-row, where for many years he was a familiar figure. The publishers of "Zooms and Spins" are Sampson Low, Marston and Co., Ltd.

Tasmania.—The King has granted to the State of Tasmania the right to adopt armorial bearings, and we have been favoured with a copy of these, printed in the proper colours, by Mr. John Vail, Government Printer at Hobart. The following is the official description of the Arms:—Quarterly-gules and barry tion of the Arms:—Quarterly-gules and barry to the crest and azure a fesse of the second charged with a ram statant proper bet base in chief a garb and a thunderbolt and in for four apples and a branch of hops all of the crest on a wreath argent and gules—a statant gules resting the dexter fore paw And spade and a pick-axe in saltire proper—

for supporters, on either side a Tasmanian tiger proper, with the motto "Ubertus et Fidelitas." As an example of colour printing the reproduction of the new arms is worthy of notice, and reflects much credit on those responsible for its execution. A copy of the Government crest, also printed in colours, is a fine specimen of the printer's art.

THE Prince of Wales is the subject of an interesting character sketch in the June Pearson's Magazine, written it is stated, by one in possession of exceptional facilities for giving a true impression of His Royal Highness' personality. A discussion on "Is This the Most Momentous Peace?" is accompanied by interesting pictures of famous Peace Conferences in the past. Heath Robinson offers some characteristic suggestions for "The Perfect Peace Pageant," and George Robey's "After Dinner Stories" are well up to his best form. The front cover is decorated with a portrait of the Prince of Wales.

Cleyer Production

"The Falcon" is a quarterly house organ produced by the printing craftsmen of the firm of Messrs. Spottiswoode, Ballantyne and Co., New street square, E.C. Small quarto in size, it is very well got up and printed, and contains many articles of great interest to the

printing craft, as well as matter dealing with various events in connection with the firm's workers. Several well-executed illustrations appear in the pages, and on the whole the "Falcon" takes a very high place among publications of its class, while the literary merit

of its contributions is excellent. Mr. R. A. Austen-Leigh is the editor, and he has produced a number that is worthy of the high traditions of the house from which it emanates.

It was even more difficult in 1841 for printers to collect money due to them than it is now. The American Printer tells of Samuel Adams, a leading New York printer, calling on John C. Colt, a teacher of book-keeping, to collect a bill. Colt hit the printer with a hammer, packed the body in a box, and hired an innocent truckman to haul it to a ship bound for New Orleans.

Current Topics.

A Printers' Library.

How MANY printers in this country have a private technical library in their office? and yet the possession of such a collection of books would be of the greatest advantage in solving problems that continually turn up in the daily work relating to paper, ink, colours, electrotyping, presswork, and other matters. On nearly every branch of work in the printing office there has been a book or books. written by men who were experts in their particular branches of the art, and yet how few printers have these in their possession, or if they have ever spare the time to consult them. In the trade journals, too, there is a

wealth of information that could be utilised with advantage if carefully preserved, while the works of the great masters of the art of bookmaking might be taken as patterns for work to be done. Such a library, we venture to think would be of inestimable value. It need not take up much room, and the expense of its installation would soon be refunded if it were utilised to advantage. A small library of the kind in question, if lent out to those employees who took a live interest in their work would tend to make them better craftsmen.

American Printing instructors.

THE printing instructors in the technical schools of the United States are mostly members of the International Association of Teachers of Printing, and recently they had a three days' convention at which many subjects affecting the instruction of the youthful printer were discussed. One of the speakers in pointing out the great force which printing, and particularly those who teach the art, can exert, made a plea for more elementary methods of instruction for men who expected to work in the smaller offices, and for the ordinary jobbing printer. He compared some of the methods in use by technical teachers to "a college education, when what the pupils required was a kindergarten." The president of the Association spoke of the peculiar position in which teachers of printing were placed, and the attitude toward them entertained by other printers. He said that the superintendents and teachers in the schools do not, and have not in the past, looked upon the printshop in their midst seriously enough, but that attitude was gradually changing for the better. He criticised severely those instructors who placed production ahead of creation, characterising the effort of some teachers as mercenary; as men afraid of their jobs apparently unless they could make them self-supporting. The Association agreed to start a monthly magazine for the benefit of the teachers, so that they might have an opportunity of airing their views and encouraging each other.

Newspaper Printers as Dictators.

British Columbia is experiencing the evils of a general strike just now, and most of the workers in the various trades are either "out" or about to come "out." This has given rise to a curious action on the part of the newspaper employees who are attempting to dictate to the publishers what may and what

Digitized by GOOGLE

may not be printed in the daily papers. At Vancouver, notice has been given to the managements of the daily newspapers by the members of the Typographical Union that that they will not set news copy concerning the strike which is not approved by a censor appointed by the union. To this one paper responds:-"It is not the intention of the management of the Daily Province to submit to any such censorship. News concerning the strike will be as authentic and fair as possible, and will be printed as given to the compositors, or the paper will not be issued at all." The daily Sun had also a similar demand made on it, and declined to be dictated to. Later news says that the Typographical Union is inclined to recede from the position it took up with regard to thus censoring the news. but it is quite a new point in newspaper work for the employees to dictate what may appear in print, and we trust that no more may be heard of such an outrageous attempt to gag the Press, for once such a policy is started, there is no telling to what it may ultimately lead.

Steady Business.

THE absence of any excitement in the paper trade just now is a good sign. Manufacturers, free from outward threats, are concentrating their energies on the output of their mills. It is gratifying to hear on all hands that business continues to improve. Orders are coming in steadily, and if trade generally will only keep moving, there ought to be a good time ahead. Much depends upon the industrial conditions, and they, in turn, upon an international settlement. On the other hand, papermakers must remain on the alert and adopt modern methods. There is no doubt they will have to meet severe competition both from inside the United Kingdom and from outside. A sign of the times is indicated by the advertisement of a well-known firm of manufacturers in a daily paper, an innovation which is sufficiently striking to arouse comment. This in itself is an indication that papermakers are alive to the conditions under which trade will be conducted in the future.

Imports Policy.

In thanking the Consultative Council on Imports, at their meeting the other day, for the arduous work they had performed, Sir Auckland Geddes informed the members that while they had been working at a transitional policy, other minds had been occupied in working out a permanent policy for the country. It was obviously impossible for him

at that time to indicate in any way the nature of the solution which had been arrived at of the many problems involved, but he could give them one indication of the complexity of the position. It was this: that the exchanges were now roughly capable of division into two classes, viz., those that were heavily against us and those that were heavily in our favour, and that the difference was in some cases very great. Whatever policy was adopted would have to take full account of this great change in our economic position in comparison with what existed in 1914.

Some Paper Topics.

We have been in touch with many printers during the last few days, and took advantage of the opportunity to ascertain the trend of trade. It is particularly gratifying to learn that catalogue work is becoming much in evidence. Printers undertaking this branch of print production are receiving orders and inquiries from manufacturers whose businesses permit the compilation of catalogues without the insertion of price. Motor car builders, engineers, machinists and tool makers are in this category, and from these industries big business is beginning to em-Two things were necessary to create this condition, first, the stabilisation of the product, and, second, the stabilisation of paper prices. Both are now assured, and from now onward there is certain to ensue a better demand for coated and calendered printing papers. The boom we are all looking forward to will be near to realisation when manufacturers, producers, and distributors of goods which must of necessity be advertised on the basis of price are in a position to fix stable figures for their wares. Clothing, furniture, home-trade goods, jewellery, food-stuffs, toilet and hardware goods are a few of the lines awaiting stability before the resort is made to paper as the medium, of publicity campaigning.

At the Blackpool Congress, the other day, printers made a step forward toward paper standardisation by adopting the following resolution: "The Federation of Master Printers and Allied Trades of the United Kingdom are strongly in favour of the scheme for the standardisation of paper as amended by the committee representing the master printers, papermakers, wholesale stationers, and manufacturing stationers, and urge the other associations to agree to the suggested standardisation without delay, in order that all papers may be manufactured, packed, and sold under this standardisation scheme." We hope this is something more than a pious resolution, for it is the third occasion on which the printers of the country have pledged themselves to the new standards as suggested and amended from time to time. Considering that all parties interested in the making or using of paper have for the last two years at least been agreed on the principle of standardisation, there has been ample time in which to settle the details and get the scheme in motion. Since 1913 we have in these pages repeatedly discussed the subject of paper Partistandardisation in all its bearings. cularly during the last two years have we insisted that the period of the war presented the ideal opportunity for settling upon new standards and conditions for immediate application on the termination of hostilities. Mr. Howard Hazell, the promoter of the approved scheme, recognised the fitness of the time, and urged for the immediate adoption and application of standardisation in the closing months of 1918. Since November last the Since November last the scheme has been in the hands of a committee representing principal interests, and after six months' sitting the amended draft comes forward for approval by printers. Meantime, the great opportunity for its practical application is losing its fitness. Normal conditions are becoming an opposition factor, new makings are in hand for stationers and printers' stocks, dandies are in course of manufacture; and very shortly sample books, catalogues and price lists will be in hand under old headings. Thus the atmosphere favourable to wholesale alteration of customs and conditions will give way to the old environment of obstinacy, objection and conserva-

Presumably, valuable time will now be spent in consideration of the amended scheme by interests other than those of the printer. Certainly it is but right and proper that the scheme should be adjusted to suit all the principal needs, and must be approved by all whom its workings will affect. It was a mistake from the start to consider printers as the only people who mattered when standardisation was at stake. For this mistake we are paying in lost time. It is now up to those whose approval is still required to recognise the essential need of speedy action, and we for our part will welcome immediate consideration and official adoption all round.

We have received for review a specimen of an equivalent weight scale on the slide rule principle. Its especial value rests on its application to the new scheme of standardisation. Instead of reams, the unit is the mille (i.e., the 1,000 sheet ream), and in addition to substance weight in lbs., the reading is also given in grammes per square metre. The slide carries sizes from foolscap to eight crown and square inch areas are marked off in tens from 200 to 3,000. Thus equivalents of odd sizes as well as standard sizes are catered for. By moving a given size on the slide to a given weight on the right hand scale, the equivalent weight in lbs. per mille for any other size is read off on the scale. An arrow on the left of the slide indicates substance in grammes per square metre for the weight of the paper in question. This feature is especially serviceable to the paper man and the chemist, and its educational value as a step toward teaching the metric system is an asset which cannot be too highly rated.

The report of the chairman's speech at the annual general meeting of The British Tabulating Machine Co., Ltd., contains an interesting reference to papermaking. Speaking of difficulties encountered the case of tabulating cards is cited, these cards being the keynote to the success of the machine. own words, the chairman said: "People think that these little 7-inch cards are easy to make, but during the war I found no English papermaker could or would make thern, and, therefore, they had to be imported. accurate and pure manufacture of these cards is an extremely important thing, and it is interesting to note that in the old days when we cards tried to get the cards made here, the made in the smoky atmosphere of the North contained minute carbon particles which had found their way into the pulp. That quite enough to affect the working of the machine, but thanks to an ingenious invention it is now possible to detect impusties. American cards are free from these impurities, and we hope we will find English paper 12 a kers who will manufacture them successfull y

There is nothing here that cannot be done as well at home as in America, provided the proper material is obtained. During the war pure pulp was an unknown commodit y, and are some little time may elapse before we able to command material as free from impurity as was used in better class paper in earlier days. In purity of manufacture we can equal any country, provided the proper rails are chosen for the work. There are mills in the Home Counties and in Scotland whose water supply and situation are 250lutely ideal for the production of pure paper, provided pure material is available. Of these mills there are several whose experience equips them to produce cards of the type in question. We hope the makers of the machines will get in contact at home on these orders rather than let the business 89 H. A. America.

Import Restrictions.

The President of the Board of Trade after duly considering the recommendations of the Consultative Council on Imports has given the following further directions in regard to the Prohibition of Import:—The importation of the following articles is to be restricted as shown:—

The present ration of the following stationery articles (33½ per cent. of 1916 imports) is to be maintained:

(a) Rubber-faced hand-dating and num-

bering stamps.
(b) Stamp inking pads.

(c) Stamping outfits complete.

(d) Sealing wax.(e) Endorsing ink.

(f) Penholders.

(g) Wax crayons.
Rubber bands for stationery purposes are to be admitted at the rate of 75 per cent. of 1916 imports in proportionate quarterly amounts.

DIVIDENDS AND REPORTS.

Lanston Monolype.—The directors of Lanston Monotype recommend a dividend of 3 per cent. (7\flactric d. per share) (interim), payable June 10th to 14th.

NEW COMPANIES.

ENTWISTLE, THORPE AND CO., LTD.—Registered with a capital of £2,000, in £1 shares (£750 7 per cent. participating cum. pref.), to take over the business of drawing office material dealers, commercial photographers, photo-printers of plans and other documents and photo-engravers, carried on by H. Entwistle and W. H. Thorpe at 35, Great Peterstreet. S.W. Private company. Permanent directors: H. Entwistle and W. H. Thorpe.

LAURENCE TUBBS AND Co., LTD.—Registered with a capital of £20,000, in £1 shares (8,000 pref) to acquire the business of paper and twine merchants, carried on at 19, Paper-street, E.C., under similar style by L. E. Tubbs. The subscribers are L. E. Tubbs and C. L. Tubbs. Private company. Directors, L. E. Tubbs and C. L. Tubbs. Registered office, 19, Paper-street, £.C.

CELLTEX MANUFACTURING Co., LTD.—Registered with a capital of £100,000, in £1 shares, to carry on the business of manufacturers of textile and other fabrics composed wholly or partly of paper or similar material; to acquire the sole right of manufacturing paper twine or yarn by certain patent machinery, etc., and to enter into agreements (1) with Celltex, Ltd., and W. Braby, its liquidator, and (2) with the Textile Engineering Co., Ltd. The subscribers are C. E. Harris and Miss Violet A. Lethbridge. Private company. Registered office, 25, Victoria-street, S.W.

KELMSCOTT PUBLISHING Co., LTD.—Registered with a capital of £25,000, in 10s. shares,

as printers and publishers of periodicals and literary works. The subscribers are F. Thoresby and A. Dawson. Private company. Directors, F. Thoresby and A. Dawson. Registered office, 133, Salisbury-square, E.C.

TECHNICAL PRESS, LTD.—Registered with a capital of £300, in 10s. shares, as newspaper proprietors, printers, publishers, collectors of scientific, technical and other information, etc. The subscribers are L. J. Latey and A. R. Harrison. Private company. Table "A" mainly applies. Registered office, 41, Finsbury-circus, E.C.2.

Long Eaton Reporter, Ltd.—Registered with a capital of £2,000, in £1 shares, as printers, publishers, etc. The subscribers are £. Butterfield and S. T. Parker. Private company. Table "A" mainly applies. Registered office, 13, Market-place, Long Eaton.

UNITED PRINTERS, LTD.—Registered with a capital of £1,500, in £1 shares, to adopt an agreement with W. L. Bayley and H. Leach, and to carry on the business of printers, publishers, editors, compilers, advertising contractors and agents, newspaper and magazine proprietors, etc. The subscribers are H. A. Raven, and W. L. Bayley. Private company. The first directors are W. L. Bayley and H. A. Raven. Registered office, 65b, Long-acre, W.C.2.

PICTORIAL MACHINERY, LTD.—Registered with a capital of £16,050, in 16,000 ordinary shares of £1 each, and 1,000 deferred ordinary shares of is. each, to take over the business of Lithotex, Ltd. (incorporated in 1915), and to carry on the business of manufacturers of and dealers in photographic, lithographic and other printing machinery and processes, etc. The subscribers are C. H. Crabtree and A. E. Crabtree. Private company. First directors, C. H. Crabtree, A. E. Crabtree, and F. T. Corkett, Dorking.

ASSOCIATED TEXTILE AND DRAPERY TRADES GAZETTE, LTD.—Registered with a capital of £2,000, in £1 shares, to start, acquire, edit, print, publish, circulate, distribute or otherwise deal with a periodical to be called the Associated Textile and Drapery Trades Gazette, or by some similar title, and any other publications. The subscribers are A. J. Tyler, and E. R. Bashame. Private company. The first directors are E. R. Bashame, A. J. Tyler, M. H. Ellenband, and R. H. Englefield. So long as the first directors continue to hold any other office under the company as editor, manager or secretary, they shall not be liable to retirement by rotation. Office, 41, Bedford-row, W.C.

A. E. Pettett, Ltd.—Registered with a capital of £1,700, in £1 shares, to acquire and extend the business of A. E. Pettett and Co., carried on at 218, Seven Sisters-road, N.4, and to carry on the business of printers, publishers, editors, compilers, binders, producers and distributors of, and dealers in, books, pamphlets, newspapers, magazines, etc. The subscribers are Albert E. Pettett, Frank E. Pettett, Jas. L. Mayhew and William Gustave Haag.

Private company. The first directors are Albert E. Pettett, Frank E. Pettett, Jas. L., Mayhew and William Gustave Haag. Registered office, 218, Seven Sisters-road, N.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 10 of the Companies Act, 1907, and Satisfaction registered pursuant to Section 16 of the Companies Act, 1900. (The registration of Satisfaction is not compulsory.)

BRITISH ENGINEERING PUBLISHING Co., LTD. — £300 debentures, registered May 8th, 1919, charged on the company's undertaking and property, present and future, including uncalled capital.

BRITISH ENGINEERING PUBLISHING Co., LTD.—Satisfaction in full registered May 7th, 1919, of charge registered in February, 1919, securing all moneys due or to become due thereunder.

BANKRUPTCIES, etc.

FREDK. GEO SAYERS, Stationer, etc., 118, Lordship-lane, East Dulwich, and 3, Maxtedroad, Peckham.—An order of discharge subject to a judgment for £5, was granted to this bankrupt on June 5th, at the London Bankruptcy Court. He failed in May, 1913, with provable debts £927 16s. 8d., and assets, which realised £80 15s. 5d., out of which a dividend of 11d. in the £ has been paid. The failure was attributed to loss on trading caused by the acts and orders of local and other authorities, illness, and to the dishonesty of an employee. The offences reported were (1) insufficiency of assets to equal 10s. in the £ on the amount of the unsecured liabilities; (2) omission to keep proper books of account; and (3) trading with knowledge of insolvency.

Gazette.

A WORD OF CAUTION.

[In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIPS DISSOLVED.

The partnership between Emily Caroline Snow and Ernest George Hubbard, carrying on business as printers, at 3, Southwark-bridge, buildings, Southwark, London, under the style of "Snow and Hubbard," has been dissolved as from May 19th, 1919.

The partnership between Henry Thomas Redding, Alfred Harry Williams, and Edward Watts Allen, carrying on business as printers,

designers, engravers, advertising agents and business consultants, at Staple-inn-buildings, 335, High Holborn, London, W.C., under the style of "The Berkeley Press," has been dissolved by mutual consent as from May 22nd, 1919, so far as regards Henry Thomas Redding. All debts due and owing to or by the late firm will be received or paid by Alfred Harry Williams and Edward Watts Allen, and the business will be carried on by them.

The partnership between George Jackman and John Jackman, carrying on business printers, bookbinders and stationers, at 78. Basinghall-street, Leeds, under the style of "John William Jackman and Sons," has been dissolved by mutual consent as from May 3 Ist. 1919. All debts due to and owing by the firm will be received and paid by George Jackman.

THE BANKRUPTCY ACT, 1914. NOTICE OF DIVIDEND.

Bell, Charles Malcolm, trading as Bell and Co., lately carrying on business at Temple Works, Cursitor-street, Chancery-lane, Second and final dividend of 1s. 6d. per pound will be paid on June 12th, at Lincoln House. 296-302, High Holborn, W.C.I.

Bookbinding Notes and News.

The strawboard trouble has developed since our last month's notes, and complaints are rife throughout the country regarding agents' charges. Before the regulations came into force the price had fallen, for thin unlined boards it was in the region of £13 los. to £15 los.; now it is more commonly £25 to £30, and supplies are contingent upon the buyer taking his percentage of English boards. A month ago English box-boards could be secured at £20 to £25 per ton, but the difficulty of obtaining Dutch boards is having the usual hardening influence on the price of our own produce. Dutch boards can be imported and sold at a good profit at £16 10s. per ton; there is no reason for any higher Bookbinders simply must have this type of board and no English substitute has yet proved satisfactory. If in securing the right board for their needs they are to be mercilessly exploited by the strawboard agent, the new regulations straightway become a subsidising force. There is a possibility of obtaining protection by appealing to the Board of Trade, and bookbinders who feel that they are once again the victims of the profiteer should take advantage of their right of appeal.

That the prices now being demanded are needlessly high is evidenced by the fact that at least one importer is booking orders at £15 10s. per ton, i.e., for the Dutch unlined board light weights, with heavy boards plus £3 10s. per ton. Of course the due proportion of English board must be taken in with the consignment, and for good quality millboard £40 per ton is asked. This is at least reasonable and represents fair dealing.

Since last we wrote, the minimum wage and hours, etc., for the men in the binding trades has been settled and put into action. Within a very short time the wages and conditions of female labour may also be settled. The net result of the wage increase is computed by authorities to be to add 10 per cent. to the previous cost of production. At an early date revised schedules of hourly rates will be issued from the various districts. Meantime there is hope of securing the assent of bookbinders to the use of the daily docket, without which the costing system is reduced considerably in value. It is to be hoped that the unions will throw no obstacle in the way of getting this much needed reform. The spirit of the times is more congenial than it was and workers are beginning to see more clearly the essential fact that a business cannot run soundly and successfully if it has not the means of ascertaining correctly its costs of production.

In the buying markets, prices are much as they were. There were hopes last month of

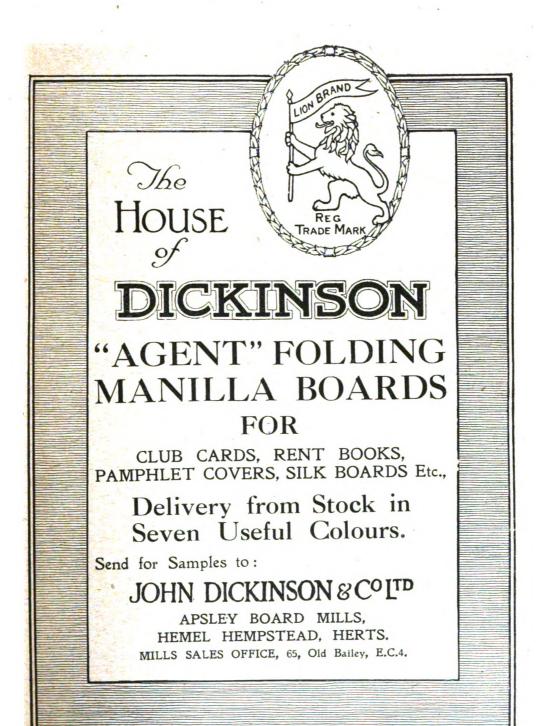

a fall in cotton prices, which, had it happened as expected, would have reduced the cost of calico, bookcloth and all other fabrics used in bookbinding. Unfortunately the market took its turn the other way and hardened considerably, with the result that bookbinding materials are practically un-altered. Similarly with gold, leather, American cloth, buckram, leather substitutes, etc., no change in price can be recorded. Leather merchants anticipate a continued scarcity in skins and no reduction in price. The opinion is held in well-informed quarters that the resumption of commerce with Germany will mark the commencing of a heavy export of hides to that country. Certainly Germany will be sadly in need of leather for all purposes and there is some ground for predicting. a long-continued shortage of bookbinding

Glue and paste have fallen slightly in price, while the latter has improved very considerably in colour and quality. The summer months are very severe in their influence on paste and binders will no doubt exercise the usual caution in stocking only the quantity required for immediate use. Gum arabic is down in price, as also is thread and tape. Marble paper is more difficult than ever to obtain and users are compelled to turn their attention to self-colour papers. At least they have the virtue of reason in price and compared with what small quantity of marble paper there is on offer, this is a matter of some account.

At the International Book and Graphic Arts Exhibition at Leipsic, in 1914, the town of Paris had some fine exhibits, notable contributions being the fine collections of bindings sent by the Ecole Estienne. No definite news has since that date been received of the fate of the exhibits, and the Paris Municipal Council are demanding restitution and the reparation of all damage incurred. Besides these articles, it is stated that the Germans owe France the equivalent of between 2,000,000 and 3,000,000 books and documents burnt by them in this war and 60,000 volumes burnt and still unpaid-for dating from the Franco-Prussian hostilities of 1870.

The bookbinding trade will be interested to learn that Mr. Robert H. Shaw has been appointed a director of the firm of Messrs. Zaehnsdorf, Ltd., bookbinders, Shaftesburyavenue, W.C.I. Mr. Shaw entered the service of Mr. Joseph Zaehnsdorf in 1897, and with the exception of a break of a few years, during which he entered the publishing business, has been intimately connected with the business. He renewed his connection with the firm some eighteen months ago. Mr. Zaehnsdorf, Jun., is now demobilised and is again

Digitized by GOOGLE

taking an active part in the management of this well-known business.

Mr. Edgar P. Woodman, general manager of the Fisher Bookbinding Co. (1912), Ltd., writes to the trade press as follows:—"In view of the agreement that has been signed with the National Union of Bookbinders that all statutory bank holidays are to be paid for, and also one week's holiday is to be given to each employee, and to be paid for, a large number of the London firms have decided this year to close their factories for the week preceding August Bank Holiday so as to enable them to get repairs done to their machinery, motors, engines, etc., which sadly need repairing after the four years we have passed through without being able to get skilled workmen to keep our plant in good working order, and under these circumstances printers and publishers should take notice that the bookbinders will be closed for that period, and should get all the urgent work well forward, so that it can all be delivered before the factories close down. Next year it may happen that we shall be in a position to split up the holidays over several months so as to avoid the same week's closing, but this year it is imperative that we all do so in order to get our machines, etc., put right in readiness for the Christmas trade.'

The leather and calf papers that are offered to the trade by Messrs. Samuel Jones and Co., Bridewell-place, E.C., are well worth the attention of bookbinders who desire to turn out attractive work at a moderate price. The get-up and finish of these papers is excellent and the selection of colours and textures offers a wide range to choose from. For many classes of work they are most suitable and bookbinders should send to the firm for samples.

The sale of Sir Chas. Philip Huntingdon's library, at Hodgson's, the other day showed that the demand for really fine bindings is as great as ever and very high prices were realised, a first edition of Harrison Ainsworth's works, in red morocco, realising £300. A set of Thomas Hardy, in polished calf, brought £160, and a fine series in red morocco of Charles Dickens was sold for £365. The total amount realised for the 394 lots was £3,072.

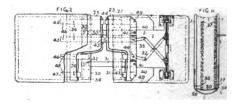

A process has been patented by Mr. H. E. White, the object of which is to utilise all scraps and cuttings of leather. Under the inventor's method the leather scrap first receives a treatment in weak acid, such as a 10 per cent. solution of hydrochloric acid, to which salts may be added, if necessary, such as magnesium sulphate or sodium chloride (common salt). After washing or otherwise removing the excess of acid, the mass is heated to 100 degs. C., so as to produce a homoxeneous material which can afterwards be rolled and pressed, etc. If preferred, after the acid treatment the leather can be treated

with such substances as methylated spirit, olive oil, or other oil or gelatine, and then worked until the whole is homogeneous. The material is afterwards hardened by treatment with formalin, chrome compounds, tanning materials (including synthetic tannins), or picric acid. During the course of preparation any desired organic or inorganic filling material may be added.

The Inland Printer gives the following recipé for liquid fish glue size:—Into a two or three quart crock put one pound of dry fish glue, two teaspoonfuls each salicylic acid, oil of wintergreen and carbolic acid, and three and one half pints hot water. Let dissolve, and strain after diluting. For metal stamping, dilute with two hundred to four hundred per cent. water, according to material to be stamped. Leather requires a much stronger solution than cloth. Vinegar may be used in diluting in place of water. Filling in may be prevented to a great extent by the addition of a little ammonia. This preparation makes a much cleaner size than most of the varieties of liquid fish glue obtainable at drug stores; and, besides you have a preparation which is always uniform. If kept in a dark, cool place, this solution will keep indefinitely. This size is seldom used on leather, but more often on cloth. A very thin coat should be applied on cloth. This size will prove useful where others fail, and should be used accordingly. In stubborn cases, if the die will permit, blind stamp the article, and then paint in the size with a camel's hair brush. Wherever possible, size only that portion which is to be stamped. As this size is susceptible to heat, the article sized with it is apt to become sticky during warm weather or if placed too close to heat, therefore care should be taken to see that but a thin coat is given.

Some Bookbinding Patents.

In a loose-leaf binder of the kind comprising front and back covers, a right and left hand threaded spindle mounted in one of the covers, nuts engaging the threads, and connected levers or lazy-tongs for actuating the

extensible back, the levers or lazy-tongs are connected either directly or through links to the adjustable side of the back. In the arrangement shown in Fig. 2, the extensible back 23 is riveted to the cover 1 at 24, and its

BRITISH & COLONIAL

other end passes through an opening 27 in the cover 2 and is secured to the links 21, 22. Sheet-engaging thongs 30, 31 are riveted to the cover 1 at 32, their other ends passing into cover 2 and being secured to the links 21, 22 and to the edge of the back by rivets 41 passing through the bar 39 and the back strengthening strip 40. Springs 44 . . 47 are provided within the fold of the back 23 and are riveted at 24, 41, 49. The sheets 37 are secured between the rounded edges 34 of the covers 1, 2, on which metal bearing-strips 50, 51 may be provided. The patentee is Mr. R. L. Esson.

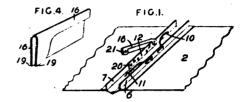

A bookbinding machine patented by Mr. O-Lütolf is described as follows: Signatures 17-Fig. 8, already folded and provided with wire-etc., binding-loops 27 are placed on the table 1 and compressed by the platen 16. On rotation of the driving-shaft 37, the frame 18 is raised and the blades 21 are passed up through the binding-loops 27. On the blades 21 near-

ing their upper position, the jaws 22 are opened by cam mechanism in the head 4, and then closed down on to the bands 9, which are penetrated by the points 23. On the retun of the blades 21, the bands 9 are drawn down through the loops 27, and on completion of the stroke, the jaws 22 are opened by pins 47 actuated by lever mechanism from the cam 40 on the driving shaft. Means are provided for adjusting the throw of the frame 18, the position vertically of the head 4, and the supports for the bands 9.

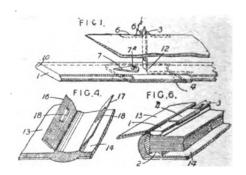

Mr. H. O. Brandt has patented a method in which a fabric is woven from spun paper yarn or yarn made direct from pulped cellulose with or without a core of cotton, etc. After sizing and pressing, the cloth is treated with surfacing or filling material to form book cloth or artificial leather.

Under an invention by Mr. E. Jacobsen, in a file of the kind comprising a cover 2 with leaves 6, 7, flexible filing members 10, 11, a metal incut reinforcement 12, and a U-shaped

pivoted locking-plate 16, the locking-plate is provided with converging sides which may be flared outwards at the edges 19. Catches 20, 21 may be provided to hold the plate 16 in closed position.

Mr. D. Taylor has patented a loose-leaf binder which comprises eyed wires 6 engaging the folds of the doubled sheets, flexible binding strips 3 which are passed through the eyes 6- of the wires 6, and slotted binding members 1, 2 carrying sliding members 4 which cover the bent-down ends of the strips 3. The

binder may be secured within covers 13, 14 by passing the strips 3 through slots 12 in the members 1, 2, through slots 18 in the flaps 16, 17 and through the eyes 6. A leaf-perforator 7 may be pivoted at 7. to the member 1.

EXPORTS of lithographic labels and prints and souvenir post cards from the United States during the month of February last amounted in value to \$12,850, according to statistics compiled by the Department of Commerce, of which all but \$515 was for labels and prints. Considerable quantities of these were sent to Great Britain and France.

A Peace Pageant.

Messrs. Raphael Tuck and Sons' New Christmas Cards.

In all ages and in all countries pageants have been organised to celebrate or commemorate great events, and now that Peace has come to the world again the pageant

the firm of Raphael Tuck aud Sons, Ltd., have in an appropriate manner, signalised the occasion by bringing forward their own "Peace Pageant" in the form of their

will, doubtless, form part in the victory celebrations that are being organised all over the country. Impressed with the idea of celebrating in a proper manner the victory of the allies and the triumph of justice and freedom, wonderful new lines in Christmas and New Year cards, calendars, post cards, auto stationery, toy books and other art gems for which this house has long been famous. The new lines for the coming season will take a

BRITISH & COLONIAL PRINTER & STATIONER

high rank, and the striking procession of these fine art products of the Arts of Peace surely forms a pageant that will be among the most beautiful which the Year of Peace has ushered in, and there is no doubt but that this year's cards will be appreciated by the public and extensively purchased for the coming festival of goodwill and peace.

It is difficult to adequately describe these wounderful collections of Christmas cards that are annually produced by Messrs. Tuck and Sons, but as one looks back to former

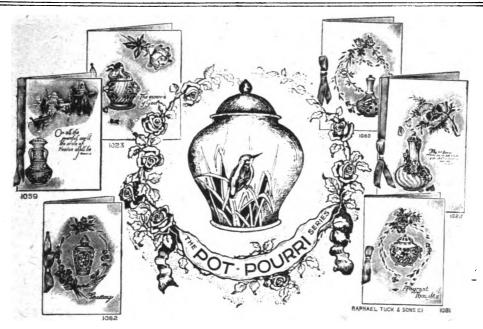

The collection is contained in several very bulky volumes, and when it is stated that it consists of over three thousand examples, which in a succession of artistic designs embody in their get-up all the best features that in former years have made Tuck's Christmas cards famous all over the world, it will be acknowledged that these books contain a really wonderful pageant of colour, form and beauty that will delight the eyes of all privileged to inspect them.

The collection, as usual begins with the

years one is struck by the extraordinary manner in which each collection has surpassed its predecessor, and although each time it seemed as if the *Ultima Thule* had been reached, yet the following year's productions were always of a superior character. Thus it is with the present collection of cards, the beautiful has been made more beautiful, new sources of artistic ingenuity have been tapped, and another illustration is provided of the illimitableness of human endeavour in the portrayal of the beautiful.

Royal Christmas cards, which fittingly lead this Pageant of Peace, and permission has again been granted for the reproduction of these beautiful cards for the use of the public. The originals of these cards are of an imposing size and the reproductions may be had in a similar size or in several smaller sizes which have been produced to suit the varying tastes of buyers, but in all sizes the colouring and details are perfect facsimiles of the originals. This year the King's card has as its decoration a picture of "King Henry VIII.

Landing at Calais." The king is depicted on the quay in company with Cardinal Wolseley and a retinue of nobles, who are to escort them to the Field of the Cloth of Gold. The picture is a remarkably fine one and is noticeable for its correctness of the detail of the period. The usual Christmas greeting appears together with a quotation from Shakespeare "The Friends thou hast, and their adoption tried, Grapple them to thy soul with hooks of steel."

Queen Mary's card has Peace for its theme and a draped figure symbolical of "Peace' is beautifully portrayed thereon, a verse on "God's Peace," a greeting, and the quotation from Channing, "Peace is the fairest form of Happiness," adorn the card which is a very fine one, and most appropriate to the period to which we have at last attained. Another very fine card is that of Queen Alexandra, wery line card is that or School and execution, "Peace and Goodwill" being here taken as the motif of an artistically produced greeting. "The of an artistically produced greeting. "The Founding of Britain's Bulwark by King Alfred, A.D. 871-901" is the title of the Christmas card prepared for the Prince of Wales. It depicts a shipyard, with vessels on the stocks, and King Alfred and the shipwrights are studying a model of a new vessel which the king holds in his hands. Here, too, the design and colouring are of a pleasing character, and a quotation from Whittier, "Time and tide are swiftly flowing. Let us take them while we may," adorns the card. That the demand for these royal cards will be great requires no prophet to foretell. A feature of most of the higher priced cards this year is an elaboration of the idea introduced last year in which a calendar was introduced as a feature of the card. This year this has been improved upon and the calendar may be detached and used separately, thus forming a souvenir that will be useful the whole year through.

Hand-painted Pot Pourri cards are well in evidence, and new designs and colourings have been introduced into this favourite series which with its delicate perfume has become such a favourite with the public. There are a great number of designs and styles, and among them we specially noted Nos. 1,010, 1,011, 1,023-4, 1,025-6. In the attractive Broderie d' Art series of cards there seems to be an unlimited selection, and this beautiful series is also in various sizes and at various prices beginning at 28s. per dozen at which price Nos. 1,014-15 are notable for their beauty. At a lower price, 20s. per dozen, Nos. 1,027, 1,028 and 1,030 are worth mention, the latter being a beautiful arrangement of forget-me-nots

The wonderful productions from the brush of Jennie Harbour in the Hand Painted Facsimile cards are most attractive. They depict an old world period which we have now left far behind, and the charming old-style groupings and fashions of the figures depicted will appeal to many. The colouring, too, and the style of mounting make them very artistic, and the added touch of the silk ribbon at the side of the card with its delicate flowers completes the charm of this series, what should be extremely popular.

There are some Hand Painted cards from designs by Pannett, in which flowers are realistically portrayed, these are priced at 20s. per dozen, and there is a Water Colour series which embraces figure studies, landscapes, etc., of a very fine character. Pot Pourri and Broderie d'Art figure here again at 12s. per dozen, and a seties of lovely Celluloid Panels are included in which the picture on the card

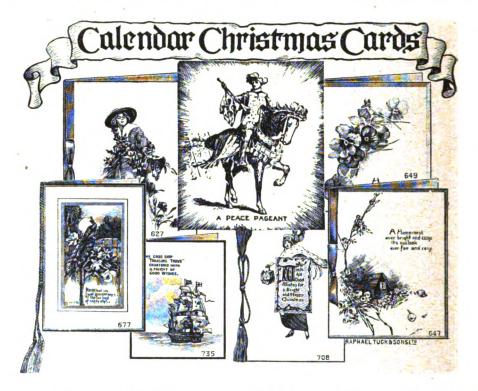

BRITISH & COLONIAL PRINTER & STATIONER

is covered by a matt surface sheet of celluloid; these also are priced at 12s. per dozen.

Among the outstanding novelties of the year are the new Colour Etching, Colour Gravure, and Colour Fac-sim. cards. The Colour Etching cards are a combination of etched designs with coloured flowers and figures, and are quite a novelty, the artistic effect of the combination being to produce a card that is of a pleasing and unusual character. Among these we noticed 1119-20, at 12s. per dozen, as very attractive. Other numbers appear in the collection, and the range of designs provides something to suit all tastes.

the hand-painted miniatures, reproductions of originals in the Wallace Collection. These are priced at 12s. per dozen and are remarkably fine cards. Now that the war is practically over attention is again being paid to sports that were in abeyance during its continuance, and in this connection a wide range of cards depict various forms, such as hunting, golf, tennis, cricket, etc. These are in the Water Colour series and are remarkable for their fine colouring and attention to detail.

Quite chic are the Monogram cards in which the lettering and design is die-stamped and hand-coloured. These are 8s. per dozen and

The Colour Gravure series is very fine, and at 8s. per dozen should sell well. Among them we may mention a very striking design, No. 1,170, "The Lion's Call," and No. 1,171, a very charmingly executed landscape. There are also Colour Gravure reproductions of pictures by famous artists, and a cheaper line at 6s. per dozen of the same class of card. The colour Fac-Sims are remarkable examples of the art of colour printing, and at 8s. per dozen an extrensive range is offered.

The selection of flowers, figure studies and landscapes in the Water Colour series is very fine indeed. Nos. 1,133-4 at 12s. per dozen may be specially noticed, and at 8s. per dozen there are some fine cards, such as 1,192, "Primroses in a Wood," and 1,193 "A Devon Cottage"; there are also some lovely garden scenes charmingly coloured. Among the gems of the season's collection may be noted

form a dainty and saleable shilling line, the numbers from 1,184 to 1,187 being really attractive and artistic. There is also a good series entitled "Our Girls," which at 8s. per dozen shows good value.

Many buyers desire religious themes in their cards, and for them there is a very extensive selection at all prices and in many styles, the pleasing get-up of which is noticeable.

Coming to the cheaper cards, of which the variety is great, we find hand-painted facsimiles at 6s. per dozen in a large number of deigns, and among them reproductions of Millett's "Gleaners" and "The Angelus." A series of cards depicting funny cats, winged greetings, and flying subjects are also worth noting.

Art Oilette leaflets at 48s. a gross are good saleable lines, as are also Book Cards that retail from a penny to fourpence each. At

these popular prices they should be good

sellers.

The Hand Coloured Carbonettes, too, at 32s. per gross are quite up-to-date, and include figure studies, landscapes, flowers, and flying subjects. At the same price there are Coloured Gravures, Monogram Cards, Oilettes, and Water Colour leaflets, one of the latter portraying a breaking wave, No. 1,749 being very fine indeed. 1,751, an evening landscape, too, is of a high character. In the Quaint series we have a selection of cards that ought to take the public taste, especially of the section that is always on the look out for novelties, there is an extensive range to choose from at 24s. per gross, and excellent value they are for that price.

One of the sample books is devoted to the Auto Stationery form of Christmas and New Year greetings. These are put up in boxes six cards with envelopes—and sell at from one shilling to three and sixpence per box. Here, too, the variety is great, and the designs charming, all the leading processes of production being utilised in their get-up. There are humorous designs, plain greetings, imitation hand painted, gold and colour diestamped, all in good taste and attractively finished. The Auto Stationery selection is a favourite with the buying public, and this year's series should meet with a good reception.

In the Hand Painted Celluloids, a strikingly high-coloured series that is much appreciated by many buyers, there are some fine floral and other designs that are worth attention.

There is also a wonderful collection of greeting post cards at prices ranging from three halfpence to ninepence each, retail, the designs in which cover a very wide range of subjects, and which are good sellers to stock. It is a pleasure to be able to say that all the work in connection with the production of Messrs. Tuck's cards is done in England, and there is no trace of foreign origin about them.

It is really a wonderful collection for the first Peace Christmas, and the firm's enterprise should be appreciated by all purchasers, and will bring a large profit to those retailers who are wise enough to lay in a sufficiently large stock to supply the demand that is bound to take place wherever they are shown. In the matter of ordering buyers will do well to be in good time, as later in the season it may be impossible to execute repeat orders.

THE sixth lecture of the series arranged by the Industrial Reconstruction Council will be given in the Saddlers' Hall, Cheapside, E.C.2, on Wednesday, June 25th. The chair will be taken at 4.30 p.m. by the Right Hon. J. H. Whitley, M.P., and a lecture will be delivered by the Right Hon. C. W. Bowerman, M.P., on "Some Industrial Problems." Applications for tickets should be made to the secretary, I.R.C., 2 and 4, Tudor-street, E.C.4.

THE libel action which the Sunday Times of Sydney brought against the Sydney Sun, in which £20,000 damages were claimed, has been withdrawn.

Paper Names in U.S.A.

Allegations of Misbranding.

Considerable interest is being taken by American papermakers in an inquiry which the Federal Trade Commission is making into alleged "misbranding" of paper by manufacturers. In its letter inviting papermakers and jobbers to attend the hearing, the Commission says:

An investigation by the Commission has disclosed that a number of writing paper and book-paper manufacturers and selling agents have been using names and terms for their various brands and styles of paper that appear to be deceptive and misleading. This improper use of names and terms may be divided

into three groups, as follows:

"(1) Names that give the impression that a particular paper is being made abroad, although it is really of domestic manufacture. Within this category would seem to come all foreign geographical names, whether nouns or adjectives, such as 'Japan,' 'Holland, 'Scotch,' 'French,' 'Italian,' or 'Egyptian,' used as a part of a name.

"(2) Words indicating that the paper is made of some textile fibre, or some other specific material, when that is not the case. Among such words are 'Linen,' 'Madras,' 'Nainsook,' 'Vellum,' 'Parchment,' and the

"(3) Such words as 'Bond,' when applied to paper not of that quality, and the terms ' Hand-made ' and ' Woven,' when those terms do not truthfully describe the product.

"We are familiar with the defence urged by some manufacturers, that from long continued use many of the terms and names used have taken on a secondary meaning, especially to to those in the trade; that there is no deception, because those buying the paper know that the terms used are merely fancy names, intended to mean nothing; and that buyers, through their skill and knowledge can determine what a paper is regardless of the name, and are therefore not deceived. While to a degree this may be true, the fact remains that the words and names are used falsely, and although the majority of purchasers may not be deceived, there are undoubtedly others who may, and the entire public is entitled to protection.

"To correct such evils the Commission can proceed either by complaint against each offender or can arrange an agreement with as many as possible to discontinue the improper conduct. It is thought best in this case to offer to all of the manufacturers and dealers an opportunity to be heard on the subject, with the ultimate purpose of entering into an agreement to cease the misbranding of misleading names."

COURTESY is not the cloth of manners. It is of the heart, particularly organisation courtesy.

Trade Notes.

THE death is announced from Toronto of Mr. A. W. Wright, an old and distinguished Canadian journalist.

BERLIN newspaper printers struck on Saturday for an increase of wages, and very few of the papers were able to appear.

THE first meeting of the Industrial Council for the Printing Trade, which was to have been held on June 24th, has been postponed to July 1st at the Holborn Restaurant.

MR. OLIVER HAWKES, the well-known music publisher, was found lying dead on Saturday in his house at Golder's Green, near a gas oven, the taps of which were turned on.

"LAND AND LIBERTY" is the title under which the journal Land Values will in future be known. With the June issue Land and Liberty begins the twenty-sixth year of publication.

Mr. T. G. Bergin, the well-known teacher of St. Bride costing class, has, we understand, been recently appointed manager of Messrs. Hazell, Watson and Viney's Long-acre establishment.

TENDERS are wanted for general printing and for the supply of stationery, for the Walthamstow Urban District Council; forms of tender from the Clerk's Office, Town Hall, Walthamstow.

THOUGH several attempts have been made to organise the penmaking industry in Birmingham, which is the home of the trade, it is only within the last five months that any success has been achieved, and the Penworkers' Federation now has a membership of over 2,400 out of 3,000 odd workers in the city.

Among the factories for sale by direction of the Disposal Board, Ministry of Munitions, is the Willesden Box Factory at Park Royal. The buildings comprise main shop, including machine, assembly and polishing shops, power and boiler houses, timber and loading sheds, offices and stores, and cover an area of over three acres.

A PARTY of editors and other journalists connected with important Danish newspapers, who are on a visit to Britain, arrived in Glasgow last week. The party includes Mr. H. Green, chief editor of the Boersen; Mr. H. H. Angelo, assistant editor National Tidende; Mr. J. Vestberg, commercial editor Berlingske Tidende; Mr. A. C. Kaarsen, commercial editor of Politiken; Mr. M. Jordan, sub-editor Koebenhavn; and Mr. M. Hansen, Gyllands posten.

MR. S. J. King, printer of the Ealing Gazette, who is the Mayor of Ealing for this year, has had his remuneration increased by £1,500—\$1,000 to be spent on the peace celebrations and £500 on the entertainment of demobilised sailors and soldiers.

DISCUSSING STATIONERY MATTERS.—On the invitation of Messrs. Mawson, Swan and

Morgan, Ltd., Newcastle, a gathering of buyers of stationery and printed matter. representing some of the biggest concerns in the district, was held at the Central Exchange Hotel, Newcastle, to discuss business methods in regard to printing and office stationery Mr. Edward T. Morgan, managing director of the firm, presided. Mr. A. J. Platt, works' manager, gave an address on economy in ordering. The increased cost of labour and the shortage of raw materials, he said, made economy imperative. He made a number of useful suggestions, amongst which was one that greater use should be made of the looseleaf method, on account of the high price of leather and other bindings. Messrs. Mawson, Swan and Morgan entertained their guests to tea, and were heartily thanked for their hospitality.

Does it Pay to Until Pages.

Dropping into the composing room of a large plant one day in order to get a good whiff of the perfume of inks and types, says a contributor to a recent issue of the American Printer, the writer watched an up-to-date stone-man as he imposed and locked up two 32-page forms side by side on an immense imposing stone. Every page had been carefully and methodically tied up with new cotton string. After the necessary furniture had been placed between the pages, the stoneman deliberately used a pair of sharp-pointed scissors on all the page-cords at the foot of He then used his nippers the several pages. to get hold of the strands of string at the top of the page and flung them, one after another: upon the floor.

This proceeding came with something like a shock to one who had been trained to take the string off pages carefully, wrap it around three fingers, fasten it simply but securely, and deposit it in a box kept for the purpose, or in some of the empty boxes in the upper case.

"This seems to surprise you," said the manager. "Yes, but I guess it is a time and money saver just the same. Have you figured out the economy of this method?" "Sure." replied the manager. "It is true that we lose nearly five cents' worth of page-cord—it is only common cotton twine—but we save an average of a quarter of an hour on every 32-page form. Our labour cost, exclusive of the front office and general overhead, is \$1.24 an hour, or 31 cents per quarter hour. We therefore figure that we save 26 cents through this more efficient, though apparently more wasteful method." Nevertheless, in hundreds of plants to-day page-cord is used over and over again until it almost falls apart, and much time is wasted in its care, its winding and unwinding, its tying and untying. This time is worth from five to ten times the value of the string.

Efficiency in the Press-Room.

Ever present with the foreman of the pressroom is the problem of placing the pressmen at the tasks for which they are best fitted. One pressman may be a speed merchant and excel on that class of work tagged "rush," which must be shot through the presses at top speed. Another pressman who would drive the executive wild as he ambled along on a rush job might be a crackerjack on high-grade work requring the utmost skill Occasionally an all - around and care. athlete is found who is a past master in presswork, born to the trade, in love with it and excelling whether speed, skill or care is the first requisite. Lucky the foreman who has such a lieutenant as pace-maker, exemplar and criterion for the other pressmen.

Granted that the foreman has selected his pressmen with care and has assigned each to the task for which he is best fitted, there still remains the problem of getting from each

pressman his best efforts.

Just how this is done is not easily told in a few words, but it is an accomplishment which makes a good executive invaluable. No two men are alike. To manage them you must study them. There is the type who only To manage them you must needs to be told what is expected of him and left alone. He will do all expected of him and more. But if bothered too much by unnecessary instructions he loses in efficiency. This type likes to travel alone and should not be talked to too often. A word of encouragement or praise will spur him on for another week or month of good work. I'here is the other type who needs considerable friendly "jollying" to work at his best. If he is not frequently noticed he is apt to imagine he is out of favour. The wise executive knows how to handle this sort. There is the type who has intelligence, vitality and pride, but lacks ambition. Very often if ambition is aroused these make excellent workmen. There is the type that has ability but is cursed with the habit of laziness. Even these can be handled by the keen executive. These are not all the types-far from, it-but enough have been mentioned to suggest the problem of the foreman in securing efficiency.

It is a moot question whether an executive should be a mixer or keep his lieutenants at a distance. Some say familiarity breeds contempt and that to be respected you must be feared to some extent. This is antediluvian stuff. The day has passed when an executive can stand on a pedestal and get the best out of his assistants. Rank, caste, the accidents of birth, the smiles of fortune and the rebuffs of fate alike are powerless to hide the fact that all men are brothers. So if a foreman would earn the respect, loyalty and co-operation of his men he must be one of them in

Men like Henry Ford have showed that the best way to win the co-operation of the workmen is to give them something to work for.

Unless a man puts his heart in his work he is not fully efficient, no matter how capable he may be, no matter how favourable the equipment and working conditions.

If a workman can earn a bare livelihood only for himself and family, and can see no future more promising, it is idle to expect the enthusiasm necessary to true efficiency.

Far-sighted employers are realising that there must be a future for each employee if the organisation is to be efficient and held intact, and are arranging for the future by systems of promotion, old age pensions, insurance, etc., together with decent wages in the present. These employers know what efficiency is and how to secure it.

Personal.

Miss Doreen Blades, daughter of Mr. A. F. Blades, president of the Federation of Master Printers, was married to Mr. H. Gaudern Pearson, at Reigate Parish Church on Tuesday.

MR. J. J. Keliher, president of the London Master Printers' Association, has been laid up with a chill.

MR. KELIHER celebrated the thirty-seventh anniversary of his wedding day on June and, having to leave the meeting of the South-East L.M.P.A. on that day for the purpose.

The initial wedding breakfast, by a curious coincidence, was served at the scene of the S.E. meeting—the Bridge House Hotel, London Bridge.

THIRTY-SEVEN seems to be a popular number for the moment. Mr. A. Langley (Langley and Sons) this year completes 37 years in the printing business.

In the list of honours conferred in connection with the King's birthday for services in or for the Union of South Africa appears the name of Mr. Leo Weinthal, editor of the African World, who is appointed an Officer of the Order of the British Empire.

It has been decided to open a subscription list in Bury with a view to honouring the services rendered to the town by Sir George Toulmin during the sixteen and a half years that he was Member for Bury.

MAJOR GEORGE HAVEN PUTNAM is to visit the Liverpool Reform Club on the 25th inst., to speak on Free Trade. He is the head of the great American publishing firm of G. P. Putnam's Sons.

On the eve of his departure to take up an important appointment in Singapore Mr. G. M. Hardie, of the case-room staff of the Aberdeen Daily Journal, was presented with a handsome gold ring and travelling case.

Current Topics.

Buy the New or Keep the Old?

During the years of war there were very few printing machines or appliances installed in the offices of this country, and that for two reasons, one being that nearly all the printers' engineering firms were engaged on war work, and the other that those few who could supply demanded higher prices than the printer chose to pay. He rather chose to wait until the end of the war, when he expected that a fall in prices might result. Now, however, with the engineers getting back to their usual routine, there is no sign of prices falling, nor is there likely to be; wages have risen to an extent never dreamed of in pre-war days, and

it is not in the least likely that they will become lower again. Hours of labour have been shortened, and in many ways the cost of production has been vastly increased, while metals have soared high in price, and although there is a probability that in their case prices may go down, still they can never reach the low level at which they stood in 1914. Hence the printer who is waiting until he can get cheaper machinery may have to wait a very long time indeed. It is a matter of calculation whether it would be better to pay the enhanced price for new machinery or to go on with old. Which is the most profitable way can only be worked out by the individual who knows the class of work he is best fitted to do. Still, an outlay on a new machine that would earn more than the old one now in use, would seemithe most desirable way, and in the long run would pay best by its increased output and better quality of work.

Why Litho Varnish is Dear.

THERE has been a lot of grumbling in the trade at the high prices of lithographic varnishes, and many customers lay the blame on the varnish makers, when in reality it is due to the high price demanded for linseed oil, which is the basis of all varnishes. has it that there is a deal of gambling and speculating in this necessary oil, and in the Daily Mail, last week, a statement was made by Mr. C. A. McCurdy, M.P., that a great gamble was in progress in which the varnish manufacturers have to bid against the specu-The trade blames the Ministry for lators. having sold 25,000 tons of linseed oil to Germany, and allege that it permitted Germany to export this oil to countries ready to pay any price for it. The oil, the trade says, is badly wanted to carry out five years' arrears of work in this country. Mr. Mansfield, director of the oils and fats department of the Ministry of Food, says that "Germany bought over 30,000 tons of linseed oil for its margarine manufacturers. We got £78 a ton for it, or £20 a ton more than the price at which it was refused by the British trade." A meeting of the varnish and paint trades was held the other day at the Ministry of Food, when it was agreed that steps should be taken to prevent persons who are not importers or manufacturers from speculating or operating other than as brokers or agents. It is probable that a scheme will be worked out with this end in view. When the price of linseed oil falls let us hope that of varnishes will also come down.

Suggested Library Improvements.

THE Adult Education Committee, appointed by the Ministry of Reconstruction, has issued a report in which it is declared that steps should be taken to increase in every possible way the usefulness of public libraries to serious readers. Co-operation between educational institutions and public libraries is declared to be desirable and indeed essential. school," the committee consider, "is a community which fulfils its end through a variety of agencies of which the class-room is one and the library another. The ideal school is one which seeks to aid self-development through the medium of 'discipline' on the one hand and by providing opportunities for the pupil 'to strike out on his own line' on the other." Proposals are made for a technical library system, with a central organisation for supplementing existing libraries, for each industry. The committee think that the firms in the industry or their organisation should support an institution of this character, but they hold that there is a case for State assistance, and recommend that the State should contribute a sum not exceeding 25 per cent. of the sums received from other sources. The governing body of each industrial central library should be related to its particular industrial council. The committee are convinced that a comprehensive library policy is necessary to sound industrial development, and that therefore the formulation and application of such a policy is an indispensable part of industrial reconstruction. They also consider that the local education authority should be the authority responsible for the administration of public libraries and museums, and urge that the powers and duties of the Local Government Board regarding these institutions should be transferred forthwith to the Board of Education.

Restriction and Paper Prices.

It is satisfactory to hear on the authority of the President of the Board of Trade that the order restricting the importation of paper is not having the effect of inflating the price and producing a scarcity of paper. Such an effect was not desired by papermakers, who were only anxious that during the period of transition the British market should not be left at the mercy of the world. In further reply to Captain Tudor-Rees in the House of Commons, the President of the Board of Trade added that he was advised that prices generally have not been pushed up and that such scarcity as may exist in certain grades of paper is due to the circumstances attending

production and shipping rather than to the effect of the regulations in price.

"Super-Advertising."

A New French Invention.

The Courrier du Livre describes what it calls a new form of "super-advertising" on printed newspapers, as follows: - "Monsieur Marchesini, in the (French) patent No. 482,034, presents an arrangement for making advertisements of all kinds (announcements or designs) stand out on the pages of newspapers, and these advertisements do not hinder the reading of the text of the paper. The advertisement is printed on the same page in a pale colour, so that the black text is perfectly visible. This result is obtained by placing against the rotary mechine which prints the paper a device capable of printing on the roll of paper words or designs constituting the advertisement. This device is placed in the rotary in such a position that the roll of paper comes in contact with it, either before or after it has received the impression from the cylinders bearing the text of the newspaper. The advertisement block can be inked in any appropriate manner, and the contact of the paper with the block can be assured in the ordinary way. This manner of showing up on newspaper pages a very striking ad., while leaving the text of the paper easily read, produces an artificial increase in the space reserved for publicity. The announcement thus attains the maximum of exhibition and efficacy by being continually placed under the eyes of any reader of the paper, and cannot be ignored.

DIVIDENDS AND REPORTS.

EDWARD LLOYD, LID.—The report to December 31st last states that the profits, after allowing for depreciation and making provision for bad and doubtful debts, estimated excess profits duty and contingencies, amount to £177,941; £39,923 was brought forward, making £217,864. Deducting interest on pension account, directors and auditors' fees, provision for income-tax, etc., £40,549; dividend on preference shares for year, £37,125; carried to reserve, £20,000; and interim dividend on ordinary shares at the rate of is. per share (free of income-tax), paid January 30th last, there remains £90,190 The directors now recommend a final dividend for the year on the ordinary shares at the rate of 1s. 3d. per share (free of income-tax), making 114 per cent. for the year, £37,500, and to carry forward £32,690. The profits for the year show an increase of £26,404, and are £25,578 in excess of those for 1913, the last complete year before the outbreak of war.

WYMAN AND Sons.—The report to December 31st last states that the net profit, after providing for depreciation, directors' salaries and all charges except interest on capital, is €40,253. The turnover was approximately £550,000, the profit resulting working out roughly at 41 per cent. A further installation of up-to-date machinery is being provided, by which both turnover and increased profit may be secured. The capital of the company has been turned over more than three times in the year. Since the close of the accounts dividends on the preference shares, bringing the payment up to date, have been posted. A further £1,694 was paid in premiums on policies for the redemption of debentures on January 1st, 1918, and a similar sum on January 1st, 1919, making seven payments out of ten to secure repayment of £20,000. It is proposed to pay a dividend at the rate of 10 per cent. on the ordinary shares, also a bonus divided of is. per share, free of incometax on the ordinary shares; to place £10,000 to general reserve; to award additional remuneration to directors of 5 per cent. on the net profit in recognition of their services, and that the balance (about £4,000) be carried forward.

HAZELL, WATSON AND VINEY, LTD.—Dividend of 6 per cent., free of tax, on the ordinary shares, making 10 per cent. for the year, £10,000 to reserve, making that fund £60,000, and £15,820 carried forward.

Associated Newspapers.—After charging income tax, making provision for depreciation of plant and machinery, buildings, fitings, etc., and adding £5,000 to pension fund accounts for year ended March 31st, show profits of £170,502, as against £168,041 last year. Dividend of 3½ per cent. (8½d. per share), less tax, was paid on ordinary shares on June 2nd.

NEW COMPANIES.

Democrat, Ltd.—Registered with a capital of £2,000 in £1 shares, to enter into an agreement with W. A. Appleton to acquire the newspaper known as the Democrat, and to carry on the business of newspaper proprietors, printers, publishers, etc. The subscribers are W. A. Appleton, and V. W. Smith. Private company. Managing director, W. A. Appleton. Registered office, Hamilton House. Bidborough-street, W.C.1.

FREDERICK WARNE AND Co., LTD.—Registered with a capital of £17,000, in 16,000 ordinary and 1,000 management shares of £1 each, to enter into an agreement with Harry Wingfield, to acquire the business and other property and liabilities mentioned therein, and to carry on the business of publishers, printers, etc. The subscribers are H. Wingfield, C. F. Godfrey, W. F. Warne, A. L. Stephens, A. Emery, W. A. Herring, and A. E. Hair. The first directors are H. Wingfield, W. F. Warne, C. F. Godfrey, and A. L. Stephens Minimum cash subscription, 20 per cent. of the shares offered.

TILLOTSONS (LIVERPOOL), LTD.—Registered with a capital of £230,000 (120,000 pref. 40,000 prefd. ord., and 70,000 ord.) in £1 shares. to acquire the business carried on by Tillotson and Son, Ltd., at Liverpool, and to carry on the business of lithographers, letterpress printers, typefounders, stereotypers, electrotypers, process engravers, photo and chromo lithographers, folding and fancy box manufacturers, paper, board, ink and stationery manufacturers, advertising and insurance agents, etc. The subscribers are J. L. Tillotson, F. L. Tillotson, G. Petty, and R. Rushton. Private company. First directors—J. L. Tillotson, F. L. Tillotson, G. Petty, and R. Rushton. The two first-named are permanent. Tillotson and Son, Ltd., so long as they hold more than half the shares may have four nominees on the board when the maximum number of directors permitted by the Articles of Association is seven, or may nominate four-sevenths of the board when the maximum exceeds seven. The original Articles fix the minimum number at two and the maximum at seven. Office, Mealhouse-lane, Bolton.

TILLOTSON'S NEWSPAPERS, LTD.—Registered with a capital of £120,000, in £1 shares, to acquire all or part of the business of newspaper proprietors, printers, publishers and literary agents, carried on by Tillotson and Son, Ltd., at Bolton, etc. Private company. The first directors are J. L. Tillotson, F. L. Tillotson and R. Rushton. Office: Mealhouse-lane, Bolton.

TILLOTSON'S (BOLTON), LTD.—Registered with a capital of £150,000, in £1 shares, to acquire all or part of the business of lithographic and letterpress printers and process engravers, carried on by Tillotson and Son, Ltd., at Bolton, etc. Private company. The first directors are the same as those of Tillotson's Newspapers, Ltd., with the addition of F. Waterhouse. Registered office: Mealhouse-lane, Bolton.

PULPINE, LTD.—Registered with a capital of £10,000, in £1 shares, as agents for and dealers in paper, waste paper, paper pulp and any kind of waste. Agreement with G. Chapelier. The subscribers are G. Chapelier and T. M. Arnett. Private company. Directors, G. Chapelier and T. M. Arnett. Registered office, 101, Grays-inn-road, W.C.

DOLLIEN MANUFACTURING Co., LTD.—Registered with a capital of £2,000, in £1 shares, as manufacturing stationers, makers of fancy leather goods. office furnishers, printers, etc. The subscribers are T. C. Neill and T. D. Dollimore. Private company. Directors, T. C. Neill and T. D. Dollimore. Registered office, 33, Whitecross-street, E.C.

E. Kuit and McGahey, Ltd.—Registered with a capital of £1,000, in £1 shares, as printers, engravers, lithographers, publishers, etc. The subscribers are R. Kuit and E. Kuit. Private company. The first directors are R. Kuit, E. Kuit, and B. Kuit. Registered office, 1, Islington-square, Chapel-street, Salford.

FARDON HOWELL AND CO., LTD.—Registered with a capital of £2,000, in £1 shares, to acquire the business of process engravers carried on by E. F. Fardon, at 56, Cornwall-street, Birmingham, under similar title. The subscribers are J. E. Herbert and C. H. Knight Private company. Directors, E. F. Fardon, J. E. Herbert and C. H. Knight. Registered office, 56, Cornwall-street, Birmingham.

ALLOTT JONES AND Co.. LTD.—Registered with a capital of £20,000, in £1 shares, to take over the business of engineering and architectural stationers carried on by F. W. J. Allott, at 22, Pall Mall, and Upper Milk-street, Liverpool, as "Allott, Jones and Co." Private company. First directors, F. W. J. Allott (governing director), and W. Birch (managing director).

Wing and Co., LTD.—Registered with a capital of £12,000, in £1 shares, to acquire the business of printers, booksellers and stationers, carried on by F. and T. R. Wing, at 13, Bargate, Boston, as "Wing and Son," and the similar business carried on by J. G. and T. W. Clark, at 12, Market-place, Boston, as "Pocklington and Norman." The sub-

scribers are J. G. Clark, T. W. Clark, C. E. Brett, F. Wing, and T. R. Wing. Private company. The first directors are J. G. Clark, T. W. Clark, C. E. Brett, F. Wing, and T. R. Wing. Registered office, 17, Bargate, Boston.

Engineering Industry, Ltd.—Registered with a capital of £5,000, in £1 shares, to acquire the periodical hitherto produced and published by the Electrical Times, Ltd., as El Ingeniero Industrial (in Spanish) and as L'Ingenieur Industrial (in French), etc. The subscribers are E. Slater, J. May, G. W. S. Hawes and R. W. Hughman. Private company. The directors are to be appointed by the subscribers. Registered office: Sardinia House, Kingsway, W.C.2.

PAPER TUBES (BURY), LTD.—Registered with a capital of £12,000, in £1 shares, as manufacturers of paper, paper pulp, paper tubes, paper bobbins, paper boxes, paper beams, perforated tubes, cross-winding tubes, tubes for bleaching and cop dyeing and tubes made of metal, wood or any fibrous material, spools, cannettes, pirns, brass and steel rings for spindles, tubing apparatus and cop tube machinery. The subscribers are E. Allen and F. Dawson. Private company. Directors: E. Allen, F. Dawson, R. H. Smithies, W. N. Smithies, J. R. Wright and W.J.J. L. Smythe. Registered office: Victory Works, Springstreet, Bury.

A WORD OF CAUTION.

[In giving the official Gazette information, it must be distinctly understood that we take official records as we find them, and accept no responsibility for inaccuracies, while, as an almost invariable rule, the facts will be found correct. We advise our readers, before forming hasty judgment, to consider that there may be in each case satisfactory explanation which does not appear on the records.—Ed.]

ENGLAND AND WALES.

PARTNERSHIP DISSOLVED.

The partnership between William Hitchman Downing and Claude Downing, carrying on business as booksellers and publishers, at 5, Temple row, Birmingham, under the style of "William Downing," has been dissolved by mutual consent as from March 31st, 1919. All debts due to or owing by the late firm will be received and paid by Claude Downing and Bernard George Martin, who will continue the business under the present style of "William Downing."

APPLICATION FOR DEBTOR'S DISCHARGE.

Clutten, James Valentine Chapman, stationer and newsagent, carrying on business at High-street, Oxford. To be heard on July 7th, at 10.30 a.m., at the County Hall, Oxford.

THERE is fun in doing good printing and profit in using it.

Some Paper Topics.

The paper market has almost, if not quite, reached the point when relative value may be said to have once again assumed an aspect of Prices are graded according to reality. quality and cost of manufacture as they have not been for the past four years. It is not a far call to the days when common writings were demanding a higher figure than good class banks or account book papers. Such fictitious values may have been partly the creation of the middlemen and partly the inevitable accompaniment of a threatened paper famine, but to whatever cause they may be assigned the effect on general market conditions remains the same. Without a consistent and appropriate relative value in the cost and sale price of paper, stability in the course of trade is impossible. It has taken six months of drastic reformation and a great deal of sacrifice financially to set the trade on its feet. Fortunately, the period of depression is nearing its termination, and the signs all point to a speedy approach of the business boom to which our eyes have been turned since the early days of the year.

We have received from a Scottish mill a sample of wrapping made to serve as a substitute for heavy kraft which was formerly used for mill wrappers. While not aiming at reproducing the character of the Scandinavian product, the mill has succeeded in turning out a wrapping equally as serviceable and possibly much cheaper. Special attention appears to have been given to shade, finish and strength; the first being pale fawn, the second velvet and the third equal to kraft. It would not be difficult to make a big demand for a new type of wrapping paper as complimentary to the kraft that has been ruling the market for some time past. Meantime the makers of English kraft are to be congratulated on the great improvement visible since the end of the war. We are not prepared to agree that the Swedish product has been equalled, but we have recently seen various mill samples which only fell short of that high standard in the matters of rattle and lookthrough, colour and general appearance were identical with the original, and strength made a nearer approach than we have hitherto observed. With the accumulation of such experience as our mills are now obtaining, the attainment of perfection in the production of kraft wrapping should soon become a practical reality. But the vital influence of cost is a factor which must even then take rank as a determining factor.

On the subject of standardisation we learn that the recent tardiness is causing concern to the promoters of the scheme. It is realised that every week that now elapses before paper is made and sold to the new conditions is putting added difficulty in the way of smooth working.

It was certainly no part of the policy of the Board of Trade, when the new regulations were framed, to allow an opening for the profiteer. We are all coming to feel a sort of

contempt for those dealers who, not satisfied with an orgy of exploitation during the war, are still endeavouring to keep the game going. There is no opportunity for the papermaker to take advantage of the new conditions, and we do not think there is any maker who would do so in any case. But some importing agents are not so immune. Witness the prices being charged for Dutch strawboards in certain quarters. We have evidence of £30 per ton and upwards having been paid for light weight unlined boards. Between £25 and £30 per ton is quite the common price. Yet there are agents satisfied with the very reasonable amount of profit which accrues after selling at £16 10s. per ton. Quite recently special lots of Dutch strawboard have been sold as low as £13 10s. per ton. Between these figures and the £35 charged in other quarters there is a difference which cannot be explained away by shortage, quality, or any other normal factor which might influence

legitimate business.

There is one way by which the exploiter may be evaded, and that is to avoid Dutch board and substitute the best quality of British board. The price of the home-made board has dropped to a fairly low level, and we are informed that the mills are very keen on turning out a thoroughly efficient board. Box makers seem thoroughly satisfied with the type of board produced at home, but we are inclined to think that bookbinders and manufacturing stationers have still a preference for the yellow strawboard. We should like to think there was a prospect of our straw crop being handled on a proper basis this year, but after the experience of recent seasons there is

nothing to back up the hope.

Briefly running round the paper market, the following grades and prices have passed under our notice since last we wrote:-English M.G. kraft at £50, and unglazed at £48 5s. An exceptionally high grade English kraft is offered at £56. Pure Swedish kraft is readily bringing £56 to £65, and there are some agents who will not sell beneath £70 per ton. Dark browns are on offer at from £25 to £36 per ton, the latter resembling the original rope brown of pre-war days. Cream E.S. writings of the inferior sort are selling at 6d. to 61d. lb., while the finest sheet of esparto writing which has been in our hands for four years is offered at 71d. per lb. Common banks are being made in England at 6d. per lb., while smaller lots of stock stuff are on sale everywhere at 7d. to 71d. per lb.

H. A. M.

At a recent convention of the editors of California papers a delegate told a story about the first editor he worked under. "Right or wrong, he was always right. I recall one occasion when the paper announced the death of William R. Jones, who, it turned out, was not dead. Accordingly next day the paper printed the following note:—'Yesterday we were the first newspaper to publish the death of William R. Jones. To-day we The Morning are the first to deny the report. Planet is always in the lead.

Printing and Paper Workers.

Annual Delegate Meeting.

Three hundred delegates, representing 50,000 members, attended the annual conference of the National Union of Printing and Paper Workers at Nottingham the other day.

the same time, he declared that trade unionists must not forget the power that lay almost entirely in the strength of their organisations, and they must not forsake their principles.

The annual report referred suitably to the death of Mr. Alfred Evans, the late general secretary, and congratulated Mr. T. G. Newland on carrying through the difficult period which followed that event.

Dealing with the recent removal of restrictions on paper, the report stated: "With the

Map Showing the New Group Areas.

The president (Mr. R. H. Swift) expressed gratification at the improved relationship which had been fostered between employers and workmen in consequence of the war. At

exception of a few news-print mills, the whole trade immediately felt the effect of this unexpected order; customers refused to give orders, with the result that papermaking was

Raphael Bouse.

CITY-LONDON.

MAY, 1919.

To our Friends,

It last the World is able to breathe freely! It is as if the sun had broken through the storm clouds of the nast years and Peace were shalling it and clouds of the past years and Peace were shedding its golden rays upon the world beneath.

Among the Pageauts which will vie with one another in the triumphal celebration of Justice and Freedom -the unique Deace Dageant of our splendid lines of Christmas and New Year Cards, Postcards, CALENDARS, GIFT BOOKS, TOY and PAINTING BOOKS, COLOUR FACSIMS, and other ART GEMS, prepared by us for the coming season, will hold high rank, and the striking procession of these products of the Arts of Peace surely forms a PAGEANT which not only the English-speaking World but the whole League of Nations will acknowledge as among the most beautiful which the year of Peace has ushered in.

Christmas and New Year Cards.

These time-honoured missives will be welcomed with whole-hearted enthusiasm in this glorious year of Peace, in which assuredly the greatest universal interchange of Greetings for the Festival of Peace and Goodwill will be recorded.

Reval Christmas Cards.

The ROYAL CHRISTMAS CARDS fittingly and triumphantly lead this Dagcant of Deace. Immediately following these, Deace and Goodwill are worthily symbolised in the attractive array of upwards of 3000 CHRISTMAS and NEW YEAR CARDS, which in a succession of beautiful designs embody in their splendid range all the best features which have made TUCK'S CHRISTMAS CARDS famous all the world over, and which will be found to more than maintain their high reputation.

The "Colour Etching," "Colour Gravure" and "Colour Facsim" Series are

this year's outstanding novelty.

The dainty "Por Pourri" Series (perfumed), the rich "Broderie D'ART" and "CELLULOID" Series vie for pride of place with JENNIE HARBOUR'S HAND-PRINTED FACSIMILES, and the "FLORAL OILETTE" Series.

Christmas Postcards. Picture Postcards.

This applies to a no less marked extent to our CHRISTMAS POSTCARDS, the immense and varied collection of these forming a host in itself.

Tuck's famous Picture Postcards mark their coming of age in the British Empire by a proud succession of Oilettes, Carbonettes, Gravures, Water Colour and Coloured Crayon Processes, all in a striking and comprehensive display of new designs.

Gilt Books. Toy Books and Painting Books.

Block Calendars.

عدم

FATHER TUCK'S ANNUAL. This ever popular Annual, making its twenty-second jubilant entry, resplendent in colour pictures, its 128 pages crammed with delightful stories in Prose and Verse, heads the Procession of Juvenile Literature.

In its wake marches in proud array the famous "RAPHABL HOUSE" LIBRARY, which with CHILDREN'S STORIES FROM BRITISH LEGENDS and CHILDREN'S STORIES FROM ITALIAN FAIRY TALES AND LEGENDS just added, numbers twenty-five sumptuous and superb volumes, holding its place as the Premier Library in Children's Literature.

More than ever have these useful and happy-hour-making Publications been given our greatest attention, and in their unending variety, they keep pace with the always increasing demand for these pleasurable and educational gifts.

Calendars

Comprise a Pageant of Perfection; a Pageant of Pictures in which every imaginable process is drawn into service, numbering over 300 exquisite designs of Novelty and Beauty.

A Dageant of Deace in its widest and truest sense thus unfolds itself in the beautiful array of our Art Productions in this happy year of Victorious Peace.

It will surely win the acclamation of the great Public all the world over and in this knowledge we venture to bespeak your approval and hearty support as of yore.

Remaining as ever, and with our most cordial wishes for a happy and successful season, Very faithfully yours,

Kaphail Tim

Directors:
Sir ADOLPH TUCK, Bart.
Mr. GUSTAVE TUCK.

Digitized by GOOGLE

stopped, and we were faced with the possibility of having thousands of members out of work. You may be sure the action of the Government was warmly resented; our industry has been disorganised through the war equal to any other industry, and we claim the right to the same protection during the reconstruction period as all others. The combined voice of the employers and workers was sufficient to force the Government to appoint a committee of inquiry. Your general secretary was appointed a member of this committee. In the course of this inquiry it was proved that fourteen mills had closed down as a result of this order, while your general secretary submitted evidence that 3,046 of our members had been thrown out of work through the same cause."

The report set out at length the proposals as amended submitted to the conference between the executive council of the Employers' Federation and the representatives of the Paper Workers' Union, and on this there was a long and heated discussion, and as a result the executive were instructed to insist upen the settlement of the outstanding differences

within a fortnight.

On the question of overtime Mr. T. G. Newland, general secretary, expressed the view of the executive that it was desirable that overtime should be abolished, but, at the same time, as the rules provided for a certain amount of overtime, it was necessary to abide by the rules.

The question of amalgamation came up for consideration, the delegates favouring a complete amalgamation of printing and paper workers, but in the meantime to seek every opportunity for joining up with the Amal-

gamated Society.

For administrative purposes it has been decided to divide the country up into groups, on lines similar to those adopted for the alliances of the Federation of Master Printers. It is felt that the union has become so large that it is unwieldy under the present system, and that by the adoption of the group system there will be a paid representative for practically every group. There will be ten groups in England and Wales, Ireland representing one group by itself. It has not yet been decided whether Scotland will form one or three groups, this matter being left for the executive to determine.

It was decided to level up the contributions, so that all male members pay 9d. per week.

and women members 4d. per week.

The report mentioned the continued increase in membership, and the formation of new branches, and it was stated at the conference that the London branch, which represents printing and distributing trades, was over 10,000 strong.

The members generally expressed regret that the president had to retire from the office, which he had held almost continuously since 1889, owing to his having taken up the position of superintendent of the convalescent home at Carshalton. It was decided to make a presentation to Mr. Swift in recognition of his long and valued services as president.

Printers' War Memorial.

Mr. C. J. Drummond presided over a well-attended meeting of the Printing Trades Committee, who are promoting the memorial to its members who have fallen in the war, at St. Bride's Institute, E.C., on Friday last, when it was announced that the roll of honour contained the names of over 1,100 men associated with the industry, together with particulars of their death. It is anticipated that this number will be considerably in-

creased before the roll is complete.

Plans were approved of the memorial wing to the Caxton Home, Limpsfield, in which the roll will be placed. The architect's original estimate has been considerably exceeded, and the sum of £6,000 will now be required to carry out the work in a manner worthy of the trade. Over £3,000 has been subscribed and promised, and an appeal is made to all engaged in the newspaper, printing and kindred industries to join in this effort to permanently place on record in their own institution the printing trades' share in the great war.

The Right Hon. C. W. Bowerman, M.P., is treasurer of the fund, and donations can either be sent to him or to the hon. secretary, Mr. S. J. White, at the Caxton Home Office, 3, Cursitor-street, E.C.4. A card has been specially prepared for particulars of the roll of honour, which will be sent on application.

Parchmentised Paper.

A British patent has been granted to the Manchester Oxide Co, and Messrs. R. H. Clayton, Julius Huebner, and H. E. Williams. Manchester, in respect of a process for parchmentising paper, based upon the discovery that thiocyanates of calcium, magnesium, strontium and lithium will by themselves have a parchmentising action on paper, and that other thiocyanates used in conjunction, that is, water-insoluble thiocyanates, and water-soluble thiocyanates, either of which used alone have no parchmentising effect give satisfactory results. The following examples illustrate the procedure:—

A solution of calcium thiocyanate of such concentration as will boil at 157 degs. C. under atmospheric pressure, is heated to and maintained at 130 degs. C. Unsized cotton or other paper is passed through the solution at such a speed that it is in contact with the solution for about 30 seconds. The paper is then washed and dried in the usual way. A solution of equal parts of calcium thiocyanate and calcium chloride is prepared of such concentration as to boil at 157 degs. C. under atmospheric pressure. The solution is heated to and maintained at 130 degs. C. Unsized cotton is passed through and afterwards washed and dried. The solutions may be acidified with four parts acetic acid per 100 parts solution.

The Eight-Hour Day in France.

Advantages and Drawbacks.

With regard to the eight-hour day recently voted in the French Parliament, Monsieur G. Degaast in the current issue of Le Courrier du Livre says: - "Just when we have the most need of hard work to repair the losses and damage caused by the war, we are asked to go backward, and that without the preparation necessary in present economic conditions. For in order to operate such a change, as considerable as it is far-reaching, it is essential to prepare one's circle for it, so that the desired improvement may not bring about a worse state of things than the old. In certain cases it may be that at once the utility and practicability of the scheme is seen. Thus the metallurgical industry is ready, actually in consequence of the war and owing to its machinery and labour organisation, to continue the eighthour day already in force in three eight-hour But under industrial conditions like ours (the book trade), even if we had been demanding the new régime for the last four or five years, it would have been impossible to realise the immediate modifications necessary. On the one hand, our makers of printing machines, conscripted to too large an extent for the production of war material, have not been able to construct printing machines soon enough; on the other hand, competent staffs are hard to secure, as so many of our men have been killed or lost sight of; finally, raw materials, and especially paper. are far from being ready to our hand in sufficient quantity and of right quality. As to the former, it is certainly not by means of the protectionist-but very irrational-methods of official equalisation of prices that we shall attain to better times!

In order not to come to grief, it is indispensable that the industrial factor of the hourly production should vary in inverse ratio to the number of daily or weekly work ing hours. Thus, if the hours are diminished (the actual case under the new scheme, the hourly production needs to be increased so that the daily production remains the same. Here there are three important points to he considered: -(1) The impossibility in certain cases of using machinery, as where first-class manual labour is employed in luxury work. Here production is not of prime importance, as the factor production is surpassed by the factor taste or method of presentation. In such an instance customers accept price variations notably higher than those occasioned by the decrease in the working hours; (2) The possibility of increasing the speed of machines or apparatus without the suppression of staff. Here a rational and scientific organisation of work will permit employer and employee alike to realise a greater production, without increase of effort or fatigue; (3) Substitution of part of the personnel by automatic adjustments and by quicker machines, on the rotary principle, eliminating by their

greater production some of those machines previously used. And in this connection, there is, in the consideration of this increased use of machinery, a point of the greatest interest, namely, the revision and perfecting of our professional and technical education, as yet of a somewhat embryonic character as regards the industries connected with the Thus, in consequence of the book trade. lack of legal sanction, the apprentices' contract is null and void, and, further, we lack, and shall lack more, the time to train apprentices, whose superfluous functions will tend to be performed by mechanical means. Hence we ought to make it obligatory to future workmen to follow courses (half-time or finishing) of pre-apprenticeship. For want of this energetic measure the recruiting of a competent staff will drop down toward zero. Let the working class world understand this well, and let certain of them, instead of making plans for the long evening's enjoyment, impress upon the young men coming into the trade not only the complete know-ledge of their "rights" but the duty of becoming good technicians by acquiring as much instruction as possible. The eighthour day will greatly aid apprentices, and even adult workers, to attend classes, lectures and technical demonstrations. leisure the eight-hour day gives the worker let him either rest himself thoroughly in order to live better thereby, or let him seek to acquire knowledge, so as to work more happily and thus make of the old ogre "work" companion who rarely deceives when properly Let our legislators, now the understood. eight hours are voted, direct their zeal towards a law regulating apprenticeship-the contract, organisation of instruction (and budget therefor) and international exchanges of apprentices during the last year or years of their term. Let us then accept gratefully the eight hours, which, properly understood and judiciously employed, need not constitute an obstacle to the forward march of industry. Only those steeped in routine, whether employers or employees, will raise their voices against it. Les us profit from the inventions of our engineers and constructors, in order to Let us drift less and accomplish good work. organise our workshops better; and life, that fugitive and fleeting thing, will be the pleasanter for it.'

WHY THE JOB WAS LATE.—The American Printer gives some of the printers' excuses for the job being late as follows:—"First you jolly him and sav: 'The first instalment's on the way; the flywheel broke, the printers struck, the linotype got in hard luck, the press designed to do this job fell out the window; and the slob that set the type lost head and brain, and we reset the thing again. And then, beside (we hate to tell), the devil died of 'flu,' and—well, the paper cutter broke his knee. These things delayed your job, you see."

You need not pick up any worries; you can get them any where as you go along.

Paper and Print in South Africa.

PAST AND PRESENT.

Third Article.

N the two previous Export Numbers of this journal we dwelt at some length upon the rise, growth and present position of the industries connected with Paper and Print in British South Africa. We now proceed to give some account of their status in the much more extensive, though far less developed tracts of country, scattered up and down Africa, which have been brought within quite recent years under the sway of the British Crown. So recent, in most cases, is the acquisition and partial settlement of these vast new territories, that in their case there is no question of "past and present," the past, industrially and commercially considered, dating its beginnings from a period, which, at the most, is not removed more than two or three decades from the present.

The States treated of in our previous articles were those, of British or Dutch origin, which now compose the Union of South Africa. In addition to these, there are in the southern portion of the continent certain territories which to some extent serve the purpose of native reserves and are but very sparsely settled by whites.

BASUTOLAND.

One of these is Basutoland, with an area of 11.700 square miles. Its population of about 400,000 includes less than 3.000 white settlers. The control of the district is practically vested in the Home Government, whose powers are exercised through the High Commissioner for South Africa, though from 1871 to 1883 it formed part of Cape Colony and was ruled from Cape Town.

The townships are few and far between. In Maseru, which is the seat of the Resident Commissioners there is a white population of about 360, with about 1,150 natives, and here there is an industrial school and other important buildings. It is also the seat of a mission station, other two missions having their organisations in Mafeteng and Morija, the latter, founded in 1833, being the oldest in the country

At Ficksburg there is a white population of over 2,000, as against 1,000 natives, and here is the central market for the great output of mealies and wheat grown in the district. The climate is fine and the surrounding scenery interesting, an extensive general trade is done in Ficksburg and the town is a busy one. Other smaller places are Chocolan, locally known as "Mushroomville," and Bethlehem, where there is a railway junction of some importance. Wool is an important item in the products of great tracts of country, but the flocks are liable to suffer during the long droughts that prevail during dry seasons. Large numbers of sheep flocks are owned by native flockmasters, and native labour is utilised to its full extent in connection with sheep growing and wool clipping. At Mafeteng there is a weekly paper, published on Fridays, called the Basutoland Star, in the native language its title is "Naledi-ealesotho."

The vast territory now known as

RHODESIA.

but formerly in part distinguished as Matabeleland and Mashonaland, comprises some 440,000 square miles, extending from the

Union Colonies in the South to the vicinity of the great lakes in the heart of the continent. It is ruled by the Chartered Company of British South Africa, and only about 3 per cent. of its population of over three-quarters of a million are whites. The present requirements of the country in the way of Paper and Print are therefore not very great, a remark which also applies to practically all the other districts, with which we shall have to deal. Two or three of the larger towns, such as Salisbury and Buluwayo, possessed printing establishments and local newspapers as far back as the early nineties, quite a representable degree of antiquity in that line for this part of the world. The territories of Northern and Southern Rhodesia have hitherto been separately administered, but at an early date will probably be united. Southern Rhodesia has by far the largest number of white settlers and also contains the chief business centre of the country. Buluwayo, though this infant metropolis can only boast of some 6,000 inhabitants; as practically everything in the way of the raw material of printing -i.e., paper—has to be imported, the Custon duty on it is at present only 3 per cent. ad vatorem. whilst on manufactured goods entering Southern Rhodesia, which it is hoped to produce in some quantity locally, in the not distant future—such as account books, printed stationery, envelopes, printed advertising matter, local catalogues and directories, etc. -a stiff tax of 25 per cent. is levied, which is reduced to 9 per cent. (in one or two cases it is remitted altogether) where British goods are concerned. The annual imports of paper into Southern Rhodesia are of the value of $f_{11,000}$, and those of stationery and books about $f_{30,000}$. Those into the Northern territory are only about £3,000 all told. A good deal of it is of South African manufacture. The number of printers in Rhodesia scarcely exceeds a dozen, and the number of newspapers and other periodical publications is about the same. At Livingstone, the chief town of Northern Rhodesia, is a small printing establishment, which serves as the Administration Press The Rhodesia Advertiser is published at Umtali, the Rhodesia Herald, at Salisbury, and there is also the Rhodesia Church Magazine circulating in the territory. The Rhodesian Mining Review, published at Salisbury, is a technical journal for the mining community, and the Government Gazette is issued at the same town. Salisbury is an important town, it is the capital and seat of Government of Southern Rhodesia, and has a white population of about 4,000. Umtali is a smaller town with a white population of about 1,200, and is important as being the distributing centre to the goldfields of British Manicaland, and is the Eastern gate of the Chartered Company's Territory.

North-west of Northern Rhodesia, and extending to Lake Nyanza, is the

NYASALAND PROTECTORATE

which covers nearly 40,000 square miles, but has only a sprinkling of barely a thousand white settlers among over a million natives.
